There should be clear support or antecedent basis in the specification for the terminology used in the claims. Usually, the original claims follow the nomenclature of the specification; but sometimes in amending the claims or in adding new claims, applicant employs terms that do not appear in the specification. This may result in uncertainty as to the interpretation to be given such terms. See MPEP § 608.01(o). It should be noted, however, that exact terms need not be used *in haec verba* to satisfy the written description requirement of the first paragraph of 35 U.S.C. 112. *Eiselstein v. Frank*, 52 F.3d 1035, 1038, 34 USPQ2d 1467, 1470 (Fed. Cir. 1995); *In re Wertheim*, 541 F.2d 257, 265, 191 USPQ 90, 98 (CCPA 1976). See also 37 CFR 1.121(e) which merely requires *substantial* correspondence between the language of the claims and the language of the specification.

Where a copending application is referred to in the specification, the examiner should ascertain whether it has matured into a patent or has become abandoned, and “now abandoned” or the patent number should be added to the specification. >If the application is an Image File Wrapper (IFW) application, the amendment must be made by way of a formal examiner’s amendment.<

The claims should be renumbered as required by 37 CFR 1.126, and particular attention should be given to claims dependent on previous claims to see that the numbering is consistent. An examiner’s amendment should be prepared if the order of the claims is changed. See MPEP § 608.01(j), § 608.01(n), and § 1302.04(g).

The abstract should be checked for an adequate and clear statement of the disclosed invention. See MPEP § 608.01(b). The length of the abstract should be limited to 150 words. >For changes to the abstract by examiner’s amendment, see MPEP § 1302.04.<

The title should also be checked. It should be as short and specific as possible. However, the title

should be descriptive of the invention claimed, even though a longer title may result. If a satisfactory title is not supplied by the applicant, the examiner may change the title on or after allowance. See MPEP § 606 and § 606.01.

No pencil notes should be made in the application file by the examiner. Any notes in the file must be erased when the application is passed to issue.

All amendments should be reviewed to assure that they were timely filed.

## 1302.02 Requirement for a Rewritten Specification

Whenever interlineations or cancellations have been made in the specification or amendments which would lead to confusion and mistake, the examiner should require the entire portion of specification affected to be rewritten before passing the application to issue. See 37 CFR 1.125 and MPEP § 608.01(q).

Form paragraph 13.01 should be used when making such a requirement.

¶ *13.01 Requirement for Rewritten Specification*

The interlineations or cancellations made in the specification or amendments to the claims could lead to confusion and mistake during the issue and printing processes. Accordingly, the portion of the specification or claims as identified below is required to be rewritten before passing the case to issue. See 37 CFR 1.125 and MPEP § 608.01(q).

**Examiner Note:**

1. Specific discussion of the sections of the specification or claims required to be rewritten must be set forth.
2. See form paragraph 6.28.01 for a substitute specification.

## 1302.03 Notice of Allowability [R-2]

A Notice of Allowability form PTOL-37 is used whenever an application has been placed in condition for allowance. The date of any communication and/or interview which resulted in the allowance should be included in the notice.

In *all* instances, both before and after final rejection, in which an application is placed in condition for allowance, applicant should be notified promptly of allowability of the claims by a Notice of Allowability PTOL-37. If delays in processing the Notice of Allowability are expected, e.g., because an extensive examiner’s amendment must be entered, and the end of a statutory period for reply is near, the examiner should notify applicant by way of an interview that

the application has been placed in condition for allowance, and an Interview Summary PTO-413 should be mailed. Prompt notice to applicant is important

because it may avoid an unnecessary appeal and act as a safeguard against a holding of abandonment.

>

<b>Notice of Allowability</b>	<b>Application No.</b>	<b>Applicant(s)</b>	
	<b>Examiner</b>	<b>Art Unit</b>	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--**

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1.  This communication is responsive to \_\_\_\_\_.
2.  The allowed claim(s) is/are \_\_\_\_\_.
3.  The drawings filed on \_\_\_\_\_ are accepted by the Examiner.
4.  Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
  - a)  All    b)  Some\*    c)  None    of the:
    1.  Certified copies of the priority documents have been received.
    2.  Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
    3.  Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).
  - \* Certified copies not received: \_\_\_\_\_.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.  
**THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.**

5.  A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
6.  CORRECTED DRAWINGS ( as "replacement sheets") must be submitted.
  - (a)  including changes required by the Notice of Draftsperson's Patent Drawing Review ( PTO-948) attached
    - 1)  hereto or 2)  to Paper No./Mail Date \_\_\_\_\_.
  - (b)  including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date \_\_\_\_\_.

**Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).**
7.  DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

## 1302.04 Examiner's Amendments and Changes [R-2]

Except by formal examiner's amendment duly signed or as hereinafter provided, no corrections, erasures, or interlineations may be made in the body of written portions of the specification or any other paper filed in the application for patent. (See 37 CFR 1.121.)

\*>If the application file is a paper file, an< informal examiner's amendment may be used for the correction of the following obvious errors and omissions only in the body of the written portions of the specification and may only be made with pen by the examiner of the application who will then initial in the margin and assume full responsibility for the change:

- (A) Misspelled words.
- (B) Disagreement of a noun with its verb.
- (C) Inconsistent "case" of a pronoun.
- (D) Disagreement between a reference character as used in the description and on the drawing. The character may be corrected in the description but only when the examiner is certain of the propriety of the change.
- (E) Entry of "Patent No....." or "Patent Application Publication No....." to identify a patent which has been granted on a U.S. application> or the publication of a U.S. application, respectively,< referred to by application number in the specification if the >domestic< priority reference is not in an application data sheet.
- (F) Entry of "abandoned" if a U.S. patent application referred to by application number in the specification, or in the application data sheet has become abandoned.

(G) Correction of reversed figure numbers. *Garrett v. Cox*, 233 F.2d 343, 345, 110 USPQ 52, 54 (CCPA 1956).

(H) Entry of "Patent Application No. ...." to identify a patent application in an otherwise allowable application filed under former 37 CFR 1.60 or 37 CFR 1.62 (see MPEP § 201.11).

(I) Other obvious minor grammatical errors such as misplaced or omitted commas, improper parentheses, quotation marks, etc.

(J) Obvious informalities in the application, other than the ones noted above, or of purely grammatical nature.

\*\*>Informal examiner's amendments are not permitted if the application is an Image File Wrapper (IFW) application. Any amendment of an IFW application must be by way of a formal examiner's amendment or be an amendment made by the applicant.<

For continuing applications filed under 37 CFR 1.53(b), where a reference to the parent application has been inadvertently omitted by the applicant, an examiner should not add a reference to the prior application without the approval of the applicant and a formal examiner's amendment since applicant may decide to delete the priority claim in the application filed under 37 CFR 1.53(b). \*\*>Furthermore, a petition under 37 CFR 1.78 to accept an unintentionally delayed benefit claim may be required if the application is a utility or plant application filed on or after November 29, 2000. See MPEP § 201.11.<

When correcting *originally filed* papers > of applications with a paper application file wrapper<, clean red ink *must* be used (not blue or black ink).

A formal examiner's amendment may be used to correct all other informalities in the body of the written portions of the specification as well as all errors and omissions in the claims, but such corrections must be made by a formal examiner's amendment, signed by the primary examiner, placed in the file and a copy sent to applicant. The changes specified in the amendment are entered by the technical support staff in the regular way. A formal examiner's amendment should include form paragraph 13.02 and form paragraph 13.02.01. Form paragraph 13.02.02 should be used if an extension of time is required.

### ¶ 13.02 Formal Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

### Examiner Note:

This form paragraph is NOT to be used in a reexamination proceeding (use form paragraph 22.06 instead).

### ¶ 13.02.01 Examiner's Amendment Authorized

Authorization for this examiner's amendment was given in a telephone interview with [1] on [2].

\*\*>

¶ 13.02.02 *Extension of Time and Examiner's Amendment Authorized by Telephone*

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on [1], [2] requested an extension of time for [3] MONTH(S) and authorized the Director to charge Deposit Account No. [4] the required fee of \$ [5] for this extension and authorized the following examiner's amendment. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

**Examiner Note:**

See MPEP § 706.07(f), item (J) which explains when an extension of time is needed in order to make amendments to place the application in condition for allowance.

<

Although 37 CFR 1.121 has been amended to require amendments to the specification/claims to be made \*\*>in compliance with 37 CFR 1.121(b)(1), (b)(2), or (c), where appropriate<, 37 CFR 1.121(g) permits the Office to make amendments to the specification, including the claims, by examiner's amendments without \*\*>the need to comply with the requirements of 37 CFR 1.121(b)(1), (b)(2), or (c)< in the interest of expediting prosecution and reducing cycle time. Examiners may continue to make additions or deletions of subject matter in the specification, including the claims, in examiner's amendments by instructions to make the change at a precise location in the specification and/or the claims.

As an alternative, the examiner's amendment utilizing paragraph/claim replacement can be created by the examiner with authorization from the applicant. The examiner's amendment can also be created from a facsimile transmission or e-mailed amendment received by the examiner and referenced in the examiner's amendment and attached thereto. Any subject matter, in clean version form (containing no brackets or underlining), to be added to the specification/claims should be set forth separately by applicant in the e-mail or facsimile submission apart from the remainder of the submission. A clean version of a paragraph/claim, or portion of a paragraph/claim, submitted by applicant in a fax or e-mail, should be printed and attached to the examiner's amendment and may be relied on as part of the examiner's amend-

ment. The examiner should mark "requested" on the entire attachment to indicate that the fax or e-mail was requested by the examiner, so as to not lead to a reduction in patent term adjustment (37 CFR 1.704(c)(8)). As the attachment is made part of the examiner's amendment, it does not get a separate PALM code and will not trigger any reduction in patent term adjustment. A paper copy of the entire e-mail or facsimile submission should be entered in the application file. Examiners are not required to electronically save any e-mails once any e-mails or attachments thereto are printed and become part of an application file record. The e-mail practice that is an exception for examiner's amendments is restricted to e-mails to the examiner from the applicant and should not be generated by the examiner to the applicant unless such e-mails are in compliance with all of the requirements set out in MPEP § 502.03.

The amendment or cancellation of claims by formal examiner's amendment is permitted when passing an application to issue where these changes have been authorized by applicant (or his/her attorney or agent) in a telephone or personal interview. The examiner's amendment should indicate that the changes were authorized, the date and type (personal or telephone) of interview, and with whom it was held.

The examiner's amendment practice may be used to make charges against deposit accounts or credit cards under special conditions.

An examiner's amendment can be used to make a charge against a deposit account, provided prior approval is obtained from the applicant, attorney or agent, in order to expedite the issuance of a patent on an application otherwise ready for allowance. When such an examiner's amendment is prepared, the prior approval is indicated by identification of the name of the authorizing party, the date and type (personal or telephone) of authorization, the purpose for which the charge is made (additional claims, etc.), and the deposit account number.

Charges can also be made against a credit card in an examiner's amendment. Once the examiner has informed applicant of the required charges, applicant must submit by facsimile, a properly completed and signed PTO-2038, authorizing the necessary charges. After completion of processing in the Office of Finance, form PTO-2038 will be removed from the record. Office employees may not accept oral (tele-

phonic) instructions to complete the Credit Card Payment Form or otherwise charge a patent process or trademark process fee (as opposed to information product or service fees) to a credit card. Further identifying data, if deemed necessary and requested by the applicant, should also be included in the examiner's amendment.

Form paragraph 13.06 may be used to charge an extension of time fee in an examiner's amendment.

\*\*>

#### ¶ 13.06 Extension of Time by Examiner's Amendment

An extension of time under 37 CFR 1.136(a) is required to place this application in condition for allowance. During a telephone conversation conducted on [1], [2] requested an extension of time for [3] MONTH(S) and authorized the Director to charge Deposit Account No. [4] the required fee of \$ [5] for this extension.

#### Examiner Note:

1. See MPEP § 706.07(f), item J which explains when an extension of time is needed in order to make amendments to place the application in condition for allowance.
2. When an examiner's amendment is also authorized, use form paragraph 13.02.02 instead.

<

\*\*>At the time of allowance, substantive changes made by the examiner to the abstract must be done by a formal examiner's amendment after first obtaining approval from the applicant. As noted by the court in recent decisions, the abstract may be used to determine the meaning of claims. See *Pandrol USA, LP v. Airboss Railway Products, Inc.*, 320 F.3d 1354, 1363 n.1, 65 USPQ2d 1985, 1996 n.1 (Fed. Cir. 2003), *Hill-Rom Co. v. Kinetic Concepts, Inc.*, 209 F.3d 1337, 1341 n.1, 54 USPQ2d 1437, 1443 n.1 (Fed. Cir. 2000). Since the abstract may be relied upon to determine the scope of the claimed invention, examiners should review the abstract for compliance with 37 CFR 1.72(b) and point out defects noted to the applicant in the first Office action, or at the earliest point in the prosecution that the defect is noted, so that applicant may make the necessary changes to the abstract.

No examiner's amendment, whether formal or informal, may make substantive changes to the written portions of the specification, including the abstract, without first obtaining applicant's approval.<

The fact that applicant is entitled to an earlier U.S. effective filing date under 35 U.S.C. 120, 121, or 365(c) or 35 U.S.C. 119(e) is sometimes overlooked. To minimize this possibility, >and for the claim to the benefit of the earlier filing date to be proper,< the statement that, "This is a division (continuation, continuation-in-part) of Application Number -/---, filed --" should appear as the first sentence of the \*>specification<, or in an application data sheet of applications other than CPAs claiming priority under 35 U.S.C. 120, except in the case of design applications where it should appear as set forth in MPEP § 1504.20. The request for a CPA >(note that effective July 14, 2003, CPA practice has been eliminated as to utility and plant applications)< filed under 37 CFR 1.53(d) is itself the specific reference, as required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2), to every application assigned the same application number identified in the request. In the case of an application filed under 37 CFR 1.53(b) as a division, continuation or continuation-in-part of a CPA, there would be only one reference to the series of applications assigned the same application number with the filing date cited being that of the original non-continued application. In applications claiming priority under 35 U.S.C. 119(e), a statement such as "This application claims the benefit of U.S. Provisional Application No. 60/ - --, filed - --" should appear as the first sentence of the \*>specification< or in an application data sheet. In addition, for an application which is claiming the benefit under 35 U.S.C. 120 of a prior application which in turn claims the benefit of a provisional application under 35 U.S.C. 119(e), a suitable reference would read, "This application is a continuation of U.S. Application No. 08/ - --, filed - --, now abandoned, which claims the benefit of U.S. Provisional Application No. 60/ - --, filed - --." The status (whether patented or abandoned) of the nonprovisional application(s) for which priority is claimed should also be included. Any such statements appearing elsewhere in the specification should be relocated or made in an application data sheet. \*\*

References cited as being of interest by examiners when passing an application to issue will not be supplied to applicant. The references will be cited as usual on form PTO-892, a copy of which will be attached to the Notice of Allowability, form PTOL-37.

Where an application is ready for issue except for a slight defect in the drawing not involving a change in structure, the examiner will prepare a letter indicating the change to be made and \*\*, if necessary, including a marked-up copy of the drawing showing the addition or alteration to be made. See MPEP § 608.02(w).

No other changes may be made by any person in any record of the U.S. Patent and Trademark office without the written approval of the >Director of the United States Patent and Trademark Office<.

In reviewing the application, all errors should be carefully noted. It is not necessary that the language be the best; it is, however, essential that it be clear in meaning, and free from errors in syntax. Any necessary examiner's amendment is usually made at the time an application is being prepared for issue by the examiner \*\*> and a < copy of any formal examiner's amendment is sent to >the< applicant \*\*> as an attachment to the Notice of Allowability, PTOL-37<.

Examiners will not cancel claims on the basis of an amendment which argues for certain claims and, alternatively, purports to authorize their cancellation by the examiner if other claims are allowed. See generally *In re Willingham*, 282 F.2d 353, 356, 127 USPQ 211, 215 (CCPA 1960).

In all instances, both before and after final rejection, in which an application is placed in condition for allowance as by an interview or amendment, applicant should be notified promptly of this fact by means of a Notice of Allowability (PTOL-37). See MPEP § 714.13 and § 1302.03.

If after reviewing, screening, or surveying an allowed application in the Office of Patent Quality \*>Assurance<, an error or omission of the type noted in items (A) through (I) under the second paragraph of this section is noted, the error or omission may be corrected by the \*\*>Review Quality Assurance Specialist< in the same manner as set forth in the second paragraph. Since all other obvious informalities may only be corrected by a formal examiner's amendment, if the Office of Patent Quality \*>Assurance< discovers any such informality, the \*\*>Review Quality Assurance Specialist< will return the application to the Technology Center (TC) personnel via the TC Director suggesting, as appropriate, specific changes for approval and correction by the examiner through the use of an examiner's amendment.

### **1302.04(a) Title of Invention**

Where the title of the invention is not specific to the invention as claimed, see MPEP § 606.01.

### **1302.04(b) Cancellation of Nonstatutory Claim**

When a case is otherwise in condition for allowance the examiner may cancel an obviously nonstatutory claim such as one to “A device substantially as shown and described.” Applicant should be notified of the cancellation of the claim by an examiner's amendment.

### **1302.04(c) Cancellation of Claims to Non-elected Invention**

See MPEP § 821.01 and § 821.02.

### **1302.04(d) Cancellation of Claim Lost in Interference**

See MPEP § 2363.03.

### **1302.04(e) Cancellation of Rejected Claims Following Appeal**

See MPEP § 1214.06, § 1215.03, and § 1215.04.

### **1302.04(f) Data of Copending Application Referred to Should Be Brought Up-to-Date [R-2]**

Where a patent application which is ready for issue refers by application number to a U.S. nonprovisional application which has matured into a patent, the examiner is authorized to enter the patent number without a formal examiner's amendment>, except where the application is an Image File Wrapper (IFW) application, in which case the amendment must be made by way of a formal examiner's amendment<. This entry should be in the following form: “, Patent No. ....”. \*>For applications with a paper file wrapper (non-IFW applications), the< entry is to be initialed and dated in the margin by the examiner to fix responsibility for the same. The entry and the initials should be in red ink.

If the nonprovisional application referred to has become abandoned, the entry “abandoned” should be made in red ink, and initialed and dated by the examiner in the margin >if the application is in a paper file wrapper (non-IFW application)<. A formal examiner’s amendment is not required >except where the application is an IFW application, in which case the amendment must be made by way of a formal examiner’s amendment<.

### **1302.04(g) Identification of Claims**

To identify a claim, a formal examiner’s amendment should refer to it by the original number and, if renumbered in the allowed application, also by the new number.

### **1302.05 Correction of Drawing [R-2]**

Where an application otherwise ready for issue requires correction of the drawing, the application is processed for allowance in the Technology Center and then forwarded to the Publishing Division. Any papers subsequently filed by the applicant, including corrected drawings, are forwarded to the Publishing Division in order to be matched with the application file. >If the drawings that are received are still not acceptable for publishing, the Publishing Division will mail a “Notice to File Corrected Application Papers,” giving the applicant a non-extendable period in which to file the corrected drawings.<

### **1302.05(a) Original Drawings Cannot Be Located [R-2]**

When the original drawings cannot be located and the application is otherwise in condition for allowance, no “Official Search” need be undertaken. A replacement drawing should be obtained from the Office of Initial Patent Examination’s records of the application as originally filed. If the reproduced drawings are not acceptable for publishing, applicant should be required to submit corrected drawings. An attachment to the Notice of Allowability should explain the problem and require the corrected drawings. >If such an attachment is not included with the Notice of Allowability, the Publishing Division will mail a “Notice to File Corrected Application Papers,” giving the applicant a non-extendable period in which to file the corrected drawings.<

### **1302.06 Prior Foreign Application**

See MPEP § 201.14(c) and § 202.03.

### **1302.07 Use of Retention Labels to Preserve Abandoned Companion Applications**

Related applications referred to in patent specifications are preserved from destruction by a retention label (form PTO-150) which is attached to the outside of the file wrapper. The technical support staff of the Technology Center (TC) prepares such a label for use as indicated below on each application (which has not become a patent) which is referred to in the specification, oath, or declaration of the application ready for allowance (or in any Office letter therein).

If the application referred to is:

(A) Still pending: Fill in and paste label on the face of the pending file wrapper in the space provided. Make no change in specification of the allowable application.

(B) Abandoned for failure to pay issue fee: If file has been forwarded to Files Repository, fill in label and send it to Files Repository for attachment to the wrapper. If not forwarded, treat the same as pending case.

(C) Abandoned: If file has been forwarded to the Files Repository, fill in label and send it to Files Repository for attachment to the wrapper. If not forwarded, treat the same as pending case. Add “abandoned” in red ink and initials to the allowable application.

(D) Already patented: No label is required. Insert patent number in specification if not already present. Formal examiner’s amendment not necessary if this is only change.

(E) In issue: Fill in label. Make no change in the specification of the allowable application.

Examiners are reminded that only one retention label is necessary. Thus, if a retention label is already present, it is sufficient to merely add “et al.” to the application number cited thereon.

### **1302.08 Interference Search**

Assuming that the application is ready for issue, the examiner makes an interference search and notes the

date and class and subclasses searched in the file wrapper. To do this, the examiner inspects all the pending prints and drawings (or all the claims if the invention is not susceptible of illustration) in the interference files of the relevant subclasses of the class in which the application is classified, and all other pertinent classes, whether in his or her Technology Center (TC) or elsewhere, in order to ascertain whether any other applicant is claiming substantially the same subject matter as is being allowed in the case in hand. When any of the drawings or claims shows such a condition to be likely, the corresponding file is reviewed.

Note also MPEP § 2301.01(b).

If the search does not disclose any interfering application, the examiner should prepare the application for issue.

An interference search may be required in TC Working Group 3640. Inspection of pertinent prints, drawings, brief cards, and applications in TC Working Group 3640 will be done on request by an examiner in TC Working Group 3640.

### **1302.09 \*\* >Classification, Print Figure, and Other Notations< [R-2]**

The examiner preparing the application for issue fills out, \*>using< black ink, the appropriate spaces on the face of the file wrapper >for applications in a paper file wrapper (non-Image File Wrapper (IFW) applications). If the application is an IFW application, the Issue Classification sheet is to be completed<.

To aid the Publishing Division and the printers, examiners should write the class and subclass on the outside of the file wrapper >for non-IFW applications< as carefully and legibly as possible. Each numeral should be distinct and any decimal point should be shown clearly and in its proper position.

Spaces are provided on the file wrapper label or PALM bib-data sheet for identifying data of a prior abandoned application for which the instant application is a substitute, and of parent application(s) and prior provisional and foreign application(s). Examiners must review the data regarding prior U.S. applications to make sure that the information is correct when preparing the application for issue. If any claim to >domestic< priority under 35 U.S.C. >119(e),< 120, 121, or 365(c) is added, deleted, and/or modified during prosecution of the application and such addition, deletion, and/or modification has been approved, the examiner must make sure that the information on the file wrapper label or PALM bib-data sheet and in the PALM data base are current and up to date. If the PALM system has not been updated, the application must be forwarded >(A)< to the Office of Initial Patent Examination Customer Corrections, accompanied by a completed Application Branch Data Base Routing Slip, >if the application has a file jacket label and is a 08/ or earlier series, or (B) to the Technology Center (TC) Legal Instrument Examiner,< with an explanation of the correction to be made >(e.g., with a marked-up copy of the bib-data sheet), if the application is an IFW application or is a 09/ or later series. A copy of the corrected bib-data sheet should be added to the file<. Examiners should also review the data regarding prior provisional and foreign applications for accuracy.

The class and subclass and the name of the examiner which are written in pencil on \*> any paper< file wrapper should correspond to the class and subclass in which the patent will issue and to the name of the examiner preparing the application for issue.

See MPEP § 202.02 for notation as to parent or prior U.S. application, including provisional application, to be placed on file wrapper.

See MPEP § 202.03 for notation as to foreign patent application to be placed on file wrapper.

See MPEP § 1302.13 for name of examiner.

Examiners, when preparing \* >a non-IFW< application for issue, are to record the number of the claim

selected for printing in the *Official Gazette* in the box labeled “PRINT CLAIM” on the face of the file wrapper>, or if the application is an IFW application, on the Issue Classification sheet<.

The claim or claims should be selected in accordance with the following instructions:

(A) The broadest claim should be selected.

(B) Examiners should ordinarily designate but one claim on each invention, although when a plurality of inventions are claimed in an application, additional claims up to a maximum of five may be designated for publication.

(C) A dependent claim should not be selected unless the independent claim on which it depends is also printed. In the case where a multiple dependent claim is selected, the entire chain of claims for one embodiment should be listed.

(D) In reissue applications, the broadest claim with changes or the broadest additional reissue claim should be selected for printing.

When recording this information in the box provided, the following items should be kept in mind:

(A) Write the claim number clearly in black ink.

(B) If multiple claims are selected, the claim numbers should be separated by commas.

(C) The claim designated must be referred to by using the renumbered patent claim number rather than the original application claim number.

Examiners, when preparing \*>a non-IFW< application for issue, are to record the figure selected for printing in the *Official Gazette* in the box labeled “**Print Fig.**” on the face of the file wrapper>, or if the application is an IFW application, on the Issue Classification sheet<. It is no longer necessary for drawings to be stamped approved or for the examiner to write this information in the space provided by the Draftsperson’s stamp on the margin of the sheet of drawing.

Ordinarily a single figure is selected for printing. This figure should be consistent with the claim to be printed in the *Official Gazette*. The figure to be printed in the *Official Gazette* must not be one that is labeled “prior art.” If there is no figure illustrative of or helpful in understanding the claimed invention, no figure need be selected. “None” may be written in the box labeled “**Print Fig.**” on the face of the file

wrapper>, or if the application is an IFW application, on the Issue Classification sheet<.

### 1302.10 Issue Classification Notations [R-2]

See MPEP § 903.07, § 903.07(b) and § 903.09 for notations to be applied in the issuing classification boxes on the face of the file wrapper, or on the blue issue classification slip for series 08/ and earlier applications>, or if the application is an IFW application, on the Issue Classification sheet<.

In all reissue applications, the number of the original patent which is being reissued should be placed in the box provided therefor below the box for the applicant's name.

### 1302.11 Reference to Assignment Division

The practice of referring certain applications to the Assignment Division when passing them to issue is no longer followed. See MPEP § 303.

### 1302.12 Listing of References [R-2]

All references which have been cited by the examiner during the prosecution, including those appearing in Board of Patent Appeals and Interferences decisions or listed in the reissue oath, must be listed on either a form PTO-892 or \* >on an Information Disclosure Statement (PTO/SB/08, old PTO-1449) and initialed<. All such reference citations will be printed in the patent. References listed by a patent examiner on a "Notice of References Cited," form PTO-892, will be indicated with an asterisk in the "References Cited" section of the front page of a patent document. An example of how the "References Cited" section of the patent will appear is as follows:

#### [56] References Cited

##### U.S. PATENT DOCUMENTS

2,234,192 * 7/1955 Greene.....	75/507
4,991,048 8/1990 Larkin.....	206/207
5,000,186 12/1991 Amis.....	267/340
5,000,993 * 12/1991 Thomas et al.....	75/507

##### FOREIGN PATENT DOCUMENTS

9500000 * 6/1995 Belgium.....	75/507
200000 * 6/1990 Japan .....	75/507
9400000 9/1994 United Kingdom.	

### OTHER PUBLICATIONS

Hill, "Ferrous Precipitation," *Journal of the American Defenestration Association*, Jan. 1989, Pages 34–46.\* Clymerhill-Irons, "Ferrous Ascension for the Eighties," *Proceedings of the International Ferrous Ascension Society*, Jan.– Mar. 1979, Pages 1111–1163.

\* cited by examiner

Indication of whether a reference was listed by the examiner will be helpful in compiling statistical data related to prior art submissions so that the USPTO can better consider whether changes are required to the rules governing prior art statements.

Indication of a reference with an asterisk should not be considered to reflect any significance other than that the reference was listed on a "Notice of References Cited," form PTO-892. When an examiner lists references on a form PTO-892, the examiner lists references that are relied upon in a prior art rejection or mentioned as pertinent. See MPEP § 707.05(c). The examiner does not list references which were previously cited by the applicant (and initialed by an examiner) on an Information Disclosure Statement, for example, on a \*>PTO/SB/08<. See MPEP § 609 and § 707.05(b), (c) and (d). No distinction will be made in the "References Cited" section for other sources of references. Thus, references cited in a protest, by an attorney or agent not acting in a representative capacity but on behalf of a single inventor, and by the applicant will not be distinguished.

At time of allowance, the examiner may cite pertinent art in an examiner's amendment or statement of reasons for allowance. Such pertinent art should be listed as usual on form PTO-892, a copy of which is attached to the Notice of Allowability form PTOL-37. Such pertinent art, other than foreign patent documents and nonpatent literature, is not sent to the applicant. Such citation of art is important in the case of continuing applications where significant prior art is often of record in the parent case. In the rare instance where no art is cited in a continuation application, all the references cited during the prosecution of the parent application will be listed at allowance for printing in the patent. See MPEP § 707.05 and § 707.05(a).

When preparing an application for allowance, the technical support staff will verify that there is at least one list of references (PTO-892 or \*>PTO/SB/08 (oldPTO-1449)<) in the application. >The technical

support staff will also verify that each reference on the Information Disclosure Statement has either been initialed by the examiner or lined-through by the examiner. All lists of references are maintained in the center section of any paper file wrapper.

In the first action after termination of an interference, the examiner should make of record in each application all references not already of record which were pertinent to any preliminary motions and which were discussed in the decision on motion.

In any application, otherwise ready for issue, in which an erroneous citation has not been formally corrected in an official paper, the examiner is directed to correct the citation by an examiner's amendment. See MPEP § 707.05(g).

Any new reference cited when the application is in issue, under the practice of MPEP § 1308.01, should be added by way of a PTO-892 or PTO/SB/08.

All copies of references placed in the file wrapper during prosecution should be retained therein when the allowed application is forwarded to the Publishing Division.

### 1302.13 Signing [R-2]

The primary examiner and the assistant examiner involved in the allowance of an application will print or stamp their names on the file wrapper in the appropriate boxes, or if the application is an IFW application, type their names on the Issue Classification sheet. The assistant examiner shall place his or her initials after his or her typed, printed, or stamped name. The primary examiner will place his or her signature in the appropriate box on the file wrapper, or if the application is an IFW application, on the Issue Classification sheet so that the typed, stamped, or printed name can still be easily read. A primary examiner who prepares an application for issue types, prints, or stamps his or her name and signs the file wrapper only in the "Primary Examiner" box, or if the application is an IFW application, on the Issue Classification sheet. A line should be drawn through the "Assistant Examiner" box to make it clear that the absence of a name in the box was not an oversight.

Only the names of the primary examiner and the assistant examiner appearing on the face of the application file wrapper or the Issue Classification Sheet will be listed in the printed patent.

### 1302.14 Reasons for Allowance [R-2]

37 CFR 1.104. Nature of examination.

\*\*\*\*\*

(e) *Reasons for allowance.* If the examiner believes that the record of the prosecution as a whole does not make clear his or her reasons for allowing a claim or claims, the examiner may set forth such reasoning. The reasons shall be incorporated into an Office action rejecting other claims of the application or patent under reexamination or be the subject of a separate communication to the applicant or patent owner. The applicant or patent owner may file a statement commenting on the reasons for allowance within such time as may be specified by the examiner. Failure by the examiner to respond to any statement commenting on reasons for allowance does not give rise to any implication.

#### REASONS FOR ALLOWANCE

One of the primary purposes of 37 CFR 1.104(e) is to improve the quality and reliability of issued patents by providing a complete file history which should clearly reflect, as much as is reasonably possible, the reasons why the application was allowed. Such information facilitates evaluation of the scope and strength of a patent by the patentee and the public and may help avoid or simplify litigation of a patent.

The practice of stating the reasons for allowance is not new, and the rule merely formalizes the examiner's existing authority to do so and provides applicants or patent owners an opportunity to comment upon any such statement of the examiner.

It should be noted that the setting forth of reasons for allowance is not mandatory on the examiner's part. However, in meeting the need for the application file history to speak for itself, it is incumbent upon the examiner in exercising his or her responsibility to the public, to see that the file history is as complete as is reasonably possible.

When an application is finally acted upon and allowed, the examiner is expected to determine, at the same time, whether the reasons why the application is being allowed are evident from the record.

Prior to allowance, the examiner may also specify allowable subject matter and provide reasons for indicating such allowable subject matter in an Office communication.

In determining whether reasons for allowance should be recorded, the primary consideration lies in the first sentence of 37 CFR 1.104(e) which states:

If the examiner believes that the record of the prosecution *as a whole* does not make clear his or her reasons for allowing a claim or claims, the examiner may set forth such reasoning. (Emphasis added).

In most cases, the examiner's actions and the applicant's replies make evident the reasons for allowance, satisfying the "record as a whole" proviso of the rule. This is particularly true when applicant fully complies with 37 CFR 1.111 (b) and (c) and 37 CFR 1.133(b). Thus, where the examiner's actions clearly point out the reasons for rejection and the applicant's reply explicitly presents reasons why claims are patentable over the reference, the reasons for allowance are in all probability evident from the record and **no** statement should be necessary. Conversely, where the record is not explicit as to reasons, but allowance is in order, then a logical extension of 37 CFR 1.111 and 1.133 would dictate that the examiner should make reasons of record and such reasons should be specific.

Where specific reasons are recorded by the examiner, care must be taken to ensure that statements of reasons for allowance (or indication of allowable subject matter) are accurate, precise, and do not place unwarranted interpretations, whether broad or narrow, upon the claims. The examiner should keep in mind the possible misinterpretations of his or her statement that may be made and its possible \* effects. Each statement should include at least (1) the major difference in the claims not found in the prior art of record, and (2) the reasons why that difference is considered to define patentably over the prior art if either of these reasons for allowance is not clear in the record. The statement is not intended to necessarily state all the reasons for allowance or all the details why claims are allowed and should not be written to specifically or impliedly state that all the reasons for allowance are set forth. Where the examiner has a large number of reasons for allowing a claim, it may suffice to state only the major or important reasons, being careful to so couch the statement. For example, a statement might start: "The primary reason for the allowance of the claims is the inclusion of the limitation, in all the claims which is not found in the prior art references," with further amplification as necessary.

Stock paragraphs with meaningless or uninformative statements of the reasons for the allowance should not be used. >It is improper to use a statement of reasons for allowance to attempt to narrow a claim

by providing a special definition to a claim limitation which is argued by applicant, but not supported by a special definition in the description in cases where the ordinary meaning of the term in the prior art demonstrates that the claim remains unpatentable for the reasons of record, and where such claim narrowing is only tangential to patentability. Cf. *Festo Corp. v. Shoketsu Kinzoku Kogyo Kabushiki Co.*, 535 U.S. 722, 741, 62 USPQ2d 1705, 1714 (2002).< The statement of reasons for allowance by the examiner is intended to provide information equivalent to that contained in a file in which the examiner's Office actions and the applicant's replies make evident the examiner's reasons for allowing claims.

Examiners are urged to carefully carry out their responsibilities to see that the application file contains a complete and accurate picture of the Office's consideration of the patentability of the application.

Under the rule, the examiner must make a judgment of the individual record to determine whether or not reasons for allowance should be set out in that record. These guidelines, then, are intended to aid the examiner in making that judgment. They comprise illustrative examples as to applicability and appropriate content. They are not intended to be exhaustive.

#### **EXAMPLES OF WHEN IT IS LIKELY THAT A STATEMENT SHOULD BE ADDED TO THE RECORD**

(A) Claims are allowed on the basis of one (or some) of a number of arguments and/or affidavits presented, and a statement is necessary to identify which of these were persuasive, for example:

(1) When the arguments are presented in an appeal brief.

(2) When the arguments are presented in an ordinary reply, with or without amendment of claims.

(3) When both an affidavit under 37 CFR 1.131 and arguments concerning rejections under 35 U.S.C. 102 and 103 are presented.

(B) First action issue:

(1) Of a noncontinuing application, wherein the claims are very close to the cited prior art and the differences have not been discussed elsewhere.

(2) Of a continuing application, wherein reasons for allowance are not apparent from the record in the parent case or clear from preliminary filed matters.

(C) Withdrawal of a rejection for reasons not suggested by applicant, for example:

(1) As a result of an appeal conference.

(2) When applicant's arguments have been misdirected or are not persuasive alone and the examiner comes to realize that a more cogent argument is available.

(3) When claims are amended to avoid a rejection under 35 U.S.C. 102, but arguments (if any) fail to address the question of obviousness.

(D) Allowance after remand from the Board of Patent Appeals and Interferences.

(E) Allowance coincident with the citation of newly found references that are very close to the claims, but claims are considered patentable thereover:

(1) When reference is found and cited (but not argued) by applicant.

(2) When reference is found and cited by examiner.

(F) Where the reasons for allowance *are* of record but, in the examiner's judgment, are unclear (e.g., spread throughout the file history) so that an unreasonable effort would be required to collect them.

(G) Allowance based on a claim interpretation which might not be readily apparent, for example:

(1) Article claims in which method limitations impart patentability.

(2) Method claims in which article limitations impart patentability.

(3) Claim is so drafted that "nonanalogous" art is not applicable.

(4) Preamble or functional language "breathes life" into claim.

(H) Allowance following decision by the United States Court of Appeals for the Federal Circuit or District Court of the District of Columbia.

The reasons for allowance should refer to and incorporate the briefs and the court decision.

>

(I) Where the claims are considered patentable over the X and/or Y references cited in a search report of a corresponding PCT application and the reasons for allowance are not apparent from the record.<

## EXAMPLES OF STATEMENTS OF SUITABLE CONTENT

(A) The primary reason for allowance of the claims is the inclusion of .03 to .05 percent nickel in all of the claims. Applicant's second affidavit in example 5 shows unexpected results from this restricted range.

(B) During two telephonic interviews with applicant's attorney, Mr..... on 5/6 and 5/10/77, the examiner stated that applicant's remarks about the placement of the primary teaching's grid member were persuasive, but he pointed out that applicant did not claim the member as being within the reactor. Thus, an amendment doing such was agreed to.

(C) The \* >claims in the< application \* >are< deemed to be directed to a nonobvious improvement over the invention patented in Pat. No. 3,953,224. The \*\*>claims comprise< baffle means 12 whose effective length in the extraction tower may be varied so as to optimize and to control the extraction process.

(D) Upon reconsideration, this application has been awarded the effective filing date of application number -/---. Thus the rejection under 35 U.S.C. 102(d) and 103 over Belgium Patent No. 757,246 is withdrawn.

(E) The specific limitation as to the pressure used during compression was agreed to during the telephone interview with applicants' attorney. During said interview, it was noted that applicants contended in their amendment that a process of the combined applied teachings could not result in a successful article within a particular pressure range (see page 3, bottom, of applicant's amendment). The examiner agreed and allowed the application after incorporating the pressure range into the claim.

(F) In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art first to eliminate one of top members 4, second to eliminate plate 3, third to attach remaining member 4 directly to tube 2 and finally to substitute this modified handle for the handle 20 of Nania (see Fig. 1) especially in view of applicant's use of term "consisting."

(G) The application is allowable for the reasons set forth on page -- of the decision of the Court of Appeals for the Federal Circuit, which is hereby incorporated by reference. As noted therein, and as argued on page -- of Appellant's brief, the claimed

invention requires a one piece tubular member whereas the closest prior art requires a multiple piece assembly which does not teach or suggest the claimed invention.

### EXAMPLES OF STATEMENTS THAT ARE NOT SUITABLE AS TO CONTENT

(A) The 3-roll press couple has an upper roll 36 which is swingably adjustable to vary the pressure selectively against either of the two lower rolls. (NOTE: The significance of this statement may not be clear if no further explanation is given.)

(B) The main reasons for allowance of these claims are applicant's remarks in the appeal brief and an agreement reached in the appeal conference.

(C) The instant composition is a precursor in the manufacture of melamine resins. A thorough search of the prior art did not bring forth any composition which corresponds to the instant composition. The examiner in the art also did not know of any art which could be used against the instant composition.

(D) Claims 1-6 have been allowed because they are believed to be both novel and nonobvious.

The examiner should *not* include in his or her statement any matter which does not relate directly to the reasons for allowance. For example:

(E) Claims 1 and 2 are allowed because they are patentable over the prior art. If applicants are aware of better art than that which has been cited, they are required to call such to the attention of the examiner.

(F) The reference Jones discloses and claims an invention similar to applicant's. However, a comparison of the claims, as set forth below, demonstrates the conclusion that the inventions are noninterfering.

Most instances when the examiner finds a need to place in the file a statement of the reasons for allowing a claim or claims will come at the time of allowance. In such cases, the examiner should (a) check the appropriate box on the form PTOL-37 and (b) attach thereto a paper containing the examiner's statement of reasons for allowance. Such a statement should be typewritten. The paper should identify the application number and be clearly labeled "Statement of Reasons for Allowance." It should also specify that comments may be filed by the applicant on the statement and should preferably be submitted with the payment of the issue fee so as not to delay processing of the appli-

cation and in any event no later than payment of the issue fee.

Form paragraph 13.03 may be used for this purpose.

\*\*>

#### ¶ 13.03 Reasons for Allowance

The following is an examiner's statement of reasons for allowance: [1]

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### Examiner Note:

1. Do not use this form paragraph in reexamination proceedings, see form paragraph 22.16.
2. In bracket 1, provide a detailed statement of the reason(s) certain claim(s) have been indicated as being allowable or as containing allowable subject matter.

<

A statement may be sent to applicant with other communications, where appropriate, but should be clearly labeled as a "Statement of Reasons for Allowance" and contain the data indicated above.

Form paragraph 13.13.01 may be used to specify the reasons for indicating allowable subject matter in a communication prior to allowance.

#### ¶ 13.03.01 Reasons for Indication of Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: [1]

#### Examiner Note:

1. This form paragraph is for use in an Office action prior to allowance of the application. Use form paragraph 13.03 in the Notice of Allowability.
2. In bracket 1, provide a detailed statement of the reason(s) certain claim(s) have been indicated as being allowable or as containing allowable subject matter.

### APPLICANT'S COMMENTS ON THE REASONS FOR ALLOWANCE

The examiner's statement of reasons for allowance is an important source of prosecution file history. See *Zenith Labs., Inc. v. Bristol-Myers Squibb Co.*, 19 F.3d 1418, 30 USPQ2d 1285 (Fed. Cir. 1996). \*\*>The examiner's statement of reasons for allowance is the personal opinion of the examiner as to why the claims are allowable. The examiner's statement should not create an *estoppel*. Only applicant's state-

ments should create an *estoppel*. The failure of applicant to comment on the examiner's statement of reasons for allowance should not be treated as acquiescence to the examiner's statement. Any inferences or presumption are to be determined on a case-by-case basis by a court reviewing the patent, the USPTO examining the patent in a reissue application or a reexamination proceeding, the Board of Patent Appeals and Interferences reviewing the patent in an interference proceeding, etc. Applicant may set forth his or her position if he or she disagrees with the examiner's reasons for allowance.

Comments filed by the applicant on the examiner's statement of reasons for allowance, should preferably be submitted no later than the payment of the issue fee, to avoid processing delays. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance." Comments will be entered in the application file by the Office of Publication with an appropriate notation on the "Contents" list on the file wrapper.

The application file generally will not be returned to the examiner after the entry of such comments made by applicant on the examiner's statement of reasons for allowance. Therefore, the absence of an examiner's response to applicant's comments does not mean that the examiner agrees with or acquiesces in the reasoning of such comments. See 37 CFR 1.104(e). While the examiner may review and comment upon such a submission, the examiner has no obligation to do so.

### 1303 Notice of Allowance [R-2]

37 CFR 1.311. *Notice of Allowance.*

\*\*>

(a) If, on examination, it appears that the applicant is entitled to a patent under the law, a notice of allowance will be sent to the applicant at the correspondence address indicated in § 1.33. The notice of allowance shall specify a sum constituting the issue fee which must be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. The sum specified in the notice of allowance may also include the publication fee, in which case the issue fee and publication fee (§ 1.211(e)) must both be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. This three-month period is not extendable.<

(b) An authorization to charge the issue fee or other post-allowance fees set forth in § 1.18 to a deposit account may be filed in an individual application only after mailing of the notice of allowance. The submission of either of the following after the

mailing of a notice of allowance will operate as a request to charge the correct issue fee to any deposit account identified in a previously filed authorization to charge fees:

- (1) An incorrect issue fee; or
- (2) A completed Office-provided issue fee transmittal form (where no issue fee has been submitted).

A Notice of Allowance is prepared and mailed, and the mailing date appearing thereon is recorded on the >paper or image< file wrapper >table of contents<.

\*\*>If< an application is subject to publication under 37 CFR 1.211, the Notice of Allowance will require both the issue fee and the publication fee. See 37 CFR 1.211(e). \*\*>The Notice of Allowance and Issue Fee Due form (PTOL-85) has been revised and the revised form is entitled "Notice of Allowance and Fee(s) Due." Revision of the form was necessary to include the amount of any required publication fee, as provided in 37 CFR 1.211(e) and 1.311, and to more clearly communicate the amount of any patent term extension or adjustment earned under 35 U.S.C. 154(b). As revised, the PTOL-85 form is three pages long, with all three pages being mailed to the applicant and a duplicate being retained in the application file. The first two pages of the revised form include an indication that the publication fee is due, if the application was subject to publication and the publication fee has not already been paid. Part B of the revised form (PTOL-85B) should be returned to the Office with the payment of the issue fee. The PTOL-85B is labeled at the bottom of the form "TRANSMIT THIS FORM WITH FEE(S)." Applicants are reminded to transmit an extra copy of the PTOL-85B when payment of the issue fee is by way of authorization to debit a Deposit Account. See MPEP § 509.01.

There are three versions of page three of the revised PTOL-85 form, depending upon the filing date of the application:

(A) For applications filed before June 8, 1995, page three will state that "This application was filed prior to June 8, 1995, thus no Patent Term Extension or Adjustment applies." Utility and plant applications filed before June 8, 1995 are eligible for a 17 year term and thus are not eligible for patent term extension or adjustment under 35 U.S.C. 154(b).

(B) For applications filed on or after June 8, 1995 and before May 29, 2000, page three will state that "The patent term extension is \_ days. Any patent to issue from the above identified application will

include an indication of the \_ extension on the front page. If a continued prosecution application (CPA) was filed in the above identified application, the filing date that determines patent term extension is the filing date of the most recent CPA.” Utility and plant applications filed on or after June 8, 1995 and before May 29, 2000 may be eligible for patent term extension. See 35 U.S.C. 154(b), effective June 8, 1995, and 37 CFR 1.701.

(C) For applications filed on or after May 29, 2000, page three will state that “The patent term adjustment to date is \_ days. If the issue fee is paid on a date that is three months after the mailing date of this notice, and the patent issues on the Tuesday before the date that is 28 weeks (six and a half

months) after the mailing date of this notice, the term adjustment will be \_ days. If a continued prosecution application (CPA) was filed in the above identified application, the filing date that determines patent term extension is the filing date of the most recent CPA.” Utility and plant applications filed on or after May 29, 2000 may be eligible for patent term adjustment. See 35 U.S.C. 154(b), effective May 29, 2000, and 37 CFR 1.702 - 1.705, especially 37 CFR 1.705(a).

For more information about eighteen month publication, publication fees, and patent term adjustment, visit the USPTO Internet web site at [www.uspto.gov](http://www.uspto.gov).<

**NOTICE OF ALLOWANCE AND FEE(S) DUE**

EXAMINER
----------

ART UNIT	PAPER NUMBER
----------	--------------

DATE MAILED:

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
-----------------	-------------	----------------------	---------------------	------------------

TITLE OF INVENTION:

APPLN. TYPE	SMALL ENTITY	ISSUE FEE	PUBLICATION FEE	TOTAL FEE(S) DUE	DATE DUE
-------------	--------------	-----------	-----------------	------------------	----------

**THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.**

**THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE REFLECTS A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE APPLIED IN THIS APPLICATION. THE PTOL-85B (OR AN EQUIVALENT) MUST BE RETURNED WITHIN THIS PERIOD EVEN IF NO FEE IS DUE OR THE APPLICATION WILL BE REGARDED AS ABANDONED.**

**HOW TO REPLY TO THIS NOTICE:**

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status is changed, pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above and notify the United States Patent and Trademark Office of the change in status, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check the box below and enclose the PUBLICATION FEE and 1/2 the ISSUE FEE shown above.

Applicant claims SMALL ENTITY status.  
 See 37 CFR 1.27.

II. PART B - FEE(S) TRANSMITTAL should be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). Even if the fee(s) have already been paid, Part B - Fee(s) Transmittal should be completed and returned. If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.**

**PART B - FEE(S) TRANSMITTAL**

**Complete and send this form, together with applicable fee(s), to: Mail** **Mail Stop ISSUE FEE**  
**Commissioner for Patents**  
**P.O. Box 1450**  
**Alexandria, Virginia 22313-1450**  
**or Fax** **(703) 746-4000**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 4 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

**Certificate of Mailing or Transmission**

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (703) 746-4000, on the date indicated below.

--	---

The Director of the USPTO is requested to apply the Issue Fee and Publication Fee (if any) or to re-apply any previously paid issue fee to the application identified above.

(Authorized Signature) \_\_\_\_\_ (Date) \_\_\_\_\_

NOTE: The Issue Fee and Publication Fee (if required) will not be accepted from anyone other than the applicant, a registered attorney or agent, or the assignee or other party in interest as shown by the records of the United States Patent and Trademark Office.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DATE MAILED:

**Determination of Patent Term Extension under 35 U.S.C. 154 (b)**  
 (application filed after June 7, 1995 but prior to May 29, 2000)

The patent term extension is “\_\_\_\_” days. Any patent to issue from the above identified application will include an indication of the “\_\_\_\_” day extension on the front page.

If a continued prosecution application (CPA) was filed in the above- identified application, the filing date that determines patent term extension is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system. (<http://pair.uspto.gov>)

Any questions regarding the patent term extension or adjustment determination should be directed to the Office of Patent Legal Administration at (703) 305-1383.

PTOL-85C (REV. 06-03) Approved for use through 04/30/2004.

ART UNIT      PAPER NUMBER

DATE MAILED:

**Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)**  
 (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is “ \_\_\_\_ ” day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be “ \_\_\_\_ ” day(s).

If a Continued Prosecution Application (CPA) was filed in the above- identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system. (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (703) 305-1383. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

&lt;

### **1303.01 Amendment Received After Allowance [R-2]**

If the amendment is filed under 37 CFR 1.312, see MPEP § 714.15 to § 714.16(e). If the amendment contains claims copied from a patent, see MPEP § 2307.03.

Reference to an Issue Batch Number is no longer necessary because the Office no longer stores and tracks applications according to issue batches.

Any paper filed after receiving the Issue Notification should include the indicated patent number, unless the application has been withdrawn from issue.

### **1303.02 Undelivered [R-2]**

In case a Notice of Allowance is returned, and a new notice is sent (see MPEP § 707.13), the date of sending the notice must be changed in the file to agree with the date of such remailing. If the application is an Image File Wrapper (IFW) application, the original document, a copy of the returned document with any markings, and the remailed document should be retained in the application so that the file history is clear.

### **1303.03 Not Withheld Due to Death of Inventor**

The Notice of Allowance will not be withheld due to death of the inventor if the executor or administrator has not intervened. See MPEP § 409.01(f).

### **1304 Amendments After D-10 Notice**

For amendments received after D-10 Notice, see MPEP § 130.

#### **1304.01 Withholding From Issue of “Secrecy Order” Applications**

“Secrecy Order” applications are not sent to issue even when all of the claims have been allowed. Instead of mailing a Notice of Allowance, a D-10 Notice is sent. See MPEP § 130.

If the “Secrecy Order” in an application is withdrawn after the D-10 notice is mailed, the application should then be treated like an ordinary application in condition for allowance.

### **1305 Jurisdiction [R-2]**

Jurisdiction of the application remains with the primary examiner until the Notice of Allowance is mailed. However, the examiner may make examiner’s amendments correcting obvious errors, as when brought to the attention of the examiner by the printer, and also may admit amendments under 37 CFR 1.312 which are confined to matters of form in the specification or claims, or to the cancellation of a claim or claims. The examiner’s action on other amendments under 37 CFR 1.312 consists of a recommendation to the Director.

To regain jurisdiction over the application, the examiner must write a letter to the Director requesting it. See MPEP § 1308 and § 1308.02.

Once the patent has been granted, the U.S. Patent and Trademark Office can take no action concerning it, except as provided in 35 U.S.C. 135, 35 U.S.C. 251 through 256, 35 U.S.C. 302 through 307 and 35 U.S.C. 311 through 316.

### **1306 Issue Fee [R-2]**

The issue fee and any required publication fee are due 3 months from the date of the Notice of Allowance. The amount of the issue fee and any required publication fee are shown on the Notice of Allowance, which will reflect any issue fee previously paid in the application. For example, if the application was allowed and the issue fee paid, but applicant withdrew the application from issue and filed a Request for Continued Examination (RCE) and the application was later allowed, the Notice of Allowance will reflect an issue fee amount that is due that is the difference between the current issue fee amount and the issue fee that was previously paid. Had applicant filed a Continued Prosecution Application (CPA) instead of an RCE, the issue fee required would be the current issue fee amount and would not reflect any issue fee paid before the CPA was filed because the issue fee was paid in a prior application. Note that because the amount of the fees due is determined by the fees set forth in 37 CFR 1.18 which are in effect as of the date of submission of payment of the fees, the amount due at the time the fees are paid may differ from the amount indicated on the Notice of Allowance. Accordingly, applicants

are encouraged, at the time of submitting payment of the **Fee(s)**, to determine whether the amount of the issue fee due **or** any required publication fee has changed to avoid the patent lapsing for failure to pay the balance of the issue fee due (37 CFR 1.317) or becoming abandoned for failure to pay the publication fee. The amounts due under 35 U.S.C. 41(a) (i.e., the issue fee, but not the publication fee) are reduced by 50 per centum for small entities.

Applicants and their attorneys or agents are urged to use the **Fee(s) Transmittal** form (PTOL-85B) provided with the Notice of Allowance when submitting their payments. **Unless otherwise directed**, all post allowance correspondence should be addressed **Mail Stop Issue Fee**.

**Where it is clear that an applicant actually intends to pay the issue fee and required publication fee, but the proper fee payment is not made, for example, an incorrect issue fee amount is supplied, or a PTOL-85B Fee(s) Transmittal form is filed without payment of the issue fee, a general authorization to pay fees or a specific authorization to pay the issue fee, submitted prior to the mailing of a notice of allowance, will be allowed to act as payment of the correct issue fee.** 37 CFR 1.311(b). In addition, where the deposit account information is added to the **Fee(s) Transmittal** form (PTOL-85B), but the check box authorizing that the deposit account be charged the issue fee is not checked, the deposit account will still be charged the required issue fee and any required publication fee.

Technology Center personnel should forward all post allowance correspondence to the **Office of Initial Patent Examination (OIPE)**. The papers received by the **OIPE** will be scanned and matched with the appropriate application and the entire application will be forwarded to the appropriate Technology Center for processing.

The payment of the issue fee due may be simplified by using a U.S. Patent and Trademark Office Deposit Account or a credit card payment with form PTO-2038 for such a fee. See MPEP § 509 However, any such payment must be specifically authorized by reference to the “issue fee” or “fees due under 37 CFR 1.18.”

The **fee(s) due** will be accepted from the applicant, assignee, or a registered attorney or agent, either of record or under 37 CFR 1.34(a).

The **Director** has no authority to extend the time for paying the issue fee. Intentional failure to pay the issue fee within the 3 months permitted by 35 U.S.C. 151 does not amount to unavoidable or unintentional delay in making payment.

### **1306.01 Deferring Issuance of a Patent [R-2]**

*37 CFR 1.314. Issuance of patent.*

If applicant timely pays the issue fee, the Office will issue the patent in regular course unless the application is withdrawn from issue (§ 1.313) or the Office defers issuance of the patent. To request that the Office defer issuance of a patent, applicant must file a petition under this section including the fee set forth in § 1.17(h) and a showing of good and sufficient reasons why it is necessary to defer issuance of the patent.

There is a public policy that the patent will issue in regular course once the issue fee is timely paid. 37 CFR 1.314. It has been the policy of the U.S. Patent and Trademark Office to defer issuance of a patent, upon request, for a period of up to 1 month only, in the absence of extraordinary circumstances or requirement of the regulations (e.g., 37 CFR 1.177) which would dictate a longer period. Situations like negotiation of licenses, time for filing in foreign countries, collection of data for filing a continuation-in-part application, or a desire for simultaneous issuance of related applications are not considered to amount to extraordinary circumstances.

A petition to defer issuance of a patent is not appropriate until the issue fee is paid. Issuance of a patent cannot be deferred after an allowed application receives a patent number and issue date unless the application is withdrawn from issue under 37 CFR 1.313(b) **or** (c). The petition to defer is considered at the time the petition is correlated with the application file before the appropriate deciding official (MPEP § 1002.02(b)). In order to facilitate consideration of a petition for deferment of issue, the petition should be firmly attached to the Issue Fee Transmittal form (PTOL-85B) and clearly labeled as a Petition to Defer Issue; Attention: Office of **Petitions**.

### **1306.02 Simultaneous Issuance of Patents [R-2]**

Where applications have been allowed and a Notice of Allowance and **Fee(s) Due** (PTOL-85) has been mailed in each application, a request for simulta-

neous issuance will be granted. Unless all the applications have reached this stage of processing, or a specific requirement of the regulations is involved (e.g., 37 CFR 1.177), a request for simultaneous issuance generally will not be granted.

Applicants and their attorneys who desire the simultaneous issue of allowed applications must submit the request to: **>Mail Stop Issue Fee, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450<**, Attention: Office of Patent Publication.

The request must contain the following information about *each* allowed application for which simultaneous issue is requested:

- (A) Application number,
- (B) Filing date,
- (C) Name(s) of inventor(s),
- (D) Title of invention, and
- (E) Date of allowance.

Separate copies of the request must accompany *each* **>Fee(s)< Transmittal (PTOL-85B)**.

### **1306.03 Practice After Payment of Issue Fee [R-2]**

Under the current publication process, utility and reissue patents are issued within about four weeks after the issue fee **>**and any required publication fee are **<** received in the Office. A patent number and issue date will be assigned to an application and an Issue Notification will be mailed after the issue fee has been paid and processed by the USPTO. Because the Issue Notification may be mailed less than two weeks before the application is expected to issue as a patent, applicants are advised to file any continuing application before receiving the Issue Notification to avoid loss of copendency.

Since the Office cannot ensure that any paper filed after payment of the issue fee will reach the appropriate USPTO official before the date the application issues as a patent, applicants are also encouraged to file any necessary amendments, assignments, petitions, information disclosure statements, or other papers prior to the date of issue fee payment, preferably within one month after the Notice of Allowance has been mailed. See MPEP § 502 for post allowance correspondence.

In order to minimize disruptions and delays in the printing process, the application is **not** available after

the Notice of Allowance has been mailed unless necessary for “Query Printer Waiting”, amendments submitted under 37 CFR 1.312, information disclosure statements, and petitions. Corrected filing receipts will not be mailed after the date of mailing of the Notice of Allowance unless special circumstances exist. Duplicate filing of papers is not recommended **>**(and may be treated as a failure to engage in reasonable efforts to conclude prosecution pursuant to 37 CFR 1.704(c)(10))**<**. The same correspondence should not be mailed and faxed to the Office unless the duplication has been specifically required by the Office. See MPEP § 719.01(a).

### **ORDERING OF ALLOWED APPLICATIONS**

Examining corps personnel must submit a request to the Office of Patent Publications **>**Image Assistance **<** Center when ordering an allowed application file. **\*\***

### **1307 Change in Classification of Cases Which Are in Issue**

See MPEP § 903.07.

### **1308 Withdrawal From Issue [R-2]**

*37 CFR 1.313. Withdrawal from issue.*

(a) Applications may be withdrawn from issue for further action at the initiative of the Office or upon petition by the applicant. To request that the Office withdraw an application from issue, applicant must file a petition under this section including the fee set forth in § 1.17(h) and a showing of good and sufficient reasons why withdrawal of the application from issue is necessary. A petition under this section is not required if a request for continued examination under § 1.114 is filed prior to payment of the issue fee. If the Office withdraws the application from issue, the Office will issue a new notice of allowance if the Office again allows the application.

(b) Once the issue fee has been paid, the Office will not withdraw the application from issue at its own initiative for any reason except:

- (1) A mistake on the part of the Office;
- (2) A violation of § 1.56 or illegality in the application;
- (3) Unpatentability of one or more claims; or
- (4) For interference.

(c) Once the issue fee has been paid, the application will not be withdrawn from issue upon petition by the applicant for any reason except:

- (1) Unpatentability of one or more claims, which petition must be accompanied by an unequivocal statement that one or more claims are unpatentable, an amendment to such claim or

claims, and an explanation as to how the amendment causes such claim or claims to be patentable;

(2) Consideration of a request for continued examination in compliance with § 1.114; or

(3) Express abandonment of the application. Such express abandonment may be in favor of a continuing application.

(d) A petition under this section will not be effective to withdraw the application from issue unless it is actually received and granted by the appropriate officials before the date of issue. Withdrawal of an application from issue after payment of the issue fee may not be effective to avoid publication of application information.

>

## I. < WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE APPLICANT

>

### A. < Prior to the Payment of Issue Fee

If the applicant wishes to have an application withdrawn from issue, he or she must petition the \*>Director< under 37 CFR 1.313(a) or file a request for continued examination (RCE) under 37 CFR 1.114 with a submission and the fee set forth in 37 CFR 1.17(e). A submission may be an information disclosure statement (37 CFR 1.97 and 1.98) or an amendment. The RCE practice does not apply to utility or plant applications filed before June 8, 1995 and design applications. See MPEP § 706.07(h), subsections I, II and IX. If an applicant files a RCE (with the fee and a submission), the applicant need not pay the issue fee to avoid abandonment of the application. Applicants are cautioned against filing a RCE prior to payment of the issue fee and subsequently paying the issue fee (before the Office acts on the RCE) because doing so may result in issuance of a patent without consideration of the RCE (if the RCE is not matched with the application before the application is processed into a patent).

Petitions under 37 CFR 1.313(a) to have an application withdrawn from issue should be directed to the Technology Center (TC) Director to which the application is assigned (see MPEP § 1002.02(c)). Unless applicant receives a written communication from the Office that the application has been withdrawn from issue, the issue fee must be timely submitted to avoid abandonment.

Applicant may also file a continuing application on or before the day the issue fee is due and permit the

parent application to become abandoned for failure to pay the issue fee (35 U.S.C. 151).

>

### B. < After the Payment of Issue Fee

Once the issue fee is paid, withdrawal is permitted only for the reasons stated in 37 CFR 1.313(c). The status of the application at the time the petition is filed is determinative of whether the petition is considered under 37 CFR 1.313(a) or 37 CFR 1.313(c). Petitions under 37 CFR 1.313(c) to have an application withdrawn after payment of the issue fee should be directed to the Office of Petitions (see MPEP § 1002.02(b)).

In addition to the specific reasons identified in 37 CFR 1.313(c)(1)-(3) applicant should identify some specific and significant defect in the allowed application before the application will be withdrawn from issue. A petition under 37 CFR 1.313(c) based on the reason specified in 37 CFR 1.313(c)(2) can only be filed in utility or plant applications filed on or after June 8, 1995 because the request for continued examination (RCE) practice does not apply to these types of applications filed before June 8, 1995 and design applications. See MPEP § 706.07(h), subsections I and IX. Such a petition along with the petition fee set forth in 37 CFR 1.17(h) must include a request for continued examination in compliance with 37 CFR 1.114 (e.g., a submission and the fee set forth in 37 CFR 1.17(e)). The continued prosecution application (CPA) practice under 37 CFR 1.53(d) \*\*>only applies to design applications<. See MPEP § 201.06(d). To withdraw from issue a utility or plant application \*\*, an applicant may wish to file a petition under 37 CFR 1.313(c)(2) with a RCE or under 37 CFR 1.313(c)(3) for the express abandonment of the application in favor of a continuing application under 37 CFR 1.53(b), but not a CPA under 37 CFR 1.53(d).

Any petition filed under 37 CFR 1.313(\*>c<) to withdraw an application from issue after payment of the issue fee should be clearly marked “Petition under \*\*>37 CFR 1.313(c).” Petitions to withdraw an application from issue under 37 CFR 1.313(c) may be:

(A) mailed to “Mail Stop Petitions, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450”;

(B) transmitted by facsimile to the Central Facsimile Number (703) 872-9306; or

(C) hand-carried to the Office of Petitions (see MPEP § 1730 for the location).

Applicants are strongly advised to hand-carry the petition to the Office of Petitions to allow sufficient time to process the petition and if the petition can be granted, withdraw the application from issue. While a petition to withdraw an application from issue may be granted as late as one day prior to the patent issue date, to avoid publication and dissemination, the petition decision must be granted at least 3 weeks prior to the issue date.<

The Office cannot ensure that any petition under 37 CFR 1.313(c) will be acted upon prior to the date of patent grant. See *Filing of Continuing Applications, Amendments, or Petitions after Payment of Issue Fee*, Notice, 1221 *Off. Gaz. Pat. Office* 14 (April 6, 1999). Since a RCE (unlike a CPA under 37 CFR 1.53(d)) is not any type of new application filing, the Office cannot grant a petition to convert an untimely RCE to a continuing application under 37 CFR 1.53(b). Therefore, applicants are strongly cautioned to file any desired RCE prior to payment of issue fee. In addition, applicants considering filing a RCE after payment of the issue fee are strongly cautioned to call the Office of Petitions to determine whether sufficient time remains before the patent issue date to consider (and grant) a petition under 37 CFR 1.313(c) and what steps are needed to ensure that a grantable petition under 37 CFR 1.313(c) is before an appropriate official in the Office of Petitions in sufficient time to grant the petition before the patent is issued

>

## II. < WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE

The \* >Director< may withdraw an application from issue under 37 CFR 1.313 on his or her own initiative. See *Harley v. Lehman*, 981 F. Supp. 9, 12, 44 USPQ2d 1699, 1702 (D.D.C. 1997) (adoption of 37 CFR 1.313(b) permitting applications to be withdrawn from issue under certain narrow circumstances not directly covered by the statute was not unreasonable). 35 U.S.C. 151 provides that upon payment of the issue fee, “the patent shall issue.” Thus, an application cannot be withdrawn from issue after payment

of the issue fee consistent with 35 U.S.C. 151 unless there has been a determination that at least one of the conditions specified at 37 CFR 1.313(b)(1) through (4) exist such that the applicant is no longer “entitled to a patent under the law” as provided in 35 U.S.C. 151. See *Harley v. Lehman*, 981 F. Supp. at 11-12, 44 USPQ2d at 1701-02 (D.D.C. 1997)(Commissioner may adopt rules permitting applications to be withdrawn from issue after payment of the issue fee in situations in which the applicant is not entitled to a patent under the law); and see *Sampson v. Dann*, 466 F. Supp. 965, 973-74, 201 USPQ 15, 22 (D.D.C. 1978)(Commissioner not authorized to withdraw an application from issue after payment of the issue fee on an *ad hoc* basis, but only in situations which meet the conditions of 37 CFR 1.313(b)).

The authority to withdraw an application from issue at the initiative of the USPTO after payment of the issue fee under 37 CFR 1.313(b) has been delegated to TC Directors (see MPEP § 1002.02(c)). The Office of Petitions has also been delegated the authority to withdraw an application from issue after payment of the issue fee in those situations in which the request for withdrawal from issue is at the initiative of the USPTO by someone other than a TC Director (see MPEP § 1002.02(b)).

35 U.S.C. 151 and 37 CFR 1.313(b) do not authorize the USPTO to withdraw an application from issue after payment of the issue fee for any reason **except**:

- (1) a mistake on the part of the Office;
- (2) a violation of 37 CFR 1.56 or illegality in the application;
- (3) unpatentability of one or more claims; or
- (4) for interference.

See 37 CFR 1.313(b).

Examples of reasons that do **not** warrant withdrawing an application from issue after payment of the issue fee at the initiative of the Office are:

- (A) to permit the examiner to consider an information disclosure statement;
- (B) to permit the examiner to consider whether one or more claims are unpatentable; or
- (C) to permit the applicant to file a continuing application (including a CPA).

An application may be removed from the Office of Patent Publication, without it being withdrawn from

issue under 37 CFR 1.313(b), to permit the examiner to consider an information disclosure statement or whether one or more claims are unpatentable. Only if such consideration results in a determination that one or more claims are unpatentable does 37 CFR 1.313(b) authorize the application to be withdrawn from issue. If uncertainty exists as to whether prosecution will in fact be re-opened, the uncertainty must be resolved before the application is withdrawn from issue. If there is a question whether an application must be withdrawn from issue and no TC Director is available to decide whether withdrawal from issue is appropriate and to sign the withdrawal Notice, the application should be hand-carried to the Office of Petitions for decision on whether withdrawal from issue is appropriate and to effect the withdrawal.

Any notice withdrawing an application from issue after payment of the issue fee must specify which of the conditions set forth in 37 CFR 1.313(b)(1) through (4) exists and thus warrants withdrawal of the application from issue. Any petition under 37 CFR 1.181 to review the decision of a TC Director to withdraw an application from issue after payment of the issue fee will be decided by the Deputy Commissioner for Patent Examination Policy.

### ***Procedure to be followed when an application is withdrawn from issue***

The procedure set forth below is to be followed when a TC Director withdraws an application from issue. This processing is to be done in the Technology Center without the need to send the application to the Office of Patent Publication.

First, determine (via \*\* PALM) whether the issue fee has been paid, and whether the application has been assigned a patent number and issue date.

#### **1. Withdrawal From Issue Before Payment of Issue Fee**

If the issue fee **has not** been paid and the deadline for payment has not expired:

(A) Prepare, date stamp, and mail a “Withdrawal from Issue” letter signed by the TC Director to the applicant to effectuate the withdrawal from issue, using form paragraph 10.01. A copy of the “Withdrawal from Issue” letter should be sent to the Office of Patent Publication.

(B) Change the status of the application to status code 066 (Previous Action Withdrawn - Awaiting Further Action). Enter the Withdrawal from Issue letter in the application file and make it of record on the application file contents.

(C) Stick an Issue Information Label (Form 2016) on the file wrapper over the filled in boxes on the file wrapper that contain issue information. >If the application is an Image File Wrapper (IFW) application, this step is not done; instead a new Issue Classification sheet will be completed if the application is subsequently allowed.<

(D) Forward the application to the examiner for **prompt** appropriate action (*e.g.*, reopen prosecution, initiate interference proceedings).

\*\*>

#### **¶ 10.01 Withdrawal From Issue, Fee Not Paid**

In re Application of [1] :  
 Appl. No.: [2] : **WITHDRAWAL FROM ISSUE**  
 Filed: [3] : 37 CFR 1.313  
 For: [4] :

The purpose of this communication is to inform you that the above identified application is being withdrawn from issue pursuant to 37 CFR 1.313.

The application is being withdrawn to permit reopening of prosecution. The reasons therefor will be communicated to you by the examiner.

U.S. Patent and Trademark Office records reveal that the issue fee and the publication fee have not been paid. If the issue fee and the publication fee have been submitted, the applicant may request a refund, or may request that the fee be credited to a deposit account. However, applicant may wait until the application is either again found allowable or held abandoned. If the application is allowed, upon receipt of a new Notice of Allowance and Fee(s) Due, applicant may request that the previously submitted issue fee and publication fee be applied toward payment of the issue fee and publication fee in the amount identified on the new Notice of Allowance and Fee(s) Due. If the application is abandoned, applicant may request either a refund or a credit to a specified Deposit Account.

The application is being forwarded to the examiner for action.

[5]  
 Director,  
 Technology Center [6]  
 [7]

#### **Examiner Note:**

1. This letter is printed with the USPTO letterhead and must be signed by the TC Director.
2. DO NOT use this form letter if the issue fee and publication fee have been paid.

3. In bracket 7, insert the correspondence address of record.

<

## 2. Withdrawal From Issue After Payment of Issue Fee

If the issue fee **has** been paid:

(A) Prepare, sign, date stamp, and mail a “Notice of Withdrawal From Issue under 37 CFR 1.313(b)” to the applicant indicating that the application has been withdrawn from issue (using one of the form letters WDR-TCB1, WDR-TCB2, WDR-TCB3, or WDR-TCB4).

(B) If the application has been assigned a patent number and issue date:

(1) Prepare a “Withdrawal from Issue of” memorandum using the form memorandum WDR-MEMO. E-mail the memorandum to the Director of the Office of Patent Publication and the persons copied on the memorandum to inform them that the application has been withdrawn from issue.

(2) The “Notice of Withdrawal From Issue under 37 CFR 1.313(b)” letter to applicant must be signed, date stamped, and mailed no later than the Monday before the issue date to be effective to withdraw the application from issue.

(3) Remove the patent number from the file wrapper.

(C) Change the status of the application to status code 066 (Previous Action Withdrawn - Awaiting Further Action) by using PALM transaction code 1040. Enter the “Notice of Withdrawal From Issue under 37 CFR 1.313(b)” and the “Withdrawal from Issue of” memorandum, if applicable, in the application file and make it of record on the application file contents.

(D) Stick an Issue Information Label (Form 2016) on the file wrapper over the filled-in boxes on the file wrapper that contain issue information. >If the application is an IFW application, this step is not done; instead a new Issue Classification sheet will be completed if the application is subsequently allowed.<

(E) Forward the application to the examiner for prompt appropriate action (*e.g.*, reopen prosecution, initiate interference proceedings).

## 1308.01 Rejection After Allowance [R-2]

A claim noted as allowable shall thereafter be rejected only with the approval of the primary examiner. Great care should be exercised in authorizing such rejection. See MPEP § 706.04.

When a new reference is discovered, which obviously is applicable to one or more of the allowed claims in an application in issue, a \* >memorandum< is addressed to the Technology Center (TC) Director, requesting that the application be withdrawn from issue for the purpose of applying the new reference. This \*>memorandum< should cite the reference, and, if need be, briefly state its application. The \*>memorandum< should be submitted with the reference and the file wrapper>, if the application file is in paper<. If the examiner’s proposed action is not approved, the \* >memorandum< requesting withdrawal from issue should not be placed in the file.

If the request to withdraw from issue is approved, the \*\* >TC Director should withdraw the application from issue as explained in MPEP § 1308. After the TC Director has withdrawn the application from issue, the examiner will prepare< an Office action stating that the application has been withdrawn from issue, citing the new reference, and rejecting the claims met thereby.

The action is given a paper number and placed in the file. >For Image File Wrapper (IFW) processing, see IFW Manual.<

If the issue fee has already been paid and prosecution is reopened, the applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied >(the Notice of Allowance will reflect an issue fee amount that is due that is the difference between the current issue fee amount and the issue fee that was previously paid)<. If abandoned, applicant may request refund or credit to a deposit account.

\*\*

## 1308.02 For Interference Purposes

It may be necessary to withdraw a case from issue for reasons connected with an interference. For the

procedure to be followed, see MPEP § 2305.04 and § 2307.03.

### 1308.03 Quality Review Program for Examined Patent Applications [R-2]

The Office of Patent Quality *Quality Assurance* administers a program for reviewing the quality of the examination of patent applications. The general purpose of the program is to improve patent quality and increase the likelihood of patents being found to be valid.

The quality review is conducted by *Review Quality Assurance Specialists* on a randomly selected sample of allowed applications from each *examiner*. The sample is computer generated under the office-wide computer system (PALM), which selects a predetermined number of allowed applications from each *examiner* per year for review. A subsample of the selected allowed applications are both reviewed and independently searched by the reviewers. The only applications excluded from the sample are those in which there has been a decision by the Board of Patent Appeals and Interferences, or by a court.

The *Review Quality Assurance Specialist* independently reviews each sampled application assigned to his or her docket to determine whether any claims may be unpatentable. The *Review Quality Assurance Specialist* may consult with, discuss, or review an application with any other reviewer or professional in the examining corps, except the professional who acted on the application. The review will, with or without additional search, provide the examining corps personnel with information which will assist in improving the quality of issued applications. The program shall be used as an educational tool to aid in identifying problem areas in the examining Technology Centers (TCs).

Reviewed applications may be returned to the examining TCs for consideration of the reviewer's question(s) as to adequacy of the search and/or patentability of a claim(s).

If, during the quality review process, it is determined that one or more claims of a reviewed application are unpatentable, the prosecution of the application will be reopened. The Office action should contain, as an opening, form paragraph 13.04.

#### ¶ 13.04 Reopen Prosecution - After Notice of Allowance

Prosecution on the merits of this application is reopened on claim [1] considered unpatentable for the reasons indicated below:

[2]

#### Examiner Note:

1. This paragraph should be used when a rejection is made on any previously allowed claim(s) which for one reason or another is considered unpatentable after the Notice of Allowance (PTOL-85) has been mailed.
2. Make appropriate rejection(s) as in any other action.
3. In bracket 1, identify claim(s) that are considered unpatentable.
4. In bracket 2, state all appropriate rejections for each claim considered unpatentable.

If the issue fee has already been paid in the application, the application must be withdrawn from issue by the Office of Patent Publication, and the action should contain not only the above quoted paragraph, but also form paragraph 13.05.

#### ¶ 13.05 Reopen Prosecution - Vacate Notice of Allowance

Applicant is advised that the Notice of Allowance mailed [1] is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.

#### Examiner Note:

1. This form paragraph must be used when the prosecution is reopened after the mailing of the Notice of Allowance.
2. In bracket 1, insert date of the Notice of Allowance.

Quality *Quality Assurance* forms and papers are *not* to be included with Office actions, nor should such forms or papers be retained in the file of any reviewed application whether or not prosecution is to be reopened. The application record should *not* indicate that a review has been conducted by Quality *Quality Assurance*.

Whenever an application has been returned to the TC under the Quality *Quality Assurance* Program, the TC should promptly decide what action is to be taken in the application and inform the Office of Patent Quality *Quality Assurance* of the nature of that action by use of the appropriate form. If prosecution is to be reopened or other corrective action taken, only the forms should be returned to the Office of Patent Quality *Quality Assurance* initially, with the application being returned to the Office of Patent Quality *Quality Assurance* when

action is completed. In all other instances, both the application and the forms should be returned to the Office of Patent Quality Assurance.

### 1309 Issue of Patent [R-2]

Under the current publication process, electronic capture of most of the information to be printed in a patent will begin as soon as an allowed application is received in the Office of Patent Publication, immediately after the Notice of Allowance has been mailed. The Office of Patent Publication forwards the allowed applications to the printer for Initial Data Capture (IDC). This IDC process takes approximately five weeks to accomplish and during this time the application, if in a paper file, is not available to examiners or for purposes of making copies of the application (copies of the application files that have been published may be ordered from the Office of Public Records, upon payment of the fee, but the applications will not be removed from the publication process for purposes of making copies). After IDC is completed, the application is returned to the Office of Patent Publication, and the file will be available to examiners and the Office of Public Records.

When the issue fee is paid and all other requirements have been met (e.g., drawings) within the time allowed by law, the application is forwarded to the printer for Final Data Capture (FDC) and final issue preparation. At this point, the application can only be retrieved if it is withdrawn from issue. The application is assigned a patent number and issue date about ten days before the application issues as a patent, and an Issue Notification is mailed to inform the applicant of the patent number and issue date. A bond paper copy of the patent grant is ribboned, sealed, and mailed by the Office of Patent Publication.

All allowed applications ready for printing will be selected by chronological sequence based on the date the issue fee was paid. Special handling will be given to the following applications in these categories:

(A) Allowed cases which were made special by the Director (including those under the Special Examining Procedure).

(B) Allowed cases that have a U.S. effective filing date more than 5 years old.

(C) Allowed reissue applications.

(D) Allowed applications having an effective filing date earlier than that required for declaring an interference with a copending application claiming the same subject matter.

(E) Allowed application of a party involved in a terminated interference.

To ensure that any application falling within the scope of the categories outlined above and identified by (A) to (E) receives special treatment, the examiner should e-mail or otherwise contact the Image Assistance Center in the Office of Patent Publication for special treatment. The examiner should state the special treatment category outlined above.

35 U.S.C. 2. Powers and duties.

\*\*\*\*\*

(b) SPECIFIC POWERS.— The Office—

(1) shall adopt and use a seal of the Office, which shall be judicially noticed and with which letters patent, certificates of trademark registrations, and papers issued by the Office shall be authenticated;

\*\*\*\*\*

35 U.S.C. 153. How issued.

\*\*>

Patents shall be issued in the name of the United States of America, under the seal of the Patent and Trademark Office, and shall be signed by the Director or have his signature placed thereon and shall be recorded in the Patent and Trademark Office.

<

>

#### I. < PRINTING NAMES OF PRACTITIONERS AND FIRM ON PATENTS

The Fee(s) Transmittal form provides a space (item 2) for the person submitting the base issue fee to indicate, for printing, (1) the names of up to three registered patent attorneys or agents or, alternatively, (2) the name of a single firm, which has as a member at least one registered patent attorney or agent, and the names of up to two registered patent attorneys or agents. If the person submitting the issue fee desires that no name of practitioner or firm be printed on the patent, the space on the Fee(s) Transmittal form should be left blank. If no name is listed on the form, no name will be printed on the patent.

>

**II. < ASSIGNMENT PRINTED ON PATENT**

The **>Fee(s)<** Transmittal form portion (PTOL - 85B) of the Notice of Allowance provides a space (item 3) for assignment data which should be completed in order to comply with 37 CFR 3.81. Unless an assignee’s name and address are identified in item 3 of the **>Fee(s)<** Transmittal form PTOL-85B, the patent will issue to the applicant. Assignment data printed on the patent will be based solely on the information so supplied. See MPEP § 307. >Recording of the assignment, or submission of the assignment for recordation as set forth in 37 CFR 3.11 is required for a Patent to issue to an assignee. See 37 CFR 3.81(a).

**III. < ASSIGNEE NAMES**

Only the first appearing name of an assignee will be printed on the patent where multiple names for the *same* party are identified on the **>Fee(s)<** Transmittal form, PTOL-85B. Such multiple names may occur when both a legal name and an “also known as” or “doing business as” name is also included. This printing practice will not, however, affect the practice of recording assignments with the Office in the Assignment Division. The assignee entry on form PTOL-85B should still be completed to indicate the assignment data as recorded in the Office. For example, the assignment filed in the Office and therefore the PTOL-85B assignee entry might read “Smith Company doing business as (d.b.a.) Jones Company.” The assignee entry on the printed patent will read “Smith Company.”

\*\*

**1309.02 “Query/Printer Waiting” Cases [R-2]**

When the printer finds an apparent error in an application, the file is returned to the Office with an

attached “Query/Printer Waiting” slip noting the supposed error.

The Publishing Division forwards such “query/printer waiting” applications to the Technology Center (TC) Director’s secretary. The secretary acts as a control center in each TC and forwards the applications to the examiner by the appropriate route. The application should be taken up and acted on immediately and returned to the TC Director’s secretary within 72 hours (excluding weekends and holidays). Either necessary corrective action should be taken or an indication should be made that the application is considered to be correct as it stands. >A copy of the query form is entered into the application file, and the response from the examiner should be clear from the record.<

If the examiner concurs in the criticisms, the errors should, if possible, be corrected in clean red ink and initialed or be corrected by examiner’s amendment >(note that in an Image File Wrapper (IFW) application, an examiner’s amendment must be made by way of a formal examiner’s amendment)<. See MPEP § 1302.04.

Delays in making corrections may sometimes be avoided if the applicant or his or her representative is telephoned immediately, and the error is corrected by amendment under 37 CFR 1.312, where appropriate.

**>Applications with a paper file wrapper<** are picked up from the **>TC Director’s<** office by the messenger and returned to the Publishing Division for forwarding to the printer.

**THESE APPLICATIONS SHOULD NOT BE MAILED TO THE PUBLISHING DIVISION.**

>A similar process exists for IFW applications, with the query form being placed into the IFW, and the response from the examiner also made part of the record. For IFW processing, see IFW Manual.<

- 1400.01 Introduction [R-2]**
- A patent may be corrected or amended in four ways, namely:
- (A) by reissue,
  - (B) by the issuance of a certificate of correction which becomes a part of the patent,
  - (C) by disclaimer, and
  - (D) by reexamination.
- The first three ways are discussed in this chapter while the fourth way (reexamination) is discussed in MPEP Chapter 2200 >for *ex parte* reexamination and MPEP Chapter 2600 for *inter partes* reexamination<.
- 1401 Reissue**
- 35 U.S.C. 251. Reissue of defective patents.*
- Whenever any patent is, through error without any deceptive intention, deemed wholly or partly inoperative or invalid, by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than he had a right to claim in the

patent, the Director shall, on the surrender of such patent and the payment of the fee required by law, reissue the patent for the invention disclosed in the original patent, and in accordance with a new and amended application, for the unexpired part of the term of the original patent. No new matter shall be introduced into the application for reissue.

The Director may issue several reissued patents for distinct and separate parts of the thing patented, upon demand of the applicant, and upon payment of the required fee for a reissue for each of such reissued patents.

The provisions of this title relating to applications for patent shall be applicable to applications for reissue of a patent, except that application for reissue may be made and sworn to by the assignee of the entire interest if the application does not seek to enlarge the scope of the claims of the original patent.

No reissued patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent.

The provisions of 35 U.S.C. 251 permit the reissue of a patent to correct an error in the patent made without any deceptive intention and provide criteria for the reissue. 37 CFR 1.171 through 1.179 are rules directed to reissue.

## 1402 Grounds for Filing [R-2]

A reissue application is filed to correct an error in the patent which was made without any deceptive intention, where, as a result of the error, the patent is deemed wholly or partly inoperative or invalid. An error in the patent arises out of an error in conduct which was made in the preparation and/or prosecution of the application which became the patent.

There must be at least one error in the patent to provide grounds for reissue of the patent. If there is no error in the patent, the patent will not be reissued. The present section provides a discussion of what may be considered an error in the patent upon which to base a reissue application.

In accordance with 35 U.S.C. 251, the error upon which a reissue is based must be one which causes the patent to be “deemed wholly or partly inoperative or invalid, by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than he had a right to claim in the patent.” Thus, an error under 35 U.S.C. 251 *has not been presented* where the correction to the patent is one of spelling, or grammar, or a typographical, editorial or clerical error which does not cause the patent to be deemed wholly or partly inoperative or invalid for the reasons specified in 35 U.S.C. 251. These corrections

to a patent do not provide a basis for reissue (although these corrections may also be included in a reissue application, where a 35 U.S.C. 251 error is already present).

These corrections may be made via a certificate of correction; see MPEP § 1481.

The most common bases for filing a reissue application are:

- (A) the claims are too narrow or too broad;
- (B) the disclosure contains inaccuracies;
- (C) applicant failed to or incorrectly claimed foreign priority; and
- (D) applicant failed to make reference to or incorrectly made reference to prior copending applications.

An attorney’s failure to appreciate the full scope of the invention was held to be an error correctable through reissue in *In re Wilder*, 736 F.2d 1516, 222 USPQ 369 (Fed. Cir. 1984). The correction of misjoinder of inventors in divisional reissues has been held to be a ground for reissue. See *Ex parte Scudder*, 169 USPQ 814 (Bd. App. 1971). The Board of Appeals held in *Ex parte Scudder*, 169 USPQ at 815, that 35 U.S.C. 251 authorizes reissue application to correct misjoinder of inventors where 35 U.S.C. 256 is inadequate.

Reissue may no longer be necessary under the facts in *Ex parte Scudder, supra*, in view of 35 U.S.C. 116 which provides, *inter alia*, that:

“Inventors may apply for a patent jointly even though . . .  
(3) each did not make a contribution to the subject matter of every claim in the patent.”

See also 37 CFR 1.45(b)(3).

If the only change being made in the patent is correction of the inventorship, this can be accomplished by filing a request for a certificate of correction under the provisions of 35 U.S.C. 256 and 37 CFR 1.324. See MPEP § 1412.04 and § 1481. A Certificate of Correction will be issued if all parties are in agreement and the inventorship issue is not contested.

A reissue was granted in *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968), where the only ground urged was failure to file a certified copy of the original foreign application to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the patent was granted.

In *Brenner*, the claim for priority had been made in the prosecution of the original patent, and it was only

necessary to submit a certified copy of the priority document in the reissue application to perfect priority. Reissue is also available to convert the “error” in failing to take any steps to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the patent was granted. In a situation where it is necessary to submit for the first time both the claim for priority and the certified copy of the priority document in the reissue application, \*\* and the patent to be reissued resulted from a utility or plant application which became the patent to be reissued was filed on or after November 29, 2000, the reissue applicant \*\* must (where it is necessary to submit for the first time the claim for priority) also file a petition for an unintentionally delayed priority claim under 37 CFR 1.55(c) in addition to filing a reissue application. See MPEP § 201.14(a).

\*\*

The courts have not addressed the question of correction of the failure to adequately claim \* benefit under 35 U.S.C. 119(e) in the application (which became the patent to be reissued) via reissue. If the application which became the patent to be reissued was filed prior to November 29, 2000, correction as to \* benefit under 35 U.S.C. 119(e) would be permitted in a manner somewhat analogous to that of the priority correction discussed above. Under no circumstances, however, can a reissue be employed to correct an applicant’s mistake by adding or correcting a \* benefit claim under 35 U.S.C. 119(e) where the application, which became the patent to be reissued, was filed on or after November 29, 2000.

Section 4503 of the American Inventors Protection Act of 1999 (AIPA) amended 35 U.S.C. 119(e)(1) to state that:

No application shall be entitled to the benefit of an earlier filed provisional application under this subsection unless an amendment containing the specific reference to the earlier filed provisional application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this subsection. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section *during the pendency of the application*.

35 U.S.C. 119(e)(1), as amended by the AIPA, clearly prohibits the addition or correction of \* bene-

fit claims under 35 U.S.C. 119(e) when the application is no longer pending, e.g., an issued patent. Therefore, a reissue is not a valid mechanism for adding or correcting a \* benefit claim under 35 U.S.C. 119(e) after a patent has been granted.

Correction of failure to adequately claim priority under 35 U.S.C. 120 in an earlier filed copending U.S. Patent application was held a proper ground for reissue. *Sampson v. Comm’r Pat.*, 195 USPQ 136, 137 (D.D.C. 1976). If the utility or plant application which became the patent to be reissued was filed on or after November 29, 2000, the reissue applicant must file a petition for an unintentionally delayed priority claim under 37 CFR 1.78(a)(3) and (a)(6) in addition to filing a reissue application. See MPEP § 201.11. For treatment of an error involving disclaimer of a priority claim under 35 U.S.C. 120, see MPEP 1405.

A reissue applicant’s failure to timely file a divisional application covering the non-elected invention(s) following a restriction requirement is not considered to be error causing a patent granted on elected claims to be partially inoperative by reason of claiming less than the applicant had a right to claim. Thus, such applicant’s error is not correctable by reissue of the original patent under 35 U.S.C. 251. \*\* See MPEP § 1412.01.

A reissue may be based on a drawing correction that is substantive in nature, because such a correction qualifies as correcting an “error” under 35 U.S.C. 251 that may properly be deemed to render the patent wholly or partly inoperative. A reissue application cannot be based on a non-substantive drawing change, such as a reference numeral correction or addition, the addition of shading, or even the addition of an additional figure merely to “clarify” the disclosure. Non-substantive drawing changes may, however, be included in a reissue application that corrects at least one substantive “error” under 35 U.S.C. 251.

## 1403 Diligence in Filing [R-2]

When a reissue application is filed within 2 years from the date of the original patent, a rejection on the grounds of lack of diligence or delay in filing the reissue should not normally be made. *Ex parte Lafferty*, 190 USPQ 202 (Bd. App. 1975); but see *Rohm & Haas Co. v. Roberts Chemical Inc.*, 142 F. Supp. 499, 110 USPQ 93 (S.W. Va. 1956), *rev’d on other*

*grounds*, 245 F.2d 693, 113 USPQ 423 (4th Cir. 1957).

The fourth paragraph of 35 U.S.C. 251 states:

“No reissued patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent.”

Where any broadening reissue application is filed within two years from the date of the original patent, 35 U.S.C. 251 presumes diligence, and the examiner should not inquire why applicant failed to file the reissue application earlier within the two year period.

See MPEP § 1412.03 for broadening reissue practice. See also *In re Graff*, 111 F.3rd 874, 42 USPQ2d 1471 (Fed. Cir. 1997); *In re Bennett*, 766 F.2d 524, 528, 226 USPQ 413, 416 (Fed. Cir. 1985); *In re Fotland*, 779 F.2d 31, 228 USPQ 193 (Fed. Cir. 1985).

A reissue application that is filed on the 2-year anniversary date of the patent grant is considered as being filed within 2 years. See *Switzer v. Sockman*, 333 F.2d 935, 142 USPQ 226 (CCPA 1964) (a similar rule in interferences).

A reissue application can be granted a filing date without an oath or declaration, or without the filing fee being present. See 37 CFR 1.53(f). Applicant will be given a period of time to provide the missing parts and to pay the surcharge under 37 CFR 1.16(e). See MPEP § 1410.01.

#### 1404 Submission of Papers Where Reissue Patent Is in Litigation [R-2]

Marking of envelope: Applicants and protestors (see MPEP § 1901.03) submitting papers for entry in reissue applications of patents involved in litigation are requested to mark the outside envelope and the top right-hand portion of the papers with the words “REISSUE LITIGATION” and with the art unit or other area of the United States Patent and Trademark Office in which the reissue application is located, e.g., Commissioner for Patents, Board of Patent Appeals and Interferences, Office of Patent Legal Administration, Technology Center, Office of Patent Publication, etc. \*\* Marking of papers: Any “Reissue Litigation” papers mailed to the Office should be so marked. The markings preferably should be written in a bright color with a felt point marker. Papers marked “REISSUE LITIGATION” will be given special attention and expedited handling. (For IFW pro-

cessing, see IFW Manual.)< See MPEP § 1442.01 through § 1442.04 for examination of litigation-related reissue applications. >Protestor’s participation, including the submission of papers, is limited in accordance with 37 CFR 1.291(c).<

>

#### 1405 Reissue and Patent Term [R-2]

35 U.S.C. 251 prescribes the effect of reissue on the patent term by stating that “the Director shall... reissue the patent... for the unexpired term of the original patent.”

The maximum term of the original patent is fixed at the time the patent is granted. While the term may be subsequently shortened, e.g., through the filing of a terminal disclaimer, it cannot be extended through the filing of a reissue. Accordingly, a deletion in a reissue application of an earlier-obtained benefit claim under 35 U.S.C. 120 will not operate to lengthen the term of the patent to be reissued.

When a reissue application has been filed in an attempt to delete an earlier-obtained benefit claim under 35 U.S.C. 120, it should be treated as follows:

(A) More than one “error” (as defined by 35 U.S.C. 251) is described in a reissue declaration, and one of the errors identified is the failure to delete a 35 U.S.C. 120 benefit claim in the original patent, or the erroneous making of a claim for 35 U.S.C. 120 benefit.

If one of the errors identified is the presence of the claim for 35 U.S.C. 120 benefit in the patent, and patentee (1) states a belief that this error renders the original patent wholly or partly inoperative or invalid, and (2) is seeking to eliminate this error via the reissue proceeding, the Office will permit entry of an accompanying amendment deleting the benefit claim in the continuity data, and will not object to or reject the reissue declaration. Assuming the reissue declaration appropriately identifies or describes at least one other error being corrected, the reissue declaration would not be objected to for failure to comply with the requirements of 37 CFR 1.175.

Where the reissue declaration states that the patentee is making this correction in order to extend the term of the original patent, the examiner’s Office action will merely refer to the statement in the declaration and then point out with respect to such state-

ment that 35 U.S.C. 251 only permits reissue “... for the unexpired part of the term of the original patent.”

(B) Only one “error” (as defined by 35 U.S.C. 251) is described in a reissue declaration, and that error is the failure to delete a 35 U.S.C. 120 benefit claim in the original patent, or the erroneous making of a claim for 35 U.S.C. 120 benefit.

(1) If the only error identified in the reissue declaration is stated to be the correction or adjustment of the patent term by deleting the 35 U.S.C. 120 benefit claim, a rejection under 35 U.S.C. 251 should be made, based on the lack of an appropriate error for reissue and failure to comply with 37 CFR 1.175.

(2) If the only error identified in the reissue declaration is the need to delete a 35 U.S.C. 120 benefit claim, which the patentee seeks to now delete in the reissue application, (and no reference is made as to increasing the term of the patent), the examiner should not make a rejection under 35 U.S.C. 251 based on lack of an appropriate error for reissue and failure to comply with 37 CFR 1.175. The examiner should examine the reissue application in accordance with 37 CFR 1.176 (MPEP § 1440). A statement should, however, be made in an Office action pointing out the lack of effect (of the change in the patent) on the patent term because 35 U.S.C. 251 only permits reissue “... for the unexpired part of the term of the original patent.”<

>

## 1406 Citation and Consideration of References Cited in Original Patent [R-2]

In a reissue application, the examiner should consider and list on a PTO-892 form all references that have been cited during the original prosecution of the patent. See MPEP § 1455. An exception to this practice might be where the references cited in the original patent may no longer be relevant, e.g., in view of a narrowing of the claim scope in the reissue application.

Should applicants wish to ensure that all of the references which were cited in the original patent are considered and cited in the reissue application, an information disclosure statement (IDS) in compliance with 37 CFR 1.97 and 1.98 should be filed in the reissue application. See MPEP § 609. Note that the waiver of the 37 CFR 1.98(a)(2)(i) requirement for

submitting copies of U.S. patents and U.S. patent application publications applies to a reissue application that is filed after June 30, 2003, even though the underlying patent to be reissued resulted from an application filed before June 30, 2003. See the notice entitled 'Information Disclosure Statements May Be Filed Without Copies of U.S. Patents and Published Applications in Patent Applications filed after June 30, 2003' published on August 5, 2003 in 1273 OG 55. Note also that the Office imposes no responsibility on a reissue applicant to resubmit, in a reissue application, all the “References Cited” in the patent for which reissue is sought. Rather, applicant has a continuing duty under 37 CFR 1.56 to timely apprise the Office of any information which is material to the patentability of the claims under consideration in the reissue application. See MPEP § 1418.

Where a copy of a reference is not available and cannot be obtained through any source other than the reissue applicant (who has not submitted the copy), the examiner will not indicate on PTO-892 or an SB/08 submitted by applicant that a reference has been considered.<

## 1410 Content of Reissue Application [R-2]

*37 CFR 1.171. Application for reissue.*

An application for reissue must contain the same parts required for an application for an original patent, complying with all the rules relating thereto except as otherwise provided, and in addition, must comply with the requirements of the rules relating to reissue applications.

*37 CFR 1.173. Reissue specification, drawings, and amendments.*

(a) *Contents of a reissue application.* An application for reissue must contain the entire specification, including the claims, and the drawings of the patent. No new matter shall be introduced into the application. No reissue patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent, pursuant to 35 U.S.C. 251.

(1) *Specification, including claims.* The entire specification, including the claims, of the patent for which reissue is requested must be furnished in the form of a copy of the printed patent, in double column format, each page on only one side of a single sheet of paper. If an amendment of the reissue application is to be included, it must be made pursuant to paragraph (b) of this section. The formal requirements for papers making up the reissue application other than those set forth in this section are set out in § 1.52. Additionally, a copy of any disclaimer (§ 1.321), certificate of correction (§§ 1.322 through 1.324), or reexamination certifi-

cate (§ 1.570) issued in the patent must be included. (See also § 1.178).

(2) *Drawings.* Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

\*\*\*\*\*

The specification (including the claims and any drawings) of the reissue application is the copy of the printed patent for which reissue is requested that is submitted by applicant as part of the initial application papers. The copy of the printed patent must be submitted in double column format, each page of double column format being on only one side of the piece of paper. It should be noted that a re-typed specification is not acceptable in a reissue application; the full copy of the printed patent must be used. In addition, an applicant for reissue is required to file a reissue oath or declaration which, in addition to complying with 37 CFR 1.63, must comply with 37 CFR 1.175. Where the patent has been assigned, the reissue applicant must also provide a consent of assignee to the reissue and evidence of ownership. Where the patent has not been assigned, the reissue applicant should affirmatively state that the patent is not assigned.

An amendment may be submitted at the time of filing of a reissue application. The amendment may be made either by:

(A) physically incorporating the changes within the specification by cutting the column of the printed patent and inserting the added material and rejoining the remainder of the column; or

(B) providing a separate amendment paper with the reissue application.

In either case, the amendment must be made pursuant to 37 CFR 1.173(b) and must comply with all the provisions of 37 CFR 1.173(b)–(e) and (g).

Pursuant to 37 CFR 1.173(a)(1), applicant is required to include a copy of any disclaimer (37 CFR 1.321), certificate of correction (37 CFR 1.322 – 1.324), or reexamination certificate (37 CFR 1.520) issued in the patent for which reissue is requested. It should also be noted that 37 CFR 1.178(b) requires reissue applicants to call to the attention of the Office

any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigation (litigation covers any papers filed in the court or issued by the court, such as, for example, motions, pleadings, and court decisions including court orders) and the results of such proceedings. This duty to submit such information is a continuing duty, and runs from the time the reissue application is filed until the reissue application is abandoned or issues as a reissue patent.

It is no longer required that the reissue applicant should file an offer to surrender the original patent, see MPEP § 1416; it is only necessary that the patent be surrendered before the application is allowed.

Where appropriate, the reissue applicant may provide a claim for priority >benefit< under 35 U.S.C. 119 or 120, and may also file an Information Disclosure Statement.

The initial contents of a reissue application are discussed in detail in MPEP § 1410.01 through § 1418.

For expedited processing, new and continuing reissue application filings under 37 CFR 1.53(b) may be addressed to \*\* >: Mail Stop REISSUE, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450. Mail Stop< REISSUE should only be used for the initial filing of reissue applications, and should \* >not< be used for any subsequently filed correspondence in reissue applications. >All new reissue filings should include a copy of a completed Reissue Patent Application Transmittal Form (PTO/SB/50) to ensure that the filing of the new application will be recognized as being for a reissue application.<

The oath or declaration, any matters ancillary thereto (such as the consent of assignee), and the filing fee may be submitted after the filing date pursuant to 37 CFR 1.53(f).

The requirement for the assignee to consent to filing a reissue no longer includes a requirement for applicant to order a title report with the filing of the reissue application. Rather, the assignee entity is established by a statement on behalf of all the assignees under 37 CFR 1.172(a) and 37 CFR 3.73(b). See MPEP § 1410.01.

Form PTO/SB/50, Reissue Patent Application Transmittal, may be used for filing reissue applications.

PTO/SB/50 (04-04)  
Approved for use through 04/30/2007. OMB 0651-0033  
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

This collection of information is required by 37 CFR 1.173. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Mail Stop Reissue, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**  
 If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

## 1410.01 Reissue Applicant, Oath or Declaration, and Consent of all Assignees [R-2]

### 37 CFR 1.172. Applicants, assignees.

(a) A reissue oath must be signed and sworn to or declaration made by the inventor or inventors except as otherwise provided (see §§ 1.42, 1.43, 1.47), and must be accompanied by the written consent of all assignees, if any, owning an undivided interest in the patent, but a reissue oath may be made and sworn to or declaration made by the assignee of the entire interest if the application does not seek to enlarge the scope of the claims of the original patent. All assignees consenting to the reissue must establish their ownership interest in the patent by filing in the reissue application a submission in accordance with the provisions of § 3.73(b) of this chapter.

(b) A reissue will be granted to the original patentee, his legal representatives or assigns as the interest may appear.

### 37 CFR 3.73. Establishing right of assignee to take action.

\*\*\*\*\*

\*\*>

(b)(1) In order to request or take action in a patent or trademark matter, the assignee must establish its ownership of the patent or trademark property of paragraph (a) of this section to the satisfaction of the Director. The establishment of ownership by the assignee may be combined with the paper that requests or takes the action. Ownership is established by submitting to the Office a signed statement identifying the assignee, accompanied by either:<

(i) Documentary evidence of a chain of title from the original owner to the assignee (*e.g.*, copy of an executed assignment). The documents submitted to establish ownership may be required to be recorded pursuant to § 3.11 in the assignment records of the Office as a condition to permitting the assignee to take action in a matter pending before the Office; or

(ii) A statement specifying where documentary evidence of a chain of title from the original owner to the assignee is recorded in the assignment records of the Office (*e.g.*, reel and frame number).

(2) The submission establishing ownership must show that the person signing the submission is a person authorized to act on behalf of the assignee by:

(i) Including a statement that the person signing the submission is authorized to act on behalf of the assignee; or

(ii) Being signed by a person having apparent authority to sign on behalf of the assignee, *e.g.*, an officer of the assignee.

(c) For patent matters only:

(1) Establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted.

(2) If the submission under this section is by an assignee of less than the entire right, title and interest, such assignee must

indicate the extent (by percentage) of its ownership interest, or the Office may refuse to accept the submission as an establishment of ownership.

The reissue oath must be signed and sworn to by all the inventors, or declaration made by all the inventors, except as otherwise provided in 37 CFR 1.42, 1.43, and 1.47 (see MPEP § 409). Pursuant to 37 CFR 1.172, where the reissue application does *not* seek to enlarge the scope of any of the claims of the original patent, the reissue oath may be made and sworn to, or declaration made, by the assignee of the entire interest. Depending on the circumstances, either Form PTO/SB/51, Reissue Application Declaration by the Inventor, or Form PTO/SB/52, Reissue Application Declaration by the Assignee, may be used to prepare a declaration in a reissue application. These forms are reproduced in MPEP § 1414.

>If an inventor is to be added in a reissue application, a proper reissue oath or declaration including the signatures of all of the inventors is required. If one or more inventors are being deleted in a reissue application, an oath or declaration must be supplied over the signatures of the remaining inventors. Note that although an inventor being deleted in a reissue application need not sign the oath or declaration, if that inventor to be deleted has any ownership interest in the patent (*e.g.*, that inventor did not assign away his/her rights to the patent), the signature of that inventor must be supplied in the consent to filing the reissue application. See MPEP § 1412.04 as to correction of inventorship via reissue.<

## CONSENT TO THE REISSUE

Where no assignee exists, applicant should affirmatively state that fact. >This can be done by simply checking the 'NO' box of item 7 of Form PTO/SB/50 (which form may be signed by the inventors, or by a registered practitioner).< If the file record is silent as to the existence of an assignee, it will be presumed that *an assignee does exist*. This presumption should be set forth by the examiner in the first Office action alerting applicant to the requirement. It should be noted that the mere filing of a written assertion of small entity status in no way relieves applicant of the requirement to affirmatively state that no assignee exists.

Where a written assertion of small entity status, or other paper in file indicates that the application/patent is assigned, and there is no consent by the assignee named in the written assertion of small entity, the examiner should make inquiry into the matter in an Office action, even if the record otherwise indicates that the application/patent is not assigned.

The reissue oath or declaration must be accompanied by the written consent of all assignees. 35 U.S.C. 111(a) and 37 CFR 1.53(b) provide, however, for according an application a filing date if filed with a specification, including claim(s), and any required drawings. Thus, where an application is filed without an oath or declaration, or without the consent of all assignees, if the application otherwise complies with 37 CFR 1.53(b) and the reissue rules, the Office of Initial Patent Examination (OIPE) will accord a filing date and send out a notice of missing parts setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(e). If the reissue oath or declaration is filed but the assignee consent is lacking, the surcharge is required because, until the consent is filed, the reissue oath or declaration is defective, since it is not apparent that the signatures thereon are proper absent an indication that the assignees have consented to the filing.

The consent of assignee must be signed by a party authorized to act on behalf of the assignee. See MPEP § 324 for a discussion of parties authorized to act on behalf of the assignee. The consent to the reissue application may use language such as:

The XYZ Corporation, assignee of U.S. Patent No. 9,999,999, consents to the filing of reissue application No. 09/999,999 (or the present application, if filed with the initial application papers) for the reissue of U.S. Patent No. 9,999,999.

---

Lilly M. Schor

Vice President,

XYZ Corporation

Where the written consent of all the assignees to the filing of the reissue application cannot be obtained, applicant may under appropriate circumstances petition to the Office of Petitions (MPEP § 1002.02(b)) for a waiver under 37 CFR 1.183 of the requirement

of 37 CFR 1.172, to permit the acceptance of the filing of the reissue application. The petition fee under 37 CFR 1.17(h) must be included with the petition.

The reissue application can then be examined, but will not be allowed or issued without the consent of all the assignees as required by 37 CFR 1.172. *See N. B. Fassett*, 1877 C.D. 32, 11 O.G. 420 (Comm'r Pat. 1877); *James D. Wright*, 1876 C.D. 217, 10 O.G. 587 (Comm'r Pat. 1876).

>Where a **continuation** reissue application is filed with a copy of the assignee consent from the parent reissue application, and the parent reissue application is not to be abandoned, the copy of the consent should not be accepted. Where a **divisional** reissue application is filed with a copy of the assignee consent from the parent reissue application, regardless of whether or not the parent reissue application is to be abandoned, the copy of the consent should not be accepted. The copy of the consent from the parent does not indicate that the assignee has consented to the addition of the new invention of the divisional reissue application to the original patent, or to the addition of the new error correction of the continuation reissue application. (Presumably, a new correction has been added via the continuation, since the parent is still pending.) As noted above, OIPE will accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(e)

Where a continuation reissue application is filed with a copy of the assignee consent from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the consent should be accepted by the Office<

Form paragraph 14.15 may be used to indicate that the consent of the assignee is lacking.

\*\*>

*¶ 14.15 Consent of Assignee to Reissue Lacking*

This application is objected to under 37 CFR 1.172(a) as lacking the written consent of all assignees owning an undivided interest in the patent. The consent of the assignee must be in compliance with 37 CFR 1.172. See MPEP § 1410.01.

A proper assent of the assignee in compliance with 37 CFR 1.172 and 3.73 is required in reply to this Office action.

**Examiner Note:**

1. This form paragraph may be used in an Office action which rejects any of the claims on other grounds.

2. If a consent document/statement has been submitted but is insufficient (e.g., not by all the assignees) or is otherwise ineffective (e.g., a conditional consent, or a copy of the consent from the parent reissue application was filed in this continuation reissue application and the parent reissue application is not being abandoned), an explanation of such is to be included following this form paragraph.

3. If the case is otherwise ready for allowance, this form paragraph should be followed by form paragraph 7.51 (insert the phrase --See above-- in bracket 1 of form paragraph 7.51).

<

## PROOF OF OWNERSHIP OF ASSIGNEE

The assignee that consents to the filing of the reissue application (as discussed above) must also establish that it is the assignee, *i.e.*, the owner, of the patent. See 37 CFR 1.172. *Accordingly, a 37 CFR 3.73(b) paper establishing the ownership of the assignee should be submitted at the time of filing the reissue application, in order to support the consent of the assignee.* The assignee must establish its ownership in accordance with 37 CFR 3.73(b) by:

(A) filing in the reissue application documentary evidence of a chain of title from the original owner to the assignee; or

(B) specifying in the record of the reissue application where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

Documents that are submitted to establish ownership may be required to be recorded. Compliance with 37 CFR 3.73(b) may be provided as part of the same paper in which the consent by assignee is provided.

Upon initial receipt of a reissue application, the examiner should inspect the application to determine whether the submission under 37 CFR 1.172 and 37 CFR 3.73(b) establishing the ownership of the assignee is present and sufficient.

If an assignment document is attached with the 37 CFR 3.73(b) submission, the assignment should be reviewed to ensure that the named assignee is the same for the assignment document and the 37 CFR 3.73(b) statement, and that the assignment document is an assignment of the patent to be reissued to the assignee. If an assignment document is not attached with the 37 CFR 3.73(b) statement, but rather the reel and frame number where the assignment document is recorded in the USPTO is referenced in the 37 CFR 3.73(b) statement, it will be presumed that the assign-

ment recorded in the USPTO supports the statement identifying the assignee. It will not be necessary for the examiner to obtain a copy of the recorded assignment document. If the submission under 37 CFR 1.172 and 37 CFR 3.73(b) is not present, form paragraph 14.16 may be used to indicate that the assignee has not provided evidence of ownership.

### ¶ 14.16 Failure of Assignee To Establish Ownership

This application is objected to under 37 CFR 1.172(a) as the assignee has not established its ownership interest in the patent for which reissue is being requested. An assignee must establish its ownership interest *in order to support the consent to a reissue application required by 37 CFR 1.172(a)*. The assignee's ownership interest is established by:

(a) filing in the reissue application evidence of a chain of title from the original owner to the assignee, or

(b) specifying in the record of the reissue application where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. See MPEP § 1410.01.

An appropriate paper satisfying the requirements of 37 CFR 3.73 must be submitted in reply to this Office action.

### Examiner Note:

1. This form paragraph may be used in an Office action which rejects any of the claims on other grounds.
2. If otherwise ready for allowance, this form paragraph should be followed by form paragraph 7.51 (insert the phrase --See above-- in bracket 1 of form paragraph 7.51).

Just as the consent of assignee must be signed by a party authorized to act on behalf of the assignee, the submission with respect to 37 CFR 3.73(b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. The signature of an attorney or agent registered to practice before the Office is not sufficient, unless that attorney or agent is authorized to act on behalf of the assignee.

If the submission under 37 CFR 3.73(b) to establish ownership is not signed by a party authorized to act on behalf of the assignee, the appropriate paragraphs of form paragraphs 14.16.01 through 14.16.06 may be used.

### ¶ 14.16.01 Establishment of Ownership Not Signed by Appropriate Party

This application is objected to under 37 CFR 1.172(a) as the assignee has not established its ownership interest in the patent for which reissue is being requested. An assignee must establish its ownership interest *in order to support the consent to a reissue application required by 37 CFR 1.172(a)*. The submission establishing the ownership interest of the assignee is informal. There is

no indication of record that the party who signed the submission is an appropriate party to sign on behalf of the assignee. 37 CFR 3.73(b)

A proper submission establishing ownership interest in the patent, pursuant to 37 CFR 1.172(a), is required in response to this action.

**Examiner Note:**

1. This form paragraph should be followed: (a) by one of form paragraphs 14.16.02 through 14.16.04, (b) then by form paragraph 14.16.05, (c) then optionally by form paragraph 14.16.06.
2. See MPEP § 1410.01.

\*\*>

*¶ 14.16.02 Failure To State Capacity To Sign*

The person who signed the submission establishing ownership interest has failed to state his/her capacity to sign for the corporation or other business entity, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

**Examiner Note:**

1. This form paragraph is to be used when the person signing the submission establishing ownership interest does not state his/her capacity (e.g., as a recognized officer) to sign for the assignee, and is not established as being authorized to act on behalf of the assignee.
2. Use form paragraph 14.16.06 to explain how an official, other than a recognized officer, may properly sign a submission establishing ownership interest.

<

*¶ 14.16.03 Lack of Capacity To Sign*

The person who signed the submission establishing ownership interest is not recognized as an officer of the assignee, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

\*\*>

*¶ 14.16.04 Attorney/Agent of Record Signs*

The submission establishing ownership interest was signed by applicant's [I]. An attorney or agent of record is not authorized to sign a submission establishing ownership interest, unless he/she has been established as being authorized to act on behalf of the assignee. See MPEP § 324.

**Examiner Note:**

1. This form paragraph is to be used when the person signing the submission establishing ownership interest is an attorney or agent of record who is not an authorized officer as defined in MPEP § 324 and has not been established as being authorized to act on behalf of the assignee.
2. Use form paragraph 14.16.06 to explain how an official, other than a recognized officer, may properly sign a submission establishing ownership interest.
3. In bracket 1, insert either --attorney-- or --agent--.

*¶ 14.16.06 Criteria To Accept When Signed by a Non-Recognized Officer*

It would be acceptable for a person, other than a recognized officer, to sign a submission establishing ownership interest, provided the record for the application includes a duly signed statement that the person is empowered to sign a submission establishing ownership interest and/or act on behalf of the assignee.

Accordingly, a new submission establishing ownership interest which includes such a statement above, will be considered to be signed by an appropriate official of the assignee. A separately filed paper referencing the previously filed submission establishing ownership interest and containing a proper empowerment statement would also be acceptable.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.16.02, 14.16.03 or 14.16.04.
2. When one of form paragraphs 14.16.02, 14.16.03 or 14.16.04 is used to indicate that a submission establishing ownership interest is not proper because it was not signed by a recognized officer, this form paragraph should be used to point out one way to correct the problem.
3. While an indication of the person's title is desirable, its inclusion is not mandatory when this option is employed.

<

Where the submission establishes the assignee's ownership as to the patent, ownership as to the reissue application will be presumed. Accordingly, a submission as to the ownership of the patent will be construed to satisfy the 37 CFR 1.172 (and 37 CFR 3.73(b)) requirements for establishing ownership of the application. Thus, a terminal disclaimer can be filed in a reissue application where ownership of the patent has been \* >established,< without the need for a separate submission under 37 CFR 3.73(b) showing ownership of the reissue application.

Even if the submission states that it is establishing ownership of the reissue application (rather than the patent), the submission should be accepted by the examiner as also establishing ownership in the patent. The documentation in the submission establishing ownership of the reissue application \* >must,< of \* >necessity,< include chain of title as to the patent.

**COMPARISON OF ASSIGNEE THAT CONSENTS TO ASSIGNEE SET FORTH IN SUBMISSION ESTABLISHING OWNERSHIP INTEREST**

The examiner must inspect both the consent and documentary evidence of ownership to determine whether the requirements of 37 CFR 1.172 have been

met. The assignee \* >identified< by the documentary evidence must be the same assignee which signed the consent. Also, the person who signs the consent for the assignee and the person who signs the submission of evidence of ownership for the assignee must both be persons having authority to do so. See also MPEP § 324.

The reissue patent will be granted to the original patentee, his or her legal representatives or assigns as the interest may appear.

## 1411 Form of Specification [R-2]

*37 CFR 1.173. Reissue specification, drawings, and amendments.*

(a) *Contents of a reissue application.* An application for reissue must contain the entire specification, including the claims, and the drawings of the patent. No new matter shall be introduced into the application. No reissue patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent, pursuant to 35 U.S.C. 251.

(1) *Specification, including claims.* The entire specification, including the claims, of the patent for which reissue is requested must be furnished in the form of a copy of the printed patent, in double column format, each page on only one side of a single sheet of paper. If an amendment of the reissue application is to be included, it must be made pursuant to paragraph (b) of this section. The formal requirements for papers making up the reissue application other than those set forth in this section are set out in § 1.52. Additionally, a copy of any disclaimer (§ 1.321), certificate of correction (§§ 1.322 through 1.324), or reexamination certificate (§ 1.570) issued in the patent must be included. (See also § 1.178).

(2) *Drawings.* Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

\*\*\*\*\*

The file wrappers of all /08 and earlier series reissue applications are stamped “REISSUE” above the application number on the front of the file. “Reissue” also appears below the application number on the printed label on the file wrapper of the application with 08/ and earlier series.

Reissue applications filed after July of 1998 (09/ series and later) are placed in an orange and white striped file wrapper and can be easily identified as

reissue applications. >(For IFW Processing, see IFW Manual.)<

Reissue applications filed prior to November 7, 2000 should be furnished in the form of cut-up soft copies of the original patent, with only a single column of the printed patent securely mounted on a separate sheet of paper.

For reissue applications filed on or after November 7, 2000, 37 CFR 1.173(a)(1) requires that the application specification, including the claims, >must< be furnished in the form of a copy of the printed patent in double column format (so that the patent can be simply copied without cutting). \*\* >Applicants are required to submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed (37 CFR 1.173(a)(2)). Any changes to the drawings must be made in accordance with 37 CFR 1.173(b)(3). Thus, a full copy of the printed patent (including the front page) is used to provide the abstract, drawings, specification, and claims of the patent for the reissue application. Each< page of the patent \* >must appear< on only one side of each individual page of the specification of the reissue application >; a two sided copy of the patent is not proper<. It should be noted that a re-typed specification is not acceptable in a reissue application; the full copy of the printed patent must be used. \*\* >If, however, the changes to be made to the patent are so extensive/ numerous that reading and understanding the specification is extremely difficult and error-prone, a clean copy of the specification may be submitted if accompanied by a grantable petition under 37 CFR 1.183 for waiver of 37 CFR 1.125(d) and 37 CFR 1.173(a)(1)<.

Pursuant to 37 CFR 1.173(b), amendments may be made **at the time of filing** of a reissue application. The amendment may be made either by:

(A) physically incorporating the changes within the specification by cutting the column of the printed patent and inserting the added material and rejoining the remainder of the column; or

(B) providing a preliminary amendment (a separate amendment paper) directing that specified changes be made to the copy of the printed patent.

The presentation of the insertions or deletions as part of the original reissue specification is an amendment under 37 CFR 1.173(b). An amendment of the reissue application made at the time of filing of the

reissue application must be made in accordance with 37 CFR 1.173(b)-(e) and (g); see MPEP § 1453. Thus, as required by 37 CFR 1.173(c), an amendment of the claims made at the time of filing of a reissue application must include a separate paper setting forth the status of all claims (i.e., pending or canceled), and an explanation of the support in the disclosure of the patent for the changes made to the claims.

If a chart, table, or chemical formula is amended and it spans two columns of the patent, it should not be split. Rather, the chart, table, or chemical formula should be provided in its entirety *as part of the column of the patent to which it pertains*, in order to provide a continuity of the description. When doing so, the chart, table, or chemical formula may extend beyond the width of the column. Change in only a part of a word or chemical formula is not permitted. Entire words or chemical formulas must be shown as being changed. Deletion of a chemical formula should be shown by brackets which are substantially larger and darker than any in the formula.

>Where a terminal disclaimer was filed in the application for the patent to be reissued, a copy of that terminal disclaimer is not needed in the reissue application file. (The face of the file wrapper of the reissue application should, however, be marked in order to indicate that a terminal disclaimer has been filed for the patent (and will be effective for the patent as it will be reissued)). (For IFW processing, see IFW Manual.)<

Twice reissued patent:

Examples of the form for a twice-reissued patent are found in Re. 23,558 and Re. 28,488. Double underlining and double bracketing are used in the second reissue application, while **bold**-faced type and double bracketing appear in the printed patent (the second reissue patent) to indicate further insertions and deletions, respectively, in the second reissue patent.

When a copy of a first reissue patent is used as the specification of a second reissue application (filed as a reissue of a reissue), additions made by the first reissue will already be printed in italics, and should remain in such format. Thus, applicants need only present additions to the specification/claims in the second reissue application as double underlined text. Subject matter to be deleted from the first reissue

patent should be presented in the second reissue application within sets of double brackets.

### 1411.01 Certificate of Correction or Disclaimer in Original Patent [R-2]

The applicant should include any changes, additions, or deletions that were made by a Certificate of Correction to the original patent grant in the reissue application without underlining or bracketing. The examiner should \* make certain that all Certificate of Correction changes in the patent have been properly incorporated into the reissue application.

Certificate of Correction changes and disclaimer of claim(s) under 37 CFR 1.321(a) should be made without using underlining or brackets. Since these are part of the original patent and were made before the reissue was filed, they should show up in the printed reissue >patent< document as part of the original patent, i.e., not in italics or bracketed. If the changes are extensive and/or applicant has submitted them improperly with underlining and brackets, a clean copy of the specification with the Certificate of Correction changes in it may be requested by the examiner. >In order for the clean copy to be entered as a substitute specification, the reissue applicant must file a grantable petition under 37 CFR 1.183 for waiver of 37 CFR 1.125(d) and 37 CFR 1.173(a)(1). The examiner's request for the clean copy will generally serve as sufficient basis for granting the petition.<

### 1411.02 New Matter

New matter, that is, matter not present in the patent sought to be reissued, is excluded from a reissue application in accordance with 35 U.S.C. 251.

The claims in the reissue application must be for subject matter which the applicant had the right to claim in the original patent. Any change in the patent made via the reissue application should be checked to ensure that it does not introduce new matter. Note that new matter may exist by virtue of the omission of a feature or of a step in a method. See *United States Industrial Chemicals, Inc. v. Carbide & Carbon Chemicals Corp.*, 315 U.S. 668, 53 USPQ 6 (1942).

Form paragraph 14.22.01 may be used where new matter has been added anywhere in "the application for reissue" as prohibited by 35 U.S.C. 251.

¶ 14.22.01 *Rejection, 35 U.S.C. 251, New Matter*

Claim [1] rejected under 35 U.S.C. 251 as being based upon new matter added to the patent for which reissue is sought. The added material which is not supported by the prior patent is as follows: [2]

**Examiner Note:**

1. In bracket 2, fill in the applicable page and line numbers and provide an explanation of your position, as appropriate.
2. A rejection under 35 U.S.C. 112, first paragraph, should also be made if the new matter is added to the claims or is added to the specification and affects the claims. If new matter is added to the specification and does not affect the claims, an objection should be made based upon 35 U.S.C. 132 using form paragraph 7.28.

## 1412 Content of Claims

The content of claims in a reissue application is somewhat limited, as is indicated in MPEP § 1412.01 through MPEP § 1412.03.

### 1412.01 Reissue Claims Must Be for Same General Invention [R-2]

The reissue claims must be for the same invention as that \* >**disclosed**< as being the invention in the original patent, as required by 35 U.S.C. 251. This does *not* mean that the invention claimed in the reissue must have been claimed in the original patent, although this is evidence that applicants considered it their invention. The entire disclosure, not just the claim(s), is considered in determining what the patentee objectively intended as his or her invention. The proper test as to whether reissue claims are for the same invention as that disclosed as being the invention in the original patent is “an essentially factual inquiry confined to the objective intent manifested by the **original patent.**” *In re Amos*, 953 F.2d 613, 618, 21 USPQ2d 1271, 1274 (Fed. Cir. 1991) (quoting *In re Rowand*, 526 F.2d 558, 560, 187 USPQ 487, 489 (CCPA 1975)) (emphasis added). See also *In re Mead*, 581 F.2d 257, 198 USPQ 412 (CCPA 1978). The “original patent” requirement of 35 U.S.C. 251 must be understood in light of *In re Amos*, *supra*, where the Court of Appeals for the Federal Circuit stated:

We conclude that, under both *Mead* and *Rowand*, a claim submitted in reissue may be rejected under the “original patent” clause if the original specification demonstrates, to one skilled in the art, an absence of disclosure sufficient to indicate that a patentee could have claimed the subject matter. Merely finding that the subject matter was “not originally claimed, not an object of the original patent,

and not depicted in the drawing,” does not answer the essential inquiry under the “original patent” clause of § 251, which is whether one skilled in the art, reading the specification, would identify the subject matter of the new claims as invented and disclosed by the patentees. In short, the absence of an “intent,” even if objectively evident from the earlier claims, the drawings, or the original objects of the invention is simply not enough to establish that the new claims are not drawn to the invention disclosed in the original patent.

953 F.2d at 618-19, 21 USPQ2d at 1275. Claims presented in a reissue application are considered to satisfy the requirement of 35 U.S.C. 251 that the claims be “for the invention disclosed in the original patent” where:

(A) the claims presented in the reissue application are described in the original patent specification and enabled by the original patent specification such that 35 U.S.C. 112 first paragraph is satisfied; and

(B) nothing in the original patent specification indicates an intent not to claim the subject matter of the claims presented in the reissue application.

>The presence of< some disclosure (description and enablement) in the original patent should evidence that applicant intended to claim or that applicant considered the material now claimed to be his or her invention.

The original patent specification would indicate an intent not to claim the subject matter of the claims presented in the reissue application in a situation analogous to the following:

The original patent specification discloses that composition X is not suitable (or not satisfactory) for molding an item because composition X fails to provide quick drying. After the patent issues, it is found that composition X would be desirable for the molding in spite of the failure to provide quick drying, because of some other newly recognized benefit from composition X. A claim to composition X or a method of use thereof would not be permitted in a reissue application, because the original patent specification contained an explicit statement of intent *not* to claim composition X or a method of use thereof.

In most instances, however, the mere failure to claim a disclosed embodiment in the original patent (absent an explicit statement in the original patent specification of unsuitability of the embodiment)

would **not** be grounds for prohibiting a claim to that embodiment in the reissue.

### >FAILURE TO TIMELY FILE A DIVISIONAL APPLICATION PRIOR TO ISSUANCE OF ORIGINAL PATENT

Where a restriction requirement was made in an application and applicant permitted the elected invention to issue as a patent without the filing of a divisional application on the non-elected invention(s), the non-elected invention(s) cannot be recovered by filing a reissue application. A reissue applicant's failure to timely file a divisional application covering the non-elected invention(s) in response to a restriction requirement is not considered to be error causing a patent granted on the elected claims to be partially inoperative by reason of claiming less than the applicant had a right to claim. Accordingly, such error is not correctable by reissue of the original patent under 35 U.S.C. 251. *In re Watkinson*, 900 F.2d 230, 14 USPQ2d 1407 (Fed. Cir. 1990); *In re Orita*, 550 F.2d 1277, 1280, 193 USPQ 145, 148 (CCPA 1977). See also *In re Mead*, 581 F.2d 251, 198 USPQ 412 (CCPA 1978). In this situation, the reissue claims should be rejected under 35 U.S.C. 251 for lack of defect in the original patent and lack of error in obtaining the original patent. Compare with *In re Doyle*, 293 F.3d 1355, 63 USPQ2d 1161 (Fed. Cir. 2002) where the court permitted the patentee to file a reissue application to present a so-called linking claim, a claim broad enough to read on or link the invention elected (and patented) together with the invention not elected. The non-elected invention(s) were inadvertently not filed as a divisional application.<

## 1412.02 Recapture of Canceled Subject Matter [R-2]

\*\* >A reissue will not be granted to 'recapture' claimed subject matter which was surrendered in an application to obtain the original patent. *Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984); *In re Wadlinger*, 496 F.2d 1200, 181 USPQ

826 (CCPA 1974); *In re Richman*, 409 F.2d 269, 276, 161 USPQ 359, 363-364 (CCPA 1969); *In re Willingham*, 282 F.2d 353, 127 USPQ 211 (CCPA 1960).

### I. THREE STEP TEST FOR RECAPTURE:

*In Clement*, 131 F.3d at 1468-70, 45 USPQ2d at 1164-65, the Court of Appeals for the Federal Circuit set forth a three step test for recapture analysis. In *Pannu*, 258 F.3d at 1371, 59 USPQ2d at 1600, the court restated this test as follows:

Application of the recapture rule is a three-step process.

The **first step** is to 'determine whether and in what aspect the reissue claims are broader than the patent claims.'....

'The **second step** is to determine whether the broader aspects of the reissued claim related to surrendered subject matter' ....

**Finally**, the court must determine whether the reissued claims were materially narrowed in other respects to avoid the recapture rule. [Emphasis added]

#### A. *The First Step - Was There Broadening?*

In every reissue application, the examiner must first review each claim for the presence of broadening, as compared with the scope of the claims of the patent to be reissued. A reissue claim is broadened where some limitation of the patent claims is no longer required in the reissue claim; see MPEP § 1412.03 for guidance as to the nature of a 'broadening claim.' If the reissue claim is not broadened in any respect as compared to the patent claims, the analysis ends; there is no recapture.

#### B. *The Second Step - Does Any Broadening Aspect of the Reissued Claim Relate to Surrendered Subject Matter?*

Where a claim in a reissue application is broadened in some respect as compared to the patent claims, the examiner must next determine whether the broadening aspect(s) of that reissue claim relate(s) to subject matter that applicant previously surrendered during the prosecution of the original application (which became the patent to be reissued). Each limitation of the patent claims, which is omitted or broadened in the reissue claim, must be reviewed for this determination. This involves two sub-steps:

## 1. The Two Sub-Steps:

(A) It must first be determined whether there was any surrender of subject matter made in the prosecution of the original application which became the patent to be reissued.

If an original patent claim limitation now being omitted or broadened in the present reissue application was originally relied upon by applicant in the original application to make the claims allowable over the art, the omitted limitation relates to subject matter previously surrendered by applicant. The reliance by applicant to define the original patent claims over the art can be by way of presentation of new/amended claims to define over the art, or an argument/statement by applicant that a limitation of the claim(s) defines over the art. To determine whether such reliance occurred, the examiner must review the prosecution history of the original application file (of the patent to be reissued) for recapture. The prosecution history includes the rejections and applicant's arguments made therein.

If there was no surrender of subject matter made in the prosecution of the original application, again the analysis ends and there is no recapture.

(B) If there was a surrender of subject matter in the original application prosecution, it must then be determined whether any of the broadening of the reissue claims is in the area of the surrendered subject matter. All of the broadening aspects of reissue claims must be analyzed to determine if any of the omitted/broadened limitation(s) are directed to limitations relied upon by applicant in the original application to make the claims allowable over the art.

## 2. Examples of the *Pannu* Second Step Analysis:

### (A) Example (1) - Argument without amendment:

In *Hester, supra*, the Federal Circuit held that the surrender which forms the basis for impermissible recapture "can occur through arguments alone". 142 F.3d at 1482, 46 USPQ2d at 1649. For example, assume that limitation A of the patent claims is omitted in the reissue claims. This omission provides a broadening aspect in the reissue claims, as compared to the claims of the patent. If the omitted limitation A was argued in the original application to make the application claims allowable over the art in the appli-

cation, then the omitted limitation relates to subject matter previously surrendered in the original application, and recapture will exist. Accordingly, where claims are broadened in a reissue application, the examiner should review the prosecution history of the original patent file for recapture, even where the claims were never amended during the prosecution of the application which resulted in the patent.

Note: The argument that the claim limitation defined over the rejection must have been specific as to the limitation relied upon, rather than a general statement regarding the claims as a whole. A general 'boiler plate' sentence in the original application will not, by itself, be sufficient to establish surrender and recapture.

An example of a general "boiler plate" sentence of argument is:

"In closing, it is argued that the limitations of claims 1-7 distinguish the claims from the teachings of the prior art, and claims 1-7 are thus patentable."

An argument that merely states that all the limitations of the claims define over the prior art will also not, by itself, be sufficient to establish surrender and recapture. An example is:

"Claims 1-5 set forth a power-train apparatus which comprises the combination of A+B+C+D+E. The prior art of record does not disclose or render obvious a motivation to provide for a material-transfer apparatus as defined by the limitations of claim 1, including an A member and a B member, both connected to a C member, with all three being aligned with the D and E members."

This statement is simply a restatement of the entirety of claim 1 as allowed. No measure of surrender could be gleaned from such a statement of reasons for allowance. See *Ex parte Yamaguchi*, 61 USPQ2d 1043 (Bd. Pat. App. & Inter. 2001)(reported but unpublished, precedential).

In both of the above examples, the argument does not provide an indication of what specific limitations, e.g., specific element or step of the claims, cooperative effect, or other aspect of the claims, are being relied upon for patentability. Thus, applicant has not surrendered anything.

### (B) Example (2) - Amendment of the claims without argument:

The limitation omitted in the reissue claim(s) was added in the original application claims for the pur-

pose of making the application claims allowable over a rejection or objection made in the application. Even though applicant made no argument on the record that the limitation was added to obviate the rejection, the nature of the addition to the claim can show that the limitation was added in direct reply to the rejection. This too will establish the omitted limitation as relating to subject matter previously surrendered. To illustrate this, note the following example:

The original application claims recite limitations A+B+C, and the Office action rejection combines two references to show A+B+C. In the amendment replying to the Office action, applicant adds limitation D to A+B+C in the claims, but makes no argument as to that addition. The examiner then allows the claims. Even though there is no argument as to the addition of limitation D, it must be presumed that the D limitation was added to obviate the rejection. The subsequent deletion of (omission of) limitation D in the reissue claims would be presumed to be a broadening in an aspect of the reissue claims related to surrendered subject matter. Accordingly, the reissued claims would be barred by the recapture doctrine.

The above result would be the same whether the addition of limitation D in the original application was by way of applicant's amendment or by way of an examiner's amendment with authorization by applicant.

(C) Example (3) - Who can make the surrendering argument?

Assume that the limitation A omitted in the reissue claims was present in the claims of the original application. The examiner's reasons for allowance in the original application stated that it was that limitation A which distinguished over a potential combination of references X and Y. Applicant did not present on the record a counter statement or comment as to the examiner's reasons for allowance, and permitted the claims to issue.

*Ex parte Yamaguchi*, supra, held that a surrender of claimed subject matter cannot be based solely upon an applicant's failure to respond to, or failure to challenge, an examiner's statement made during the prosecution of an application. Applicant is bound only by applicant's revision of the application claims or a positive argument/statement by *applicant*. An applicant's failure to present on the record a counter statement or comment as to an examiner's reasons for allowance

does not give rise to any implication that applicant agreed with or acquiesced in the examiner's reasoning for allowance. Thus, the failure to present a counter statement or comment as to the examiner's statement of reasons for allowance does not give rise to any finding of surrender. **The examiner's statement of reasons for allowance in the original application cannot, by itself, provide the basis for establishing surrender and recapture.**

It is only in the situation where applicant does file comments on the statement of reasons for allowance, that surrender may have occurred. Note the following two scenarios in which an applicant files comments:

*Scenario 1- There is Surrender:* The examiner's statement of reasons for allowance in the original application stated that it was limitation C (of the combination of ABC) which distinguished over a potential combining of references X and Y, in that limitation C provided increased speed to the process. Applicant filed comments on the examiner's statement of reasons for allowance essentially supporting the examiner's reasons. The limitation C is thus established as relating to subject matter previously surrendered.

*Scenario 2- There is No Surrender:* On the other hand, if applicant's comments on the examiner's statement of reasons for allowance contain a counter statement that it is limitation B (of the combination of ABC), rather than C, which distinguishes the claims over the art, then limitation B would constitute surrendered subject matter, and limitation C has not been surrendered.

**C. *The Third Step - Were the reissued claims materially narrowed in other respects to compensate for the broadening in the area of surrender, and thus avoid the recapture rule?***

As pointed out above, the third prong of the recapture determination set forth in *Pannu* is directed to analysis of the broadening and narrowing effected via the reissue claims, and of the significance of the claim limitations added and deleted, using the prosecution history of the patent (to be reissued), to determine whether the reissue claims should be barred as recapture.

The following discussion addresses analyzing the reissue claims, and *which claims* are to be compared to the reissue claims in determining the issue of surrender (for reissue recapture).

When analyzing a reissue claim for the possibility of impermissible recapture, there are two different types of analysis that must be performed. If the reissue claim 'fails' either analysis, recapture exists.

First, the reissue claim must be compared to any claims canceled or amended during prosecution of the original application. It is impermissible recapture for a reissue claim to be as broad or broader in scope than any claim that was canceled or amended in the original prosecution to define over the art. Claim scope that was canceled or amended is deemed surrendered and therefore barred from reissue. *In re Clement, supra*.

Second, it must be determined whether the reissue claim entirely omits any limitation that was added/argued during the original prosecution to overcome an art rejection. Such an omission in a reissue claim, even if it includes other limitations making the reissue claim narrower than the patent claim in other aspects, is impermissible recapture. *Pannu v. Storz Instruments Inc., supra*. However, if the reissue claim recites a broader form of the key limitation added/argued during original prosecution to overcome an art rejection (and therefore not entirely removing that key limitation), then the reissue claim may not be rejected under the recapture doctrine. *Ex Parte Eggert*, 67 USPQ2d 1716 (Bd. Pat. App. & Inter. 2003) (precedential). For example, if the key limitation added to overcome an art rejection was "an orange peel," and the reissue claim instead recites "a citrus fruit peel", the reissue claim may not be rejected on recapture grounds.

The following discussion is provided for analyzing the reissue claims.

### 1. Comparison of Reissue Claims Narrowed/Broadened Vis-à-vis the Canceled Claims

DEFINITION: "Canceled claims," in the context of recapture case law, are claims canceled from the original application to obtain the patent for which reissue is now being sought. The claims

(A) can simply be canceled and not replaced by others, or

(B) can be canceled and replaced by other claims which are more specific than the canceled claims in at least one aspect (to thereby define over the art of record). The "replacement claims" can be new claims which are narrower than the canceled claims, or can

be the same claims amended to be narrower than the canceled version of the claims.

#### (a) **Reissue Claims are Same or Broader in Scope Than Canceled Claims in All Aspects:**

The recapture rule bars the patentee from acquiring, through reissue, claims that are in all aspects (A) of the same scope as, or (B) broader in scope than, those claims canceled from the original application to obtain a patent. *In re Ball Corp. v. United States*, 729 F.2d at 1436, 221 USPQ at 295.

#### (b) **Reissue Claims are Narrower in Scope Than Canceled Claims in at Least One Aspect:**

If the reissue claims are equal in scope to, or narrower than, the claims of the original patent (as opposed to the claims "canceled from the application") in all aspects, then there can never be recapture. The discussion that follows is not directed to that situation. It is rather directed to the situation where the *reissue claims are narrower than the claims 'canceled' from the application in some aspect, but are broader than the claims of the original patent in some other aspect*.

If the reissue claims are narrower in scope than the claims canceled from the original application by inclusion of *the limitation added to define the original application claims over the art*, there will be no recapture, even if the reissue claims are broader than the canceled claims in some other aspect (i.e., an aspect not related to the surrender made in the original application).

Assume combination AB was originally presented in the application, and was amended in response to an art rejection to add element C and thus provide ABC (after which the patent issued). The reissue claims are then directed to combination AB<sub>broadened</sub>C. The AB<sub>broadened</sub>C claims are *narrower* in scope when compared with the canceled claim subject matter AB *in respect to the addition of C* (which was added in the application to overcome the art), and there is no recapture.

As another example, assume combination ABZ was originally presented in the application, and was amended in response to an art rejection to add element C and thus provide ABZC (after which the patent issued). The reissue claims are then directed to combination ABC (i.e., element Z is deleted from the can-

celed claims, while element C remains present). The ABC claims of the reissue are *narrower* in scope as compared to the canceled-from-the-original-application claim subject matter ABZ *in respect to the addition of C* (which was added in the application to overcome the art), and there is thus no recapture.

## 2. Comparison of Reissue Claims Narrowed/Broadened *Via-à-vis* the Patent Claims

The 'patent claims,' in the context of recapture case law, are claims which issued in the original patent for which reissue is now being sought. As pointed out above, where the reissue claims are narrower than the claims of the original patent in all aspects, then there can never be recapture. If reissue claims are equal in scope to the patent claims, there is no recapture as to those reissue claims. Where, however, reissue claims are both broadened and narrowed as compared with the original patent claims, the nature of the broadening and narrowing must be examined to determine whether the reissue claims are barred as being recapture of surrendered subject matter. If the claims are 'broader than they are narrower in a manner directly pertinent to the subject matter... surrendered during prosecution' (*Clement*, 131 F.3d at 1471, 45 USPQ2d at 1166), then recapture will bar the claims. This narrowing/broadening *vis-à-vis* the patent is broken down into four possibilities that will now be addressed.

The "limitation" presented, argued, or stated to make the claims patentable over the art (in the application) "generates" the surrender of claimed subject matter. For the sake of simplification, this limitation will be referred to throughout this section as the *surrender-generating limitation*. If a claim is presented in a reissue application that omits, in its entirety, the surrender-generating limitation, that claim impermissibly recaptures what was previously surrendered, and that claim is barred under 35 U.S.C. 251. This terminology will be used in the discussion of the four categories of narrowing/broadening *vis-à-vis* the **patent** that follows.

### (a) **Reissue Claims are Narrower in Scope Than Patent Claims, in Area Not Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope by Omitting Limitation(s) Added/Argued To Overcome Art Rejection in Original Prosecution:**

In this case, there is recapture.

This situation is where the patent claims are directed to combination ABC and the reissue claims are directed to ABD. Element C was either a limitation added to AB to obtain allowance of the original patent, or was argued by applicant to define over the art (or both). Thus, addition of C (and/or argument as to C) has resulted in the surrender of any combination of A & B that does not include C; this is the surrendered subject matter. Element D, on the other hand, is not related to the surrendered subject matter. Thus, the reissue claim, which no longer contains C, is broadened in an area related to the surrender, and the narrowing via the addition of D does not save the claim from recapture since D is not related to the surrendered subject matter.

Reissue claims that are broader than the original patent claims by not including the surrender-generating limitation (element C, in the example given) will be barred by the recapture rule even though there is narrowing of the claims not related to the surrender-generating limitation. As stated in the decision of *In re Clement*, 131 F.3d at 1470, 45 USPQ2d at 1165, if the reissue claim is broader in an aspect germane to a prior art rejection, but narrower in another aspect completely unrelated to the rejection, the recapture rule bars the claim. *Pannu v. Storz Instruments Inc.*, *supra*, then brings home the point by providing an actual fact situation in which this scenario was held to be recapture.

### (b) **Reissue Claims are Narrower or Equal in Scope, in Area Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope in Area Not Directed to Amendment/Argument:**

In this case, there is no recapture.

This situation is where the patent claims are directed to combination ABCDE and the reissue claims are directed to ABDE (element C is omitted).

Assume that the combination of ABCD was present in the original application as it was filed, and element E was later added to define over that art. No argument was ever presented as to elements A-C defining over the art.

In this situation, the ABCDE combination of the patent can be broadened (in the reissue application) to omit element C, and thereby claim the combination of ABDE, where element E (the surrender generating limitation) is not omitted. There would be no recapture in this instance. (If an argument had been presented as to element C defining over the art, in addition to the addition of element E, then the ABCDE combination could not be broadened to omit element C and thereby claim combination of ABDE. This would be recapture; see the above discussion as to surrender and recapture based upon argument.)

Additionally, the reissue claims are certainly permitted to recite combination ABDE<sub>specific</sub> (where surrender-generating element E is narrowed). The patent claims have been broadened in an area not directed to the surrender (by omitting element C) and narrowed in the area of surrender (by narrowing element E to E<sub>specific</sub>). This is clearly permitted.

As another example, assume limitation C was added to application claims AB to obtain the patent to ABC, and now the reissue application presents claims to AC or AB<sub>broad</sub>C. Such reissue claims avoid the effect of the recapture rule because they are broader in a way that does not attempt to reclaim what was surrendered earlier. *Mentor Corp. v. Coloplast, Inc.*, 998 F.2d 992, 994, 27 USPQ2d 1521, 1525 (Fed. Cir. 1993). Such claims are considered to be broader in an aspect not 'germane to a prior art rejection,' and thus are not barred by recapture. Note *In re Clement*, 131 F.3d at 1470, 45 USPQ2d at 1165.

Reissue claims that are broader than the original patent claims by deletion of a limitation or claim requirement other than the "surrender-generating limitation" will avoid the effect of the recapture rule, regardless of the nature of the narrowing in the claims, and even if the claims are not narrowed at all from the scope of the patent claims.

**(c) Reissue Claims are Narrower in Scope in Area Not Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope in Area Not Directed to the Amendment/Argument:**

In this instance, there is clearly no recapture. In the reissue application, there has been no change in the claims related to the matter surrendered in the original application for the patent.

In this instance, element C was added to the AB combination to provide ABC and define over the art, and the patent was issued. The reissue omits element B and adds element Z, to thus claim ACZ. There is no recapture since the surrender generating element C has not been modified in any way. (Note, however, that if, when element C was added to AB, applicant argued that the association of newly added C with B provides a synergistic (unexpected) result to thus define over the art, then neither B nor C could be omitted in the reissue application.)

**(d) Reissue Claims Broader in Scope in Area Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; but Reissue Claims Retain, in Broadened Form, the Limitation(s) Argued/Added to Overcome Art Rejection in Original Prosecution:**

Assume the combination AB was originally claimed in the application, and was amended in reply to an art rejection to add element C and thus provide the combination ABC (after which the patent issued). A reissue application is then filed, and the reissue application claims are directed to the combination ABC<sub>broadened</sub>. The ABC<sub>broadened</sub> claims are narrowed in scope when compared with the canceled claim subject matter AB, because of the addition of C<sub>broadened</sub>. Thus, the claims retain, in broadened form, the limitation argued/added to overcome art rejection in original prosecution. There is no recapture, since ABC<sub>broadened</sub> is narrower than canceled claim subject matter AB in an area related to the surrender. This is so, because it was element C that was added in the application to overcome the art. See *Ex Parte Eggert, supra*.

## II. < REISSUE TO TAKE ADVANTAGE OF 35 U.S.C. 103(b):

A patentee may file a reissue application to permit consideration of process claims which qualify for 35 U.S.C. 103(b) treatment if a patent is granted on an application entitled to the benefit of 35 U.S.C. 103(b), without an election having been made as a result of error without deceptive intent. See MPEP § 706.02(n). **This is not to be considered a recapture.** The addition of process claims, however, will generally be considered to be a *broadening* of the invention (*Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989)), and such addition must be applied for within two years of the grant of the original patent. See also MPEP § 1412.03 as to broadened claims.

>

## III. < REISSUE FOR ARTICLE CLAIMS WHICH ARE FUNCTIONAL DESCRIPTIVE MATERIAL STORED ON A COMPUTER-READABLE MEDIUM:

A patentee may file a reissue application to permit consideration of article of manufacture claims which are functional descriptive material stored on a computer-readable medium, where these article claims correspond to the process or machine claims which have been patented. The error in not presenting claims to this statutory category of invention (the “article” claims) must have been made as a result of error without deceptive intent. The addition of these “article” claims will generally be considered to be a *broadening* of the invention (*Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989)), and such addition must be applied for within two years of the grant of

the original patent. See also MPEP § 1412.03 as to broadened claims.

>

## IV. < REJECTION BASED UPON RECAPTURE:

Reissue claims which recapture surrendered subject matter should be rejected using form paragraph 14.17.

\*\*>

### ¶ 14.17 Rejection, 35 U.S.C. 251, Recapture

Claim[1] rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. See *Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope surrendered in the application for the patent cannot be recaptured by the filing of the present reissue application.

[2]

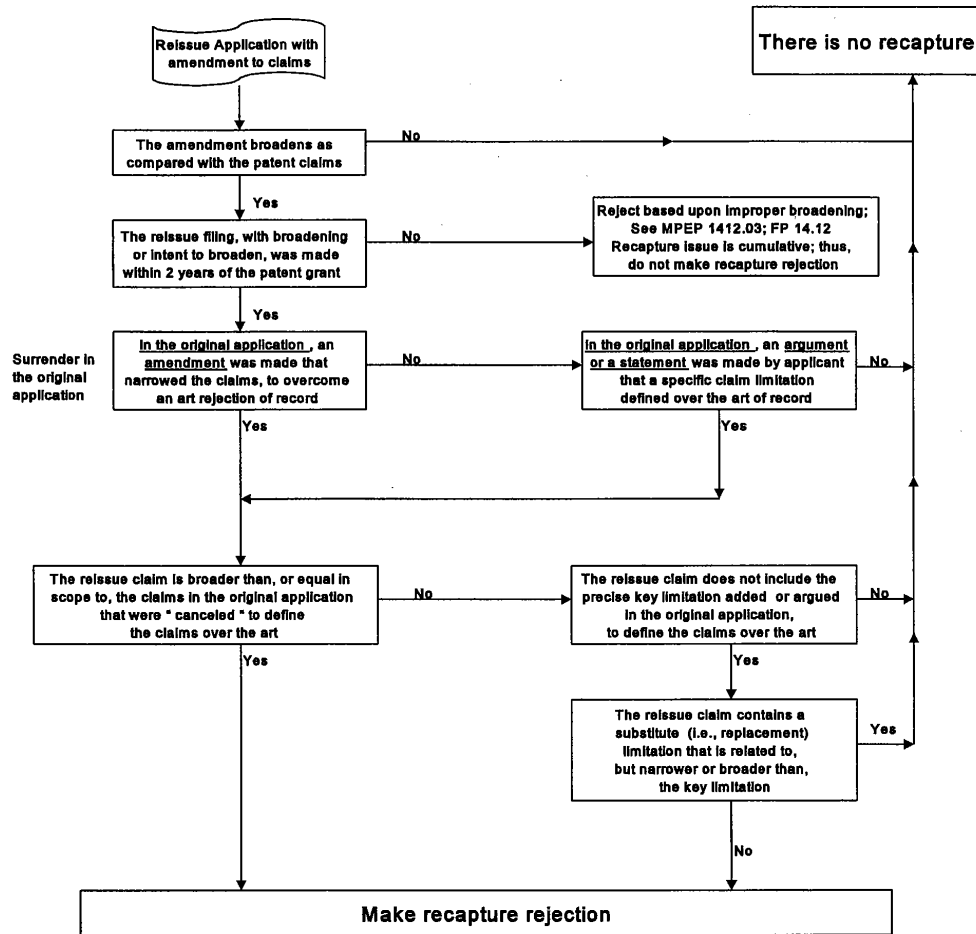

### Examiner Note:

In bracket 2, the examiner should explain the specifics of why recapture exists, including an identification of the omitted/broadened claim limitations in the reissue which provide the “broadening aspect” to the claim(s), and where in the original application the narrowed claim scope was presented/argued to obviate a rejection/objection. See MPEP § 1412.02.

See the recapture-analysis flow chart which follows for assistance in determining whether recapture is present, consistent with the case law discussed above.

**Reissue Recapture - Determining its presence or absence**

<

### 1412.03 Broadening Reissue Claims [R-2]

35 U.S.C. 251 prescribes a 2-year limit for filing applications for broadening reissues:

No reissue patent shall be granted enlarging the scope of the original patent unless applied for within two years from the grant of the original patent.

#### MEANING OF “BROADENED REISSUE CLAIM”

A broadened reissue claim is a claim which enlarges the scope of the claims of the patent, *i.e.*, a claim which is greater in scope than each and every claim of the original patent. If a disclaimer is filed in the patent prior to the filing of a reissue application, the disclaimed claims are not part of the “original patent” under 35 U.S.C. 251. The Court in *Vectra Fitness Inc. v. TNWK Corp.*, 49 USPQ2d 1144, 1147, 162 F.3d 1379, 1383 (Fed. Cir. 1998) held that a reissue application violated the statutory prohibition under 35 U.S.C. 251 against broadening the scope of the patent more than 2 years after its grant because the reissue claims are broader than the claims that remain after the disclaimer, even though the reissue claims are narrower than the claims that were disclaimed by the patentee before reissue. The reissue application was bounded by the claims remaining in the patent after a disclaimer is filed. A claim of a reissue application enlarges the scope of the claims of the patent if it is broader in *at least one* respect, even though it may be narrower in other respects.

A claim in the reissue which includes subject matter not covered by the patent claims enlarges the scope of the patent claims. For example, if any amended or newly added claim in the reissue contains within its scope any conceivable product or process which would not have infringed the patent, then that reissue claim would be broader than the patent claims. *Tillotson, Ltd. v. Walbro Corp.*, 831 F.2d 1033, 1037 n.2, 4 USPQ2d 1450, 1453 n.2 (Fed. Cir. 1987); *In re Ruth*, 278 F.2d 729, 730, 126 USPQ 155, 156 (CCPA 1960); *In re Rogoff*, 261 F.2d 601, 603, 120 USPQ 185, 186 (CCPA 1958). A claim which reads on something which the original claims do not is a broadened claim. A claim would be considered a broadening claim if the patent owner would be able to sue any party for infringement who previously could not have been

sued for infringement. Thus, where the original patent claims only the process, and the reissue application adds (for the first time) product claims, the scope of the claims has been broadened since a party could not be sued for infringement of the product based on the claims of the original patent.

The addition of combination claims in a reissue application where only subcombination claims were present in the original patent could be a broadening of the invention. The question which must be resolved in this case is whether the combination claims added in the reissue would be for “the invention as claimed” in the original patent. See *Ex parte Wikdahl*, 10 USPQ2d at 1549. The newly added combination claims should be analyzed to determine whether they contain every limitation of the subcombination of any claim of the original patent. If the combination claims (added in the reissue) contain every limitation of the subcombination (which was claimed in the original application), then infringement of the combination must also result in infringement of the subcombination. Accordingly, the patent owner **could not**, if a reissue patent issues with the combination claims, **sue any new party** for infringement who could not have been sued for infringement of the original patent. Therefore, **broadening does not exist**, in spite of the addition of the combination.

\*\*

#### SCOPE OF DEPENDENT CLAIM ENLARGED-NOT BROADENING

As pointed out above, a claim will be considered a broadened reissue claim when it is greater in scope than **each and every** claim of the patent to be reissued. A corollary of this is that a claim which has been *broadened in a reissue as compared to its scope in the patent* is not a broadened reissue claim if it is narrower than, or equal in scope to, any other claim which appears in the patent. A common example of this is where dependent claim 2 is broadened via the reissue (other than the addition of a process step to convert an intermediate to a final product as discussed in the preceding subsection), but independent claim 1 on which it is based is not broadened. Since a dependent claim is construed to contain all the limitations of the claim upon which it depends, claim 2 must be at least as narrow as claim 1 and is thus not a broadened reissue claim.

### NEW CATEGORY OF INVENTION ADDED IN REISSUE - >GENERALLY NOT< BROADENING

The addition of process claims as a new category of invention to be claimed in the patent (*i.e.*, where there were no method claims present in the original patent) is generally considered as being a broadening of the invention. See *Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989). >A situation may arise, however, where the reissue application adds a limitation (or limitations) to process A of making the product A claimed in the original patent claims. For example:

- (1) a process of using the product A (made by the process of the original patent) to make a product B, disclosed but not claimed in the original patent; or
- (2) a process of using the product A to carry out a process B disclosed but not claimed in the original patent.

Although this amendment of the claims adds a method of making product B or adds a method of using product A, this is not broadening (*i.e.*, this is not an enlargement of the scope of the original patent) because the 'newly claimed invention' contains all the limitations of the original patent claim(s).<

### WHEN A BROADENED CLAIM CAN BE PRESENTED

A broadened claim can be presented within two years from the grant of the original patent in a reissue application. In addition, a broadened claim can be presented *after* two years from the grant of the original patent in a broadening reissue which was filed *within* two years from the grant. Where any intent to broaden is indicated in the reissue application within the two years from the patent grant, a broadened claim can subsequently be presented in the reissue after the two year period. Finally, if intent to broaden is indicated in a parent reissue application within the two years, a broadened claim can be presented in a continuing reissue application after the two year period. In any other situation, a broadened claim cannot be presented, and the examiner should check carefully for the improper presentation of broadened claims.

A reissue application filed on the 2-year anniversary date from the patent grant is considered to be

filed within 2 years of the patent grant. See *Switzer v. Sockman*, 333 F.2d 935, 142 USPQ 226 (CCPA 1964) for a similar rule in interferences.

See also the following cases which pertain to broadened reissues:

*In re Graff*, 111 F.3d 874, 877, 42 USPQ2d 1471, 1473-74 (Fed. Cir. 1997) (Broadened claims in a continuing reissue application were properly rejected under 35 U.S.C. 251 because the proposal for broadened claims was not made (in the parent reissue application) within two years from the grant of the original patent and the public was not notified that broadened claims were being sought until after the two-year period elapsed.);

*In re Fotland*, 779 F.2d 31, 228 USPQ 193 (Fed. Cir. 1985), *cert. denied*, 476 U.S. 1183 (1986) (The failure by an applicant to include *an oath or declaration indicating a desire to seek broadened claims* within two years of the patent grant will bar a subsequent attempt to broaden the claims after the two year limit. Under the former version of 37 CFR 1.175 (the former 37 CFR 1.175(a)(4)), applicant timely sought a "no-defect" reissue, but the Court did not permit an attempt made beyond the two year limit to convert the reissue into a broadening reissue. In this case, applicant did not indicate any intent to broaden within the two years.);

*In re Bennett*, 766 F.2d 524, 528, 226 USPQ 413, 416 (Fed. Cir. 1985) (*en banc*) (A reissue application with broadened claims was filed within two years of the patent grant; however, the declaration was executed by the assignee rather than the inventor. The Federal Circuit permitted correction of the improperly executed declaration to be made more than two years after the patent grant.);

*In re Doll*, 419 F.2d 925, 928, 164 USPQ 218, 220 (CCPA 1970) (If the reissue application is timely filed within two years of the original patent grant and the applicant indicates in the oath or declaration that the claims will be broadened, then applicant may subsequently broaden the claims in the pending reissue prosecution even if the additional broadening occurs beyond the two year limit.).

Form paragraphs 14.12 and 14.13 may be used in rejections based on improper broadened reissue claims.

¶ 14.12 Rejection, 35 U.S.C. 251, Broadened Claims After Two Years

Claim [1] rejected under 35 U.S.C. 251 as being broadened in a reissue application filed outside the two year statutory period. [2] A claim is broader in scope than the original claims if it contains within its scope any conceivable product or process which would not have infringed the original patent. A claim is broadened if it is broader in any one respect even though it may be narrower in other respects.

**Examiner Note:**

The claim limitations that broaden the scope should be identified and explained in bracket 2. See MPEP §§ 706.03(x) and 1412.03.

¶ 14.13 Rejection, 35 U.S.C. 251, Broadened Claims Filed by Assignee

Claim [1] rejected under 35 U.S.C. 251 as being improperly broadened in a reissue application made and sworn to by the assignee and not the patentee. [2] A claim is broader in scope than the original claims if it contains within its scope any conceivable product or process which would not have infringed the original patent. A claim is broadened if it is broader in any one respect even though it may be narrower in other respects.

**Examiner Note:**

The claim limitations that broaden the scope should be identified and explained in bracket 2. See MPEP §§ 706.03(x) and 1412.03.

**BROADENING REISSUE - OATH/DECLARATION REQUIREMENTS**

A broadening reissue application must be applied for by all of the inventors (patentees), that is, the original reissue oath or declaration must be signed by all of the inventors. See also MPEP § 1414. If a supplemental oath or declaration in a broadening reissue application is needed in the application in order to fulfill the requirements of 37 CFR 1.175, the supplemental reissue oath or declaration must be signed by all of the inventors. See *In re Hayes*, 53 USPQ2d 1222 (Comm'r Pat. 1999) and MPEP § 1414.01.

**1412.04 Correction of Inventorship [R-2]**

The correction of misjoinder of inventors has been held to be a ground for reissue. See *Ex parte Scudder*, 169 USPQ 814, 815 (Bd. App. 1971) wherein the Board held that 35 U.S.C. 251 authorizes reissue applications to correct misjoinder of inventors where 35 U.S.C. 256 is inadequate. See also *A.F. Stoddard & Co. v. Dann*, 564 F.2d 556, 567 n.16, 195 USPQ 97, 106 n.16 (D.C. Cir. 1977) wherein correction of inventorship from sole inventor A to sole inventor B

was permitted in a reissue application. The court noted that reissue by itself is a vehicle for correcting inventorship in a patent.

**CERTIFICATE OF CORRECTION AS A VEHICLE FOR CORRECTING INVENTORSHIP**

While reissue is a vehicle for correcting inventorship in a patent, correction of inventorship should be effected under the provisions of 35 U.S.C. 256 and 37 CFR 1.324 by filing a request for a Certificate of Correction if:

- (A) the only change being made in the patent is to correct the inventorship; and
- (B) all parties are in agreement and the inventorship issue is not contested.

See MPEP § 1481 for the procedure to be followed to obtain a Certificate of Correction for correction of inventorship.

**REISSUE AS A VEHICLE FOR CORRECTING INVENTORSHIP**

Where the provisions of 35 U.S.C. 256 and 37 CFR 1.324 do not apply, a reissue application is the appropriate vehicle to correct inventorship. The failure to name the correct inventive entity is an error in the patent which is correctable under 35 U.S.C. 251. The reissue oath or declaration pursuant to 37 CFR 1.175 must state that the applicant believes the original patent to be wholly or partly inoperative or invalid through error of a person being incorrectly named in an issued patent as the inventor, or through error of an inventor incorrectly not named in an issued patent, and that such error arose without any deceptive intention on the part of the applicant. The reissue oath or declaration must, as stated in 37 CFR 1.175, also comply with 37 CFR 1.63.

The correction of inventorship does not enlarge the scope of the patent claims. Where a reissue application does not seek to enlarge the scope of the claims of the original patent, the reissue oath may be made and sworn to, or the declaration made, by the assignee of the entire interest under 37 CFR 1.172. An assignee of part interest may not file a reissue application to correct inventorship where the other co-owner did not join in the reissue application and has not consented to the reissue proceeding. See *Baker Hughes Inc. v. Kirk*, 921 F. Supp. 801, 809, 38 USPQ2d 1885,

(D.D.C. 1995). See 35 U.S.C. 251, third paragraph. Thus, the signatures of the inventors are not needed on the reissue oath or declaration where the assignee of the entire interest signs the reissue oath/declaration. Accordingly, an assignee of the entire interest can add or delete an inventor by reissue (*e.g.*, correct inventorship from inventor A to inventors A and B) without the original inventor's consent. See also 37 CFR 3.71(a) ("One or more assignees as defined in paragraph (b) of this section may, after becoming of record pursuant to paragraph (c) of this section, conduct prosecution of a national patent application or reexamination proceeding **to the exclusion of either the inventive entity**, or the assignee(s) previously entitled to conduct prosecution." Emphasis added). Thus, the assignee of the entire interest can file a reissue to change the inventorship to one which the assignee believes to be correct, even though an inventor might disagree. The protection of the assignee's property rights in the application and patent are statutorily based in 35 U.S.C. 118.

Where a reissue to correct inventorship also changes the claims to enlarge the scope of the patent claims, the signature of all the inventors *is needed*. However, if an inventor refuses to sign the reissue oath or declaration because he or she believes the change in inventorship (to be effected) is not correct, the reissue application can still be filed with a petition under 37 CFR 1.47 without that inventor's signature. It is the assignee who controls correction of inventorship.

The reissue application with its reissue oath or declaration under 37 CFR 1.175 provides a complete mechanism to correct inventorship. See *A.F. Stoddard & Co. v. Dann*, 564 F.2d at 567, 195 USPQ at 106. A request under 37 CFR 1.48 or a petition under 37 CFR 1.324 cannot be used to correct the inventorship of a reissue application. If a request under 37 CFR 1.48 or a petition under 37 CFR 1.324 is filed in a reissue application, the request or petition should be dismissed and the processing or petition fee refunded. The material submitted with the request or petition should then be considered to determine if it complies with 37 CFR 1.175. If the material submitted with the request or petition does comply with the requirements of 37 CFR 1.175 (and the reissue application is otherwise in order), the correction of inventorship will be

permitted as a correction of an error in the patent under 35 U.S.C. 251.

Where a reissue application seeks to correct inventorship in the patent and the inventors are required to sign the reissue oath or declaration (rather than an assignee of the entire interest under 37 CFR 1.172) due to a broadening of any claims of the original patent, the correct inventive entity must sign the reissue oath or declaration. Where an inventor **is being added** in a reissue application to correct inventorship in a patent, the inventor being added must sign the reissue oath or declaration together with the inventors previously designated on the patent. For example, a reissue application is filed to correct the inventorship from inventors A and B (listed as inventors on the patent) to inventors A, B, and C. Inventor C is the inventor being added. In such a case, A, B, and C are the correct inventors, and accordingly, each of A, B, and C must sign the reissue oath or declaration. Where an inventor **is being deleted** in a reissue application to correct inventorship in a patent and the inventors are required to sign the oath or declaration due to a broadening of any claims of the original patent, the inventor being deleted need not sign the reissue oath or declaration. The reissue oath or declaration must be signed by the correct inventive entity. For example, a reissue application is filed to correct inventorship from inventors A, B, and C (listed as inventors on the patent) to inventors A and B. Inventor C is being deleted as a named inventor. In such a case, A and B are the correct inventors, and accordingly, inventors A and B must sign the reissue oath or declaration but inventor C need not sign the reissue oath or declaration.

## 1413 Drawings [R-2]

37 CFR 1.173. *Reissue specification, drawings, and amendments.*

\*\*\*\*\*

(a)(2) Drawings. Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

\*\*\*\*\*

A clean copy (e.g., good quality photocopies free of any extraneous markings) of each drawing sheet of the printed patent must be supplied by the applicant at the time of filing of the reissue application. If the copies meet the requirements of 37 CFR 1.84, no further formal drawings will be required. New drawing sheets are not to be submitted, unless some change is made in the original patent drawings. Such changes must be made in accordance with 37 CFR 1.173(b)(3).

The prior reissue practice of transferring drawings from the patent file has been eliminated, since clean photocopies of the printed patent drawings are acceptable for use in the printing of the reissue patent.

### AMENDMENT OF DRAWINGS

*37 CFR 1.173. Reissue specification, drawings, and amendments.*

\*\*\*\*\*

\*\*>

(b)(3) *Drawings.* One or more patent drawings shall be amended in the following manner: Any changes to a patent drawing must be submitted as a replacement sheet of drawings which shall be an attachment to the amendment document. Any replacement sheet of drawings must be in compliance with § 1.84 and shall include all of the figures appearing on the original version of the sheet, even if only one figure is amended. Amended figures must be identified as “Amended,” and any added figure must be identified as “New.” In the event that a figure is canceled, the figure must be surrounded by brackets and identified as “Canceled.” All changes to the drawing(s) shall be explained, in detail, beginning on a separate sheet accompanying the papers including the amendment to the drawings.<

\*\*\*\*\*

The provisions of 37 CFR 1.173(b)(3) govern the manner of making amendments (changes) to the drawings in a reissue application. The following guidance is provided as to the procedure for amending drawings:

(A) Amending the original or printed patent drawing sheets by physically changing or altering them is not permitted. Any request to do so should be denied.

(B) Where a change to the drawings is desired, \*\*>applicant must submit a replacement sheet for each sheet of drawings containing a Figure to be revised. Any replacement sheet must comply with 37 CFR 1.84 and include all of the figures appearing on the original version of the sheet, even if only one figure is being amended. Each figure that is amended must be

identified by placing the word “Amended” at the bottom of that figure. Any added figure must be identified as “New.” In the event that a figure is canceled, the figure must be identified as “Canceled” and also surrounded by brackets. All changes to the figure(s) must be explained, in detail, beginning on a separate sheet which accompanies the papers including the amendment to the drawings.

(C) If desired, applicant may include a marked-up copy of any amended drawing figure, including annotations indicating the changes made. Such a marked-up copy must be clearly labeled as “Annotated Marked-up Drawings”, and it must be presented in the amendment or remarks section that explains the change to the drawings.

In addition, the examiner may desire a marked-up copy of any amended drawing figure, and so state in an Office action. A marked-up copy of any amended drawing figure, including annotations indicating the changes made, must be provided when required by the examiner.<

(D) For each proper new drawing sheet being added, the new sheet should be inserted after the existing drawing sheets. For each proper \* drawing sheet >being added< which replaces an existing drawing sheet, the existing sheet should be canceled by placing the sheet face down in the file and placing a large "X" on the back of the sheet. The new sheet should be inserted in place of the turned over existing sheet.

(E) If any drawing change \* is not \* >approved,< or if any submitted sheet of formal drawings is not entered, the examiner will so inform the reissue applicant in the next Office action, and the examiner will set forth the reasons for same.

### 1414 Content of Reissue Oath/Declaration [R-2]

*37 CFR 1.175. Reissue oath or declaration.*

(a) The reissue oath or declaration in addition to complying with the requirements of § 1.63, must also state that:

(1) The applicant believes the original patent to be wholly or partly inoperative or invalid by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than the patentee had the right to claim in the patent, stating at least one error being relied upon as the basis for reissue; and

(2) All errors being corrected in the reissue application up to the time of filing of the oath or declaration under this paragraph arose without any deceptive intention on the part of the applicant.

(b)(1) For any error corrected, which is not covered by the oath or declaration submitted under paragraph (a) of this section, applicant must submit a supplemental oath or declaration stating that every such error arose without any deceptive intention on the part of the applicant. Any supplemental oath or declaration required by this paragraph must be submitted before allowance and may be submitted:

(i) With any amendment prior to allowance; or

(ii) In order to overcome a rejection under 35 U.S.C. 251 made by the examiner where it is indicated that the submission of a supplemental oath or declaration as required by this paragraph will overcome the rejection.

(2) For any error sought to be corrected after allowance, a supplemental oath or declaration must accompany the requested correction stating that the error(s) to be corrected arose without any deceptive intention on the part of the applicant.

(c) Having once stated an error upon which the reissue is based, as set forth in paragraph (a)(1), unless all errors previously stated in the oath or declaration are no longer being corrected, a subsequent oath or declaration under paragraph (b) of this section need not specifically identify any other error or errors being corrected.

(d) The oath or declaration required by paragraph (a) of this section may be submitted under the provisions of § 1.53(f).

The reissue oath/declaration is an essential part of a reissue application and must be filed with the application, or within the time period set under 37 CFR 1.53(f) along with the required surcharge as set forth in 37 CFR 1.16(e) in order to avoid abandonment.

The question of the sufficiency of the reissue oath/declaration filed under 37 CFR 1.175 must in each case be reviewed and decided personally by the primary examiner.

Reissue oaths or declarations must contain the following:

(A) A statement that the applicant believes the original patent to be wholly or partly inoperative or invalid—

(1) by reason of a defective specification or drawing, or

(2) by reason of the patentee claiming more or less than patentee had the right to claim in the patent;

(B) A statement of at least one error which is relied upon to support the reissue application, *i.e.*, as the basis for the reissue;

(C) A statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant; and

(D) The information required by 37 CFR 1.63.

These elements will now be discussed:

**I. A STATEMENT THAT THE APPLICANT BELIEVES THE ORIGINAL PATENT TO BE WHOLLY OR PARTLY INOPERATIVE OR INVALID BY REASON OF A DEFECTIVE SPECIFICATION OR DRAWING, OR BY REASON OF THE PATENTEE CLAIMING MORE OR LESS THAN PATENTEE HAD THE RIGHT TO CLAIM IN THE PATENT.**

In order to satisfy this requirement, a declaration can state:

“Applicant believes the original patent to be partly inoperative or invalid by reason of a defective specification or drawing.”

Alternatively, a declaration can state:

“Applicant believes the original patent to be partly inoperative or invalid by reason of the patentee claiming more or less than patentee had the right to claim in the patent.”

Where the specification or drawing is defective and patentee claimed more or less than patentee had the right to claim in the patent, then *both* statements should be included in the reissue oath/declaration. See MPEP § 1412.04 for an exemplary declaration statement when the error being corrected is an error in inventorship.

The above examples will be sufficient to satisfy this requirement without any further statement.

Form paragraph 14.01 may be used where the reissue oath/declaration does not provide the required statement as to applicant’s belief that the original patent is wholly or partly inoperative or invalid.

*¶ 14.01 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - No Statement of Defect in the Patent*

The reissue oath/declaration filed with this application is defective because it fails to contain the statement required under 37 CFR 1.175(a)(1) as to applicant’s belief that the original patent is wholly or partly inoperative or invalid. See 37 CFR 1.175(a)(1) and see MPEP § 1414. [1]

**Examiner Note:**

1. Use this form paragraph when applicant: (a) fails to allege that the original patent is inoperative or invalid and/or (b) fails to state the reason of a defective specification or drawing, or of patentee claiming more or less than patentee had the right to claim in

the patent . In bracket 1, point out the specific defect to applicant by using the language of (a) and/or (b), as it is appropriate.

2. Form paragraph 14.14 must follow this form paragraph.

## II. A STATEMENT OF AT LEAST ONE ERROR WHICH IS RELIED UPON TO SUPPORT THE REISSUE APPLICATION (I.E., THE BASIS FOR THE REISSUE).

>

(A) < A reissue applicant must acknowledge the existence of an error in the specification, drawings, or claims, which error causes the original patent to be defective. *In re Wilder*, 736 F.2d 1516, 222 USPQ 369 (Fed. Cir. 1984). A change or departure from the original specification or claims represents an “error” in the original patent under 35 U.S.C. 251. See MPEP § 1402 for a discussion of grounds for filing a reissue that may constitute the “error” required by 35 U.S.C. 251. Not all changes with respect to the patent constitute the “error” required by 35 U.S.C. 251.

>

(B) < Applicant need only specify in the reissue oath/declaration one of the errors upon which reissue is based. Where applicant specifies one such error, this requirement of a reissue oath/declaration is satisfied. Applicant may specify more than one error.

Where more than one error is specified in the oath/declaration and some of the designated “errors” are found to not be “errors” under 35 U.S.C. 251, any remaining error which is an error under 35 U.S.C. 251 will still support the reissue.

The “at least one error” which is relied upon to support the reissue application must be set forth in the oath/declaration. It is not necessary, however, to point out how (or when) the error arose or occurred. Further, it is not necessary to point out how (or when) the error was discovered. If an applicant chooses to point out these matters, the statements directed to these matters will not be reviewed by the examiner, and the applicant should be so informed in the next Office action. All that is needed for the oath/declaration statement as to error is the identification of “at least one error” relied upon.

In identifying the error, it is sufficient that the reissue oath/declaration identify a single word, phrase, or expression in the specification or in an original claim, and how it renders the original patent wholly or partly inoperative or invalid. The corresponding corrective action which has been taken to

correct the original patent need not be identified in the oath/declaration. If the initial reissue oath/declaration “states at least one error” in the original patent, and, *in addition*, recites the specific corrective action taken in the reissue application, the oath/declaration would be considered acceptable, even though the corrective action statement is not required.

>

(C) < It is not sufficient for an oath/declaration to merely state “this application is being filed to correct errors in the patent which may be noted from the changes made in the disclosure.” Rather, the oath/declaration must specifically identify an error. In addition, it is not sufficient to merely reproduce the claims with brackets and underlining and state that such will identify the error. See *In re Constant*, 827 F.2d 728, 729, 3 USPQ2d 1479 (Fed. Cir.), *cert. denied*, 484 U.S. 894 (1987). Any error in the claims must be identified by reference to the specific claim(s) and the specific claim language wherein lies the error.

>

(D) Where a continuation reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, and the parent reissue application is not to be abandoned, the reissue oath/declaration should be accepted by the Office of Initial Patent Examination without further evaluation, since it is an oath/declaration, albeit improper under 35 U.S.C. 251. The examiner should reject the claims of the continuation reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the continuation reissue application, and should require a new oath/declaration.

Where a continuation reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the reissue oath/declaration should be accepted by OIPE, and the examiner should check to ensure that the oath/declaration identifies an error which is still being corrected in the continuation application. If a preliminary amendment was filed with the continuation reissue application, the examiner should check for the need of a supplemental reissue oath/declaration. Pursuant to 37 CFR 1.175 (b)(1) , for any error corrected via the preliminary amendment which is not covered by the oath or declaration submitted in the parent reissue

application, applicant must submit a supplemental oath/declaration stating that such error arose without any deceptive intention on the part of the applicant. See MPEP § 1414.01.<

Where a divisional reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, the reissue oath/declaration should be accepted by OIPE, since it is an oath/declaration, though it may be improper under 35 U.S.C. 251. The examiner should check the copy of the oath/declaration to ensure that it identifies an error being corrected by the divisional reissue application. The copy of the oath/declaration from the parent reissue application may or may not cover an error being corrected by the divisional reissue application since the divisional reissue application is (by definition) directed to a new invention. If it does not, the examiner should reject the claims of the divisional reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the divisional reissue application, and require a new oath/declaration. If the copy of the reissue oath/declaration from the parent reissue application does in fact cover an error being corrected in the divisional reissue application, no such rejection should be made. However, since a new invention is being added by the filing of the divisional reissue application, a supplemental reissue oath/declaration pursuant to 37 CFR 1.175 (b)(1) will be required. See MPEP § 1414.01.

Form paragraph 14.01.01 may be used where the reissue oath/declaration does not identify an error.

*¶ 14.01.01 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - No Statement of a Specific Error*

The reissue oath/declaration filed with this application is defective because it fails to identify at least one error which is relied upon to support the reissue application. See 37 CFR 1.175(a)(1) and MPEP § 1414.

**Examiner Note:**

1. Use this form paragraph when the reissue oath or declaration does not contain any statement of an error which is relied upon to support the reissue application.
2. This form paragraph can be used where the reissue oath or declaration does not even mention error. It can also be used where the reissue oath or declaration contains some discussion of the concept of error but never in fact identifies a specific error to be relied upon. For example, it is not sufficient for an oath or declaration to merely state “this application is being filed to correct

errors in the patent which may be noted from the changes made in the disclosure.”

3. Form paragraph 14.14 must follow this form paragraph.

Where the reissue oath/declaration does identify an error or errors, the oath/declaration must be checked carefully to ensure that at least one of the errors identified is indeed an “error” which will support the filing of a reissue, i.e., an “error” that will provide grounds for reissue of the patent. See MPEP § 1402. If the error identified in the oath/declaration is not an appropriate error upon which a reissue can be based, then the oath/declaration must be indicated to be defective in the examiner’s Office action.

Form paragraphs 14.01.02 and 14.01.03 may be used where the reissue oath/declaration fails to provide at least one error upon which a reissue can be based.

*¶ 14.01.02 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1)-The Identified “Error” Is Not Appropriate Error*

The reissue oath/declaration filed with this application is defective because the error which is relied upon to support the reissue application is not an error upon which a reissue can be based. See 37 CFR 1.175(a)(1) and MPEP § 1414.

**Examiner Note:**

1. Use this form paragraph when the reissue oath/declaration identifies only one error which is relied upon to support the reissue application, and that one error is not an appropriate error upon which a reissue can be based.
2. Form paragraph 14.14 must follow this form paragraph.

*¶ 14.01.03 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - Multiple Identified “Errors” Not Appropriate Errors*

The reissue oath/declaration filed with this application is defective because none of the errors which are relied upon to support the reissue application are errors upon which a reissue can be based. See 37 CFR 1.175(a)(1) and MPEP § 1414.

**Examiner Note:**

1. Use this form paragraph when the reissue oath/declaration identifies more than one error relied upon to support the reissue application, and none of the errors are appropriate errors upon which a reissue can be based.
2. Note that if the reissue oath/declaration identifies more than one error relied upon, and at least one of the errors is an error upon which reissue can be based, this form paragraph should not be used, despite the additional reliance by applicant on “errors” which do not support the reissue. Only one appropriate error is needed to support a reissue.
3. Form paragraph 14.14 must follow this form paragraph.

**III. A STATEMENT THAT ALL ERRORS WHICH ARE BEING CORRECTED IN THE REISSUE APPLICATION UP TO THE TIME OF \* >SIGNING< OF THE OATH/DECLARATION AROSE WITHOUT ANY DECEPTIVE INTENTION ON THE PART OF THE APPLICANT.**

In order to satisfy this requirement, the following statement may be included in an oath or declaration:

“All errors \*\* in the present reissue application up to the time of \* >signing< of this >oath/<declaration >, or errors which are being corrected by a paper filed concurrently with this oath/declaration which correction of errors I/we have reviewed,< arose without any deceptive intention on the part of the applicant.”

Nothing more is required. The examiner will determine only whether the reissue oath/declaration contains the required averment; the examiner will not make any comment as to whether it appears that there was in fact deceptive intention (see MPEP § 2022.05). >It is noted that a reissue oath/declaration will not be effective for any errors which are corrected by a filing made after the execution of the reissue oath/declaration, unless it is clear from the record that the parties executing the document were aware of the nature of the correction when they executed the document. Further, a reissue oath/declaration with an early date of execution cannot be filed after a correction made later in time, to cover the correction made after the execution date. This is so, even if the reissue oath/declaration states that *all errors up to the filing of the oath/declaration* arose without any deceptive intention on the part of the applicant.<

Form paragraph 14.01.04 may be used where the reissue oath/declaration does not provide the required statement as to “without any deceptive intention on the part of the applicant.”

*¶ 14.01.04 Defective Reissue Oath/Declaration, 37 CFR 1.175- Lack of Statement of “Without Any Deceptive Intention”*

The reissue oath/declaration filed with this application is defective because it fails to contain a statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant. See 37 CFR 1.175 and MPEP § 1414.

**Examiner Note:**

1. Use this form paragraph when the reissue oath/declaration does not contain the statement required by 37 CFR 1.175 that all errors being corrected in the reissue application arose without any deceptive intention on the part of the applicant.
2. This form paragraph is appropriate to use for a failure by applicant to comply with the requirement, as to any of 37 CFR 1.175(a)(2), 37 CFR 1.175(b)(1), or 37 CFR 1.175(b)(2).
3. Form paragraph 14.14 must follow.

**IV. THE REISSUE OATH/DECLARATION MUST COMPLY WITH 37 CFR 1.63.**

The reissue oath/declaration must include the averments required by 37 CFR 1.63(a) and (b), *e.g.*, that applicants for reissue

(A) have reviewed and understand the contents of the specification, including the claims, as amended by any amendment specifically referred to in the oath/declaration;

(B) believe the named inventor or inventors to be the original and the first inventor or inventors of the subject matter which is claimed and for which a patent is sought; and

(C) acknowledge the duty to disclose to the Office all information known to the person to be material to patentability as defined in 37 CFR 1.56. See also the discussion regarding the requirements of an oath/declaration beginning at MPEP § 602.

The examiner should check carefully to ensure that all the requirements of 37 CFR 1.63 are met. Form paragraph 14.01.05 should be used in conjunction with the content of form paragraphs 6.03 through 6.09 as appropriate, where the reissue oath/declaration fails to comply with the requirements of 37 CFR 1.63.

*¶ 14.01.05 Defective Reissue Oath/Declaration, 37 CFR 1.175 - General*

The reissue oath/declaration filed with this application is defective (see 37 CFR 1.175 and MPEP § 1414) because of the following:

**Examiner Note:**

1. Use this form paragraph when the reissue oath/declaration does not comply with 37 CFR 1.175, and none of form paragraphs 14.01 - 14.01.04 or 14.05.02 apply.
2. This form paragraph must be followed by an explanation of why the reissue oath/declaration is defective.
3. Form paragraph 14.14 must follow the explanation of the defect.

See MPEP § 1414.01 for a discussion of the requirements for a supplemental reissue oath/declaration.

Depending on the circumstances, either form PTO/SB/51, Reissue Application Declaration By The

Inventor, or form PTO/SB/52, Reissue Application Declaration By The Assignee may be used to prepare a declaration in a reissue application.

### 1414.01 Supplemental Reissue Oath/Declaration [R-2]

If additional defects or errors are corrected in the reissue after the filing of the application and the original reissue oath or declaration, a supplemental reissue oath/declaration must be filed, unless all additional errors corrected are spelling, grammar, typographical, editorial or clerical errors which are not errors under 35 U.S.C. 251 (see MPEP § 1402). In other words, a supplemental oath/declaration is required where any “error” under 35 U.S.C. 251 has been corrected and the error was not identified in the original reissue oath/declaration.

The supplemental reissue oath/declaration must state that every error which was corrected in the reissue application not covered by the prior oath(s)/declaration(s) submitted in the application arose without any deceptive intention on the part of the applicant.

An example of acceptable language is as follows:

“Every error in the patent which was corrected in the present reissue application, and is not covered by the prior declaration submitted in this application, arose without any deceptive intention on the part of the applicant.”

>A supplemental reissue oath/declaration will not be effective for any errors which are corrected by a filing made after the execution of the supplemental reissue oath/declaration, unless it is clear from the record that the parties executing the document were aware of the nature of the correction when they executed the document. Further, a supplemental reissue oath/declaration with an early date of execution cannot be filed after a correction made later in time, to cover the correction made after the execution date. This is so, even if the supplemental reissue oath/declaration states that *all errors up to the filing of the supplemental reissue oath/declaration oath or declaration* arose without any deceptive intention on the part of the applicant.<

#### WHEN AN ERROR MUST BE STATED IN THE SUPPLEMENTAL OATH/DECLARATION

In the supplemental reissue oath/declaration, there is **no need to state an error** which is relied upon to support the reissue application **if**:

(A) an error to support a reissue has been previously and properly stated in a reissue oath/declaration in the application; and

(B) that error is still being corrected in the reissue application.

If applicant chooses to state any further error at this point (even though such is not needed), the examiner should not review the statement of the further error.

The supplemental reissue oath/declaration must state an error which is relied upon to support the reissue application only where one of the following is true:

(A) the prior reissue oath/declaration failed to state an error;

(B) the prior reissue oath/declaration attempted to state an error but did not do so properly; or

(C) all errors under 35 U.S.C. 251 stated in the prior reissue oath(s)/declaration(s) are no longer being corrected in the reissue application.

#### WHEN A SUPPLEMENTAL OATH/DECLARATION MUST BE SUBMITTED

The supplemental oath/declaration in accordance with 37 CFR 1.175(b)(1) must be submitted before allowance. See MPEP § 1444 for a discussion of the action to be taken by the examiner to obtain the supplemental oath/declaration in accordance with 37 CFR 1.175(b)(1), where such is needed.

Where applicant seeks to correct an error after allowance of the reissue application, a supplemental reissue oath/declaration must accompany the requested correction stating that the error(s) to be corrected arose without any deceptive intention on the part of the applicant. The supplemental reissue oath/declaration submitted after allowance will be directed to the error applicant seeks to correct after allowance. This supplemental oath/declaration need not cover any earlier errors, since all earlier errors should have been covered by a reissue oath/declaration submitted prior to allowance.

#### SUPPLEMENTAL OATH/DECLARATION IN BROADENING REISSUE

A broadening reissue application must be applied for by all of the inventors (patentees), that is, the original reissue oath/declaration must be signed by all of the inventors. See MPEP § 1414. If a supplemental

oath/declaration in a broadening reissue application is subsequently needed in the application in order to fulfill the requirements of 37 CFR 1.175, the supplemental reissue oath/declaration must be signed by all of the inventors. *In re Hayes*, 53 USPQ2d 1222, 1224 (Comm'r Pat. 1999) (“37 CFR 1.175(b)(1), taken in conjunction with Section 1.172, requires a supplemental declaration be signed by all of the inventors. This is because all oaths or declarations necessary to fulfill the rule requirements in a reissue application are taken together collectively as a single oath or declaration. Thus, each oath and declaration must bear the appropriate signatures of all the inventors.”).

If a joint inventor refuses or cannot be found or reached to sign a supplemental oath/declaration, a supplemental oath/declaration listing all the inventors, and signed by all the available inventors may be filed provided it is accompanied by a petition under 37 CFR 1.183 along with the petition fee, requesting waiver of the signature requirement of the nonsigning inventor.

Form PTO/SB/51S, Supplemental Declaration For Reissue Patent Application To Correct “Errors” Statement (37 CFR 1.175), may be used to prepare a supplemental reissue declaration.

Additional inventors or legal representatives(s) are being named on the \_\_\_\_\_ supplemental sheets PTO/SB/02A or 02LR attached hereto.

This collection of information is required by 37 CFR 1.175. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.8 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

**1415 Reissue Filing and Issue Fees [R-2]**

The reissue applicant is permitted to present every claim that was issued in the original patent for the basic filing fee. In addition to the basic filing fee, the filing or later presentation of each independent claim which is in excess of the number of independent claims in the original patent requires a fee. In addition, the filing or later presentation of each claim

(whether independent or dependent) in excess of 20, and also in excess of the number of claims in the original patent, requires a fee. Fees for claims in reissue continued prosecution applications are calculated in the same manner as outlined above. The Office has prepared Form PTO/SB/56, Reissue Application Fee Transmittal Form which is designed to assist in the correct calculation of reissue filing fees.

<

### 1415.01 Maintenance Fees on the Original Patent [R-2]

The filing of a reissue application does not alter the schedule of payments of maintenance fees on the original patent. If maintenance fees have not been paid on the original patent as required by 35 U.S.C. 41(b) and 37 CFR 1.20, and the patent has expired, no reissue patent can be granted. 35 U.S.C. 251, first paragraph, only authorizes the granting of a reissue patent for the unexpired term of the original patent. Once a patent has expired, the \* >Director of the USPTO< no longer has the authority under 35 U.S.C. 251 to reissue the patent. See *In re Morgan*, 990 F.2d 1230, 26 USPQ2d 1392 (Fed. Cir. 1993).

The examiner should determine whether all required maintenance fees have been paid *prior to conducting an examination* of a reissue application. In addition, during the process of preparing the reissue application for issue, the examiner should again determine whether all required maintenance fees have been paid up to date.

\*\* >The history of maintenance fees is determined by the following, all of which should be used (to provide a check on the search made):

(A) Go to the USPTO Intranet (<http://ptoweb/pto-intranet/index.htm>) and select the PALM screen, then the “General Information” screen, type in the patent number and then select the “Fees” screen.

(B) Go to the USPTO Intranet and then the “Revenue Accounting and Management” screen, then the “File History” screen. Then type in the patent number.

(C) Go to the USPTO Intranet Site (<http://www.uspto.gov>) and select “eBusiness”, then the “Patent Electronic Business Center” screen, then the “Patent Application Information Retrieval (PAIR)” screen (<http://pair.uspto.gov/cgi-bin/final/home.pl>), and type in the patent number and select the “view Maint. Statement” screen.<

If the window for the maintenance fee due has closed (maintenance fees are due by the day of the 4th, 8th and 12th year anniversary of the grant of the patent), but the maintenance fee has not been paid, then the reissue should be \*\* >forwarded to the Office of Patent Legal Administration (OPLA) to consider vacating and terminating the reissue proceeding (with subsequent abandonment of the reissue application)<. However, if time remains for applicant to pay the

maintenance fee, then the application should not be rejected under 35 U.S.C. 251 and it may be passed to issue when it is in condition for allowance, because the patent has not expired. >The issuance of one or more reissue patents does not alter the schedule of payments of maintenance fees on the original patent. Thus, if a patentee obtains a reissue patent and then a continuation/divisional of the reissue patent issues as a second reissue patent, a separate maintenance fee is **not** due on the second reissue patent. 35 U.S.C. 41 does not provide for the charging of more than one maintenance fee for plural reissues.<

See MPEP Chapter 2500 for additional information pertaining to maintenance fees.

### 1416 Offer to Surrender and Return Original Patent [R-2]

*37 CFR 1.178. Original patent; continuing duty of applicant.*

(a) The application for a reissue should be accompanied by either an offer to surrender the original patent, or the original patent itself, or if the original is lost or inaccessible, by a statement to that effect. The application may be accepted for examination in the absence of the original patent or the statement, but one or the other must be supplied before the application is allowed. If a reissue application is refused, the original patent, if surrendered, will be returned to applicant upon request.

\*\*\*\*\*

An examination on the merits of the reissue application is made even though the \*\* actual surrender, or a statement to the effect that the original is lost or inaccessible, has not been received. Either the original patent, or a statement as to loss or inaccessibility of the original patent, must >,however,< be received before the examiner can allow the reissue application >(i.e., pass the reissue application to issue)<.

Form paragraph 14.05.01 may be used to notify applicant that the original patent or an affidavit or declaration as to loss is required before allowance >of the reissue application<.

#### *¶ 14.05.01 Original Patent Required Prior to Allowance*

The original patent, or a statement as to loss or inaccessibility of the original patent, must be received before this reissue application can be allowed. See 37 CFR 1.178.

#### **Examiner Note:**

1. This form paragraph may be used in an Office action to remind applicant of the requirement for submission of the original patent before allowance.

2. It may also be used in an *Ex parte Quayle* action to require such submission.
3. Do not use this form paragraph in an examiner's amendment. The original patent or a statement of loss must be filed prior to mailing of the "Notice of Allowability".

If the original patent has been surrendered in the reissue application, and applicant requests the return of the surrendered original patent upon abandonment of the reissue application, the original patent will be sent to the applicant by the Technology Center.

An applicant may request that a surrendered original patent be transferred from an abandoned reissue application to a continuation or divisional reissue application. The technical support staff making the transfer should note the transfer on the "Contents" of the abandoned application. The application number and filing date of the reissue application to which it is

transferred must be included in the notation. Even where the original patent grant is submitted together with the reissue application as filed, patentee must include a copy of the printed original patent to serve as the specification of the reissue application. See 37 CFR 1.172(a) and MPEP § 1411.

Form PTO/SB/55, Reissue Patent Application Statement As To Loss Of Original Patent, may be used by applicant for filing a statement to the effect that the original patent is lost or inaccessible. >The form, or an equivalent statement (where the form is not used), may be signed by the inventors, by an officer of the assignee, by an authorized party acting on behalf of the assignee with a proper 37 CFR 3.73(b) statement, or by a registered practitioner representing the reissue applicant.<

\*\*>

PTO/SB/55 (05-03)  
 Approved for use through 01/31/2004. OMB 0651-0033  
 U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

<b>REISSUE PATENT APPLICATION STATEMENT AS TO LOSS OF ORIGINAL PATENT</b>		Docket Number (Optional)
I hereby state that:		
I am the applicant for a reissue patent based on the original patent identified below.		
Name of Inventor(s)/Assignee(s)		
Patent Number		
Title of Invention		
Reissue application number (if known)		
The ribboned original patent grant is lost or inaccessible.		
Signature		
Typed or printed name	Date	
Title (e.g., inventor(s), officer of assignee)		

This collection of information is required by 37 CFR 1.178. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

## 1417 Claim for Benefit Under 35 U.S.C. 119(a)-(d) [R-2]

### PRIORITY UNDER 35 U.S.C. 119(a)-(d) WAS PERFECTED IN THE ORIGINAL PATENT

A “claim” for the benefit of an earlier filing date in a foreign country under 35 U.S.C. 119(a)-(d) must be made in a reissue application, even though such a claim was previously made in the application \*\* >for< the original patent \*\* >to be reissued<. However, no additional certified copy of the foreign application is necessary. The procedure is similar to that for “Continuing Applications” in MPEP § 201.14(b).

In addition, 37 CFR 1.63 requires that in *any* application in which a claim for foreign priority is made pursuant to 37 CFR 1.55, the oath or declaration must identify the foreign application for patent or inventors’ certificate on which priority is claimed unless supplied on an application data sheet (37 CFR 1.76), and any foreign applications having a filing date before that of the application on which priority is claimed, by specifying:

(A) the application number of the foreign application;

(B) the foreign country or intellectual property authority; and

(C) the day, month, and year of the filing of the foreign application.

The examiner should note that the heading on printed copies of the patent will not be carried forward to the reissue from the original patent. Therefore, it is important that the bibliographic data sheet reprint (for series 09/ and later applications) or the front face of the reissue file wrapper (for series 08/ and earlier applications) be endorsed by the examiner under “FOREIGN APPLICATIONS.” >(For IFW processing, see IFW Manual.)<

### PRIORITY UNDER 35 U.S.C. 119(a)-(d) IS NEWLY PERFECTED IN THE REISSUE APPLICATION

A reissue was granted in *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968), where the only ground urged was failure to file a certified copy of the original foreign application to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d)

before the patent was granted. In *Brenner*, the claim for priority had been made in the prosecution of the original patent, and it was only necessary to submit a certified copy of the priority document in the reissue application to perfect priority >(the claim for priority must be repeated in the reissue application). Reissue is also available to correct the “error” in failing to take any steps to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the original patent was granted<. In a situation where it is necessary to submit for the first time both the claim for priority and the certified copy of the priority document in the reissue application and the >patent to be reissued resulted from a< utility or plant application \*\* filed on or after November 29, 2000, the reissue applicant will have to file a petition for an unintentionally delayed priority claim under 37 CFR 1.55(c) in addition to filing a reissue application. See MPEP § 201.14(a).

## 1418 Notification of Prior/Concurrent Proceedings and Decisions Thereon, and of Information Known to be Material to Patentability [R-2]

37 CFR 1.178. *Original patent; continuing duty of applicant.*

\*\*\*\*\*

(b) In any reissue application before the Office, the applicant must call to the attention of the Office any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigations and the results of such proceedings (see also § 1.173(a)(1)).

37 CFR 1.178(b) requires reissue applicants to call to the attention of the Office any prior or concurrent proceeding in which the patent (for which reissue is requested) is or was involved and the results of such proceedings. These proceedings would include interferences, reissues, reexaminations, and litigations. Litigation would encompass any papers filed in the court or issued by the court, which may include, for example, motions, pleadings, and court decisions. This duty to submit information is continuing, and runs from the time the reissue application is filed until the reissue application is abandoned or issues as a reissue patent.

In addition, a reissue application is subject to the same duty of disclosure requirements as is any other nonprovisional application. The provisions of 37 CFR 1.63 require acknowledgment in the reissue oath or declaration of the “duty to disclose to the Office all information known to the [applicants] to be material to patentability as defined in § 1.56.” >Note that the Office imposes no responsibility on a reissue applicant to resubmit, in a reissue application, all the ‘References Cited’ in the patent for which reissue is sought. Rather, applicant has a continuing duty under 37 CFR 1.56 to timely apprise the Office of any information which is material to the patentability of the claims under consideration in the reissue application.

37 CFR 1.97 and 37 CFR 1.98 provide a mechanism to submit information known to applicants to be material to patentability. Information submitted in compliance with 37 CFR 1.97 and 37 CFR 1.98 will be considered by the Office. See MPEP § 609. Although a reissue applicant may utilize 37 CFR 1.97 and 37 CFR 1.98 to comply with the duty of disclosure required by 37 CFR 1.56, this does not relieve applicant of the duties under 37 CFR 1.175 of, for example, stating “at least one error being relied upon.”

While 37 CFR 1.97(b) provides for the filing of an information disclosure statement within 3 months of the filing of an application or before the mailing date of a first Office action, reissue applicants are encouraged to file information disclosure statements at the time of filing of the reissue application so that such statements will be available to the public during the 2-month period provided in MPEP § 1441.< Form paragraph 14.11.01 may be used to remind applicant of the duty to disclose any litigation information which is material to patentability.

¶ *14.11.01 Reminder of Duties Imposed by 37 CFR 1.178(b) and 37 CFR 1.56*

Applicant is reminded of the continuing obligation under 37 CFR 1.178(b), to timely apprise the Office of any prior or concurrent proceeding in which Patent No. [I] is or was involved. These proceedings would include interferences, reissues, reexaminations, and litigation.

Applicant is further reminded of the continuing obligation under 37 CFR 1.56, to timely apprise the Office of any information which is material to patentability of the claims under consideration in this reissue application.

These obligations rest with each individual associated with the filing and prosecution of this application for reissue. See also MPEP §§ 1404, 1442.01 and 1442.04.

**Examiner Note:**

1. This form paragraph is to be used in the first action in a reissue application.
2. In bracket [1], insert the patent number of the original patent for which reissue is requested.

\*\*

**1430 Reissue Files Open to the Public and, Notice of Filing Reissue Announced in, *Official Gazette* [R-2]**

*37 CFR 1.11. Files open to the public.*

\*\*\*\*\*

(b) All reissue applications, all applications in which the Office has accepted a request to open the complete application to inspection by the public, and related papers in the application file, are open to inspection by the public, and copies may be furnished upon paying the fee therefor. The filing of reissue applications, other than continued prosecution applications under § 1.53(d) of reissue applications, will be announced in the *Official Gazette*. The announcement shall include at least the filing date, reissue application and original patent numbers, title, class and subclass, name of the inventor, name of the owner of record, name of the attorney or agent of record, and examining group to which the reissue application is assigned.

\*\*\*\*\*

Under 37 CFR 1.11(b) all reissue applications filed after March 1, 1977, are open to inspection by the general public, and copies may be furnished upon paying the fee therefor. The filing of reissue applications (except for continued prosecution applications (CPA's) filed under 37 CFR 1.53(d)) will be announced in the *Official Gazette*. The announcement gives interested members of the public an opportunity to submit to the examiner information pertinent to the patentability of the reissue application. The announcement includes the filing date, reissue application and original patent numbers, title, class and subclass, name of the inventor, name of the owner of record, name of the attorney or agent of record, and the Technology Center (TC) to which the reissue application is initially assigned. A TC Director or other appropriate Office official may, under appropriate circumstances, postpone access to or the making of copies of a reissue application, such as, for example, to avoid interruption of the examination or other review of the application by an examiner. Those reissue applications already on file prior to March 1, 1977 are not automatically open to inspection, but a liberal policy

is followed by the Office of Patent Legal Administration and by the Board of Patent Appeals and Interferences (see MPEP § 1002.02(b), item 19) in granting petitions for access to such applications. >(For IFW reissues, see IFW Manual for the manner in which such electronic files will be made available to the public.)<

A notice of a reissue application in the *Official Gazette* should be published prior to any examination of the application. If an inadvertent failure to publish notice of the filing of the reissue application in the *Official Gazette* is recognized later in the examination, action should be taken to have the notice published as quickly as possible, and action on the application may be delayed until two months after the publication, allowing for any protests to be filed. >For a discussion of protests, see MPEP Chapter 1900.<

The filing of a continued prosecution application (CPA) under 37 CFR 1.53(d) of a reissue application will not be announced in the *Official Gazette*. Although the filing of a CPA of a reissue application constitutes the filing of a reissue application, the announcement of the filing of such CPA would be redundant in view of the announcement of the filing of the prior reissue application in the *Official Gazette* and the fact that the same application number and file will continue to be used for the CPA.

If applicant files a Request for Continued Examination (RCE) of the reissue application under 37 CFR 1.114 (which can be filed on or after May 29, 2000 for a reissue application filed on or after June 8, 1995), such filing will not be announced in the *Official Gazette*. An RCE continues prosecution of the existing reissue application and is not a filing of a new application.

For those reissue applications filed on or after March 1, 1977, the following procedure will be observed:

(A) The filing of all reissue applications, except for CPAs filed under 37 CFR 1.53(d), >(note that effective July 14, 2003, CPA practice has been eliminated as to utility and plant application)< will be announced in the *Official Gazette* and will include certain identifying data as specified in 37 CFR 1.11(b). Any member of the general public may request access to a particular reissue application filed after March 1, 1977. >(For IFW Processing, see IFW

Manual.)< Since no record of such request is intended to be kept, an oral request will suffice.

(B) The reissue application files will be maintained in the TCs and inspection thereof will be supervised by TC personnel. Although no general limit is placed on the amount of time spent reviewing the files, the Office may impose limitations, if necessary, e.g., where the application is actively being processed. >(For IFW Processing, see IFW Manual.)<

(C) Where the reissue application has left the TC for administrative processing, requests for access should be directed to the appropriate supervisory personnel where the application is currently located. >(For IFW Processing, see IFW Manual.)<

(D) Requests for copies of papers in the reissue application file must be in writing and addressed to the \*\* >Mail Stop Document Services, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. Such requests< may be either mailed or delivered to the Office Customer Service Window (See MPEP § 502). The price for copies made by the Office is set forth in 37 CFR 1.19.

\*\*

## 1440 Examination of Reissue Application [R-2]

37 CFR 1.176. *Examination of reissue.*

(a) A reissue application will be examined in the same manner as a non-reissue, non-provisional application, and will be subject to all the requirements of the rules related to non-reissue applications. Applications for reissue will be acted on by the examiner in advance of other applications.

(b) Restriction between subject matter of the original patent claims and previously unclaimed subject matter may be required (restriction involving only subject matter of the original patent claims will not be required). If restriction is required, the subject matter of the original patent claims will be held to be constructively elected unless a disclaimer of all the patent claims is filed in the reissue application, which disclaimer cannot be withdrawn by applicant.

37 CFR 1.176 provides that an original claim, if represented in a reissue application, will be fully examined in the same manner, and subject to the same rules as if being presented for the first time in an original non-reissue, nonprovisional application, except that division will not be required by the examiner. See MPEP § 1450 and § 1451. Reissue applications are normally examined by the same examiner who issued

the patent for which reissue is requested. In addition, the application will be examined with respect to compliance with 37 CFR 1.171-1.179 relating specifically to reissue applications, for example, the reissue oath or declaration will be carefully reviewed for compliance with 37 CFR 1.175. See MPEP § 1444 for handling applications in which the oath or declaration lacks compliance with 37 CFR 1.175. Reissue applications with related litigation will be acted on by the examiner before any other special applications, and will be acted on immediately by the examiner, subject only to a 2-month delay after publication for examining reissue applications; see MPEP § 1441.

The original patent file wrapper >/file history< should always be \* >obtained< and reviewed when examining a reissue application thereof.

### 1441 Two-Month Delay Period [R-2]

37 CFR 1.176 provides that reissue applications will be acted on by the examiner in advance of other applications, i.e., “special.” Generally, a reissue application will not be acted on sooner than 2 months after announcement of the filing of the reissue has appeared in the *Official Gazette*. The 2-month delay is provided in order that members of the public may have time to review the reissue application and submit pertinent information to the Office before the examiner’s action. The pertinent information is submitted in the form of a protest under 37 CFR 1.291(a). > For a discussion as to protests under 37 CFR 1.291(a) in reissue applications, see MPEP § 1441.01.< As set forth in MPEP § 1901.04, the public should be aware that such submissions should be made as early as possible, since >,< under certain circumstances >,< the 2-month delay period will not be employed. For example, the Office \* >may< act on >a< continuation \* >or a< divisional reissue \* >application< prior to the expiration of the 2-month period after announcement. Additionally, the Office will entertain \* >a petition< under 37 CFR 1.182 which \* >is< accompanied by the required petition fee (37 CFR 1.17(h)) to act on a reissue application without delaying for 2 months. Accordingly, protestors to reissue applications (see MPEP § 1441.01) cannot automatically assume that a full 2-month delay period will always be available. Appropriate reasons for requesting that the 2-month delay period not be employed include that litigation has been stayed to permit the filing of the reissue

application. Such petitions are decided by the Office of Patent Legal Administration.

### 1441.01 Protest in Reissue Applications [R-2]

>Since reissue applications are not published under 35 U.S.C. 122, pursuant to 37 CFR 1.291(a)(1), a protest may be filed throughout the pendency of a reissue application prior to the date of mailing of a notice of allowance subject to the timing constraints of the examination, as set forth in MPEP § 1901.04.<

A protest with regard to a reissue application should be filed within the 2-month period following the announcement of the filing of the reissue application in the *Official Gazette*. If the protest of a reissue application cannot be filed within the 2-month delay period, the protest can be submitted at a later time. Where the protest is submitted after the 2-month period, no petition for entry of the protest under 37 CFR 1.182 is needed with respect to the protest being submitted after the 2 months >,< unless a final rejection has been issued or prosecution on the merits has been closed for the reissue application.

Where the protest is submitted after the 2-month period, the protest may be received after the first Office action by the examiner, since reissue applications are taken up “special.” Once the first Office action is mailed (after the 2-month period), a member of the public may still submit pertinent information in the form of a protest under 37 CFR 1.291(a), and the examiner will consider the information submitted in the next Office action, to the extent that such consideration is appropriate. See MPEP § 1901.04 and § 1901.06 for the timeliness and content criteria as to when a protest is considered.

The Technology Center (TC) to which the reissue application is assigned is listed in the *Official Gazette* notice of filing of the reissue application. Accordingly, the indicated TC should retain the reissue application file for 2 months after the date of the *Official Gazette* notice before transferring the reissue application under the procedure set forth in MPEP § 903.08(d). >(For IFW processing, see IFW Manual.<

The publication of a notice of a reissue application in the *Official Gazette* should be done prior to any examination of the reissue application. If an inadvertent failure to publish notice of the filing of the reissue

application in the *Official Gazette* is recognized later in the examination, action should be taken to have the notice published as quickly as possible, and action on the reissue application may be delayed until 2 months after the publication, allowing for any protests to be filed.

See MPEP § 1901.06 for general procedures on examiner treatment of protests in reissue applications.

## 1442 Special Status

All reissue applications are taken up “special,” and remain “special” even though applicant does not respond promptly.

All reissue applications, except those under suspension because of litigation, will be taken up for action ahead of other “special” applications; this means that all issues not deferred will be treated and responded to immediately. Furthermore, reissue applications involved in litigation will be taken up for action in advance of other reissue applications.

### 1442.01 Litigation-Related Reissues

During initial review, the examiner should determine whether the patent for which the reissue has been filed is involved in litigation, and if so, the status of that litigation. If the examiner becomes aware of litigation involving the patent sought to be reissued during examination of the reissue application, and applicant has not made the details regarding that litigation of record in the reissue application, the examiner, in the next Office action, will inquire regarding the specific details of the litigation.

Form paragraph 14.06 may be used for such an inquiry.

#### ¶ 14.06 *Litigation-Related Reissue*

The patent sought to be reissued by this application [1] involved in litigation. Any documents and/or materials which would be material to patentability of this reissue application are required to be made of record in response to this action.

Due to the related litigation status of this application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED DURING THE PROSECUTION OF THIS APPLICATION.

#### **Examiner Note:**

In bracket 1, insert either —is— or —has been—.

If additional details of the litigation appear to be material to examination of the reissue application, the examiner may make such additional inquiries as necessary and appropriate.

If the existence of litigation has not already been noted, the examiner should place a prominent notation on the application file to indicate the litigation (1) at the bottom of the face of the file in the box just to the right of the box for the retention label, and (2) on the pink Reissue Notice Card form.

Applicants will normally be given 1 month to reply to Office actions in all reissue applications which are being examined during litigation, or after litigation had been stayed, dismissed, etc., to allow for consideration of the reissue by the Office. This 1-month period may be extended only upon a showing of *clear justification* pursuant to 37 CFR 1.136(b). The Office action will inform applicant that the provisions of 37 CFR 1.136(a) are not available. Of course, up to 3 months may be set for reply if the examiner determines such a period is clearly justified.

### 1442.02 Concurrent Litigation [R-2]

In order to avoid duplication of effort, action in reissue applications in which there is an indication of concurrent litigation will be suspended automatically unless and until it is evident to the examiner, or the applicant indicates, that any one of the following applies:

- (A) a stay of the litigation is in effect;
- (B) the litigation has been terminated;
- (C) there are no significant overlapping issues between the application and the litigation; or
- (D) it is applicant’s desire that the application be examined at that time.

Where any of (A) - (D) above apply, form paragraphs 14.08-14.10 may be used to deny a suspension of action in the reissue, i.e., to deny a stay of the reissue proceeding.

#### ¶ 14.08 *Action in Reissue Not Stayed — Related Litigation Terminated*

Since the litigation related to this reissue application is terminated and final, action in this reissue application will NOT be stayed. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

¶ 14.09 *Action in Reissue Not Stayed — Related Litigation Not Overlapping*

While there is concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed because there are no significant overlapping issues between the application and that litigation. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

¶ 14.10 *Action in Reissue Not Stayed — Applicant's Request*

While there is concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed because of applicant's request that the application be examined at this time. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

Where none of (A) through (D) above apply, action in the reissue application in which there is an indication of concurrent litigation will be suspended by the examiner. The examiner should consult with the Group Special Program Examiner prior to suspending action in the reissue. Form paragraph 14.11 may be used to suspend action, i.e., stay action, in a reissue application with concurrent litigation.

¶ 14.11 *Action in Reissue Stayed - Related Litigation*

In view of concurrent litigation, and in order to avoid duplication of effort between the two proceedings, action in this reissue application is STAYED until such time as it is evident to the examiner that (1) a stay of the litigation is in effect, (2) the litigation has been terminated, (3) there are no significant overlapping issues between the application and the litigation, or (4) applicant requests that the application be examined.

If the reissue application has been merged with \* >an *ex parte*< reexamination proceeding, the merged proceeding generally will **not** be stayed where there is litigation. In a merged >*ex parte*< reexamination/reissue proceeding, the >*ex parte*< reexamination will control because of the *statutory* (35 U.S.C. 305) requirement that >*ex parte*< reexamination proceedings be conducted with special dispatch. See MPEP § 2285 and § 2286. >As to a stay or suspension where reissue proceedings are merged with *inter partes* reexamination proceedings, see 37 CFR 1.937 and MPEP § 2686.<

### 1442.03 Litigation Stayed

All reissue applications, except those under suspension because of litigation, will be taken up for action

ahead of other “special” applications; this means that all issues not deferred will be treated and responded to *immediately*. Furthermore, reissue applications involved in “stayed litigation” will be taken up for action in advance of other reissue applications. Great emphasis is placed on the expedited processing of such reissue applications. The courts are especially interested in expedited processing in the Office where litigation is stayed.

In reissue applications with “stayed litigation,” the Office will entertain petitions under 37 CFR 1.182, which are accompanied by the fee under 37 CFR 1.17(h), to not apply the 2-month delay period stated in MPEP § 1441. Such petitions are decided by the Office of Patent Legal Administration.

Time-monitoring systems have been put into effect which will closely monitor the time used by applicants, protestors, and examiners in processing reissue applications of patents involved in litigation in which the court has stayed further action. Monthly reports on the status of reissue applications with related litigation are required from each Technology Center (TC). Delays in reissue processing are to be followed up. The TC Special Program Examiner is responsible for oversight of reissue applications with related litigation.

The purpose of these procedures and those deferring consideration of certain issues, until all other issues are resolved or the application is otherwise ready for consideration by the Board of Patent Appeals and Interferences (note MPEP § 1448), is to reduce the time between filing of the reissue application and final action thereon, while still giving all parties sufficient time to be heard.

Requests for stays or suspension of action in reissues where litigation has been stayed may be answered with form paragraph 14.07.

¶ 14.07 *Action in Reissue Not Stayed or Suspended — Related Litigation Stayed*

While there is a stay of the concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed or suspended because a stay of that litigation is in effect for the purpose of awaiting the outcome of these reissue proceedings. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

**1442.04 Litigation Involving Patent [R-2]**

37 CFR 1.178. *Original patent; continuing duty of applicant.*

\*\*\*\*\*

(b) In any reissue application before the Office, the applicant must call to the attention of the Office any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigations and the results of such proceedings (see also § 1.173(a)(1)).

Where the patent for which reissue is being sought is, or has been, involved in litigation, the applicant should bring the existence of such litigation to the attention of the Office. 37 CFR 1.178(b). This should be done at the time of, or shortly after, the applicant files the application, either in the reissue oath or declaration, or in a separate paper, preferably accompanying the application as filed. Litigation begun after filing of the reissue application also should be promptly brought to the attention of the Office.

Litigation encompasses any papers filed in the court or issued by the court. This may include, for example, motions, pleadings, and court decisions, as well as the results of such proceedings. When applicant notifies the Office of the existence of the litigation, enough information should be submitted so that the Office can reasonably evaluate the need for asking for further materials in the litigation. Note that the existence of supporting materials which may substantiate allegations of invalidity should, at least, be fully described, and preferably submitted. The Office is not interested in receiving voluminous litigation materials which are not relevant to the Office's consideration of the reissue application. The status of the litigation should be updated in the reissue application as soon as significant events happen in the litigation.

When a reissue application is filed, the examiner should determine whether the original patent has been adjudicated by a court. The decision(s) of the court, and also other papers in the suit, may provide information essential to the examination of the reissue. Examiners should inform the applicant of the duty to supply information as to litigation involving the patent. Form paragraph 14.11.01 may be used for this purpose. See MPEP § 1418.

Additionally, the patented file will contain notices of the filing and termination of infringement suits on

the patent. Such notices are required by law to be filed by the clerks of the Federal District Courts. These notices do not indicate if there was an opinion by the court, nor whether a decision was published. *Shepard's Federal Citations* and the cumulative digests of the *United States Patents Quarterly*, both of which are in the Lutrelle F. Parker, Sr., Memorial Law Library, contain tables of patent numbers giving the citation of published decisions concerning the patent.

A litigation computer search by the Scientific and Technical Information Center (STIC) should be requested by the examiner to determine whether the patent has been, or is, involved in litigation. The "Search Notes" box on the application file wrapper can then be completed to indicate that the review was conducted. A copy of the STIC search should be hole-punched and placed in the reissue file. >(For IFW processing, see IFW Manual.)<

Additional information or guidance as to making a litigation search may be obtained from the library of the Office of the Solicitor. Where papers are not otherwise conveniently obtainable, the applicant may be requested to supply copies of papers and records in suits, or the Office of the Solicitor may be requested to obtain them from the court. The information thus obtained should be carefully considered for its bearing on the proposed claims of the reissue, particularly when the reissue application was filed in view of the holding of a court.

If the examiner becomes aware of litigation involving the patent sought to be reissued during examination of the reissue application, and applicant has not made the details regarding that litigation of record in the reissue application, the examiner, in the next Office action, should inquire regarding the same. Form paragraph 14.06 may be used for such an inquiry. See MPEP § 1442.01.

If the additional details of the litigation appear to be material to patentability of the reissue application, the examiner may make such additional inquiries as necessary and appropriate.

**1442.05 \*\* >Court Ordered Filing of Reissue Application< [R-2]**

\*\*.

In most instances, the reissue-examination procedure is instituted by a patent owner who voluntarily files a reissue application as a consequence of related

patent litigation. \*\*>Some district courts in earlier decisions have required a patentee-litigant to file a reissue application as a consequence of the patent litigation. However, the Court of Appeals for the Federal Circuit held in *Green v. The Rich Iron Co.*, 944 F.2d 852, 853, 20 USPQ2d 1075, 1076 (Fed. Cir. 1991) that a district court in an infringement case could not compel a patentee to seek reissue by the USPTO.<

It is to be noted that only a patentee or his or her assignee may file a reissue patent application. An order >by a court< for a different party to file a reissue will not be binding on the Office.

\*\*

### 1443 Initial Examiner Review [R-2]

As part of an examiner's preparation for the examination of a reissue application, the Examiner Reissue Guide and Checklist should be consulted for basic guidance and suggestions for handling the prosecution. The Technology Center (TC) Special Program Examiners (SPREs) should make the Guide and Checklist available at the time a reissue application is docketed to an examiner.

On initial receipt of a reissue application, the examiner should inspect the submission under 37 CFR 1.172 as to documentary evidence of a chain of title from the original owner to the assignee to determine whether the consent requirement of 37 CFR 1.172 has been met. The examiner will compare the consent and documentary evidence of ownership; the assignee indicated by the documentary evidence must be the same assignee which signed the consent. Also, the person who signs the consent for the assignee and the person who signs the submission of evidence of ownership for the assignee must both be persons having authority to do so. See also MPEP § 324.

Where the application is assigned, and there is no submission under 37 CFR 1.172 as to documentary evidence in the application, the examiner should require the submission using form paragraph 14.16. Once the submission under 37 CFR 1.172 as to documentary evidence is received, it must be compared with the consent to determine whether the assignee indicated by the documentary evidence is the same assignee which signed the consent. See MPEP § 1410.01 for further discussion as to the required consent and documentary evidence.

Where there is a statement of record that the application is **not** assigned, there should be no submission under 37 CFR 1.172 as to documentary evidence of ownership in the application, and none should be required by the examiner.

The filing of all reissue applications, except for continued prosecution applications (CPAs) filed under 37 CFR 1.53(d), must be announced in the *Official Gazette*. Accordingly, for any reissue application other than a CPA, the examiner should determine if the filing of the reissue application has been announced in the *Official Gazette* as provided in 37 CFR 1.11(b), especially where the reissue is a file wrapper continuation under former 37 CFR 1.62. The date of the *Official Gazette* notice can usually be found on the pink "REISSUE" tag which protrudes from the top of the application file of 08/ or earlier series. >(For IFW processing, see IFW Manual.)< Where the date is missing from the tag, or where the tag itself is missing, the >contents entry on the< PALM screen (2952) should be checked for the presence of an "NRE" entry in the contents. For 09/ and later series reissue applications, the *Official Gazette* publication date appears on the face of the file wrapper. >(For IFW processing, see IFW Manual.) < If the filing of the reissue application has not been announced in the *Official Gazette*, the reissue application should be returned to the Office of Initial Patent Examination (Special Processing) to handle the announcement. The examiner should not further act on the reissue until 2 months after announcement of the filing of the reissue has appeared in the *Official Gazette*. See MPEP § 1440.

The examiner should determine if there is concurrent litigation, and if so, the status thereof (MPEP § 1442.01), and whether the reissue file >wrapper/file history< has been appropriately marked. Note MPEP § 1404. >(For IFW processing, see IFW Manual.)<

The examiner should determine if a protest has been filed, and if so, it should be handled as set forth in MPEP § 1901.06. >For a discussion of protests under 37 CFR 1.291(a) in reissue applications, see MPEP § 1441.01.<

The examiner should determine whether the patent is involved in an interference, and if so, should refer to MPEP § 1449.01 before taking any action on the reissue application.

The examiner should check that an offer to surrender the original patent, or a statement to the effect that the original is lost or inaccessible, has been received. An examination on the merits is made even though the above has not been received. See MPEP § 1416.

The examiner should verify that all Certificate of Correction changes have been properly incorporated into the reissue application. See MPEP § 1411.01.

The examiner should verify that the patent on which the reissue application is based has not expired, either because its term has run or because required maintenance fees have not been paid. Once a patent has expired, the \* >Director of the USPTO< no longer has the authority under 35 U.S.C. 251 to reissue the patent. See *In re Morgan*, 990 F.2d 1230, 26 USPQ2d 1392 (Fed. Cir. 1992). See also MPEP § 1415.01.

## 1444 Review of Reissue Oath/Declaration

In accordance with 37 CFR 1.175, the following is required in the reissue oath/declaration:

(A) A statement that the applicant believes the original patent to be wholly or partly inoperative or invalid-

(1) by reason of a defective specification or drawing, or

(2) by reason of the patentee claiming more or less than patentee had the right to claim in the patent;

(B) A statement of at least one error which is relied upon to support the reissue application, i.e., which provides a basis for the reissue;

(C) A statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant; and

(D) The information required by 37 CFR 1.63.

MPEP § 1414 contains a discussion of each of the above elements (i.e., requirements of a reissue oath/declaration). The examiner should carefully review the reissue oath/declaration in conjunction with that discussion, in order to ensure that each element is provided in the oath/declaration. If the examiner's review of the oath/declaration reveals a lack of compliance with any of the requirements of 37 CFR 1.175, a rejection of all the claims under 35 U.S.C. 251 should be made on the basis that the reissue oath/declaration is insufficient.

In preparing an Office action, the examiner should use form paragraphs 14.01 through 14.01.04 to state the objection(s) to the oath/declaration, i.e., the defects in the oath/declaration. These form paragraphs are reproduced in MPEP § 1414. The examiner should then use form paragraph 14.14 to reject the claims under 35 U.S.C. 251, based upon the improper oath/declaration.

### ¶ 14.14 Rejection, Defective Reissue Oath or Declaration

Claim [1] rejected as being based upon a defective reissue [2] under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the [3] is set forth in the discussion above in this Office action.

### Examiner Note:

1. In bracket 1, list all claims in the reissue application. See MPEP § 706.03(x).

2. This paragraph should be preceded by at least one of the paragraphs 14.01 to 14.01.04.

3. In brackets 2 and 3, insert either --oath-- or --declaration--.

A lack of signature on a reissue oath/declaration (except as otherwise provided in 37 CFR 1.42, 1.43, and 1.47 and in 37 CFR 1.172) would be considered a lack of compliance with 37 CFR 1.175(a) and result in a rejection, including final rejection, of all the claims on the basis that the reissue oath/declaration is insufficient. If the unsigned reissue oath/declaration is submitted as part of a reply which is otherwise properly signed and responsive to the outstanding Office action, the reply should be accepted by the examiner as proper and responsive, and the oath/declaration considered fully in the next Office action. The reply should not be treated as an unsigned or improperly signed amendment (see MPEP § 714.01(a)), nor do the holdings of *Ex parte Quayle* apply in this situation. The lack of signature, along with any other oath/declaration deficiencies, should be noted in the next Office action *rejecting* the claims as being based upon an insufficient reissue oath/declaration.

## HANDLING OF THE REISSUE OATH/DECLARATION DURING THE REISSUE PROCEEDING

An initial reissue oath/declaration is submitted with the reissue application (or within the time period set for filing the oath/declaration in a Notice To File Missing Parts under 37 CFR 1.53(f)). Where the reissue oath/declaration fails to comply with 37 CFR 1.175(a), the examiner will so notify the applicant in an Office action, rejecting the claims under 35 U.S.C.

251 as discussed above. In reply to the Office action, a supplemental reissue oath/declaration should be submitted dealing with the noted defects in the reissue oath/declaration.

Where the initial reissue oath/declaration (1) failed to provide *any* error statement, or (2) attempted to provide an error statement, but failed to identify any error under 35 U.S.C. 251 upon which reissue can be based (see MPEP § 1402), the examiner should reject all the claims as being based upon a defective reissue oath/declaration under 35 U.S.C. 251. To support the rejection, the examiner should specifically point out the failure of the initial oath/declaration to comply with 37 CFR 1.175 because an “error” under 35 U.S.C. 251 upon which reissue can be based was not identified therein. In reply to the rejection under 35 U.S.C. 251, a supplemental reissue oath/declaration must be submitted stating an error under 35 U.S.C. 251 which can be relied upon to support the reissue application. Submission of this supplemental reissue oath/declaration to obviate the rejection cannot be deferred by applicant until the application is otherwise in condition for allowance. In this instance, a proper statement of error *was never provided in the initial reissue oath/declaration*, thus a supplemental oath/declaration is required *in reply to the Office action* in order to properly establish grounds for reissue.

A different situation may arise where the initial reissue oath/declaration does properly identify one or more errors under 35 U.S.C. 251 as being the basis for reissue, however, because of changes or amendments made during prosecution, none of the identified errors are relied upon any more. A supplemental oath/declaration will be needed to identify at least one error *now* being relied upon as the basis for reissue, even though the prior oath/declaration was earlier found proper by the examiner. The supplemental oath/declaration need *not* also indicate that the error(s) identified in the prior oath(s)/declaration(s) is/are no longer being corrected. In this instance, applicant’s submission of the supplemental reissue oath/declaration to obviate the rejection under 35 U.S.C. 251 can, at applicant’s option, be deferred until the application is otherwise in condition for allowance. The submission can be deferred because a proper statement of error was provided in the initial reissue oath/declaration. Applicant need only request that submission of the supplemental re-

sue oath/declaration be deferred until allowance, and such a request will be considered a complete reply to the rejection.

#### **SUPPLEMENTAL REISSUE OATH/DECLARATION UNDER 37 CFR 1.175(b)(1):**

Once the reissue oath/declaration is found to comply with 37 CFR 1.175(a), it is not required, nor is it suggested, that a new reissue oath/declaration be submitted together with each new amendment and correction of error in the patent. During the prosecution of a reissue application, amendments are often made and additional errors in the patent are corrected. A supplemental oath/declaration need not be submitted with each amendment and additional correction. Rather, it is suggested that the reissue applicant wait until the case is in condition for allowance, and then submit a cumulative supplemental reissue oath/declaration pursuant to 37 CFR 1.175(b)(1).

See MPEP § 1414.01 for a discussion of the required content of a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1).

A supplemental oath/declaration under 37 CFR 1.175(b)(1) must be submitted before allowance. It may be submitted with any reply prior to allowance. It may be submitted to overcome a rejection under 35 U.S.C. 251 made by the examiner, where it is indicated that the submission of the supplemental oath/declaration will overcome the rejection.

A supplemental oath/declaration under 37 CFR 1.175(b)(1) will be required where:

(A) the application is otherwise (other than the need for this supplemental oath/declaration) in condition for allowance;

(B) amendments or other corrections of errors in the patent have been made subsequent to the last oath/declaration filed in the application; and

(C) at least one of the amendments or other corrections corrects an error under 35 U.S.C. 251.

When a supplemental oath/declaration under 37 CFR 1.175(b)(1) directed to the amendments or other corrections of error is required, the examiner is encouraged to telephone the applicant and request the submission of the supplemental oath/declaration by fax. If the circumstances do not permit making a telephone call, or if applicant declines or is unable to promptly submit the oath/declaration, the examiner

should issue a final Office action (final rejection) and use form paragraph 14.05.02 where the action issued is a second or subsequent action on the merits.

*¶ 14.05.02 Supplemental Oath or Declaration Required Prior to Allowance*

In accordance with 37 CFR 1.175(b)(1), a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) must be received before this reissue application can be allowed.

Claim [1] rejected as being based upon a defective reissue [2] under 35 U.S.C. 251. See 37 CFR 1.175. The nature of the defect is set forth above.

Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251. An example of acceptable language to be used in the supplemental oath/declaration is as follows:

“Every error in the patent which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant.”

**Examiner Note:**

1. In bracket 1, list all claims in the reissue application.
2. In bracket 2, insert either --oath-- or --declaration--.
3. This form paragraph is used in an Office action to: (a) remind applicant of the requirement for submission of the supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) before allowance and (b) at the same time, reject all the claims since the reissue application is defective until the supplemental oath/declaration is submitted.
4. Do not use this form paragraph if no amendments (or other corrections of the patent) have been made subsequent to the last oath/declaration filed in the case; instead allow the case.
5. This form paragraph cannot be used in an *Ex parte Quayle* action to require the supplemental oath/declaration, because the rejection under 35 U.S.C. 251 is more than a matter of form.
6. Do not use this form paragraph in an examiner's amendment. The supplemental oath/declaration must be filed prior to mailing of the Notice of Allowability.

As noted above, the examiner will issue a final Office action where the application is otherwise in condition for allowance, and amendments or other corrections of error in the patent have been made subsequent to the last oath/declaration filed in the application. The examiner will be introducing (via form paragraph 14.05.02) a rejection into the case for the first time in the prosecution, when the claims have been determined to be otherwise allowable. This introduction of a new ground of rejection under 35 U.S.C. 251 will not prevent the action from being made final on a second or subsequent action because of the following factors:

(A) The finding of the case in condition for allowance is the first opportunity that the examiner has to make the rejection;

(B) The rejection is being made in reply to, i.e., was caused by, an amendment of the application (to correct errors in the patent);

(C) All applicants are on notice that this rejection will be made upon finding of the case otherwise in condition for allowance where errors have been corrected subsequent to the last oath/declaration filed in the case, so that the rejection should have been expected by applicant; and

(D) The rejection will not prevent applicant from exercising any rights to cure the rejection, since applicant need only submit a supplemental oath/declaration with the above-described language, and it will be entered to cure the rejection.

Where the application is in condition for allowance and **no amendments or other corrections of error in the patent have been made subsequent to the last oath/declaration** filed in the application, a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) **should not be required by the examiner**. Instead, the examiner should issue a Notice of Allowability indicating allowance of the claims.

**AFTER ALLOWANCE**

Where applicant seeks to correct an error after allowance of the application, any amendment of the patent correcting the error must be submitted in accordance with 37 CFR 1.312. As set forth in 37 CFR 1.312, no amendment may be made as a matter of right in an application after the mailing of the notice of allowance. An amendment filed under 37 CFR 1.312 must be filed before or with the payment of the issue fee and may be entered on the recommendation of the primary examiner, and approved by the supervisory patent examiner, without withdrawing the case from issue.

Because the amendment seeks to correct an error in the patent, the amendment will affect the disclosure, the scope of a claim, or add a claim. Thus, in accordance with MPEP § 714.16, the remarks accompanying the amendment must fully and clearly state:

(A) why the amendment is needed;

(B) why the proposed amended or new claims require no additional search or examination;

- (C) why the claims are patentable; and
- (D) why they were not presented earlier.

A supplemental reissue oath/declaration must accompany the amendment. The supplemental reissue oath/declaration must state that the error(s) to be corrected arose without any deceptive intention on the part of the applicant. The supplemental reissue oath/declaration submitted after allowance must be directed to the error(s) applicant seeks to correct after allowance. This oath/declaration need not cover any earlier errors, since all earlier errors should have been covered by a reissue oath/declaration submitted prior to allowance.

Occasionally correcting an error after allowance does not include an amendment of the specification or claims of the patent. For example, the correction of the error could be the filing of a certified copy of the original foreign application (prior to the payment of the issue fee - see 37 CFR 1.55(a)(2)) to obtain the right of foreign priority under 35 U.S.C. 119 (see *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968)) where the claim for foreign priority had been timely made in the application for the original patent. In such a case, the requirements of 37 CFR 1.312 must still be met. This is so, because the correction of the patent is an amendment of the patent, even though no amendment is physically entered into the case. Thus, for a reissue oath/declaration submitted after allowance to correct an additional error (or errors), the reissue applicant must comply with 37 CFR 1.312 in the manner discussed above.

#### **1445 Reissue Application Examined in Same Manner as Original Application**

As stated in 37 CFR 1.176, a reissue application, including all the claims therein, is subject to “be examined in the same manner as a non-reissue, non-provisional application.” Accordingly, the claims in a reissue application are subject to any and all rejections which the examiner deems appropriate. It does not matter whether the claims are identical to those of the patent or changed from those in the patent. It also does not matter that a rejection was not made in the prosecution of the patent, or could have been made, or was in fact made and dropped during prosecution of the patent; the prior action in the prosecution of the

patent does not prevent that rejection from being made in the reissue application. Claims in a reissue application enjoy no “presumption of validity.” *In re Doyle*, 482 F.2d 1385, 1392, 179 USPQ 227, 232-233 (CCPA 1973); *In re Sneed*, 710 F.2d 1544, 1550 n.4, 218 USPQ 385, 389 n.4 (Fed. Cir. 1983). Likewise, the fact that during prosecution of the patent the examiner considered, may have considered, or should have considered information such as, for example, a specific prior art document, does not have any bearing on, or prevent, its use as prior art during prosecution of the reissue application.

#### **1448 Fraud, Inequitable Conduct, or Duty of Disclosure Issues [R-2]**

The Office no longer investigates and rejects reissue applications under 37 CFR 1.56. The Office will not comment upon duty of disclosure issues which are brought to the attention of the Office in reissue applications except to note in the application, in appropriate circumstances, that such issues are no longer considered by the Office during its examination of patent applications. Examination as to the lack of deceptive intent requirement in reissue applications will continue but without any investigation of fraud, inequitable conduct, or duty of disclosure issues. Applicant’s statement in the reissue oath or declaration of lack of deceptive intent will be accepted as dispositive except in special circumstances such as an admission or judicial determination of fraud, inequitable conduct, or violation of the duty of disclosure.

#### **ADMISSION OR JUDICIAL DETERMINATION**

An admission or judicial determination of fraud, inequitable conduct, or violation of the duty of disclosure is a special circumstance, because no investigation need be made. Accordingly, after consulting with the Technology Center (TC) Special Program Examiner (SPRE), a rejection should be made using the appropriate one of form paragraphs 14.21.09 or 14.22 as reproduced below.

Any admission of fraud, inequitable conduct or violation of the duty of disclosure must be explicit, unequivocal, and not subject to other interpretation. Where a rejection is made based upon such an admission (see form paragraph 14.22 below) and applicant responds with any reasonable interpretation of the facts that would not lead to a conclusion of fraud,

inequitable conduct or violation of the duty of disclosure, the rejection should be withdrawn. Alternatively, if applicant argues that the admission noted by the examiner was not in fact an admission, the rejection should also be withdrawn.

Form paragraph 14.21.09 should be used where the examiner becomes aware of a judicial determination of fraud, inequitable conduct or violation of the duty of disclosure on the part of the applicant **independently of the record of the case**, i.e., the examiner has external knowledge of the judicial determination.

Form paragraph 14.22 should be used where, **in the application record**, there is (a) an explicit, unequivocal admission by applicant of fraud, inequitable conduct or violation of the duty of disclosure which is not subject to other interpretation, or (b) information as to a judicial determination of fraud, inequitable conduct or violation of the duty of disclosure on the part of the applicant. External information which the examiner believes to be an *admission* by applicant should never be used by the examiner, and such external information should never be made of record in the reissue application.

*¶ 14.21.09 Rejection, 35 U.S.C. 251, No Error Without Deceptive Intention - External Knowledge*

Claims [1] rejected under 35 U.S.C. 251 since error “without any deceptive intention” has not been established. In view of the judicial determination in [2] of [3] on the part of applicant, a conclusion that any error was “without deceptive intention” cannot be supported. [4]

**Examiner Note:**

1. In bracket 1, list all claims in the reissue application.
2. In bracket 2, list the Court or administrative body which made the determination of fraud or inequitable conduct on the part of applicant.
3. In bracket 3, insert --fraud--, --inequitable conduct-- and/or --violation of duty of disclosure--.
4. In bracket 4, point out where in the opinion (or holding) of the Court or administrative body the determination of fraud, inequitable conduct or violation of duty of disclosure is set forth. Page number, column number, and paragraph information should be given as to the opinion (or holding) of the Court or administrative body. The examiner may add explanatory comments.

\*\*>

*¶ 14.22 Rejection, 35 U.S.C. 251, No Error Without Deceptive Intention-Evidence in the Application*

Claims [1] rejected under 35 U.S.C. 251 since error “without any deceptive intention” has not been established. In view of the reply filed on [2], a conclusion that any error was “without deceptive intention” cannot be supported.

[3]

**Examiner Note:**

1. In bracket 1, list all claims in the reissue application.
2. In bracket 2, insert the filing date of the reply which provides an admission of fraud, inequitable conduct or violation of duty of disclosure, or that there was a judicial determination of same.
3. In bracket 3, insert a statement that there has been an admission or a judicial determination of fraud, inequitable conduct or violation of duty of disclosure which provide circumstances why applicant’s statement in the oath or declaration of lack of deceptive intent should not be taken as dispositive. Any admission of fraud, inequitable conduct or violation of duty of disclosure must be explicit, unequivocal, and not subject to other interpretation.

<

See MPEP § 2012 for additional discussion as to fraud, inequitable conduct or violation of duty of disclosure in a reissue application.

## 1449 Protest Filed in Reissue Where Patent Is in Interference [R-2]

If a protest (see MPEP Chapter 1900) is filed in a reissue application related to a patent involved in a pending interference proceeding, the reissue application should be referred to the Office of Patent Legal Administration (OPLA) before considering the protest and acting on the reissue application.

The OPLA will check to see that:

- (A) all parties to the interference are aware of the filing of the reissue; and
- (B) the Office does not allow claims in the reissue which are unpatentable over the pending interference count(s), or found unpatentable in the interference proceeding. >After the reissue application has been reviewed by the OPLA, the reissue application with the protest will be returned to the examiner. See MPEP § 1441.01 for a discussion as to protests under 37 CFR 1.291(a) in reissue applications.<

## 1449.01 Concurrent Office Proceedings [R-2]

>

### I. CONCURRENT REEXAMINATION PROCEEDINGS:<

37 CFR 1.565(d) provides that if “a reissue application and an *ex parte* reexamination proceeding on which an order pursuant to 37 CFR 1.525 has been

mailed are pending concurrently on a patent, a decision will normally be made to merge the two proceedings or to suspend one of the two proceedings.” \*\* >37 CFR 1.991 provides that if “a reissue application and an *inter partes* reexamination proceeding on which an order pursuant to 37 CFR 1.931 has been mailed are pending concurrently on a patent, a decision may be made to merge the two proceedings or to suspend one of the two proceedings”.< If an examiner becomes aware that a reissue application and \* >an *ex parte* or *inter partes*< reexamination proceeding are both pending for the same patent, he or she should inform the Technology Center (TC) Special Program Examiner (SPRE) immediately.

Where a reissue application and a reexamination proceeding are pending concurrently on a patent, *and an order granting reexamination has been issued* for the reexamination proceeding, the files for the reissue application and the reexamination will be forwarded to the Office of Patent Legal Administration (OPLA) for a decision whether to merge the reissue and the reexamination, or stay one of the two. >(For IFW processing, see IFW Manual.)< See *In re Onda*, 229 USPQ 235 (Comm’r Pat. 1985). See also MPEP § 2285.

>Where a reissue application and a reexamination proceeding are pending concurrently on a patent, the patent owner, i.e., the reissue applicant, has a responsibility to notify the Office of the concurrent proceeding. 37 CFR § 1.178(b), 37 CFR 1.565(a), and 37 CFR 1.985(a). The patent owner should file in the reissue application, as early as possible, a Notification of Concurrent Proceedings pursuant to 37 CFR 1.178(b) in order to alert the Office of the existence of the reexamination proceeding on the same patent. See MPEP § 1418. In addition, the patent owner should file in the reexamination proceeding, as early as possible, a Notification of Concurrent Proceedings pursuant to 37 CFR 1.565(a) or 1.985(a) (depending on whether the reexamination proceeding is an *ex parte* reexamination proceeding or an *inter partes* reexamination proceeding) to provide a notification to the Office in the reexamination proceeding of the existence of the two concurrent proceedings.

The patent owner may file a petition under 37 CFR 1.182 in a reissue application to merge the reissue application with the reexamination proceeding, or to stay one of the proceedings because of the other. This

petition must be filed after the issuance of the order to reexamine (37 CFR 1.525, 37 CFR 1.931) in the reexamination proceeding. If the petition is filed prior to the reexamination order, it will not be considered, and will be returned to the patent owner by the TC Director. If the petition is filed after the issuance of the order to reexamine, the petition and the files for the reissue application and the reexamination proceeding will be forwarded to OPLA for decision.

## II. CONCURRENT INTERFERENCE PROCEEDINGS:<

If the original patent is involved in an interference, the examiner must consult the administrative patent judge in charge of the interference before taking any action on the reissue application. It is particularly important that the reissue application not be granted without the administrative patent judge's approval. See MPEP § 2360.

>

## III. CONCURRENT REISSUE PROCEEDINGS

Where more than one reissue applications are pending concurrently on the same patent, see MPEP §§ 1450 and 1451.<

### 1449.02 Interference in Reissue

In appropriate circumstances, a reissue application may be placed into interference with a patent or pending application. A patentee may provoke an interference with a patent or pending application by filing a reissue application, if the reissue application includes an appropriate reissue error as required by 35 U.S.C. 251. Reissue error must be based upon applicant error; a reissue cannot be based solely on the error of the Office for failing to declare an interference or to suggest copying claims for the purpose of establishing an interference. See *In re Keil*, 808 F.2d 830, 1 USPQ2d 1427 (Fed. Cir. 1987); *In re Dien*, 680 F.2d 151, 214 USPQ 10 (CCPA 1982); *In re Bostwick*, 102 F.2d 886, 888, 41 USPQ 279, 281 (CCPA 1939); and *In re Guastavino*, 83 F.2d 913, 916, 29 USPQ 532, 535 (CCPA 1936). See also *Slip Track Systems, Inc. v. Metal Lite, Inc.*, 159 F.3d 1337, 48 USPQ2d 1055 (Fed. Cir. 1998) (Two patents issued claiming the same patentable subject matter, and the patentee with the earlier filing date requested reexamination of the

patent with the later filing date (Slip Track's patent). A stay of litigation in a priority of invention suit under 35 U.S.C. 291, pending the outcome of the reexamination, was reversed. The suit under 35 U.S.C. 291 was the only option available to Slip Track to determine priority of invention. Slip Track could not file a reissue application solely to provoke an interference proceeding before the Office because it did not assert that there was any error as required by 35 U.S.C. 251 in the patent.). A reissue application can be employed to provoke an interference if the reissue application:

(A) adds copied claims which are not present in the original patent;

(B) amends claims to correspond to those of the patent or application with which an interference is sought; or

(C) contains at least one error (not directed to provoking an interference) appropriate for the reissue.

In the first two situations, the reissue oath/declaration must assert that applicant erred in failing to include claims of the proper scope to provoke an interference in the original patent application. Note that in *In re Metz*, 1998 U.S. App. LEXIS 23733 (Fed. Cir. 1998)(unpublished), the Federal Circuit permitted a patentee to file a reissue application to copy claims from a patent in order to provoke an interference with that patent. Furthermore, the subject matter of the copied or amended claims in the reissue application must be supported by the disclosure of the original patent under 35 U.S.C. 112, first paragraph. See *In re Molins*, 368 F.2d 258, 261, 151 USPQ 570, 572 (CCPA 1966) and *In re Spencer*, 273 F.2d 181, 124 USPQ 175 (CCPA 1959).

A reissue applicant cannot present added or amended claims to provoke an interference, if the claims were deliberately omitted from the patent. If there is evidence that the claims were not inadvertently omitted from the original patent, e.g., the subject matter was described in the original patent as being undesirable, the reissue application may lack proper basis for the reissue. See *In re Bostwick*, 102 F.2d at 889, 41 USPQ at 282 (CCPA 1939)(reissue lacked a proper basis because the original patent pointed out the disadvantages of the embodiment that provided support for the copied claims).

The issue date of the patent, or the publication date of the application publication (whichever is applicable

under 35 U.S.C. 135(b)), with which an interference is sought must be less than 1 year prior to the presentation of the copied or amended claims in the reissue application. See 35 U.S.C. 135(b) and MPEP § 715.05 and § 2307. If the reissue application includes broadened claims, the reissue application must be filed within two years from the issue date of the original patent. See 35 U.S.C. 251 and MPEP § 1412.03.

### **REISSUE APPLICATION FILED WHILE PATENT IS IN INTERFERENCE**

If a reissue application is filed while the original patent is in an interference proceeding, the reissue applicant is required to notify the Board of Patent Appeals and Interferences of the filing of the reissue application within 10 days from the filing date. See 37 CFR 1.660(b) and MPEP § 2360.

### **1450 Restriction and Election of Species >Made in Reissue Application< [R-2]**

*37 CFR 1.176. Examination of reissue.*

(a) A reissue application will be examined in the same manner as a non-reissue, non-provisional application, and will be subject to all the requirements of the rules related to non-reissue applications. Applications for reissue will be acted on by the examiner in advance of other applications.

(b) Restriction between subject matter of the original patent claims and previously unclaimed subject matter may be required (restriction involving only subject matter of the original patent claims will not be required). If restriction is required, the subject matter of the original patent claims will be held to be constructively elected unless a disclaimer of all the patent claims is filed in the reissue application, which disclaimer cannot be withdrawn by applicant.

37 CFR 1.176(b) permits the examiner to require restriction in a reissue application between claims newly added in a reissue application and the original patent claims, where the added claims are directed to an invention which is separate and distinct from the invention(s) defined by the original patent claims. The criteria for making a restriction requirement in a reissue application between the newly added claims and the original claims are the same as that applied in a non-reissue application. See MPEP §§ 806 through 806.05(i). The authority to make a "restriction" requirement under 37 CFR 1.176(b) extends to and includes the authority to make an election of species.

Where a restriction requirement is made by the examiner, the original patent claims will be held to be constructively elected (except for the limited situation where a disclaimer is filed as discussed in the next paragraph). Thus, the examiner will issue an Office action >in the reissue application< (1) providing notification of the restriction requirement, (2) holding the added claims to be constructively non-elected and withdrawn from consideration, \* (3) treating the original patent claims on the merits >, and (4) informing applicant that if the original claims are found allowable, and a divisional application has been filed for the non-elected claims, further action in the application will be suspended, pending resolution of the divisional application.<

If a disclaimer of all the original patent claims is filed in the reissue application containing newly added claims that are separate and distinct from the original patent claims, only the newly added claims will be present for examination. In this situation, the examiner's Office action will treat the newly added claims in the reissue application on the merits. The disclaimer of all the original patent claims must be filed in the reissue application prior to the issuance of the examiner's Office action containing the restriction requirement, in order for the newly added claims to be treated on the merits. Once the examiner has issued the Office action providing notification of the restriction requirement and treating the patent claims on the merits, it is too late to obtain an examination on the added claims in the reissue application by filing a disclaimer of all the original patent claims. If reissue applicant wishes to have the newly added claims be treated on the merits, a divisional reissue application must be filed to obtain examination of the added claims. Reissue applicants should carefully note that once a disclaimer of the patent claims is filed, it cannot be withdrawn. It does not matter whether the reissue application is still pending, or whether the reissue application has been abandoned or issued as a reissue patent. For all these situations, 37 CFR 1.176(b) states that the disclaimer cannot be withdrawn; the disclaimer will be given effect.

Claims elected pursuant to a restriction requirement will receive a complete examination on the merits, while the non-elected claims (to any added invention(s)) will be held in abeyance in a withdrawn status, and will only be examined if filed in a divisional

reissue application. If the reissue application containing only original unamended claims becomes allowable first (and no "error" under 35 U.S.C. 251 exists), further action in that reissue application will be suspended to await examination in the divisional reissue application(s) containing the added claims. >Multiple suspensions (usually six-month periods) may be necessary.< The Office will not \* >permit< claims >to issue< in a reissue application which >application< does not correct any error in the original patent. Once a divisional reissue application containing the added claims is examined and becomes allowable, \*\* >the examiner will issue a requirement under 37 CFR 1.177(c) for applicant to merge the claims of the suspended first reissue application with the allowable claims of the divisional reissue application into a single application, by placing all of the claims in one of the applications and expressly abandoning the other. The Office action making this requirement will set a two-month period for compliance with the requirement. If applicant fails to timely respond to the Office action, or otherwise refuses to comply with the requirement made, then the divisional reissue application (claiming the invention which was non-elected in the now-suspended first reissue application) will be passed to issue alone, since the claims of the divisional reissue application, by themselves, do correct an error in the original patent. Prosecution will be reopened in the suspended first reissue application, and a rejection based on a lack of error under 35 U.S.C. 251 will then be made. This rejection may be made final, since applicant is on notice of the consequences of not complying with the merger requirement.

If the divisional reissue application becomes abandoned, prosecution will be reopened in the suspended first reissue application, and a rejection based on a lack of error under 35 U.S.C. 251 will then be made in the first reissue application. Since no error in the original patent is being corrected in the first reissue application, no reissue patent will issue.<

As stated in 37 CFR 1.176(b), **the examiner is not permitted to require restriction among original claims of the patent** (i.e., among claims that were in the patent prior to filing the reissue application). Even where the original patent contains claims to different inventions which the examiner considers independent or distinct, and the reissue application claims the same

inventions, a restriction requirement would be improper. If such a restriction requirement is made, it must be withdrawn.

Restriction between multiple inventions recited **in the newly added claims** will be permitted provided the added claims are drawn to several separate and distinct inventions. In such a situation, the original patent claims would be examined in the first reissue application, and applicant is permitted to file a divisional reissue application for each of the several separate and distinct inventions identified in the examiner's restriction requirement.

A situation will sometimes arise where the examiner makes an election of species requirement between the species claimed in the original patent claims and a species of claims added in the reissue application. In such a situation, if (1) the non-elected claims to the added species depend from (or otherwise include all limitations of) a generic claim which embraces all species claims, and (2) the generic claim is found allowable, then the non-elected claims of the added species must be rejoined with the elected claims of the original patent. See MPEP § 809.02(c).

\*\*

## **1451 Divisional Reissue Applications; Continuation Reissue Applications Where the Parent is Pending [R-2]**

*35 U.S.C. 251. Reissue of defective patents.*

\*\*\*\*\*

The Director may issue several reissued patents for distinct and separate parts of the thing patented, upon demand of the applicant, and upon payment of the required fee for a reissue for each of such reissued patents.

\*\*\*\*\*

*37 CFR 1.177. Issuance of multiple reissue patents.*

(a) The Office may reissue a patent as multiple reissue patents. If applicant files more than one application for the reissue of a single patent, each such application must contain or be amended to contain in the first sentence of the specification a notice stating that more than one reissue application has been filed and identifying each of the reissue applications by relationship, application number and filing date. The Office may correct by certificate of correction under § 1.322 any reissue patent resulting from an application to which this paragraph applies that does not contain the required notice.

(b) If applicant files more than one application for the reissue of a single patent, each claim of the patent being reissued must be presented in each of the reissue applications as an amended,

unamended, or canceled (shown in brackets) claim, with each such claim bearing the same number as in the patent being reissued. The same claim of the patent being reissued may not be presented in its original unamended form for examination in more than one of such multiple reissue applications. The numbering of any added claims in any of the multiple reissue applications must follow the number of the highest numbered original patent claim.

(c) If any one of the several reissue applications by itself fails to correct an error in the original patent as required by 35 U.S.C. 251 but is otherwise in condition for allowance, the Office may suspend action in the allowable application until all issues are resolved as to at least one of the remaining reissue applications. The Office may also merge two or more of the multiple reissue applications into a single reissue application. No reissue application containing only unamended patent claims and not correcting an error in the original patent will be passed to issue by itself.

The court in *In re Graff*, 111 F.3d 874, 876-77, 42 USPQ2d 1471, 1473 (Fed. Cir. 1997) stated that “[t]he statute does not prohibit divisional or continuation reissue applications, and does not place stricter limitations on such applications when they are presented by reissue, provided of course that the statutory requirements specific to reissue applications are met.” Following the decision in *Graff*, the Office has adopted a policy of treating continuations and divisionals of reissue applications, to the extent possible, in the same manner as continuations and divisionals of non-reissue applications.

Questions relating to the propriety of divisional reissue applications and continuation reissue applications should be referred via the Technology Center (TC) Special Program Examiner to the Office of Patent Legal Administration.

## **DIVISIONAL REISSUE APPLICATIONS**

37 CFR 1.176(b) permits the examiner to require restriction in a reissue application between the original claims of the patent and any newly added claims which are directed to a separate and distinct invention(s). See also MPEP § 1450. As a result of such a restriction requirement, divisional applications may be filed for each of the inventions identified in the restriction requirement.

In addition, applicant may initiate a division of the claims by filing more than one reissue application in accordance with 37 CFR 1.177. The multiple reissue applications which are filed may contain different groups of claims from among the original patent claims, or some of the reissue applications may con-

tain newly added groups (not present in the original patent). There is no requirement that the claims of the multiple reissue applications be independent and distinct from one another; if they are not independent and distinct from one another, the examiner must apply the appropriate double patenting rejections.

There is no requirement that a family of divisional reissue applications issue at the same time; however, it is required that they contain a cross reference to each other in the specification. 37 CFR 1.177(a) requires that all multiple reissue applications resulting from a single patent must include as the first sentence of their respective specifications a cross reference to the other reissue application(s). Accordingly, the first sentence of each reissue specification must provide notice stating that more than one reissue application has been filed, and it must identify each of the reissue applications and their relationship within the family of reissue applications, and to the original patent. An example of the suggested language to be inserted is as follows:

Notice: More than one reissue application has been filed for the reissue of Patent No. 9,999,999. The reissue applications are application numbers 09/999,994 (the present application), 09/999,995, and 09/999,998, all of which are divisional reissues of Patent No. 9,999,999.

The examiner should object to the specification and require an appropriate amendment if applicant fails to include such a cross reference to the other reissue applications in the first sentence of the specification of each of the reissue applications.

Where one of the divisional applications of the family has issued without the required cross reference to the other reissue application(s), the examiner will refer the matter to his/her Supervisory Patent Examiner (SPE). The SPE will initiate a certificate of correction under 37 CFR 1.322 to include the appropriate cross reference in the already issued first reissue patent before passing the pending reissue application to issue. Form paragraph 10.19 may be used for such purpose. After the SPE prepares the memorandum as per form paragraph 10.19, the patent file with the memorandum should be forwarded to the Certificates of Correction Branch for issuance of a certificate. >The examiner should make a reference in the pending divisional reissue application to the fact that an actual request for a Certificate of Correction has been

initiated in the first reissue patent pursuant to 37 CFR 1.177(a), e.g., by an entry in the search notes or in an examiner's amendment.<

*¶ 10.19 Memorandum - Certificate of Correction (Cross-Reference to Other Reissues in Family)*

DATE: [1]

TO: Certificates of Correction Branch

FROM: [2], SPE, Art Unit [3]

SUBJECT: Request for Certificate of Correction

Please issue a Certificate of Correction in U. S. Letters Patent No. [4] as specified on the attached Certificate.

---

[5], SPE

Art Unit [6]

**UNITED STATES PATENT AND TRADEMARK OFFICE  
CERTIFICATE**

Patent No. [7]

Patented: [8]

The present reissue patent issued from an application that is one of a family of divisional reissue applications resulting from Patent No. [9]. The present reissue patent has issued without the cross reference to the other reissue application(s) of the family which is required pursuant to 37 CFR 1.177(a). Accordingly, insert in the first sentence of the specification as follows:

Notice: More than one reissue application has been filed for the reissue of patent [9]. The reissue applications are [10].

---

[11], Supervisory Patent Examiner

Art Unit [12]

**Examiner Note:**

- 1 In bracket 9, insert the patent number of the patent for which multiple reissue divisional applications have been filed.
- 2 This is an internal memo and must not be mailed to the applicant. This memo should accompany the patented file to the Certificates of Correction Branch as noted in form paragraphs 10.13 and 10.14.
- 3 In brackets 5 and 11, insert the name of SPE and provide the signature of the SPE above each line.
- 4 In brackets 6 and 12, insert the Art Unit number.
- 5 Two separate pages of USPTO letterhead will be printed when using this form paragraph.
- 6 In bracket 10, identify each of the reissue applications (including the present application) and their relationship within the family of reissue applications, and to the original patent.

In addition to the amendment to the first sentence of the specification, the reissue application cross references will also be reflected in the file by way of the bibliographic data sheet reprint (for 09/ and later series), or the front face of the reissue file wrapper (for 08/ and earlier series), for all the multiple reissue applications, so that adequate notice is provided that

more than one reissue application has been filed for a single original patent. >(For IFW processing, see IFW Manual.)<

Pursuant to 37 CFR 1.177(b) all of the claims of the patent to be reissued must be presented in each reissue application in some form, i.e., as amended, as unamended or as canceled. Further, the same patent claim cannot be presented in more than one of the reissue applications, as a pending claim, in its original unamended version for examination. Finally, any added claims must be numbered beginning with the next highest number following the last patent claim.

If the same or similar claims are presented in more than one of the multiple reissue applications, the possibility of statutory double patenting (35 U.S.C. 101) or non-statutory (judicially created doctrine) double patenting should be considered by the examiner during examination, and the appropriate rejections made. A terminal disclaimer may be filed to overcome an obviousness type double patenting rejection. The terminal disclaimer is necessary in order to ensure common ownership of the reissue patents throughout the remainder of the unexpired term of the original patent. >Whenever a divisional reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, the copy of the assignee consent from the parent reissue application should not be accepted. *The copy of the consent from the parent reissue application does not indicate that the assignee has consented to the addition of the new invention of the divisional reissue application to the original patent.* The Office of Initial Patent Examination (OIPE) should accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(e). See MPEP § 1410.01. The copy of the reissue oath/declaration should be accepted by OIPE, since it is an oath/declaration, even though it may be improper under 35 U.S.C. 251. The examiner should check the copy of the oath/declaration to ensure that it identifies an error being corrected by the divisional reissue application. The copy of the oath/declaration from the parent reissue application may or may not cover the error being corrected by the divisional reissue application since the divisional reissue application is (by definition) directed to a new invention. If it does not, the exam-

iner should reject the claims of the divisional reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the divisional reissue application, and require a new oath/declaration. See MPEP § 1414. If the copy of the reissue oath/declaration from the parent reissue application does in fact cover an error being corrected in the divisional reissue application, no such rejection should be made. However, since a new invention is being added by the filing of the divisional reissue application, a supplemental reissue oath/declaration pursuant to 37 CFR 1.175 (b)(1) will be required. See MPEP § 1414.01.<

Situations yielding divisional reissues occur infrequently and usually involve only two such files. It should be noted, however, that in rare instances in the past, there have been more than two (and as many as five) divisional reissues of a patent. >For treatment of a plurality of divisional reissue applications resulting from a requirement to restrict to distinct inventions or a requirement to elect species, see MPEP § 1450.<

## CONTINUATION REISSUE APPLICATIONS

A continuation of a reissue is not ordinarily filed “for distinct and separate parts of the thing patented” as called for in the second paragraph of 35 U.S.C. 251. The decision of *In re Graff*, 111 F.3d 874, 42 USPQ2d 1471 (Fed. Cir. 1997) interprets 35 U.S.C. 251 to permit multiple reissue patents to issue even where the multiple reissue patents are not for “distinct and separate parts of the thing patented.” The court stated:

Section 251[2] is plainly intended as enabling, not as limiting. Section 251[2] has the effect of assuring that a different burden is not placed on divisional or continuation reissue applications, compared with divisions and continuations of original applications, by codifying the Supreme Court decision which recognized that more than one patent can result from a reissue proceeding. Thus § 251[2] places no greater burden on Mr. Graff’s continuation reissue application than upon a continuation of an original application; § 251[2] neither overrides, enlarges, nor limits the statement in § 251[3] that the provisions of Title 5 apply to reissues.

111 F.3d at 877, 42 USPQ2d at 1473. Accordingly, prosecution of a continuation of a reissue application will be permitted (despite the existence of the pending parent reissue application) where the continuation complies with the rules for reissue.

The parent and the continuation reissue applications should be examined together if possible. An appropriate amendment to the continuing data entries must be made to the first sentence of the specification, (see the discussion above under the heading “Divisional Reissue Applications”), and to the bibliographic data sheet reprint (for 09/ and later series) or to the front face of the reissue file wrapper (for 08/ and earlier series), for *both the parent and the continuation* reissue applications, so that the parent-continuation relationship of the reissue applications is specifically identified and notice is provided of both reissue applications. >(For IFW processing, see IFW Manual.<

Where the parent reissue application issues prior to the examination of the continuation, the claims of the continuation should be carefully reviewed for double patenting over the claims of the parent. Where the parent and the continuation reissue applications are examined together, a provisional double patenting rejection should be made in both cases as to any overlapping claims. See MPEP § 804 - § 804.04 as to double patenting rejections. Any terminal disclaimer filed to obviate an obviousness-type double patenting rejection ensures common ownership of the reissue patents throughout the remainder of the unexpired term of the original patent.

If the parent reissue application issues without any cross reference to the continuation, amendment of the parent reissue patent to include a cross-reference to the continuation must be effected at the time of allowance of the continuation application by Certificate of Correction. See the discussion above under the heading “Divisional Reissue Applications” as to how the Certificate of Correction is to be provided.

>Again, the examiner should make reference in the pending divisional reissue application to the fact that an actual request for a Certificate of Correction has been generated in the first reissue patent pursuant to 37 CFR 1.177(a), e.g., by an entry in the search notes or in an examiner’s amendment.

Where a continuation reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, and the parent reissue application is not to be abandoned, the copy of the consent of the parent reissue application should not be accepted. *The copy of the consent of the parent reissue application does not indicate that the*

*assignee has consented to the addition of the new error correction of the continuation reissue application to the original patent. Presumably, a new correction has been added, since the parent reissue application is still pending. OIPE should accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(e). See MPEP § 1410.01. The copy of the reissue oath/declaration should be accepted by OIPE, since it is a oath/declaration, albeit improper under 35 U.S.C. 251. The examiner should reject the claims of the continuation reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the continuation reissue application, and should require a new oath/declaration. See MPEP § 1414.*

Where a continuation reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the consent should be accepted by both OIPE and the examiner. The reissue oath/declaration should be accepted by OIPE, and the examiner should check to ensure that the oath/declaration identifies an error that is being corrected in the continuation reissue application. See MPEP § 1414. If a preliminary amendment was filed with the continuation reissue application, the examiner should check for the need of a supplemental reissue oath/declaration. Pursuant to 37 CFR 1.175 (b)(1), for any error corrected via the preliminary amendment which is not covered by the oath or declaration submitted in the parent reissue application, applicant must submit a supplemental oath/declaration stating that every such error arose without any deceptive intention on the part of the applicant. See MPEP § 1414 and § 1414.01.<

## **1452 Request for Continued Examination of Reissue Application**

A request for continued examination (RCE) under 37 CFR 1.114 is available for a reissue application. Effective May 29, 2000, an applicant in a reissue application may file a request for continued examination of the reissue application, if the reissue application was filed on or after June 8, 1995. This applies

even where the application, which resulted in the original patent, was filed prior to June 8, 1995.

An RCE continues the prosecution of the existing reissue application and is not a filing of a new reissue application. Thus, the filing of an RCE will not be announced in the *Official Gazette*. Additionally, if a reissue application is merged with a reexamination proceeding (see MPEP § 1449.01), the filing of an RCE will not dissolve the merger, since the reissue application does not become abandoned.

## 1453 Amendments to Reissue Applications [R-2]

37 CFR 1.121. *Manner of making amendments in application.*

\*\*> \*\*\*\*\*

(i) *Amendments in reissue applications.* Any amendment to the description and claims in reissue applications must be made in accordance with § 1.173.<

\*\*\*\*\*

37 CFR 1.173. *Reissue specification, drawings, and amendments.*

\*\*\*\*\*

(b) *Making amendments in a reissue application.* An amendment in a reissue application is made either by physically incorporating the changes into the specification when the application is filed, or by a separate amendment paper. If amendment is made by incorporation, markings pursuant to paragraph (d) of this section must be used. If amendment is made by an amendment paper, the paper must direct that specified changes be made.

(1) *Specification other than the claims.* Changes to the specification, other than to the claims, must be made by submission of the entire text of an added or rewritten paragraph, including markings pursuant to paragraph (d) of this section, except that an entire paragraph may be deleted by a statement deleting the paragraph without presentation of the text of the paragraph. The precise point in the specification must be identified where any added or rewritten paragraph is located. This paragraph applies whether the amendment is submitted on paper or compact disc (see §§ 1.52(e)(1) and 1.821(c), but not for discs submitted under § 1.821(e)).

(2) *Claims.* An amendment paper must include the entire text of each claim being changed by such amendment paper and of each claim being added by such amendment paper. For any claim changed by the amendment paper, a parenthetical expression “amended,” “twice amended,” *etc.*, should follow the claim number. Each changed patent claim and each added claim must include markings pursuant to paragraph (d) of this section, except that a patent claim or added claim should be canceled by a statement canceling the claim without presentation of the text of the claim.

>

(3) *Drawings.* One or more patent drawings shall be amended in the following manner: Any changes to a patent drawing must be submitted as a replacement sheet of drawings which shall be an attachment to the amendment document. Any replacement sheet of drawings must be in compliance with § 1.84 and shall include all of the figures appearing on the original version of the sheet, even if only one figure is amended. Amended figures must be identified as “Amended,” and any added figure must be identified as “New.” In the event that a figure is canceled, the figure must be surrounded by brackets and identified as “Canceled.” All changes to the drawing(s) shall be explained, in detail, beginning on a separate sheet accompanying the papers including the amendment to the drawings.

(i) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, may be included. The marked-up copy must be clearly labeled as “Annotated Marked-up Drawings” and must be presented in the amendment or remarks section that explains the change to the drawings.

(ii) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, must be provided when required by the examiner.

(c) *Status of claims and support for claim changes.* Whenever there is an amendment to the claims pursuant to paragraph (b) of this section, there must also be supplied, on pages separate from the pages containing the changes, the status (*i.e.*, pending or canceled), as of the date of the amendment, of all patent claims and of all added claims, and an explanation of the support in the disclosure of the patent for the changes made to the claims.<

(d) *Changes shown by markings.* Any changes relative to the patent being reissued which are made to the specification, including the claims, upon filing, or by an amendment paper in the reissue application, must include the following markings:

(1) The matter to be omitted by reissue must be enclosed in brackets; and

(2) The matter to be added by reissue must be underlined, except for amendments submitted on compact discs (§§ 1.96 and 1.821(c)). Matter added by reissue on compact discs must be preceded with “<U>” and end with “</U>” to properly identify the material being added.

(e) *Numbering of patent claims preserved.* Patent claims may not be renumbered. The numbering of any claim added in the reissue application must follow the number of the highest numbered patent claim.

(f) *Amendment of disclosure may be required.* The disclosure must be amended, when required by the Office, to correct inaccuracies of description and definition, and to secure substantial correspondence between the claims, the remainder of the specification, and the drawings.

(g) *Amendments made relative to the patent.* All amendments must be made relative to the patent specification, including the claims, and drawings, which are in effect as of the date of filing of the reissue application.

The provisions of 37 CFR 1.173(b)-(g) and those of 37 CFR 1.121>(i)< apply to amendments in reissue applications. Any amendments submitted in a reissue

application \*\* must comply with 37 CFR 1.173(b) \*\*,.

\*\*

Amendments submitted in a reissue application, including preliminary amendments (i.e., amendments filed as a separate paper to accompany the filing of a reissue application), must comply with the practice outlined below in this section; however, for examiner's amendments to the specification and claims, 37 CFR 1.121(g) provides certain exceptions to that practice in the interest of expediting prosecution. The exceptions set forth in 37 CFR 1.121(g) also apply in reissue applications.

Pursuant to 37 CFR 1.173(a), no amendment in a reissue application may enlarge the scope of the claims, unless "applied for within two years from the grant of the original patent." Further, the amendment may not introduce new matter. See MPEP § 1412.03 for further discussion as to the time limitation on enlarging the scope of the patent claims in a reissue application.

All amendment changes must be made relative to the patent to be reissued. Pursuant to 37 CFR 1.173(d), any such changes which are made to the specification, including the claims, must be shown by employing the following "markings:"

(A) The matter to be omitted by reissue must be enclosed in brackets; and

(B) The matter to be added by reissue must be underlined, except for amendments submitted on compact discs (pursuant to 37 CFR 1.96 for computer printouts or programs, and 37 CFR 1.825 for sequence listings). Matter added by reissue on compact discs must be preceded with "<U>" and end with "</U>" to properly identify the material being added.

## THE SPECIFICATION

37 CFR 1.173(b)(1) relates to the manner of making amendments to the specification other than the claims. It is not to be used for making amendments to the claims or the drawings.

All amendments which include any deletions or additions must be made by submission of the entire text of each added or rewritten paragraph with markings (as defined above), except that an entire paragraph of specification text may be deleted by a statement deleting the paragraph without presentation of the text of the paragraph. Applicant must indicate

the precise point where each amendment is made. All bracketing and underlining is made in comparison to the original patent, not in comparison to any prior amendment in the reissue application. Thus, all paragraphs which are newly *added* to the specification of the original patent must be submitted as completely underlined each time they are re-submitted in the reissue application.

## THE CLAIMS

37 CFR 1.173(b)(2) relates to the manner of making amendments to the claims in reissue applications. It is not to be used for making amendments to the remainder of the specification or to the drawings. 37 CFR 1.173(b)(2) requires that:

(A) For each claim that is being amended *by the amendment being submitted* (the current amendment), the entire text of the claim must be presented with markings as defined above;

(B) For each new claim added to the reissue *by the amendment being submitted* (the current amendment), the entire text of the added claim must be presented completely underlined;

(C) A patent claim should be canceled by a direction to cancel that claim, there is no need to present the patent claim surrounded by brackets; and

(D) A new claim (previously added in the reissue) should be canceled by a direction to cancel that claim.

Original patent claims are never to be renumbered; see 37 CFR 1.173(e). A patent claim retains its number even if it is canceled in the reissue proceeding, and the numbering of any added claims must begin after the last original patent claim.

Pursuant to 37 CFR 1.173(c), each amendment submitted must set forth the status of all patent claims and all added claims as of the date of the submission. The status to be set forth is whether the claim is pending or canceled. The failure to submit the claim status will generally result in a notification to applicant that the amendment *prior to final rejection* is not completely responsive (see 37 CFR 1.135(c)). Such an amendment *after final rejection* will not be entered.

Also pursuant to 37 CFR 1.173(c), each claim amendment must be accompanied by an explanation of the support in the disclosure of the patent for the amendment (i.e., support for all changes made in the claim(s), whether insertions or deletions). The failure

to submit an explanation will generally result in a notification to applicant that the amendment *prior to final rejection* is not completely responsive (see 37 CFR 1.135(c)). Such an amendment *after final rejection* will not be entered.

## THE DRAWINGS

\*\*

37 CFR 1.173(a)(2) states that amendments to the original patent drawings are not permitted, and that any change to the drawings must be by way of 37 CFR 1.173(b)(3). \*\* >See MPEP § 1413 for the manner of making amendments to the drawings in a reissue application.<

Form paragraph 14.20.01 may be used to advise applicant of the proper manner of making amendments in a reissue application.

### ¶ 14.20.01 Amendments To Reissue-37 CFR 1.173(b)

Applicant is notified that any subsequent amendment to the specification and/or claims must comply with 37 CFR 1.173(b).

#### Examiner Note:

This form paragraph may be used in the first Office action to advise applicant of the proper manner of making amendments.

Form paragraph 14.21.01 may be used to notify applicant that proposed amendments **filed prior to final rejection** in the reissue application do not comply with 37 CFR 1.173(b).

### ¶ 14.21.01 Improper Amendment To Reissue - 37 CFR 1.173(b)

The amendment filed [1] proposes amendments to [2] that do not comply with 37 CFR 1.173(b), which sets forth the manner of making amendments in reissue applications. A supplemental paper correctly amending the reissue application is required.

A shortened statutory period for reply to this letter is set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter.

#### Examiner Note:

1. This form paragraph may be used for any 37 CFR 1.173(b) informality as to an amendment submitted in a reissue application prior to final rejection. After final rejection, applicant should be informed that the amendment will not be entered by way of an Advisory Office action.

2. In bracket 2, specify the proposed amendments that are not in compliance.

Note that if an informal amendment is submitted **after final rejection**, form paragraph 14.21.01 should not be used. Rather, an advisory Office action should be issued using Form PTO-303 indicating that the amendment was not entered because it does not com-

ply with 37 CFR 1.173(b), which sets forth the manner of making amendments in reissue applications.

## ALL CHANGES ARE MADE VIS-À-VIS THE PATENT TO BE REISSUED

When a reissue patent is printed, all underlined matter is printed in *italics* and all brackets are printed as inserted in the application, in order to show exactly which additions and deletions have been made to the patent being reissued. Therefore, all underlining and bracketing in the reissue application should be made relative to the text of the patent, as follows. In accordance with 37 CFR 1.173(g), all amendments in the reissue application must be made relative to (i.e., *vis-à-vis*) the patent specification in effect as of the date of the filing of the reissue application. The patent specification includes the claims and drawings. If there was a prior change to the patent (made via a prior concluded reexamination certificate, reissue of the patent, certificate of correction, etc.), the first amendment of the subject reissue application must be made relative to the patent specification as changed by the prior proceeding or other mechanism for changing the patent. All amendments subsequent to the first amendment must also be made relative to the patent specification in effect as of the date of the filing of the reissue application, and **not** relative to the prior amendment.

### *The Subject Patent Already Has Underlining or Bracketing*

If the original (or previously changed) patent includes a formula or equation already having underlining or bracketing therein as part of the formula or equation, any amendment of such formula or equation should be made by bracketing the entire formula and rewriting and totally underlining the amended formula in the re-presented paragraph of the specification or rewritten claim in which the changed formula or equation appears. Amendments of segments of a formula or equation should not be made. If the original patent includes bracketing and underlining from an earlier reexamination or reissue, double brackets and double underlining should be used in the subject reissue application to identify and distinguish the present changes being made. The subject reissue, when printed, would include double brackets (indicating

deletions made in the subject reissue) and boldface type (indicating material added in the subject reissue).

### EXAMPLES OF PROPER AMENDMENTS

A substantial number of problems arise in the Office because of improper submission of amendments in reissue applications. The following examples are provided to assist in preparation of proper amendments to reissue applications.

#### *Original Patent Description or Patent Claim Amended*

##### **Example (1)**

If it is desired to change the specification at column 4 line 23, to replace “is” with --are--, submit a copy of the entire paragraph of specification of the patent being amended with underlining and bracketing, and point out where the paragraph is located, e.g.,

Replace the paragraph beginning at column 4, line 23 with the following:

Scanning [is] are controlled by clocks which are, in turn, controlled from the display tube line synchronization. The signals resulting from scanning the scope of the character are delivered in parallel, then converted into serial mode through a shift register wherein the shift signal frequency is controlled by a clock that is, in turn, controlled from the display tube line synchronization.

##### **Example (2)**

For changes to the claims, one must submit a copy of the entire patent claim with the amendments shown by underlining and bracketing, e.g.,

Amend claim 6 as follows:

Claim 6 (Amended). The apparatus of claim [5] l wherein the [first] second piezoelectric element is parallel to the [second] third piezoelectric element.

If the dependency of any original patent claim is to be changed by amendment, it is proper to make that original patent claim dependent upon a later filed higher numbered claim.

#### *Cancellation of Claim(s)*

##### **Example (3)**

To cancel an original patent claim, in writing, direct cancellation of the patent claim, e.g.,

Cancel claim 6.

##### **Example (4)**

To cancel a new claim (previously added in the reissue), in writing, direct cancellation of the new claim, e.g.,

Cancel claim 15.

#### *Presentation of New Claims*

##### **Example (5)**

Each new claim (i.e., a claim not found in the patent, that is newly presented in the reissue application) should be presented with underlining throughout the claim, e.g.,

Add claim 7 as follows:

Claim 7. The apparatus of claim 5 further comprising electrodes attaching to said opposite faces of the first and second piezoelectric elements.

Even though original claims may have been canceled, the numbering of the original claims does not change. Accordingly, any added claims are numbered beginning with the number next higher than the number of claims in the original patent. If new claims have been added to the reissue application which are later canceled prior to issuance of the reissue patent, the examiner will renumber any remaining new claims in numerical order to follow the number of claims in the original patent.

#### *Amendment of New Claims*

An amendment of a “new claim” (i.e., a claim not found in the patent, that was previously presented in the reissue application) must be done by presenting the amended “new claim” containing the amendatory material, and completely underlining the claim. The presentation cannot contain any bracketing or other indication of what was in the previous version of the claim. This is because all changes in the reissue are made *vis-à-vis* the original patent, and not in comparison to the prior amendment. Although the presentation of the amended claim does not contain any indication of what is changed from the previous version of the claim, applicant must point out what is changed in the “Remarks” portion of the amendment. Also, per 37 CFR 1.173(c), each change made in the claim must be accompanied by an explanation of the support in the disclosure of the patent for the change.

### ***Amendment of Original Patent Claims More Than Once***

The following illustrates proper claim amendment of original patent claims in reissue applications:

A. Patent claim.

Claim 1. A cutting means having a handle portion and a blade portion.

B. Proper first amendment format.

Claim 1 (Amended). A [cutting means] knife having a bone handle portion and a notched blade portion.

C. Proper second amendment format.

Claim 1 (Twice Amended). A [cutting means] knife having a handle portion and a serrated blade portion.

Note that the second amendment must include the changes previously presented in the first amendment, i.e., [cutting means] knife, as well as the new changes presented in the second amendment, i.e., serrated.

The word bone was presented in the first amendment and is now to be deleted in the second amendment. The word “bone” is NOT to be shown in brackets in the second amendment. Rather, the word “bone” is simply omitted from the claim, since “bone” never appeared in the patent. An explanation of the deletion should appear in the remarks.

The word notched which was presented in the first amendment is replaced by the word serrated in the second amendment. The word notched is being deleted in the second amendment and did not appear in the patent; accordingly, “notched” is not shown in any form in the claim. The word serrated is being added in the second amendment, and accordingly “serrated” is added to the claim and is underlined.

In the second amendment, the deletions of “notched” and “bone” are not changes from the original patent claim text and therefore are not shown in brackets in the second amendment. In both the first and the second amendments, the entire claim is presented only with the changes from the original patent text.

### **>ADDITIONAL EXAMPLES**

(A) For a reissue application, where the patent was previously reissued:

As per MPEP § 1411, double underlining and double bracketing are used in the second reissue application to show amendments made relative to the first reissued patent

(B) For a reissue application, where the patent was previously reexamined and a reexamination certificate has issued for the patent:

An amendment in the reissue application must be presented as if the changes made to the original patent text via the reexamination certificate are a part of the original patent. Thus, all italicized text of the reexamination certificate is presented in the amendment (made in the reissue application) without italics. Further, any text found in brackets in the reexamination certificate is omitted in the amendment (made in the reissue application).

(C) For a reissue application, where a certificate of correction has issued for the patent:

An amendment in the reissue application must be presented as if the changes made to the original patent text via the certificate of correction are a part of the original patent. Thus, all text added by certificate of correction is presented in the amendment (made in the reissue application) without italics. Further, any text deleted by certificate of correction is entirely omitted in the amendment (made in the reissue application).

(D) For a reissue application, where a statutory disclaimer has issued for the patent:

Any claim statutorily disclaimed is no longer in the patent, and such a claim cannot be amended. The statutorily disclaimed claim(s) should be lined through, and not surrounded by brackets.<

## **1454 Appeal Brief**

The requirements for an appeal brief are set forth in 37 CFR 1.192 and MPEP § 1206, and they apply to a reissue application in the same manner that they apply to a non-reissue application. There is, however, a difference in practice as to presentation of the copy of the claims in the appeal brief for a reissue application. The claims on appeal presented in an appeal brief for a reissue application should include all underlining and bracketing necessary to reflect the changes made to the patent claims during the prosecution of the reissue application. In addition, any new claims added in the reissue application should be completely underlined.

## 1455 Allowance and Issue [R-2]

### “BLUE SLIP”

In all reissue applications prepared for issue where a blue slip is needed (i.e., 08/ and earlier series), the patent number of the original patent which is being reissued should be placed in the box provided therefor below the box for the applicant’s name on the blue Issue Classification Slip (form PTO-270) or design Issue Classification Slip (form PTO-328). Otherwise, the Issue Classification Slip is prepared in the same manner as for a non-reissue application. >(For IFW processing, see IFW Manual.)<

For 09/ and later series applications, the patent number of the original patent which is being reissued should be placed on the face of the file wrapper above the box “PREPARED AND APPROVED FOR ISSUE” just after “(Exr. Initials)” in the line reading “SURRENDER OF ORIGINAL PATENT \_\_\_\_\_ (Exr. Initials).” >(For IFW processing, see IFW Manual.)<

### CHANGES TO THE ORIGINAL PATENT

The specifications of reissue patents will be printed in such a manner as to show the changes over the original patent text by enclosing any material omitted by the reissue in heavy brackets [ ] and printing material added by the reissue in *italics*. 37 CFR 1.173 (see MPEP § 1411) requires the specification of a reissue application to be presented in a specified form, specifically designed to facilitate this different manner of printing, as well as for other reasons.

The printed reissue patent specification will carry the following heading, which will be added by the Publishing Division of the Office of Patent Publication:

“Matter enclosed in heavy brackets [ ] appears in the original patent but forms no part of this reissue specification; matter printed in italics indicates the additions made by reissue.”

The examiners should see that the specification is in proper form for printing. Examiners should carefully check the entry of all amendments to ensure that the changes directed by applicant will be accurately printed in any reissue patent that may ultimately issue. Matter appearing in the original patent which is omit-

ted by reissue should be enclosed in brackets, while matter added by reissue should be underlined.

Any material added by amendment in the reissue application (as underlined text) which is later canceled should be crossed through, *and not bracketed*. Material cancelled from the original patent should be enclosed in brackets, *and not lined through*.

All the claims of the original patent should appear in the reissue patent, with canceled patent claims being enclosed in brackets.

### CLAIM NUMBERING

No renumbering of the original patent claims is permitted, even if the dependency of a dependent patent claim is changed by reissue so that it is to be dependent on a subsequent higher numbered claim.

When a dependent claim in a reissue application depends upon a claim which has been canceled, and the dependent claim is not thereafter made dependent upon a pending claim, such a dependent claim must be rewritten in independent form.

New claims added during the prosecution of the reissue application should follow the number of the highest numbered patent claim and should be completely underlined to indicate they are to be printed in italics >on the printed patent<. Often, as a result of the prosecution and examination, some new claims are canceled while other new claims remain. When the reissue >application< is allowed, any claims remaining which are additional to the patent claims (i.e., claims added via the reissue >application<) should be renumbered in sequence starting with the number next higher than the number of \* >the last claim< in the original patent >(the printed patent)<. Therefore, the number of claims allowed will not necessarily correspond to the number of the last claim in the reissue application, as allowed. >The number of claims appearing in the “CLAIMS ALLOWED - Total Claims” box on the lower right of the file wrapper face at the time of allowance should be consistent with the number of claims indicated as allowable on the Notice of Allowability (Form PTOL-37). (For IFW processing, see IFW Manual.)<

### CLAIM DESIGNATED FOR PRINTING

At least one claim of an allowable reissue application must be designated for printing in the *Official Gazette*. Whenever at least one claim has been

amended or added in the reissue, the claim (claims) designated for printing must be (or include) a claim which has been changed or added by the reissue. A canceled claim is not to be designated as the claim for the *Official Gazette*.

If there is no change in the claims of the allowable reissue application (i.e., when they are the same as the claims of the original patent) or, if the only change in the claims is the cancellation of claims, then the most representative pending *allowed* claim is designated for printing in the *Official Gazette*.

### PROVIDING PROPER FORMAT

Where a reissue application has not been prepared in the above-indicated manner, the examiner may obtain from the applicant a clean copy of the reissue specification prepared in the indicated form, or a proper submission of a previously improperly submitted amendment. However, if the deletions from the original patent are small, the reissue application can be prepared for issue by putting the bracketed inserts at the appropriate places and suitably numbering the added claims.

When applicant submits a clean copy of the reissue specification, or a proper submission of a previous improper amendment, a supplemental reissue declaration should **not** be provided to address this submission, because the correction of format does not correct a 35 U.S.C. 251 error in the patent.

### PARENT APPLICATION DATA

All parent application data on the front face of the original patent file wrapper should be placed on the bibliographic data sheet reprint for 09/ and later series applications or on the front face of the reissue file wrapper for 08/ and earlier series applications, if it is still proper. >(For IFW processing, see IFW Manual.)<

It sometimes happens that the reissue is a continuation of another reissue application, and there is also original-patent parent application data. The examiner should ensure that the parent application data on the original patent is properly combined with the parent application data of the reissue, in the text of the specification and on the bibliographic data sheet reprint for 09/ and later series applications or on the front face of

the reissue file wrapper for 08/ and earlier series applications. >(For IFW processing, see IFW Manual.)< The combined statement as to parent application data should be checked carefully for proper bracketing and underlining.

### REFERENCES CITED AND PRINTED

The list of references to be printed in the reissue patent \*\* >includes all< the references cited during the prosecution of the reissue application, >It is noted that the Office will not print in the reissue patent 'References Cited' section any reference cited in the patent but not again cited in the reissue application.< A patent cannot be reissued solely for the purpose of adding citations of additional prior art.

### EXAMINER'S AMENDMENT AND SUPPLEMENTAL DECLARATION

When it is necessary to amend the reissue application in order to place the application in condition for allowance, the examiner may:

(A) request that applicant provide the amendments (e.g., by facsimile transmission or by hand-carry); or

(B) make the amendments, with the applicant's approval, by a formal examiner's amendment.

If the changes are made by a formal examiner's amendment, the *entire* paragraph(s) or claim(s) being amended need not be presented in rewritten form for any deletions or additions. Changes to the specification including the claims of an application made by the Office in an examiner's amendment may be made by specific instructions to insert or delete subject matter set forth in the examiner's amendment by identifying the precise point in the specification or the claim(s) where the insertion or deletion is to be made. 37 CFR 1.121(g).

If it is necessary to amend a claim or the specification in order to correct an "error" under 35 U.S.C. 251 and thereby place the application in condition for allowance, then a supplemental oath or declaration will be required. See MPEP § 1444. The examiner should telephone applicant and request the supplemental oath or declaration, which must be filed before the application can be counted as an allowance.

## FINAL REVIEW OF THE REISSUE APPLICATION BY THE EXAMINER

Prior to forwarding a reissue application to the Technology Center (TC) Special Program Examiner (SPRE) for final review, the examiner should complete and initial an Examiner \* >Reissue< Checklist. A copy of the checklist should be available from the SPRE or from the Paralegal Specialist of the TC.

### 1456 Reissue Review [R-2]

All reissue applications are monitored and reviewed in the Technology Centers (TCs) by the Office of TC Special Program Examiner>s< (which includes >TC< SPRE>s<, paralegal>s< or other technical support who might be assigned as backup) at several stages during the prosecution.>The review by the Office of the TC SPREs is made to check that practice and procedure unique to reissue has been carried out for the reissue application. In addition to the SPRE review of the reissue applications, a patentability review is made in a sample of reissue applications by the TC Quality Assurance Specialist (QAS) in the manner previously carried out by the former Office of Patent Quality Review.< In order to ensure that SPREs are aware of the reissue applications in their TCs, a pair of terminal-specific PALM flags have been created which must be set by the SPRE before certain PALM transactions can be completed. First, when a new reissue application enters the TC, \*\* >a SPRE must set a PALM “flag” by entering the reissue application number in an Office-wide computer grouping< before a docketing transaction will be accepted. By having to set this first flag, the SPRE is made aware of the assignment of the reissue application to the TC and can take steps, as may be appropriate, to instruct the examiner on reissue-specific procedures before the examination process begins, as well as throughout the period that the examiner is handling the reissue application. \*\* >Second, the SPRE must remove the above-described PALM “flag”< before a Notice of Allowance can be generated or the PALM transaction for an issue revision can be entered, thereby ensuring that the SPRE is made aware of when the reissue application is being allowed so that the SPRE may be able to conduct a final review of the reissue application, if appropriate.

When the reissue application has been reviewed and is ready to be released to issue, the TC SPRE

should initial the face of the file wrapper, and forward the reissue file to the Office of Patent Legal Administration (OPLA). >(For IFW processing, see IFW Manual.)< Along with the reissue file, the file for the original patent should be forwarded to OPLA. >(For IFW processing, see IFW Manual.)<

After leaving the TC, all reissue applications go through a screening process which is currently performed in OPLA. The screening process which includes review of the reissue oath or declaration for compliance with 37 CFR 1.175, review of the presentation and entry of reissue amendments for compliance with 37 CFR 1.173(b), and review of other matters to ensure adherence to current reissue practices. \*\* >The above identified review processes< are appropriate vehicles for correcting errors, identifying problem areas and recognizing trends, providing information on the uniformity of practice, and providing feedback to the \* >TC personnel responsible for processing and examining reissue applications<.

>

### 1457 Design Reissue Applications and Patents [R-2]

A reissue application can be filed for a design patent in the same manner that a reissue application is filed for a utility patent. There are, however, a few aspects of a design reissue application that are addressed as follows:

#### 1. EXPEDITED EXAMINATION PROCEDURE

Design reissue applications requesting expedited examination and complying with the requirements of 37 CFR 1.155 are examined with priority and undergo expedited processing throughout the entire course of prosecution in the Office, including appeal, if any, to the Board of Patent Appeals and Interferences. All processing is expedited from the date the request is granted.

Design reissue applicants seeking expedited examination may file a design reissue application in the Office together with a corresponding request under 37 CFR 1.155 pursuant to the guidelines set forth in MPEP § 1504.30.

The design reissue application and the request are processed by the Office of Initial Patent Examination (OIPE). OIPE affixes a pink tag to the design reissue

application file wrapper specifying when notice of the design reissue application will be published in the *Official Gazette* (see MPEP § 1441). (For IFW processing, see IFW Manual.) After processing in OIPE, the design reissue application and the request are forwarded to the Design TC Director's Office. Upon a decision by the Design TC Director to grant the request for expedited examination, fees are immediately processed, and the application papers are promptly assigned an application number. The design reissue application file is then forwarded to the Office of Patent Legal Administration (OPLA) for a decision under 37 CFR 1.182 to *sua sponte* waive the requirement for delaying action in the application until 2 months after announcement of the design reissue application filing is published in the *Official Gazette* (see MPEP § 1441). Once the decision under 37 CFR 1.182 is mailed, the design reissue application file will be returned to the Design TC Director's Office. In accordance with the waiver, the Design Group will begin expedited examination of the application under 37 CFR 1.155 promptly after the return of the design reissue application file from OPLA, rather than delay examination until after 2 months from the date the announcement is published in the *Official Gazette* and the applicant will be notified that examination is being expedited. The decision under 37 CFR 1.182 will require that no Notice of Allowance be mailed in the design reissue application until after 2 months from the date the announcement is published in the *Official Gazette*. For example, if the design reissue application is allowed on the first Office action, then the application will be held in the TC, and the Notice of Allowance will not be mailed until the expiration of 2 months after publication of the filing of the design reissue application in the *Official Gazette* (plus time for matching any protest filed with the application). (For IFW processing, see IFW Manual.) The examiner will check (A) the pink tag affixed to the design reissue application file wrapper as to when notice of the reissue application is to be published in the *Official Gazette*, and (B) the PALM contents to ascertain when publication actually occurred. The delay in the mailing of the Notice of Allowance is to ensure that any potential protests complying with 37 CFR 1.291 submitted within the 2-month delay period will be considered by the Office. (see MPEP § 1441.01).

The expedited examination procedure under 37 CFR 1.155 occurs through initial examination processing and throughout the entire prosecution in the Office. Once a request for expedited examination is granted, prosecution of the design reissue application will proceed according to the procedure under 37 CFR 1.155, and there is no provision for "withdrawal" from expedited examination procedure.

## II. DESIGN REISSUE FEE

The design reissue application fee is set forth for in 37 CFR 1.16(h). Note that the additional fees in 37 CFR 1.16(i) and 37 CFR 1.16(j) do not apply for a design reissue application since more than one claim is not permitted in a design application pursuant to the last sentence of 37 CFR 1.153(a).

The fee for issuing a design reissue patent is set forth in 37 CFR 1.18(b). Note that 37 CFR 1.18(a) which sets the fee for a utility reissue patent specifically excludes a design reissue patent.

## III. MULTIPLE DESIGN REISSUE APPLICATIONS

The design reissue application can be filed based on the "error" of failing to include a design for a patentably distinct segregable part of the design claimed in the original patent or a patentably distinct subcombination of the claimed design. A reissue design application claiming both the entire article and the patentably distinct subcombination or segregable part would be proper under 35 U.S.C. 251, if such a reissue application is filed within two years of the issuance of the design patent, since it is considered a broadening of the scope of the patent claim. Restriction will be required under 37 CFR 1.176(b) in such a reissue design application, and the added design to the segregable part or subcombination will be held to be constructively non-elected and withdrawn from consideration. See MPEP § 1450. In the Office action containing the restriction requirement, the examiner should suggest to the applicant that a divisional design reissue application directed to the constructively non-elected segregable part or subcombination subject matter may be filed. The claim to the patented design for the entire article will then be examined and, if found allowable without change from the patent, a rejection will be made under 35 U.S.C. 251 based on the fact that there is no "error" in the non-amended

original patent claim. In the Office action making this rejection, applicant should be advised that a proper response to the rejection must include (A) a request to suspend action in this original reissue application pending completion of examination of a divisional reissue application directed to the constructively non-elected segregable part or subcombination subject matter, (B) the filing of the divisional reissue application, or a statement that one has already been filed (identifying it at least by application number), and (C) an argument that a complete response to the rejection has been made based upon the filing of the divisional reissue application and the request for suspension. Action in the original design reissue application will then be suspended, and the divisional will be examined.

If, after examination, the divisional design reissue application is also determined to be allowable, a requirement must be made in the divisional design reissue application to submit a petition under 37 CFR 1.183 requesting waiver of 37 CFR 1.153 in order to permit the rejoining of the designs to the entire article (of the original application) and the segregable part or subcombination (of the divisional) under a single claim into a single design reissue application for issuance, the single application being the first design reissue application.

It should be noted that the filing of a design reissue application would not be proper if applicant did in fact include the design for a segregable part or subcombination thereof in the original design patent application, a restriction was thus made, and then applicant failed to file a divisional reissue application for a non-elected invention that was canceled in view of a restriction requirement (prior to issue of the original application. See *In re Watkinson*, 900 F.2d 230, 14 USPQ2d 1407 (Fed. Cir. 1990); *In re Orita*, 550 F.2d 1277, 1280, 193 USPQ 145, 148 (CCPA 1977).

#### IV. CONVERSION TO UTILITY PATENT

A design patent cannot be converted to a utility patent via reissue.

Converting a design patent to a utility patent will, in most instances, involve the introduction of new matter into the patent. The disclosure of a design patent is not directed to how the invention is made and used, and the introduction of new matter is

required to bridge this gap and provide support for the utility patent. Accordingly, the examiner should consider rejections based on the introduction of new matter under 35 U.S.C. 251, first paragraph, and lack of enablement and/or description under 35 U.S.C. 112, first paragraph, when a reissue application is filed to convert a design patent to a utility patent.

Further, the term of a design patent may not be extended by reissue. *Ex parte Lawrence*, 70 USPQ 326 (Comm'r Pat. 1946). Thus, any reissue application filed to convert a design patent to a utility patent, which conversion would thereby extend the term of the patent, should be rejected as failing to comply with 35 U.S.C. 251, first paragraph, which permits reissue only "for the unexpired part of the term of the original patent." The statute requires that the reissued patent shall not extend the term of the original patent.<

#### 1460 Effect of Reissue [R-2]

35 U.S.C. 252. *Effect of reissue.*

The surrender of the original patent shall take effect upon the issue of the reissued patent, and every reissued patent shall have the same effect and operation in law, on the trial of actions for causes thereafter arising, as if the same had been originally granted in such amended form, but in so far as the claims of the original and reissued patents are substantially identical, such surrender shall not affect any action then pending nor abate any cause of action then existing, and the reissued patent, to the extent that its claims are substantially identical with the original patent, shall constitute a continuation thereof and have effect continuously from the date of the original patent.

A reissued patent shall not abridge or affect the right of any person or that person's successors in business who, prior to the grant of a reissue, made, purchased, offered to sell, or used within the United States, or imported into the United States, anything patented by the reissued patent, to continue the use of, to offer to sell, or to sell to others to be used, offered for sale, or sold, the specific thing so made, purchased, offered for sale, used, or imported unless the making, using, offering for sale, or selling of such thing infringes a valid claim of the reissued patent which was in the original patent. The court before which such matter is in question may provide for the continued manufacture, use, offer for sale, or sale of the thing made, purchased, offered for sale, used, or imported as specified, or for the manufacture, use, offer for sale, or sale in the United States of which substantial preparation was made before the grant of the reissue, and the court may also provide for the continued practice of any process patented by the reissue that is practiced, or for the practice of which substantial preparation was made, before the grant of the reissue, to the extent and under such terms as the court deems equitable for the protection of investments made or business commenced before the grant of the reissue.

The effect of the reissue of a patent is stated in 35 U.S.C. 252. With respect to the Office treatment of the reissued patent, the reissued patent will be viewed as if the original patent had been originally granted in the amended form provided by the reissue. >With respect to intervening rights resulting from the reissue of an original patent, the second paragraph of 35 U.S.C. 252 provides for two separate and distinct defenses to patent infringement under the doctrine of intervening rights:

“Absolute” intervening rights are available for a party that “prior to the grant of a reissue, made, purchased, offered to sell, or used within the United States, or imported into the United States, anything patented by the reissued patent,” and “equitable” intervening rights may be provided where “substantial preparation was made before the grant of the reissue.” See *BIC Leisure Prods., Inc., v. Windsurfing Int’l, Inc.*, 1 F.3d 1214, 1220, 27 USPQ2d 1671, 1676 (Fed. Cir. 1993).<

## 1470 Public Access of Reissue Applications [R-2]

37 CFR 1.11(b) opens all reissue applications filed after March 1, 1977, to inspection by the general public. 37 CFR 1.11(b) also provides for announcement of the filings of reissue applications in the *Official Gazette* (except for continued prosecution applications filed under 37 CFR 1.53(d)). This announcement will give interested members of the public an opportunity to submit to the examiner information pertinent to patentability of the reissue application.

The filing of a continued prosecution application under 37 CFR 1.53(d) of a reissue application will not be announced in the *Official Gazette*. Although the filing of a continued prosecution application of a reissue application constitutes the filing of a reissue application, the announcement of the filing of such continued prosecution application would be redundant in view of the announcement of the filing of the prior reissue application in the *Official Gazette*.

37 CFR 1.11(b) is applicable only to those reissue applications filed on or after March 1, 1977. Those reissue applications previously on file will not be automatically open to inspection but a liberal policy will be followed in granting petitions for access to such applications.

For those reissue applications filed on or after March 1, 1977, the following procedure will be observed: >(For IFW processing, see IFW Manual for each of (A) thru (D)).<

(A) The filing of reissue applications will be announced in the *Official Gazette* (except for continued prosecution applications filed under 37 CFR 1.53(d)) and will include certain identifying data as specified in 37 CFR 1.11(b). Any member of the general public may request access to a particular reissue application filed after March 1, 1977. Since no record of such request is intended to be kept, an oral request will suffice. In the File Information Unit (Record Room), only the regular application charge card need be completed and submitted. The charge card will not be made part of a pending or abandoned reissue application;

(B) The pending reissue application files will be maintained in the Technology Centers (TCs) and inspection thereof will be supervised by TC personnel. Although no general limit is placed on the amount of time spent reviewing the files, the Office may impose limitations, if necessary. No access will be permitted while the application is actively being processed;

(C) After a reissue application has left the TC for administrative processing, requests for access should be directed to the appropriate supervisory personnel in the division or branch where the application is currently located;

(D) A reissue application file is not available to the public once the reissue application file has been released and forwarded by the TC for publication of the reissue patent. This would include any reissue application files which have been selected for a \*\* >post-allowance screening at the Office of Patent Legal Administration<. Unless prosecution is reopened pursuant to \*\* >the screening<, the reissue application files are not available to the public until the reissue patent issues. This is because the reissue application file has been put into a special format for printing purposes and public access at this stage would disrupt the publication process;

(E) Requests for copies of papers in the reissue application file must be in writing addressed to \*\* >Mail Stop Document Services, Director of the U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. Such requests< may be either

mailed or delivered to the Customer Service Window. The price for a copy of an application as filed is set forth in 37 CFR 1.19(b)(1). Since no useful purpose is seen for retaining such written requests for copies of papers in reissue applications, the request(s) should be destroyed after the order has been completed.

See also MPEP § 103.

## 1480 Certificates of Correction — Office Mistake [R-2]

*35 U.S.C. 254. Certificate of correction of Patent and Trademark Office mistake.*

Whenever a mistake in a patent, incurred through the fault of the Patent and Trademark Office, is clearly disclosed by the records of the Office, the Director may issue a certificate of correction stating the fact and nature of such mistake, under seal, without charge, to be recorded in the records of patents. A printed copy thereof shall be attached to each printed copy of the patent, and such certificate shall be considered as part of the original patent. Every such patent, together with such certificate, shall have the same effect and operation in law on the trial of actions for causes thereafter arising as if the same had been originally issued in such corrected form. The Director may issue a corrected patent without charge in lieu of and with like effect as a certificate of correction.

*37 CFR 1.322. Certificate of correction of Office mistake.*

\*\*>

(a)(1) The Director may issue a certificate of correction pursuant to 35 U.S.C. 254 to correct a mistake in a patent, incurred through the fault of the Office, which mistake is clearly disclosed in the records of the Office:<

- (i) At the request of the patentee or the patentee's assignee;
- (ii) Acting *sua sponte* for mistakes that the Office discovers; or
- (iii) Acting on information about a mistake supplied by a third party.

(2)(i) There is no obligation on the Office to act on or respond to a submission of information or request to issue a certificate of correction by a third party under paragraph (a)(1)(iii) of this section.

(ii) Papers submitted by a third party under this section will not be made of record in the file that they relate to nor be retained by the Office.

(3) If the request relates to a patent involved in an interference, the request must comply with the requirements of this section and be accompanied by a motion under § 1.635.

(4) The Office will not issue a certificate of correction under this section without first notifying the patentee (including any assignee of record) at the correspondence address of record as

specified in § 1.33(a) and affording the patentee or an assignee an opportunity to be heard.

\*\*>

(b) If the nature of the mistake on the part of the Office is such that a certificate of correction is deemed inappropriate in form, the Director may issue a corrected patent in lieu thereof as a more appropriate form for certificate of correction, without expense to the patentee.<

Mistakes incurred through the fault of the Office may be the subject of Certificates of Correction under 37 CFR 1.322. The Office, however, has discretion under 35 U.S.C. 254 to decline to issue a Certificate of Correction even though an Office mistake exists. If Office mistakes are of such a nature that the meaning intended is obvious from the context, the Office may decline to issue a certificate and merely place the correspondence in the patented file, where it serves to call attention to the matter in case any question as to it subsequently arises. Such is the case, even where a correction is requested by the patentee or patentee's assignee.

In order to expedite all proper requests, a Certificate of Correction should be requested only for errors of consequence. Instead of a request for a Certificate of Correction, letters making errors of record should be utilized whenever possible. >Thus, where errors are of a minor typographical nature, or are readily apparent to one skilled in the art, a letter making the error(s) of record can be submitted in lieu of a request for a Certificate of Correction. There is no fee for the submission of such a letter.

It is strongly advised that the text of the correction requested be submitted on a Certificate of Correction form, PTO/SB/44 (also referred to as PTO 1050). Submission of this form in duplicate is not necessary. The location of the error in the printed patent should be identified on form PTO/SB/44 by column and line number or claim and line number. See MPEP § 1485 for a discussion of the preparation and submission of a request for a Certificate of Correction.

A request for a Certificate of Correction should be addressed to:

ATTN: Certificate of Correction Branch  
 Commissioner for Patents  
 P.O. Box 1450  
 Alexandria, VA 22313-1450

<

### THIRD PARTY INFORMATION ON MISTAKES IN PATENT

Third parties do not have standing to demand that the Office issue, or refuse to issue, a Certificate of Correction. *See Hallmark Cards, Inc. v. Lehman*, 959 F. Supp. 539, 543-44, 42 USPQ2d 1134, 1138 (D.D.C. 1997). 37 CFR 1.322(a)(2) makes it clear that third parties do not have standing to demand that the Office act on, respond to, issue, or refuse to issue a Certificate of Correction. The Office is, however, cognizant of the need for the public to have correct information about published patents and may therefore accept information about mistakes in patents from third parties. 37 CFR 1.322(a)(1)(iii). Where appropriate, the Office may issue certificates of correction based on information supplied by third parties, whether or not such information is accompanied by a specific request for issuance of a Certificate of Correction.

While third parties are permitted to submit information about mistakes in patents which information will be reviewed, the Office need not act on that information nor deny any accompanying request for issuance of a Certificate of Correction. Accordingly, a fee for submission of the information by a third party has not been imposed. The Office may, however, choose to issue a Certificate of Correction on its own initiative based on the information supplied by a third party, if it desires to do so. Regardless of whether the third party information is acted upon, the information will not be made of record in the file that it relates to, nor be retained by the Office. 37 CFR 1.322(a)(2)(ii).

When such third party information (about mistakes in patents) is received by the Office, the Office will not correspond with third parties about the information they submitted either (1) to inform the third parties of whether it intends to issue a Certificate of Correction, or (2) to issue a denial of any request for issuance of a Certificate of Correction that may accompany the information. The Office will confirm to the party submitting such information that the Office has in fact received the information if a stamped, self-addressed post card has been submitted. See MPEP § 503.

### PUBLICATION IN THE OFFICIAL GAZETTE

Each issue of the *Official Gazette* (patents section) numerically lists all United States patents having Certificates of Correction. The list appears under the

heading "Certificates of Correction for the week of (date)."

>

### 1480.01 Expedited Issuance of Certificates of Correction - Error Attributable to Office [R-2]

In an effort to reduce the overall time required in processing and granting Certificate of Correction requests, the Office will expedite processing and granting of patentee requests where such requests are accompanied by evidence to show that the error is attributable solely to the Office (i.e., requests filed pursuant to 37 CFR 1.322 only).

The following requirements must be met for consideration of expedited issuance of Certificates of Correction:

The text of the correction requested should be submitted on a Certificate of Correction form, PTO/SB/44 (also referred to as PTO 1050). Submission of this form in duplicate is not necessary. The location of the error in the printed patent should be identified on form PTO/SB/44 by column and line number or claim and line number. See also MPEP § 1485.

Where the correction requested was incurred through the fault of the Office, and the matter is clearly disclosed in the records of the Office, and is accompanied by documentation that unequivocally supports the patentee's assertion(s), a Certificate of Correction will be expeditiously issued. Such supporting documentation can consist of relevant photocopied receipts, manuscript pages, correspondence dated and received by the Office, photocopies of Examiners' responses regarding entry of amendments, or any other validation that supports the patentee's request so that the request can be processed without the patent file.

Where only part of a request can be approved, the appropriate modifications will be made on the form PTO/SB/44 and the patentee then notified by mail. Further consideration will be given to initially rejected requests upon a request for reconsideration. In this instance, however, or in the case where it is determined that the Office was not responsible for the error(s) cited by the patentee, accelerated issuance of Certificates of Correction cannot be anticipated

(although the Office will make every effort to process the request expeditiously).

As in the case of a request for a Certificate of Correction, a Request for Expedited Issuance of Certificate of Correction should be addressed to:

ATTN: Certificate of Correction Branch  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

### 1481 >Certificates of Correction -< Applicant's Mistake [R-2]

*35 U.S.C. 255. Certificate of correction of applicant's mistake.*

Whenever a mistake of a clerical or typographical nature, or of minor character, which was not the fault of the Patent and Trademark Office, appears in a patent and a showing has been made that such mistake occurred in good faith, the Director may, upon payment of the required fee, issue a certificate of correction, if the correction does not involve such changes in the patent as would constitute new matter or would require reexamination. Such patent, together with the certificate, shall have the same effect and operation in law on the trial of actions for causes thereafter arising as if the same had been originally issued in such corrected form.

*37 CFR 1.323. Certificate of correction of applicant's mistake.*

The Office may issue a certificate of correction under the conditions specified in 35 U.S.C. 255 at the request of the patentee or the patentee's assignee, upon payment of the fee set forth in § 1.20(a). If the request relates to a patent involved in an interference, the request must comply with the requirements of this section and be accompanied by a motion under § 1.635.

37 CFR 1.323 relates to the issuance of Certificates of Correction for the correction of errors which were not the fault of the Office. Mistakes in a patent which are not correctable by Certificate of Correction may be correctable via filing a reissue application (see MPEP § 1401 - § 1460). >See *Novo Industries, L.P. v. Micro Molds Corporation*, 350 F.3d 1348, 69 USPQ2d 1128 (Fed. Cir. 2003) (The Federal Circuit stated that when Congress in 1952 defined USPTO authority to make corrections with prospective effect, it did not deny correction authority to the district courts. A court, however, can correct only if '(1) the correction is not subject to reasonable debate based on consideration of the claim language and the specification and (2) the prosecution history does not suggest a different interpretation...').<

*In re Arnott*, 19 USPQ2d 1049, 1052 (Comm'r Pat. 1991) specifies the criteria of 35 U.S.C. 255 (for a Certificate of Correction) as follows:

Two separate statutory requirements must be met before a Certificate of Correction for an applicant's mistake may issue. The first statutory requirement concerns the nature, i.e., type, of the mistake for which a correction is sought. The mistake must be:

- (1) of a clerical nature,
- (2) of a typographical nature, or
- (3) a mistake of minor character.

The second statutory requirement concerns the nature of the proposed correction. The correction must not involve changes which would:

- (1) constitute new matter or
- (2) require reexamination.

If the above criteria are not satisfied, then a Certificate of Correction for an applicant's mistake will not issue, and reissue must be employed as the vehicle to "correct" the patent. Usually, any mistake affecting claim scope must be corrected by reissue.

A mistake is not considered to be of the "minor" character required for the issuance of a Certificate of Correction if the requested change would materially affect the scope or meaning of the patent. See also MPEP § 1412.04 as to correction of inventorship via certificate of correction or reissue.

The fee for providing a correction of applicant's mistake, other than inventorship, is set forth in 37 CFR 1.20(a). The fee for correction of inventorship in a patent is set forth in 37 CFR 1.20(b).

### CORRECTION OF ASSIGNEES' NAMES

The Issue Fee Transmittal Form portion (PTOL-85B) of the Notice of Allowance provides a space (item 3) for assignment data which should be completed in order to comply with 37 CFR 3.81. Unless an assignee's name and address are identified in the appropriate space for specifying the assignee, (i.e., item 3 of the Issue Fee Transmittal Form PTOL-85B), the patent will issue to the applicant. Assignment data printed on the patent will be based solely on the information so supplied.

A request for a Certificate of Correction under 37 CFR 1.323 arising from incomplete or erroneous assignee's name furnished in item 3 of PTOL-85B will not be granted unless a petition under 37 CFR 1.183 has been granted. Any such petition under 37

CFR 1.183 should be directed to the Office of Petitions and should include:

- (A) the petition fee required by 37 CFR 1.17(h);
- (B) a request that 37 CFR 3.81(a) be waived to permit the correct name of the assignee to be provided after issuance of the patent;
- (C) a statement that the failure to include the correct assignee name on the PTOL-85B was inadvertent; and
- (D) a copy of the Notice of Recordation of Assignment Document.

### CORRECTION OF INVENTORS' NAMES

#### *35 U.S.C. 256. Correction of named inventor.*

Whenever through error a person is named in an issued patent as the inventor, or through error an inventor is not named in an issued patent and such error arose without any deceptive intention on his part, the Director may, on application of all the parties and assignees, with proof of the facts and such other requirements as may be imposed, issue a certificate correcting such error.

The error of omitting inventors or naming persons who are not inventors shall not invalidate the patent in which such error occurred if it can be corrected as provided in this section. The court before which such matter is called in question may order correction of the patent on notice and hearing of all parties concerned and the Director shall issue a certificate accordingly.

In requesting the Office to effectuate a court order correcting inventorship in a patent pursuant to 35 U.S.C. 256, a copy of the court order and a Certificate of Correction under 37 CFR 1.323 should be submitted to the Certificates of Corrections Branch.

#### *37 CFR 1.324. Correction of inventorship in patent, pursuant to 35 U.S.C. 256.*

\*\*>

(a) Whenever through error a person is named in an issued patent as the inventor, or through error an inventor is not named in an issued patent and such error arose without any deceptive intention on his or her part, the Director may, on petition, or on order of a court before which such matter is called in question, issue a certificate naming only the actual inventor or inventors. A petition to correct inventorship of a patent involved in an interference must comply with the requirements of this section and must be accompanied by a motion under § 1.634.<

(b) Any petition pursuant to paragraph (a) of this section must be accompanied by:

(1) Where one or more persons are being added, a statement from each person who is being added as an inventor that the inventorship error occurred without any deceptive intention on his or her part;

(2) A statement from the current named inventors who have not submitted a statement under paragraph (b)(1) of this sec-

tion either agreeing to the change of inventorship or stating that they have no disagreement in regard to the requested change;

(3) A statement from all assignees of the parties submitting a statement under paragraphs (b)(1) and (b)(2) of this section agreeing to the change of inventorship in the patent, which statement must comply with the requirements of § 3.73(b) of this chapter; and

(4) The fee set forth in § 1.20(b).

(c) For correction of inventorship in an application see §§ 1.48 and 1.497, and in an interference see § 1.634.

The petition to correct inventorship under 37 CFR 1.324 must include the statements and fee required by 37 CFR 1.324(b).

Under 37 CFR 1.324(b)(1), a statement is required from each person who is being added as an inventor that the inventorship error occurred without any deceptive intention on their part. In order to satisfy this, a statement such as the following is sufficient:

“The inventorship error of failing to include John Smith as an inventor of the patent occurred without any deceptive intention on the part of John Smith.”

Nothing more is required. The examiner will determine only whether the statement contains the required language; the examiner will not make any comment as to whether or not it appears that there was in fact deceptive intention (see MPEP § 2022.05).

Under 37 CFR 1.324(b)(2), all current inventors who did not submit a statement under 37 CFR 1.324(b)(1) must submit a statement either agreeing to the change of inventorship, or stating that they have no disagreement with regard to the requested change. “Current inventors” include the inventor(s) being retained as such and the inventor(s) to be deleted. These current inventors need not make a statement as to whether the inventorship error occurred without deceptive intention.

If an inventor is not available, or refuses, to submit a statement, the assignee of the patent may wish to consider filing a reissue application to correct inventorship, since the inventor’s statement is not required for a non-broadening reissue application to correct inventorship. See MPEP § 1412.04.

Under 37 CFR 1.324(b)(3), a statement is required from the assignee(s) of the patent agreeing to the change of inventorship in the patent. The assignee statement agreeing to the change of inventorship must be accompanied by a proper statement under 37 CFR 3.73(b) establishing ownership, unless a proper 37 CFR 3.73(b) statement is already in the file. See

MPEP § 324 as to the requirements of a statement under 37 CFR 3.73(b).

While a request under 37 CFR 1.48\* is appropriate to correct inventorship in a nonprovisional *application*, a petition under 37 CFR 1.324 is the appropriate vehicle to correct inventorship in a *patent*. If a request under 37 CFR 1.48(a)>, (b), or (c)< is inadvertently filed in a patent, the request may be treated as a petition under 37 CFR 1.324, and if it is grantable, form paragraph 10.14 set forth below should be used.

Similarly, if a request under 37 CFR 1.48(a)>, (b), or (c)< is filed in a pending application but not acted upon until after the application becomes a patent, the request may be treated as a petition under 37 CFR 1.324, and if it is grantable, form paragraph 10.14 set forth below should be used.

The statutory basis for correction of inventorship in a patent under 37 CFR 1.324 is 35 U.S.C. 256. It is important to recognize that 35 U.S.C. 256 is stricter than 35 U.S.C. 116, the statutory basis for corrections of inventorship in applications under 37 CFR 1.48. 35 U.S.C. 256 requires “on application of all the parties and assignees,” while 35 U.S.C. 116 does not have the same requirement. Under 35 U.S.C. 116 and 37 CFR 1.48, waiver requests under 37 CFR 1.183 may be submitted (see, e.g., MPEP § 201.03, under the heading “Statement of Lack of Deceptive Intention”). This is not possible under 35 U.S.C. 256 and 37 CFR 1.324. In correction of inventorship in a nonprovisional application under 37 CFR 1.48(a), the requirement for a statement by each originally named inventor may be waived pursuant to 37 CFR 1.183; however, correction of inventorship in a patent under 37 CFR 1.324 requires petition of all the parties, i.e., originally named inventors and assignees, in accordance with statute (35 U.S.C. 256) and thus the requirement cannot be waived. Correction of inventorship requests under 37 CFR 1.324 should be directed to the Supervisory Patent Examiner whose unit handles the subject matter of the patent. Form paragraphs 10.13 through 10.18 may be used.

\*\*>

¶ 10.13 *Petition Under 37 CFR 1.324, Granted*

In re Patent No. [1] :  
 Issue Date: [2] : **DECISION**  
 Appl. No.: [3] : **GRANTING**  
 Filed: [4] : **PETITION**  
 For: [5] : 37 CFR 1.324

This is a decision on the petition filed [6] to correct inventorship under 37 CFR 1.324.

The petition is granted.

The patented file is being forwarded to Certificate of Corrections Branch for issuance of a certificate naming only the actual inventor or inventors.

¶ 10.15 *Memorandum - Certificate of Correction (Inventorship)*

DATE: [1]  
 TO: Certificates of Correction Branch

FROM: [2], SPE, Art Unit [3]  
SUBJECT: Request for Certificate of Correction

Please issue a Certificate of Correction in U. S. Letters Patent No. [4] as specified on the attached Certificate.

[5], SPE  
Art Unit [6]

**UNITED STATES PATENT AND TRADEMARK OFFICE  
CERTIFICATE**

Patent No. [7]  
Patented: [8]

On petition requesting issuance of a certificate for correction of inventorship pursuant to 35 U.S.C. 256, it has been found that the above identified patent, through error and without deceptive intent, improperly sets forth the inventorship. Accordingly, it is hereby certified that the correct inventorship of this patent is:

[9]

[10], Supervisory Patent Examiner  
Art Unit [11]

**Examiner Note:**

1. In bracket 9, insert the full name and residence (City, State) of each actual inventor.
2. This is an internal memo, not to be mailed to applicant, which accompanies the patented file to Certificates of Correction Branch as noted in form paragraphs 10.13 and 10.14.
3. In brackets 5 and 10, insert name of SPE; in brackets 6 and 11 the Art Unit and sign above each line.
4. Two separate pages of USPTO letterhead will be printed when using this form paragraph.

\*\*>

*¶ 10.16 Petition Under 37 CFR 1.324, Dismissed*

In re Patent No. [1] :  
Issue Date: [2] : **DECISION**  
Appl. No.: [3] : **DISMISSING**  
Filed: [4] : **PETITION**  
For: [5] : 37 CFR 1.324

This is a decision on the petition filed [6] to correct inventorship under 37 CFR 1.324.

The petition is dismissed.

A petition to correct inventorship as provided by 37 CFR 1.324 requires (1) a statement from each person who is being added as an inventor that the inventorship error occurred without any deceptive intention on their part, (2) a statement from the current named inventors (including any "inventor" being deleted) who have not submitted a statement as per "(1)" either agreeing to the change of inventorship or stating that they have no disagreement in regard to the requested change, (3) a statement from all assignees of the parties submitting a statement under "(1)" and "(2)" agreeing to the change of inventorship in the patent; such statement must comply with the requirements of 37 CFR 3.73(b); and

(4) the fee set forth in 37 CFR 1.20(b). This petition lacks item(s) [7].

[8]  
Supervisory Patent Examiner,  
Art Unit [9],  
Technology Center [10]  
[11]

**Examiner Note:**

1. If each of the four specified items has been submitted but one or more is insufficient, the petition should be denied. See paragraph 10.17. However, if the above noted deficiency can be cured by the submission of a renewed petition, a dismissal would be appropriate.
2. If the petition includes a request for suspension of the rules (37 CFR 1.183) of one or more provisions of 37 CFR 1.324 that are required by the statute (35 U.S.C. 256), form paragraph 10.18 should follow this form paragraph.
3. In bracket 7, pluralize as necessary and insert the item number(s) which are missing.
4. In bracket 11, insert correspondence address of record.
5. This form paragraph is printed with the USPTO letterhead.

<

*¶ 10.17 Petition Under 37 CFR 1.324, Denied*

In re Patent No. [1] :  
Issue Date: [2] : **DECISION DENYING PETITION**  
Appl. No.: [3] : 37 CFR 1.324  
Filed: [4] :  
For: [5] :

This is a decision on the petition filed [6] to correct inventorship under 37 CFR 1.324.

The petition is denied.

[7]

[8]  
Supervisory Patent Examiner,  
Art Unit [9],  
Technology Center [10]  
[11]

**Examiner Note:**

1. In bracket 7, a full explanation of the deficiency must be provided.
2. If the petition lacks one or more of the required parts set forth in 37 CFR 1.324, it should be dismissed using form paragraph 10.14 or 10.20, rather than being denied.
3. In bracket 11, insert correspondence address of record.
4. This form paragraph is printed with the USPTO letterhead.

*¶ 10.18 Waiver of Requirements of 37 CFR 1.324 Under 37 CFR 1.183, Dismissed*

Suspension of the rules under 37 CFR 1.183 may be granted for any requirement of the regulations which is not a requirement of the statutes. In this instance, 35 U.S.C. 256 requires [1].

Accordingly, the petition under 37 CFR 1.183 is dismissed as moot.

**Examiner Note:**

1. This form paragraph should follow form paragraph 10.16 whenever the petition requests waiver of one or more of the provisions of 37 CFR 1.324 that are also requirements of 35 U.S.C. 256.

2. If the petition requests waiver of requirements of 37 CFR 1.324 that are not specific requirements of the statute (i.e., the fee or the oath or declaration by all inventors), the application must be forwarded to a petitions attorney in the Office of the Deputy Commissioner for Patent Examination Policy for decision.

**CORRECTION TO PERFECT CLAIM FOR 35 U.S.C. 119 (a)-(d) >AND (f)< BENEFITS**

See MPEP § 201.16 for a discussion of when 35 U.S.C. 119 (a)-(d) >and (f)< benefits can be perfected by certificate of correction.

**CORRECTION AS TO 35 U.S.C. 120 AND 35 U.S.C. 119(e) BENEFITS**

***For Applications Filed Prior to November 29, 2000***

For applications filed prior to November 29, 2000, it is the version of 37 CFR 1.78, which was in effect as of November 29, 2000, that applies. The pre-November 29, 2000 version reads as follows:

*37 CFR 1.78. Claiming benefit of earlier filing date and cross-references to other applications.*

(a)(1) A nonprovisional application may claim an invention disclosed in one or more prior filed copending nonprovisional applications or copending international applications designating the United States of America. In order for a nonprovisional application to claim the benefit of a prior filed copending nonprovisional application or copending international application designating the United States of America, each prior application must name as an inventor at least one inventor named in the later filed nonprovisional application and disclose the named inventor's invention claimed in at least one claim of the later filed nonprovisional application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior application must be:

(i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or

(ii) Complete as set forth in § 1.51(b); or

(iii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and include the basic filing fee set forth in § 1.16; or

(iv) Entitled to a filing date as set forth in § 1.53(b) and have paid therein the processing and retention fee set forth in § 1.21(l) within the time period set forth in § 1.53(f).

(2) Except for a continued prosecution application filed under § 1.53(d), any nonprovisional application claiming the benefit of one or more prior filed copending nonprovisional applications or international applications designating the United States of America must contain a reference to each such prior application, identifying it by application number (consisting of the series code and serial number) or international application number and international filing date and indicating the relationship of the applications. Unless the reference required by this paragraph is included in an application data sheet (§ 1.76), the specification must contain or be amended to contain such reference in the first sentence following any title. The request for a continued prosecution application under § 1.53(d) is the specific reference required by 35 U.S.C. 120 to the prior application. The identification of an application by application number under this section is the specific reference required by 35 U.S.C. 120 to every application assigned that application number. Cross-references to other related applications may be made when appropriate (see § 1.14(a)).

(3) A nonprovisional application other than for a design patent may claim an invention disclosed in one or more prior filed copending provisional applications. In order for a nonprovisional application to claim the benefit of one or more prior filed copending provisional applications, each prior provisional application must name as an inventor at least one inventor named in the later filed nonprovisional application and disclose the named inventor's invention claimed in at least one claim of the later filed nonprovisional application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior provisional application must be entitled to a filing date as set forth in § 1.53(c), have any required English-language translation filed therein within the time period set forth in § 1.52(d), and have paid therein the basic filing fee set forth in § 1.16(k) within the time period set forth in § 1.53(g).

(4) Any nonprovisional application claiming the benefit of one or more prior filed copending provisional applications must contain a reference to each such prior provisional application, identifying it as a provisional application, and including the provisional application number (consisting of series code and serial number). Unless the reference required by this paragraph is included in an application data sheet (§ 1.76), the specification must contain or be amended to contain such reference in the first sentence following any title.

\*\*\*\*\*

Under certain conditions specified below, a Certificate of Correction can be used, with respect to 35 U.S.C. 120 and 119(e) priority, to correct:

(A) the failure to make reference to a prior copending application pursuant to 37 CFR 1.78(a)(2) and (a)(4); or

(B) an incorrect reference to a prior copending application pursuant to 37 CFR 1.78(a)(2) and (a)(4).

For all situations other than where priority is based upon 35 U.S.C. 365(c), the conditions are as follows:

(A) for 35 U.S.C. 120 priority, all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) for 35 U.S.C. 119(e) priority, all requirements set forth in 37 CFR 1.78(a)(3) must have been met in the application which became the patent to be corrected;

(C) it must be clear from the record of the patent and the parent application(s) that priority is appropriate. See MPEP § 201.11 for requirements under 35 U.S.C. 119(e) and 120.

Where 35 U.S.C. 120 and 365(c) priority based on an international application is to be asserted or corrected in a patent via a Certificate of Correction, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) it must be clear from the record of the patent and the parent application(s) that priority is appropriate (see MPEP § 201.11); and

>

(C) the patentee must submit with the request for the certificate copies of documentation showing designation of states and any other information needed to make it clear from the record that the 35 U.S.C. 120 priority is appropriate. See MPEP § 201.13(b) as to the requirements for 35 U.S.C. 120 priority based on an international application.

If all the above-stated conditions are satisfied, a Certificate of Correction can be used to amend the patent to make reference to a prior copending application, or to correct an incorrect reference to the prior copending application. Note *In re Schuurs*, 218 USPQ 443 (Comm'r Pat. 1983) which suggests that a Certificate of Correction is an appropriate remedy for correcting, in a patent, reference to a prior copending application. Also, note *In re Lambrech*, 202 USPQ 620 (Comm'r Pat. 1976), citing *In re Van Esdonk*, 187 USPQ 671 (Comm'r Pat. 1975).

If any of the above-stated conditions is not satisfied, the filing of a reissue application (see MPEP § 1401 - § 1460) would be appropriate to pursue the desired correction of the patent.

### ***For Applications Filed on or After November 29, 2000***

For applications filed on or after November 29, 2000, the version of 37 CFR 1.78 reproduced below applies (note that amendments to 37 CFR 1.78 took effect on November 29, 2000, December 28, 2001, May 1, 2003, and January 21, 2004).

#### *37 CFR 1.78. Claiming benefit of earlier filing date and cross-references to other applications.*

(a)(1) A nonprovisional application or international application designating the United States of America may claim an invention disclosed in one or more prior-filed copending nonprovisional applications or international applications designating the United States of America. In order for an application to claim the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America, each prior-filed application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed application must be:

(i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or

(ii) Complete as set forth in § 1.51(b); or

(iii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and include the basic filing fee set forth in § 1.16; or

(iv) Entitled to a filing date as set forth in § 1.53(b) and have paid therein the processing and retention fee set forth in § 1.21(l) within the time period set forth in § 1.53(f).

(2)(i) Except for a continued prosecution application filed under § 1.53(d), any nonprovisional application claiming the benefit of one or more prior-filed copending nonprovisional applications or international applications designating the United States of America must contain or be amended to contain a reference to each such prior-filed application, identifying it by application number (consisting of the series code and serial number) or international application number and international filing date and indicating the relationship of the applications. Cross references to other related applications may be made when appropriate (see § 1.14).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371 (b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed application. These time periods are not extendable.

Except as provided in paragraph (a)(3) of this section, the failure to timely submit the reference required by 35 U.S.C. 120 and paragraph (a)(2)(i) of this section is considered a waiver of any benefit under 35 U.S.C. 120, 121, or 365(c) to such prior-filed application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application for a design patent;

(B) An application filed under 35 U.S.C. 111 (a) before November 29, 2000; or

(C) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence following the title.

(iv) The request for a continued prosecution application under § 1.53(d) is the specific reference required by 35 U.S.C. 120 to the prior-filed application. The identification of an application by application number under this section is the identification of every application assigned that application number necessary for a specific reference required by 35 U.S.C. 120 to every such application assigned that application number.

(3) If the reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section is presented after the time period provided by paragraph (a)(2)(ii) of this section, the claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America may be accepted if the reference identifying the prior-filed application by application number or international application number and international filing date was unintentionally delayed. A petition to accept an unintentionally delayed claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed application must be accompanied by:

(i) The reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section to the prior-filed application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(2)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

(4) A nonprovisional application, other than for a design patent, or an international application designating the United States of America may claim an invention disclosed in one or more prior-filed provisional applications. In order for an application to claim the benefit of one or more prior filed provisional applications, each prior-filed provisional application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed provisional application must be entitled to a filing date

as set forth in § 1.53(c), and the basic filing fee set forth in § 1.16(k) must be paid within the time period set forth in § 1.53(g).

(5)(i) Any nonprovisional application or international application designating the United States of America claiming the benefit of one or more prior-filed provisional applications must contain or be amended to contain a reference to each such prior-filed provisional application, identifying it by the provisional application number (consisting of series code and serial number).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed provisional application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed provisional application. These time periods are not extendable. Except as provided in paragraph(a)(6) of this section, the failure to timely submit the reference is considered a waiver of any benefit under 35 U.S.C. 119(e) to such prior-filed provisional application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application filed under 35 U.S.C. 111(a) before November 29, 2000; or

(B) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence following the title.

(iv) If the prior-filed provisional application was filed in a language other than English and an English-language translation of the prior-filed provisional application and a statement that the translation is accurate were not previously filed in the prior-filed provisional application or the later-filed nonprovisional application, applicant will be notified and given a period of time within which to file an English-language translation of the non-English-language prior-filed provisional application and a statement that the translation is accurate. In a pending nonprovisional application, failure to timely reply to such a notice will result in abandonment of the application.

(6) If the reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section is presented in a nonprovisional application after the time period provided by paragraph (a)(5)(ii) of this section, the claim under 35 U.S.C. 119(e) for the benefit of a prior filed provisional application may be accepted during the pendency of the later-filed application if the reference identifying the prior-filed application by provisional application number was unintentionally delayed. A petition to accept an unintentionally

delayed claim under 35 U.S.C. 119(e) for the benefit of a prior filed provisional application must be accompanied by:

(i) The reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section to the prior-filed provisional application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(5)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

(b) Where two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application.

(c) If an application or a patent under reexamination and at least one other application naming different inventors are owned by the same party and contain conflicting claims, and there is no statement of record indicating that the claimed inventions were commonly owned or subject to an obligation of assignment to the same person at the time the later invention was made, the Office may require the assignee to state whether the claimed inventions were commonly owned or subject to an obligation of assignment to the same person at the time the later invention was made, and, if not, indicate which named inventor is the prior inventor.<

Under no circumstances can a Certificate of Correction be employed to correct an applicant's mistake by adding or correcting a priority claim under 35 U.S.C. 119(e) for an application filed on or after November 29, 2000.

Section 4503 of the American Inventors Protection Act of 1999 (AIPA) amended 35 U.S.C. 119(e)(1) to state that:

No application shall be entitled to the benefit of an earlier filed provisional application under this subsection unless an amendment containing the specific reference to the earlier filed provisional application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this subsection. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section *during the pendency of the application*. (emphasis added)

35 U.S.C. 119(e)(1), as amended by the AIPA, clearly prohibits the addition or correction of priority claims under 35 U.S.C. 119(e) when the application is not pending, e.g., an issued patent. Therefore, a Certificate of Correction is no longer a valid mechanism for adding or correcting a priority claim under 35

U.S.C. 119(e) after a patent has been granted on an application filed on or after November 29, 2000.

Under certain conditions as specified below, however, a Certificate of Correction can still be used, with respect to 35 U.S.C. 120 priority, to correct:

(A) the failure to make reference to a prior copending application pursuant to 37 CFR 1.78(a)(2); or

(B) an incorrect reference to a prior copending application pursuant to 37 CFR 1.78(a)(2).

Where priority is based upon 35 U.S.C. 120 to a **national application**, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) \*\* it must be clear from the record of the patent and the parent application(s) that priority is appropriate >(see MPEP § 201.11)<; and

\*>

(C) < a grantable petition to accept an unintentionally delayed claim for the benefit of a prior application must be filed, including a surcharge as set forth in 37 CFR 1.17(t), as required by 37 CFR 1.78(a)(3).

Where 35 U.S.C. 120 and 365(c) priority based on an **international application** is to be asserted or corrected in a patent via a Certificate of Correction, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) \*\* it must be clear from the record of the patent and the parent application(s) that priority is appropriate >(see MPEP § 201.11)<;

\*>

(C) < the patentee must submit >together with the request for the certificate,< copies of documentation showing designation of states and any other information needed to make it clear from the record that the 35 U.S.C. 120 priority is appropriate (see MPEP § 201.13(b) as to the requirements for 35 U.S.C. 120 priority based on an international application; \*\*>and<

(D) > a grantable petition to accept an unintentionally delayed claim for the benefit of a prior appli-

cation must be filed, including a surcharge as set forth in 37 CFR 1.17(t), as required by 37 CFR 1.78(a)(3).

If all the above-stated conditions are satisfied, a Certificate of Correction can be used to amend the patent to make reference to a prior copending application, or to correct an incorrect reference to the prior copending application, for benefit claims under 35 U.S.C. 120 and 365(c).

If any of the above-stated conditions is not satisfied, the filing of a reissue application (see MPEP § 1401 - § 1460) may be appropriate to pursue the desired correction of the patent for benefit claims under 35 U.S.C. 120 and 365(c).

### **1485 Handling of Request for Certificates of Correction [R-2]**

A request for a Certificate of Correction should be addressed to \*\* >:

ATTN: Certificate of Correction Branch  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450<

Requests for Certificates of Correction will be forwarded to the Certificate of Correction Branch of the Office of Patent Publication, where they will be listed in a permanent record book.

If the patent is involved in an interference, a Certificate of Correction under 37 CFR 1.324 will not be issued unless a corresponding motion under 37 CFR 1.634 has been granted by the administrative patent judge. Otherwise, determination as to whether an error has been made, the responsibility for the error, if any, and whether the error is of such a nature as to justify the issuance of a Certificate of Correction will be made by the Certificate of Correction Branch. If a report is necessary in making such determination, the case will be forwarded to the appropriate group with a request that the report be furnished. If no certificate is to issue, the party making the request is so notified and the request, report, if any, and copy of the communication to the person making the request are placed in the file and entered thereon under "Contents" by the Certificate of Correction Branch. The case is then returned to the patented files. >(For IFW processing, see IFW Manual.)< If a certificate is to issue, it will be prepared and forwarded to the person

making the request by the Office of Patent Publication. In that case, the request, the report, if any, and a copy of the letter transmitting the Certificate of Correction to the person making the request will be placed in the file and entered thereon under "Contents". >(For IFW processing, see IFW Manual.)<

Applicants, or their attorneys or agents, are urged to submit the text of the correction on a special Certificate of Correction form, PTO/SB/44 (also referred to as Form PTO-1050), which can serve as the camera copy for use in direct offset printing of the Certificate of Correction.

Where only a part of a request can be approved, or where the Office discovers and includes additional corrections, the appropriate alterations are made on the form PTO/SB/44 by the Office. The patentee is notified of the changes on the Notification of Approval-in-part form PTOL-404. The certificate is issued approximately 6 weeks thereafter.

Form PTO/SB/44 should be used exclusively regardless of the length or complexity of the subject matter. Intricate chemical formulas or page of specification or drawings may be reproduced and mounted on a blank copy of PTO/SB/44. Failure to use the form has frequently delayed issuance since the text must be retyped by the Office onto a PTO/SB/44.

The exact page and line number where the errors occur in the application file should be identified on the request. However, on form PTO/SB/44, only the column and line number in the printed patent should be used.

The patent grant should be retained by the patentee. The Office does not attach the Certificate of Correction to patentee's copy of the patent. The patent grant will be returned to the patentee if submitted.

Below is a sample form illustrating a variety of corrections and the suggested manner of setting out the format. Particular attention is directed to:

(A) Identification of the exact point of error by reference to column and line number of the printed patent >for changes in the specification< or to claim number and line where a claim is involved.

(B) Conservation of space on the form by typing single space, beginning two lines down from the printed message.

(C) Starting the correction to each separate column as a sentence, and using semicolons to separate

corrections within >the same< column, where possible.

(D) >Leaving a< two-inch space \* blank at bottom of the last sheet for >the< signature of >the< attesting officer.

(E) >Using< \* quotation marks to enclose the exact subject matter to be deleted or corrected; \* >using< \* double hyphens (-- --) to enclose subject matter to be added, except for formulas.

(F) Where a formula is involved, setting out only that portion thereof which is to be corrected or, if necessary, pasting a photocopy onto form PTO/SB/44.

UNITED STATES PATENT AND TRADEMARK  
OFFICE CERTIFICATE OF CORRECTION

\*\*

>Patent No. 9,999,999

Dated May 1, 2002

Eli Y. Rosenthal

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

In the drawings, Sheet 3, Fig. 3, the reference numeral 225 should be applied to the plate element attached to the support member 207:

Column 2, line 68 and column 3, lines 3, 8 and 13, for the claim reference numeral '2', each occurrence, should read -1-.

Column 7, lines 45 to 49, the left-hand formula should appear as follows:

-R<sub>3</sub> -CHF

Column 8, Formula XVII, that portion of the formula reading "-CHClCH-" should read --CHFCH<sub>2</sub> --; line 5, "chlorine" should be changed to --fluorine--.

Column 10, line 29, cancel the text beginning with "12. A sensor device" to and ending "active strips." in column 11, line 10, and insert the following claim:

12. A control circuit of the character set forth in claim 4 and for an automobile having a convertible top, and including; means for moving the top between a raised and lowered retracted position; and control means responsive to a sensor relay for energizing the top moving means for moving said top from a retracted position to a raised position.<

**ELECTRONIC PUBLICATION OF CERTIFICATES OF CORRECTION WITH LATER LISTING IN THE OFFICIAL GAZETTE**

\*\* >Effective August 2001, the U.S. Patent and Trademark Office (USPTO) publishes< on the USPTO web site at <http://www.uspto.gov/web/patents/certofcorrect> a listing by patent number of the patents for which certificates of correction are being issued.

The USPTO is now automating the publication process for certificates of correction. This new process will result in certificates of correction being published quicker electronically on the USPTO's web site as compared to their paper publication and the listing of the certificates of correction in the *Official Gazette*. Under the newly automated process, each issue of certificates of correction will be electronically published on the USPTO web site at <http://www.uspto.gov/web/patents/certofcorrect>, and will also subsequently be listed in the *Official Gazette* (and in the *Official Gazette Notices* posted at <http://www.uspto.gov/web/offices/com/sol/og>) approximately three weeks thereafter. The listing of certificates of correction in the *Official Gazette* will include the certificate's date of issuance.

On the date on which the listing of certificates of correction is electronically published on the USPTO web site: (A) the certificate of correction will be entered into the file wrapper of the patent and will be available to the public; >(For IFW processing, see IFW Manual.)< (B) a printed copy of the certificate of correction will be mailed to the patentee or the patent's assignee; and (C) an image of the printed certificate of correction will be added to the image of the patent on the patent database at <http://www.uspto.gov.patft>. Dissemination of all other paper copies of the certificate of correction will occur shortly thereafter.

The date on which the USPTO makes the certificate of correction available to the public (e.g., by adding the certificate of correction to the file wrapper>/file history<) will be regarded as the date of issuance of the certificate of correction, not the date of the certificate of correction appearing in the *Official Gazette*. >(For IFW processing, see IFW Manual.)< Certificates of correction published in the above-described manner will provide the public with prompt notice and access>,< and >this< is consistent with the legis-

lative intent behind the American Inventors Protection Act of 1999. See 35 U.S.C. 10(a) (authorizing the USPTO to publish in electronic form).

The listing of certificates of correction can be electronically accessed on the day of issuance at <http://www.uspto.gov/web/patents/certofcorrect>. The elec-

tronic image of the printed certificate of correction can be accessed on the patent database at <http://www.uspto.gov/patft> and the listing of the certificates of correction, as published in the *Official Gazette* three weeks later, will be electronically accessible at <http://www.uspto.gov/web/offices/com/sol/og>.

No. of additional copies

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: **Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

*If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.*

## 1490 Disclaimers [R-2]

### 35 U.S.C. 253. Disclaimer.

Whenever, without any deceptive intention, a claim of a patent is invalid the remaining claims shall not thereby be rendered invalid. A patentee, whether of the whole or any sectional interest therein, may, on payment of the fee required by law, make disclaimer of any complete claim, stating therein the extent of his interest in such patent. Such disclaimer shall be in writing, and recorded in the Patent and Trademark Office; and it shall thereafter be considered as part of the original patent to the extent of the interest possessed by the disclaimant and by those claiming under him.

In like manner any patentee or applicant may disclaim or dedicate to the public the entire term, or any terminal part of the term, of the patent granted or to be granted.

### 37 CFR 1.321. Statutory disclaimers, including terminal disclaimers.

(a) A patentee owning the whole or any sectional interest in a patent may disclaim any complete claim or claims in a patent. In like manner any patentee may disclaim or dedicate to the public the entire term, or any terminal part of the term, of the patent granted. Such disclaimer is binding upon the grantee and its successors or assigns. A notice of the disclaimer is published in the *Official Gazette* and attached to the printed copies of the specification. The disclaimer, to be recorded in the Patent and Trademark Office, must:

- (1) be signed by the patentee, or an attorney or agent of record;
- (2) identify the patent and complete claim or claims, or term being disclaimed. A disclaimer which is not a disclaimer of a complete claim or claims, or term, will be refused recordation;
- (3) state the present extent of patentee's ownership interest in the patent; and
- (4) be accompanied by the fee set forth in § 1.20(d).

(b) An applicant or assignee may disclaim or dedicate to the public the entire term, or any terminal part of the term, of a patent to be granted. Such terminal disclaimer is binding upon the grantee and its successors or assigns. The terminal disclaimer, to be recorded in the Patent and Trademark Office, must:

- (1) be signed:
  - (i) by the applicant, or
  - (ii) if there is an assignee of record of an undivided part interest, by the applicant and such assignee, or
  - (iii) if there is an assignee of record of the entire interest, by such assignee, or
  - (iv) by an attorney or agent of record;
- (2) specify the portion of the term of the patent being disclaimed;
- (3) state the present extent of applicant's or assignee's ownership interest in the patent to be granted; and
- (4) be accompanied by the fee set forth in § 1.20(d).

(c) A terminal disclaimer, when filed to obviate a judicially created double patenting rejection in a patent application or in a reexamination proceeding, must:

(1) Comply with the provisions of paragraphs (b)(2) through (b)(4) of this section;

(2) Be signed in accordance with paragraph (b)(1) of this section if filed in a patent application or in accordance with paragraph (a)(1) of this section if filed in a reexamination proceeding; and

(3) Include a provision that any patent granted on that application or any patent subject to the reexamination proceeding shall be enforceable only for and during such period that said patent is commonly owned with the application or patent which formed the basis for the rejection.

A disclaimer is a statement filed by an owner (in part or in entirety) of a patent or of a patent to be granted (i.e., an application), in which said owner relinquishes certain legal rights to the patent. There are two types of disclaimers: a statutory disclaimer and a terminal disclaimer. The owner of a patent or an application is the original inventor(s) or the assignee of the original inventor(s). The patent or application is assigned by one assignment or by multiple assignments which establish a chain of title from the inventor(s) to the assignee(s). The owner of the patent or application can sign a disclaimer, and a person empowered by the owner to sign the disclaimer can also sign it. Per 37 CFR 1.321(b)(1)(iv), an attorney or agent of record is permitted to sign the disclaimer. For a disclaimer to be accepted, it must be signed by the proper party as follows:

(A) A disclaimer filed in an application must be signed by

- (1) the applicant where the application has not been assigned,
- (2) the applicant and the assignee where each owns a part interest in the application,
- (3) the assignee where assignee owns the entire interest in the application, or
- (4) an attorney or agent of record.

(B) A disclaimer filed in a patent or a reexamination proceeding must be signed by either

- (1) the patentee (the assignee, the inventor(s) if the patent is not assigned, or the assignee and the inventors if the patent is assigned-in-part), or
- (2) an attorney or agent of record.

(C) Where the assignee (of an application or of a patent being reexamined or to be reissued) signs the disclaimer, there is a requirement to comply with 37 CFR 3.73(b) in order to satisfy 37 CFR 1.321, unless an attorney or agent of record signs the disclaimer. In

order to comply with 37 CFR 3.73(b), the assignee's ownership interest must be established by:

(1) filing in the application or patent evidence of a chain of title from the original owner to the assignee, or

(2) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

The submission with respect to 37 CFR 3.73(b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. See also MPEP § 324 as to compliance with 37 CFR 3.73(b). A copy of the "Statement Under 37 CFR 3.73 (b)," which is reproduced in MPEP § 324, may be sent by the examiner to applicant to provide an acceptable way to comply with the requirements of 37 CFR 3.73 (b).

(D) Where the attorney or agent of record signs the disclaimer, **there is no need** to comply with 37 CFR 3.73(b).

(E) The signature on the disclaimer need not be an original signature. Pursuant to 37 CFR 1.4(d)(2), the submitted disclaimer can be a copy, such as a photocopy or facsimile transmission of an original disclaimer.

## STATUTORY DISCLAIMERS

Under 37 CFR 1.321(a) the owner of a patent may disclaim a complete claim or claims of his or her patent. This may result from a lawsuit or because he or she has reason to believe that the claim or claims are too broad or otherwise invalid. If the patent is involved in an interference, see 37 CFR 1.662(c).

>As noted above, a statutory disclaimer is a statement in which a patent owner relinquishes legal rights to one or more claims of a patent. A statutory disclaimer is not, however, a vehicle for adding or amending claims, since there is no provision for such in the statute (35 U.S.C. 253) nor the rules (37 CFR 1.321). Thus, claims of a patent cannot be disclaimed in favor of new claims to be added to the patent or an amendment to existing claims.<

## TERMINAL DISCLAIMERS

37 CFR 1.321(a) also provides for the filing by an applicant or patentee of a terminal disclaimer which disclaims or dedicates to the public the entire term or

any portion of the term of a patent or patent to be granted.

37 CFR 1.321(c) specifically provides for the filing of a terminal disclaimer in an application or a reexamination proceeding for the purpose of overcoming a judicially created double patenting rejection. See MPEP § 804.02.

## PROCESSING

### >Certificate of Correction Branch<

The Certificate of Correction Branch is responsible for the handling of all statutory disclaimers filed under the first paragraph of 35 U.S.C. 253, whether the case is pending or patented, and all terminal disclaimers (filed under the second paragraph of 35 U.S.C. 253) except for those filed in an application pending in a Technology Center (TC). This involves:

(A) Determining >the< compliance >of the disclaimer< with 35 U.S.C. 253 and 37 CFR 1.321 and 3.73;

(B) Notifying applicant or patentee when the disclaimer is informal and thus not acceptable;

(C) Recording the disclaimers >in the record of the application file<; and

(D) Providing the disclaimer data for printing >in the *Official Gazette*<.

## TERMINAL DISCLAIMER IN PENDING APPLICATION PRACTICE >IN THE TECHNOLOGY CENTERS<

Where a terminal disclaimer is filed in an application pending in a TC, it will be processed by the paralegal of the Office of the Special Program Examiner of the TC having responsibility for the application. The paralegal will:

(A) Determine compliance with 35 U.S.C. 253 and 37 CFR 1.321 and 3.73, and ensure that the appropriate terminal disclaimer fee set forth in 37 CFR 1.20(d) >is/<was applied \*\*;

(B) Notify the examiner having charge of the application whether the terminal disclaimer is acceptable or not;

(C) Where the terminal disclaimer is not acceptable, indicate the nature of the informalities so that the examiner can inform applicant in the next Office action;

(D) Where the terminal disclaimer is acceptable, record the terminal disclaimer \* >in the record of the application as set forth below.<

\*\*

The paralegal will \* >record< a terminal disclaimer as being present in an application by:

For applications with 08/ and earlier series code

(A) Attaching a green label to the file wrapper;

(B) Stamping a notice on the file of the term which has been disclaimed >(note that the blanks on the stamped notice for entering information on the patent(s) being disclaimed are no longer filled in)<;

(C) Endorsing the paper containing the terminal disclaimer submission on the “Contents” flap of the application file; and

(D) Entering the terminal disclaimer into the PALM system records, for the application.

>(For IFW processing, see IFW Manual for (A)-(C).)<

For applications with 09/ and later series code

(A) Checking a box on the file wrapper which states that the terminal disclaimer has been filed

>(Any blanks for entering information on the patent(s) being disclaimed are no longer filled in. Note that applications with 10/ and later series codes no longer have such blanks to complete)<;

(B) Endorsing the paper containing the terminal disclaimer submission on the “Contents” flap of the application file; and

(C) Entering the terminal disclaimer into the PALM system records, for the application.

>(For IFW processing, see IFW Manual for (A)-(B).)<

The paralegal completes a Terminal Disclaimer Informal Memo to notify the examiner of the nature of any informalities in the terminal disclaimer. The examiner should notify the applicant of the informalities in the next Office action, or by interview with applicant if such will expedite prosecution of the application. Further, the examiner should initial and date the Terminal Disclaimer Informal Memo and return it to the paralegal to indicate that the examiner has appropriately notified applicant about the terminal disclaimer. The paralegal will then discard the Terminal Disclaimer Informal Memo.

**T. D. INFORMAL MEMO: DO NOT MAIL THIS MEMO TO APPLICANT**

DATE: \_\_\_\_\_

TO: EXAMINER \_\_\_\_\_

APPL. S.N.: \_\_\_\_\_

FROM: \_\_\_\_\_  
PARALEGAL SPECIALIST

ART UNIT: \_\_\_\_\_

SUBJECT: Decision on Terminal Disclaimer (T.D.) filed: \_\_\_\_\_

INSTRUCTIONS: I have reviewed the submitted T.D. with the results as set forth below. If you agree, please use the appropriate form paragraphs identified by this informal memo in your next Office action to notify applicant of the T.D. If you disagree or have any questions, please see me or the Special Program Examiner. THIS IS AN INFORMAL, INTERNAL MEMO ONLY. IT MUST NOT BE (1) MAILED TO APPLICANT OR (2) PLACED OF RECORD IN THE APPLICATION FILE. When your action is complete, please initial, date and return this memo to me. THANK YOU.

- The T.D. is PROPER and has been recorded (see ¶14.23).
- The T.D. is NOT PROPER and has not been accepted for the reason(s) checked below (see ¶14.24):
- The recording fee of \$ \_\_\_\_\_ has not been submitted nor is there any authorization in the application file for the use of a deposit account (see ¶14.26.07).
- The T.D. does not satisfy Rule 321 in that the person who has signed the T.D. has not stated the extent of his/her interest (and/or the extent of the interest of the business entity represented by the signature) in the application/patent (see ¶¶14.26 & 14.26.01).
- The T.D. lacks the enforceable only during common ownership clause - needed to overcome a double patenting rejection, Rule 321(b) (see ¶14.27.01)
- The T.D. is directed to a particular claim(s), which is not acceptable since "the disclaimer must be a terminal portion of the term of the entire patent to be granted." (MPEP 1490) (see ¶¶14.26 & 14.26.02).
- The person who signed the T.D.:
- is not an attorney "of record" (see ¶¶14.29 and 14.29.01).
- has failed to state his/her capacity to sign for the business entity (see ¶14.28),
- is not recognized as an officer of the assignee (see ¶¶14.29 & possibly 14.29.02).
- No documentary evidence of a chain of title from the original inventor(s) to assignee has been submitted, nor is the reel and frame number specified as to where such evidence is recorded in the Office (see 37 CFR 3.73(b) and 1140 O.G. 72). NOTE: This documentary evidence or the specifying of the reel and frame number may be found in the T.D. or in a separate paper of record in the application (see ¶14.30).
- The T.D. is not signed (see ¶¶14.26 & 14.26.03).
- The serial number of the application (or the number of the patent) which forms the basis for the double patenting rejection is missing or incorrect (see ¶14.32).
- The serial number of this application (or the number of the patent in reexam or reissue cases being disclaimed is missing or incorrect (see ¶¶14.26, 14.26.04 or 14.26.05).
- The period disclaimed is incorrect or not specified (see ¶¶14.26, 14.27.02 or 14.27.03).
- Other:
- Suggestion to request refund (see ¶14.36). NOTE: If already authorized, credit refund to deposit account and do not check this item.

I have appropriately notified applicant(s) of the status of the Terminal Disclaimer filed in this case.

Ex. Initials: \_\_\_\_\_ Date: \_\_\_\_\_

**RETURN THIS MEMO TO CPK2-2D25.**

(Rev. 5/98)

## OTHER MATTERS DIRECTED TO TERMINAL DISCLAIMERS

### *Requirements of Terminal Disclaimers*

A proper terminal disclaimer must disclaim the terminal part of the statutory term of any patent granted on the application being examined which would extend beyond the expiration date of the full statutory term, shortened by any terminal disclaimer, of the patent (or of any patent granted on the application) to which the disclaimer is directed. Note the exculpatory language in the second paragraph of the sample terminal disclaimer forms, PTO/SB/25 and PTO/SB/26, provided at the end of this Chapter. That language (“In making the above disclaimer, the owner does not disclaim...”) is permissible in a terminal disclaimer.

The terminal disclaimer must state that any patent granted on the application being examined will be enforceable only for and during the period that it and the patent to which the disclaimer is directed or the patent granted on the application to which the disclaimer is directed are commonly owned. See MPEP § 706.02(1)(2) for examples of common ownership, or lack thereof.

The terminal disclaimer must state that the agreement is to run with any patent granted on the application being examined and is to be binding upon the grantee, its successors, or assigns.

A statement of assignee interest in a terminal disclaimer that “A and B are the owners of 100% of the instant application...” is sufficient to satisfy the 37 CFR 1.321(b)(3) requirement that a terminal disclaimer “state the present extent of applicant’s or assignee’s ownership interest in the patent to be granted.” Although the quoted statement does not identify what specific percentage is owned by A and what specific percentage is owned by B, the statement does provide consent to the terminal disclaimer by the entirety of the ownership of the application (A and B own all of the invention, regardless of the individual percentages they own).

The appropriate one of form paragraphs 14.27.04 and 14.27.06 (reproduced below) may be used to provide applicant or patent owner with an example of acceptable terminal disclaimer language. Additionally, copies of forms PTO/SB/25 and PTO/SB/26 (provided at the end of this Chapter) may be attached to

the Office action to provide sample terminal disclaimers.

\* Pursuant to the last sentence of 35 U.S.C. 253, “any patentee or applicant may disclaim or dedicate to the public... any terminal part of the term, of the patent granted or to be granted”. Accordingly, the disclaimer must be of a terminal portion of the term of the entire patent to be granted. A disclaimer of a terminal portion of the term of an individual claim, or individual claims will not be accepted. It is further noted that a disclaimer of the term of individual claims would not be appropriate since the claims of pending application or proceeding are subject to cancellation, amendment, or renumbering. The statute does not provide for conditional disclaimers and accordingly, a proposed disclaimer which is made contingent on the allowance of certain claims cannot be accepted. The disclaimer should identify the disclaimant and his or her interest in the application and should specify the date when the disclaimer is to become effective.

### *Effect of Disclaimers in Continuing Applications and in Reissues*

A terminal disclaimer filed to obviate a double patenting rejection is effective only with respect to the application identified in the disclaimer unless by its terms it extends to continuing applications. For example, a terminal disclaimer filed in a parent application normally has no effect on a continuing application claiming filing date benefits of the parent application under 35 U.S.C. 120. A terminal disclaimer filed in a parent application to obviate a double patenting rejection does, however, carry over to a continued prosecution application (CPA) filed under 37 CFR 1.53(d) (effective July 14, 2003, CPAs are only available in design applications). The terminal disclaimer filed in the parent application carries over because the CPA retains the same application number as the parent application, i.e., the application number to which the previously filed terminal disclaimer is directed. If applicant does not want the terminal disclaimer to carry over to the CPA, applicant must file a petition under 37 CFR 1.182, along with the required petition fee, requesting the terminal disclaimer filed in the parent application not be carried over to the CPA; see below “Withdrawing a Terminal Disclaimer” (paragraph “A. Before Issuance of Patent”). If applicant

files a Request for Continued Examination (RCE) of an application under 37 CFR 1.114 (which can be filed on or after May 29, 2000 for an application filed on or after June 8, 1995), any terminal disclaimer present will continue to operate, since a new application has not been filed, but rather prosecution has been continued in the existing application. A petition under 37 CFR 1.182, along with the required petition fee, may be filed, if withdrawal of the terminal disclaimer is to be requested.

>Reissue applications: Where a terminal disclaimer was filed in an original application, a copy of that terminal disclaimer is not required be filed by applicant in the reissue. The face of the file wrapper of the reissue application should, however, be marked by the examiner in order to indicate that a terminal disclaimer has been filed for the patent (and will be effective for the patent as it will be reissued). Further, a copy of the terminal disclaimer should be placed in the reissue file by the Technology Center. (For IFW processing, see IFW Manual.)

#### ***Disclaimer Identifies the Wrong Target Application or Patent***

In some instances a terminal disclaimer filed to obviate an obviousness type double patenting rejection will identify the wrong target application or patent (i.e., an application or patent which is not the basis for the double patenting rejection). In these instances, a replacement terminal disclaimer identifying the correct target application or patent would be required by the examiner. Once a correct replacement terminal disclaimer is received, the next Office action should make it clear that 'the second terminal disclaimer replaces the first terminal disclaimer, and the first terminal disclaimer is thus void.' A second terminal disclaimer fee should not be assessed/charged, since the first fee is applied to the second terminal disclaimer.<

#### ***Two or More Copending Applications***

If two (or more) pending applications are filed >,< in *each* of which a rejection of one claimed invention over the other on the ground of >provisional< obviousness-type double patenting >(ODP)< is proper, the >(ODP)< rejection will be made in each application. \* >If the ODP rejection is the only rejection remaining in the earlier filed of the two pending applications,

(but the later-filed application is rejectable on other grounds), the examiner should then withdraw that rejection and permit the earlier-filed application to issue as a patent without a terminal disclaimer. If the ODP rejection is the only rejection remaining in the later-filed application, (while the earlier-filed application is rejectable on other grounds), a terminal disclaimer must be required in the later-filed application, before the ODP rejection can be withdrawn.

If the ODP rejections in both applications are the only rejections remaining in those applications, the examiner should then withdraw the ODP rejection in the earlier filed application thereby permitting that application to issue without need of a terminal disclaimer. A terminal disclaimer must be required in the later-filed application before the ODP rejection can be withdrawn and the application be permitted to issue.

*If both applications are filed on the same day*, the examiner should determine which application claims the base invention and which application claims the improvement (added limitations). The ODP rejection in the base application can be withdrawn without a terminal disclaimer, while the ODP rejection in the improvement application cannot be withdrawn without a terminal disclaimer.

Where there are three applications containing claims that conflict such that an ODP rejection is made in each application based upon the other two, it is not sufficient to file a terminal disclaimer in only one of the applications addressing the other two applications. Rather, an< appropriate terminal disclaimer must be filed in \*\* >at least two of the applications to link all three together<. This is because a terminal disclaimer filed to obviate a double patenting rejection is effective only with respect to the application \* in >which< the >terminal< disclaimer >is filed; it is not effective to link the other two applications to each other<. \*\*

#### **FORM PARAGRAPHS**

The following form paragraphs may be used to inform the applicant (or patent owner) of the status of a submitted terminal disclaimer.

##### *¶ 14.23 Terminal Disclaimer Proper*

The terminal disclaimer filed on [1] disclaiming the terminal portion of any patent granted on this application which would

extend beyond the expiration date of [2] has been reviewed and is accepted. The terminal disclaimer has been recorded.

**Examiner Note:**

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. If an assignment is submitted to support the terminal disclaimer, also use form paragraph 14.34 to suggest that the assignment be separately submitted for recording in the Office.
4. See MPEP § 1490 for discussion of requirements for a proper terminal disclaimer.
5. Use form paragraph 14.23.01 for reexamination proceedings.
6. For improper terminal disclaimers, see form paragraphs 14.24 *et seq.*

¶ 14.23.01 *Terminal Disclaimer Proper (Reexamination Only)*

The terminal disclaimer filed on [1] disclaiming the terminal portion of the patent being reexamined which would extend beyond the expiration date of [2] has been reviewed and is accepted. The terminal disclaimer has been recorded.

**Examiner Note:**

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. If an assignment is submitted to support the terminal disclaimer, also use 14.34 to suggest that the assignment be separately submitted for recording in the Office.
4. See MPEP § 1490 for discussion of requirements for a proper terminal disclaimer.
5. For improper terminal disclaimers, see the form paragraphs which follow.

¶ 14.24 *Terminal Disclaimer Not Proper - Introductory Paragraph*

The terminal disclaimer filed on [1] disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of [2] has been reviewed and is NOT accepted.

**Examiner Note:**

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. One or more of the appropriate form paragraphs 14.26 to 14.32 MUST follow this form paragraph to indicate why the terminal disclaimer is not accepted.
4. Form paragraph 14.33 includes the full text of rule 37 CFR 3.73 and may be included in the Office action when deemed appropriate.

5. Form paragraph 14.35 may be used to inform applicant that an additional disclaimer fee will not be required for the submission of a replacement or supplemental terminal disclaimer.

6. Do not use in reexamination proceedings, use form paragraph 14.25 instead.

¶ 14.25 *Terminal Disclaimer Not Proper - Introductory Paragraph (Reexamination Only)*

The terminal disclaimer filed on [1] disclaiming the terminal portion of the patent being reexamined which would extend beyond the expiration date of [2] has been reviewed and is NOT accepted.

**Examiner Note:**

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or the Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. One or more of the appropriate form paragraphs 14.26 to 14.32 MUST follow this form paragraph to indicate why the terminal disclaimer is not accepted.
4. Form paragraph 14.33 includes the full text of rule 37 CFR 3.73 and may be included in the Office action when deemed appropriate.
5. Form paragraph 14.35 may be used to inform applicant that an additional disclaimer fee will not be required for the submission of a replacement or supplemental terminal disclaimer.

¶ 14.26 *Does Not Comply With 37 CFR 1.321(b) and/or (c) "Sub-Heading" Only*

The terminal disclaimer does not comply with 37 CFR 1.321(b) and/or (c) because:

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 and followed by one or more of the appropriate form paragraphs 14.26.01 to 14.27.03.

¶ 14.26.01 *Extent of Interest Not Stated*

The person who has signed the disclaimer has not stated the extent of his/her interest, or the business entity's interest, in the application/patent. See 37 CFR 1.321(b)(3).

**Examiner Note:**

This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.

¶ 14.26.02 *Directed to Particular Claim(s)*

It is directed to a particular claim or claims, which is not acceptable, since "the disclaimer must be of a terminal portion of the term of the entire [patent or] patent to be granted." See MPEP § 1490.

**Examiner Note:**

This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

*¶ 14.26.03 Not Signed*

The terminal disclaimer was not signed.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

*¶ 14.26.04 Application/Patent Not Identified*

The application/patent being disclaimed has not been identified.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

*¶ 14.26.05 Application/Patent Improperly Identified*

The application/patent being disclaimed has been improperly identified since the number used to identify the [1] being disclaimed is incorrect. The correct number is [2].

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.
2. In bracket 1, insert --application-- or --patent--.
3. In bracket 2, insert the correct Application Number (including series code and serial no.) or the correct Patent Number being disclaimed.
4. A terminal disclaimer is acceptable if it includes the correct Patent Number or the correct Application Number or the serial number together with the proper filing date or the proper series code.

*¶ 14.26.06 Not Signed by All Owners*

It was not signed by all owners and, therefore, supplemental terminal disclaimers are required from the remaining owners.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

*¶ 14.26.07 No Disclaimer Fee Submitted*

The disclaimer fee of \$ [1] in accordance with 37 CFR 1.20(d) has not been submitted, nor is there any authorization in the application file to charge a specified Deposit Account or credit card.

**Examiner Note:**

1. In bracket 1, insert the fee for a disclaimer.
2. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26. If the disclaimer fee was paid for a terminal disclaimer which was not accepted, applicant does not have to pay another disclaimer fee when submitting a replacement or supplemental terminal disclaimer, and this form paragraph should not be used.

*¶ 14.27.01 Lacks Clause of Enforceable Only During Period of Common Ownership*

It does not include a recitation that any patent granted shall be enforceable only for and during such period that said patent is commonly owned with the application(s) or patent(s) which

formed the basis for the double patenting rejection. See 37 CFR 1.321(c)(3).

**Examiner Note:**

This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

*¶ 14.27.02 Fails To Disclaim Terminal Portion of Any Patent Granted On Subject Application*

It fails to disclaim the terminal portion of any patent granted on the subject application.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.
2. Use this form paragraph when the period disclaimed is not the correct period or when no period is specified at all.
3. When using this form paragraph, give an example of proper terminal disclaimer language using form paragraph 14.27.04 following this or the series of statements concerning the defective terminal disclaimer.

*¶ 14.27.03 Fails To Disclaim Terminal Portion of Subject Patent*

It fails to disclaim the terminal portion of the subject patent.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.
2. Use this form paragraph in a reissue application or reexamination proceeding when the period disclaimed is not the correct period or when no period is specified at all.

*¶ 14.27.04 Examples of Acceptable Terminal Disclaimer Language in Patent To Be Granted*

Examples of acceptable language for making the disclaimer of the terminal portion of any patent granted on the subject application follow:

I. If a Provisional Obviousness-Type Double Patenting Rejection Over A Pending Application was made, use:

Petitioner hereby disclaims, except as provided below, the terminal part of any patent granted on the instant application, which would extend beyond the expiration date of any patent granted on Application No. \_\_\_/\_\_\_\_\_, filed on \_\_\_\_\_, as shortened by any terminal disclaimer. Petitioner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the above-listed application are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors, or assigns.

II. If an Obviousness-Type Double Patenting Rejection Over A Prior Patent was made, use:

Petitioner hereby disclaims, except as provided below, the terminal part of any patent granted on the instant application, which would extend beyond the expiration date of

Patent No. \_\_\_\_\_, as presently shortened by any terminal disclaimer. Petitioner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the above listed patent are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors, or assigns.

Alternatively, Form PTO/SB/25 may be used for situation I, and Form PTO/SB/26 may be used for situation II; a copy of each form may be found at the end MPEP Chapter 1400.

*¶ 14.27.06 Examples of Acceptable Terminal Disclaimer Language in Patent (Reexamination Situation)*

Examples of acceptable language for making the disclaimer of the terminal portion of the patent being reexamined follow:

I. If a Provisional Obviousness-Type Double Patenting Rejection Over A Pending Application was made, use:

Petitioner hereby disclaims, except as provided below, the terminal part of the patent being reexamined, which would extend beyond the expiration date of any patent granted on Application No. \_\_\_/\_\_\_\_\_, filed on \_\_\_\_\_, as shortened by any terminal disclaimer. Petitioner hereby agrees that the patent being reexamined shall be enforceable only for and during such period that it and any patent granted on the above-listed application are commonly owned. This agreement is binding upon the patent owner, its successors, or assigns.

II. If an Obviousness-Type Double Patenting Rejection Over A Prior Patent was made, use:

Petitioner hereby disclaims, except as provided below, the terminal part of the patent being reexamined, which would extend beyond the expiration date of Patent No. \_\_\_\_\_, as presently shortened by any terminal disclaimer. Petitioner hereby agrees that the patent for which a reexamination certificate is issued as a result of this proceeding shall be enforceable only for and during such period that it and the above listed patent are commonly owned. This agreement is binding upon the patent owner, its successors, or assigns.

*¶ 14.28 Failure To State Capacity To Sign*

The person who signed the terminal disclaimer has failed to state his/her capacity to sign for the corporation or other business entity, and he/she has not been established as being authorized to act on behalf of the assignee.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.

\*\*>

*¶ 14.29 Not Recognized as Officer of Assignee - "Sub-Heading" Only*

The person who signed the terminal disclaimer is not recognized as an officer of the assignee, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

**Examiner Note:**

1. This form paragraph is to be used when the person signing the terminal disclaimer is not an authorized officer as defined in MPEP § 324.
2. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 and followed by form paragraphs 14.29.01 and/or 14.29.02 when appropriate. An attorney or agent of record is always authorized to sign the terminal disclaimer, even though there is no indication that he or she is an officer of the assignee.
3. Use form paragraph 14.29.02 to explain how an official, other than a recognized officer, may properly sign a terminal disclaimer.

*¶ 14.29.01 Attorney/Agent Not of Record*

An attorney or agent, not of record, is not authorized to sign a terminal disclaimer in the capacity as an attorney or agent acting in a representative capacity as provided by 37 CFR 1.34 (a). See 37 CFR 1.321(b) and/or (c).

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.29.
2. An attorney or agent, however, may sign a terminal disclaimer provided he/she is an attorney or agent of record or is established as an appropriate official of the assignee. To suggest to the attorney or agent, not of record, how he/she may establish status as an appropriate official of the assignee to sign a terminal disclaimer, use form paragraph 14.29.02.

*¶ 14.29.02 Criteria To Accept Terminal Disclaimer When Signed by a Non-Recognized Officer*

It would be acceptable for a person, other than a recognized officer, to sign a terminal disclaimer, provided the record for the application includes a statement that the person is empowered to sign terminal disclaimers and/or act on behalf of the assignee.

Accordingly, a new terminal disclaimer which includes the above empowerment statement will be considered to be signed by an appropriate official of the assignee. A separately filed paper referencing the previously filed terminal disclaimer and containing a proper empowerment statement would also be acceptable.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.29.
2. When form paragraph 14.29 is used to indicate that a terminal disclaimer is denied because it was not signed by a recognized officer nor by an attorney or agent of record, this form paragraph should be used to point out one way to correct the problem.
3. While an indication of the person's title is desirable, its inclusion is not mandatory when this option is employed.

4. A sample terminal disclaimer should be sent with the Office action.

<

¶ 14.30 *No Evidence of Chain of Title to Assignee - Application*

The assignee has not established its ownership interest in the application, in order to support the terminal disclaimer. There is no submission in the record establishing the ownership interest by either (a) providing documentary evidence of a chain of title from the original inventor(s) to the assignee, or (b) specifying (by reel and frame number) where such documentary evidence is recorded in the Office (37 CFR 3.73(b)).

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide a statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.
3. It should be noted that the documentary evidence or the specifying of reel and frame number may be found in the terminal disclaimer itself or in a separate paper.

¶ 14.30.01 *No Evidence of Chain of Title to Assignee - Patent*

The assignee has not established its ownership interest in the patent, in order to support the terminal disclaimer. There is no submission in the record establishing the ownership interest by either (a) providing documentary evidence of a chain of title from the original inventor(s) to the assignee, or (b) specifying (by reel and frame number) where such documentary evidence is recorded in the Office (37 CFR 3.73(b)).

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide a statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.
3. It should be noted that the documentary evidence or the specifying of reel and frame number may be found in the terminal disclaimer itself or in a separate paper in the application.

¶ 14.30.02 *Evidence of Chain of Title to Assignee - Submission Not Signed by Appropriate Party - Terminal Disclaimer Is Thus Not Entered*

The submission establishing the ownership interest of the assignee is informal. There is no indication of record that the party who signed the submission establishing the ownership interest is authorized to sign the submission (37 CFR 3.73(b)).

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.

2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide any statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.

3. This form paragraph should be followed by one of form paragraphs 14.16.02 or 14.16.03. In rare situations where BOTH form paragraphs 14.16.02 and 14.16.03 do not apply and thus cannot be used, the examiner should instead follow this form paragraph with a detailed statement of why there is no authorization to sign.

4. Use form paragraph 14.16.06 to point out one way to correct the problem.

¶ 14.32 *Application/Patent Which Forms Basis for Rejection Not Identified*

The application/patent which forms the basis for the double patenting rejection is not identified in the terminal disclaimer.

**Examiner Note:**

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Use this form paragraph when no information is presented. If incorrect information is contained in the terminal disclaimer, use form paragraphs 14.26 and 14.26.05.

\*\*>

¶ 14.33 *37 CFR 3.73 - Establishing Right of Assignee To Take Action*

The following is a statement of 37 CFR 3.73:

37 CFR 3.73 Establishing right of assignee to take action.

(a) The inventor is presumed to be the owner of a patent application, and any patent that may issue therefrom, unless there is an assignment. The original applicant is presumed to be the owner of a trademark application or registration, unless there is an assignment.

(b)(1) In order to request or take action in a patent or trademark matter, the assignee must establish its ownership of the patent or trademark property of paragraph (a) of this section to the satisfaction of the Director. The establishment of ownership by the assignee may be combined with the paper that requests or takes the action. Ownership is established by submitting to the Office a signed statement identifying the assignee, accompanied by either:

(i) Documentary evidence of a chain of title from the original owner to the assignee (*e.g.*, copy of an executed assignment). The documents submitted to establish ownership may be required to be recorded pursuant to § 3.11 in the assignment records of the Office as a condition to permitting the assignee to take action in a matter pending before the Office; or

(ii) A statement specifying where documentary evidence of a chain of title from the original owner to the assignee is recorded in the assignment records of the Office (*e.g.*, reel and frame number).

(2) The submission establishing ownership must show that the person signing the submission is a person authorized to act on behalf of the assignee by:

(i) Including a statement that the person signing the submission is authorized to act on behalf of the assignee; or

(ii) Being signed by a person having apparent authority to sign on behalf of the assignee, *e.g.*, an officer of the assignee.

(c) For patent matters only:

(1) Establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted.

(2) If the submission under this section is by an assignee of less than the entire right, title and interest, such assignee must indicate the extent (by percentage) of its ownership interest, or the Office may refuse to accept the submission as an establishment of ownership.

<

#### ¶ 14.34 Suggestion To Record Assignment Submitted With Terminal Disclaimer

The assignment document filed on [1] is acceptable as the documentary evidence required by 37 CFR 3.73. If the assignment document is not already recorded with the United States Patent and Trademark Office, it is suggested that the assignment document be submitted for recording among the Office assignment records. See 37 CFR 3.11 and MPEP § 302.

#### Examiner Note:

1. In bracket 1, insert the date the assignment document was filed.
2. This form paragraph should be used when an assignment document (an original, facsimile, or copy) is submitted to satisfy 37 CFR 3.73(b) but does not appear to have been recorded among the assignment records of the Office.

#### ¶ 14.35 Disclaimer Fee Not Required Twice - Applicant

It should be noted that applicant is not required to pay another disclaimer fee as set forth in 37 CFR 1.20(d) when submitting a replacement or supplemental terminal disclaimer.

#### Examiner Note:

1. This form paragraph can be used to notify an applicant that another disclaimer fee will not be required when a replacement or supplemental terminal disclaimer is submitted.
2. Use form paragraph 14.35.01 for providing notification to patent owner, rather than an applicant.

#### ¶ 14.35.01 Disclaimer Fee Not Required Twice - Patent Owner

It should be noted that patent owner is not required to pay another disclaimer fee as set forth in 37 CFR 1.20(d) when submitting a replacement or supplemental terminal disclaimer.

#### Examiner Note:

This form paragraph can be used to notify a patent owner that another disclaimer fee will not be required when a replacement or supplemental terminal disclaimer is submitted.

\*\*>

#### ¶ 14.36 Suggestion That "Applicant" Request a Refund

Since the required fee for the terminal disclaimer was previously paid, applicant's payment of an additional terminal disclaimer fee is not required. Applicant may request a refund of this additional terminal disclaimer fee by submitting a written request for a refund and a copy of this Office action to: Mail Stop 16, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

#### Examiner Note:

1. This form paragraph should be used to notify applicant that a refund can be obtained if another terminal disclaimer fee was paid when a replacement or supplemental terminal disclaimer was submitted.
2. **Note** - If applicant has authorized or requested a fee refund to be credited to a specific Deposit Account or credit card, then an appropriate credit should be made to that Deposit Account or credit card and this paragraph should NOT be used.
3. Use form paragraph 14.36.01 for providing notification to patent owner, rather than an applicant.

#### ¶ 14.36.01 Suggestion That "Patent Owner" Request a Refund

Since the required fee for the terminal disclaimer was previously paid, patent owner's payment of an additional terminal disclaimer fee is not required. Patent owner may request a refund of this additional terminal disclaimer fee by submitting a written request for a refund and a copy of this Office action to: Mail Stop 16, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

#### Examiner Note:

1. This form paragraph should be used to notify patent owner that a refund can be obtained if another terminal disclaimer fee was paid when a replacement or supplemental terminal disclaimer was submitted.
2. **Note** - If patent owner has authorized or requested a fee refund to be credited to a specific Deposit Account or credit card, then an appropriate credit should be made to that Deposit Account or credit card and this form paragraph should NOT be used.

<

#### ¶ 14.37 Samples of a Terminal Disclaimer Over a Pending Application and Assignee Statement Enclosed

Enclosed with this Office action is a sample terminal disclaimer which is effective to overcome a provisional obviousness-type double patenting rejection over a pending application (37 CFR 1.321(b) and (c)).

Also enclosed is a sample Statement Under 37 CFR 3.73(b) (Form PTO/SB/96) which an assignee may use in order to ensure compliance with the rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The “Copies of assignments...” box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the “Copies of assignments...” box is checked, either the part A box or the part B box, as appropriate, must be checked, and the “Reel\_\_\_\_, Frame\_\_\_\_” entries should be left blank. If the part B box is checked, and copies of assignments are not included, the “From:\_\_\_\_ To:\_\_\_\_” blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b), e.g., when signing a terminal disclaimer or a power of attorney.

#### **Examiner Note:**

1. This form paragraph can be used to provide applicant samples of a terminal disclaimer which contains the necessary clauses to overcome a provisional obviousness-type double patenting rejection over a pending application and a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73(b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee’s ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee, or (b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Group Paralegal or Special Program Examiner for copies of the sample terminal disclaimer and Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample terminal disclaimer found after MPEP § 1490 and the Sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

#### *¶ 14.38 Samples of a Terminal Disclaimer Over a Prior Patent and Assignee Statement Enclosed*

Enclosed with this Office action is a sample terminal disclaimer which is effective to overcome an obviousness-type double patenting rejection over a prior patent (37 CFR 1.321(b) and (c)).

Also enclosed is a sample Statement Under 37 CFR 3.73(b) (Form PTO/SB/96) which an assignee may use in order to ensure compliance with the rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The “Copies of assignments...” box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the “Copies of assignments...” box is checked, either the part A box or the part B box, as appropriate, must be checked, and the “Reel\_\_\_\_, Frame\_\_\_\_” entries should be left blank. If the

part B box is checked, and copies of assignments are not included, the “From:\_\_\_\_ To:\_\_\_\_” blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b), e.g., when signing a terminal disclaimer or a power of attorney.

#### **Examiner Note:**

1. This form paragraph can be used to provide applicant samples of a terminal disclaimer which contains the necessary clauses to overcome an obviousness-type double patenting rejection over a prior patent and a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73(b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee’s ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee, or (b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Group Paralegal or Special Program Examiner for copies of the sample terminal disclaimer and Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample terminal disclaimer found after MPEP § 1490 and the Sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

#### *¶ 14.39 Sample Assignee Statement Under 37 CFR 3.73(b) Enclosed*

Enclosed with this Office action is a sample Statement under 37 CFR 3.73(b) which an assignee may use in order to ensure compliance with the Rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The “Copies of assignments...” box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the “Copies of assignments...” box is checked, either the part A box or the part B box, as appropriate, must be checked, and the “Reel\_\_\_\_, Frame\_\_\_\_” entries should be left blank. If the part B box is checked, and copies of assignments are not included, the “From:\_\_\_\_ To:\_\_\_\_” blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b).

#### **Examiner Note:**

1. This form paragraph can be used to provide applicant a sample of a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73(b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee’s ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee, or

(b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Group Paralegal or Special Program Examiner for a copy of the sample Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

## **WITHDRAWING A RECORDED TERMINAL DISCLAIMER**

If timely requested, a recorded terminal disclaimer may be withdrawn before the application in which it is filed issues as a patent, or in a reexamination proceeding, before the reexamination certificate issues. After a patent or reexamination certificate issues, it is unlikely that a recorded terminal disclaimer will be nullified.

### **A. Before Issuance Of Patent**

While the filing and recordation of an unnecessary terminal disclaimer has been characterized as an “unhappy circumstance” in *In re Jentoft*, 392 F.2d 633, 157 USPQ 363 (CCPA 1968), there is no statutory prohibition against nullifying or otherwise canceling the effect of a recorded terminal disclaimer which was erroneously filed before the patent issues. Since the terminal disclaimer would not take effect until the patent is granted, and the public has not had the opportunity to rely on the terminal disclaimer, relief from this unhappy circumstance may be available by way of petition or by refiling the application (other than by refiling it as a CPA).

Under appropriate circumstances, consistent with the orderly administration of the examination process, the nullification of a recorded terminal disclaimer may be addressed by filing a petition under 37 CFR 1.182 requesting withdrawal of the recorded terminal disclaimer. Petitions seeking to reopen the question of the propriety of the double patenting rejection that prompted the filing of the terminal disclaimer have not been favorably considered. The filing of a continuing application other than a CPA, while abandoning the application in which the terminal disclaimer has been filed, will typically nullify the effect of a terminal disclaimer. The filing of a Request for Continued Examination (RCE) of an application under 37

CFR 1.114 will not nullify the effect of a terminal disclaimer, since a new application has not been filed, but rather prosecution has been continued in the existing application.

### **B. After Issuance Of Patent**

The mechanisms to correct a patent — Certificate of Correction (35 U.S.C. 255), reissue (35 U.S.C. 251), and reexamination (35 U.S.C. 305) — are not available to withdraw or otherwise nullify the effect of a recorded terminal disclaimer. As a general principle, public policy does not favor the restoration to the patent owner of something that has been freely dedicated to the public, particularly where the public interest is not protected in some manner — e.g., intervening rights in the case of a reissue patent. See, e.g., *Altoona Publix Theatres v. American Tri-Ergon Corp.*, 294 U.S. 477, 24 USPQ 308 (1935).

Certificates of Correction (35 U.S.C. 255) are available for the correction of an applicant’s mistake. The scope of this remedial provision is limited in two ways — by the nature of the mistake for which correction is sought and the nature of the proposed correction. *In re Arnott*, 19 USPQ2d 1049 (Comm’r Pat. 1991). The nature of the mistake for which correction is sought is limited to those mistakes that are:

- (A) of a clerical nature,
- (B) of a typographical nature, or
- (C) of a minor character.

The nature of the proposed correction is limited to those situations where the correction does not involve changes which would:

- (A) constitute new matter, or
- (B) require reexamination.

A mistake in filing a terminal disclaimer does not fall within any of the categories of mistake for which a certificate of correction of applicant’s mistake is permissible, and any attempt to remove or nullify the effect of the terminal disclaimer would typically require reexamination of the circumstances under which it was filed.

Although the remedial nature of reissue (35 U.S.C. 251) is well recognized, reissue is not available to correct all errors. It has been the Office position that reissue is not available to withdraw or otherwise nullify the effect of a terminal disclaimer recorded in an

issued patent. First, the reissue statute only authorizes the \* >Director of the USPTO< to reissue a patent “for the unexpired part of the term of the original patent.” Since the granting of a reissue patent without the effect of a recorded terminal disclaimer would result in extending the term of the original patent, reissue under these circumstances would be contrary to the statute. Second, the principle against recapturing something that has been intentionally dedicated to the public dates back to *Leggett v. Avery*, 101 U.S. 256 (1879). The attempt to restore that portion of the patent term that was dedicated to the public to secure the grant of the original patent would be contrary to this recapture principle. Finally, applicants have the opportunity to challenge the need for a terminal disclaimer during the prosecution of the application that issues as a patent. “Reissue is not a substitute for Patent Office appeal procedures.” *Ball Corp. v. United States*, 729 F.2d 1429, 1435, 221 USPQ 289, 293

(Fed. Cir. 1984). Where applicants did not challenge the propriety of the examiner’s obvious-type double patenting rejection, but filed a terminal disclaimer to avoid the rejection, the filing of the terminal disclaimer did not constitute error within the meaning of 35 U.S.C. 251. *Ex parte Anthony*, 230 USPQ 467 (Bd. App. 1982), *aff’d*, No. 84-1357 (Fed. Cir. June 14, 1985).

Finally, the nullification of a recorded terminal disclaimer would not be appropriate in a reexamination proceeding. There is a prohibition (35 U.S.C. 305) against enlarging the scope of a claim during a reexamination proceeding. As noted by the Board in *Anthony, supra*, if a terminal disclaimer was nullified, “claims would be able to be sued upon for a longer period than would the claims of the original patent. Therefore, the vertical scope, as opposed to the horizontal scope (where the subject matter is enlarged), would be enlarged.”

\*\*>

<b>TERMINAL DISCLAIMER TO OBTAIN A PROVISIONAL DOUBLE PATENTING REJECTION OVER A PENDING SECOND APPLICATION</b>	Docket Number (Optional)
---	--------------------------

In re Application of:  
 Application No.:  
 Filed:  
 For:

The owner\*, \_\_\_\_\_, of \_\_\_\_\_ percent interest in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application, which would extend beyond the expiration date of the full statutory term defined in 35 U.S.C. 154 and 173 as shortened by any terminal disclaimer filed prior to the grant of any patent granted on pending second Application Number \_\_\_\_\_, filed on \_\_\_\_\_, of any patent on the pending second application. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the second application are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of any patent granted on the instant application that would extend to the expiration date of the full statutory term as defined in 35 U.S.C. 154 and 173 of any patent granted on the second application, as shortened by any terminal disclaimer filed prior to the patent grant, in the event that any such granted patent: expires for failure to pay a maintenance fee, is held unenforceable, is found invalid by a court of competent jurisdiction, is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321, has all claims canceled by a reexamination certificate, is reissued, or is in any manner terminated prior to the expiration of its full statutory term as shortened by any terminal disclaimer filed prior to its grant.

Check either box 1 or 2 below, if appropriate.

- 1.  For submissions on behalf of an organization (e.g., corporation, partnership, university, government agency, etc.), the undersigned is empowered to act on behalf of the organization.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

- 2.  The undersigned is an attorney or agent of record.

## 1501 Statutes and Rules Applicable

The right to a patent for a design stems from:

*35 U.S.C. 171. Patents for designs.*

Whoever invents any new, original and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

*37 CFR 1.151. Rules applicable.*

The rules relating to applications for patents for other inventions or discoveries are also applicable to applications for patents for designs except as otherwise provided.

37 CFR 1.152-1.155, which relate only to design patents, are reproduced in the sections of this chapter.

It is noted that design patent applications are not included in the Patent Cooperation Treaty (PCT), and the procedures followed for PCT international applications are not to be followed for design patent applications.

The practices set forth in other chapters of this *Manual of Patent Examining Procedure* (MPEP) are to be followed in examining applications for design patents, except as particularly pointed out in the chapter.

## 1502 Definition of a Design [R-2]

In a design patent application, the subject matter which is claimed is the design embodied in or applied to an article of manufacture (or portion thereof) and not the article itself. *Ex parte Cady*, 1916 C.D. 62, 232 O.G. 621 (Comm'r Pat. 1916). “[35 U.S.C.] 171 refers, not to the design of an article, but to the design for an article, and is inclusive of ornamental designs of all kinds including surface ornamentation as well as configuration of goods.” *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980).

The design for an article consists of the visual characteristics embodied in or applied to an article.

Since a design is manifested in appearance, the subject matter of a design patent application may relate to the configuration or shape of an article, to the surface ornamentation applied to an article, or to the combination of configuration and surface ornamentation.

Design is inseparable from the article to which it is applied and cannot exist alone merely as a scheme of surface ornamentation. It must be a definite, preconceived thing, capable of reproduction and not merely the chance result of a method.

### ¶ 15.42 Visual Characteristics

The design for an article consists of the visual characteristics or aspect displayed by the article. It is the appearance presented by the article which creates an impression through the eye upon the mind of the observer.

### ¶ 15.43 Subject Matter of Design Patent

Since a design is manifested in appearance, the subject matter of a Design Patent may relate to the configuration or shape of an article, to the surface ornamentation on an article, or to both.

>

### ¶ 15.44 Design Inseparable From Article to Which Applied

Design is inseparable from the article to which it is applied, and cannot exist alone merely as a scheme of ornamentation. It

must be a definite preconceived thing, capable of reproduction, and not merely the chance result of a method or of a combination of functional elements (35 U.S.C. 171; 35 U.S.C. 112, first and second paragraphs). See *Blisscraft of Hollywood v. United Plastics Co.*, 189 F. Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961).

<

### 1502.01 Distinction Between Design and Utility Patents [R-2]

In general terms, a “utility patent” protects the way an article is used and works (35 U.S.C. 101), while a “design patent” protects the way an article looks (35 U.S.C. 171). The ornamental appearance for an article includes its shape/configuration or surface ornamentation \*>applied to< the article, or both. Both design and utility patents may be obtained on an article if invention resides both in its utility and ornamental appearance.

While utility and design patents afford legally separate protection, the utility and ornamentality of an article may not be easily separable. \*\* >Articles of manufacture may possess both functional and ornamental characteristics.<

Some of the more common differences between design and utility patents are summarized below:

(A) The term of a utility patent on an application filed on or after June 8, 1995 is 20 years measured from the U.S. filing date; or if the application contains a specific reference to an earlier application under 35 U.S.C. 120, 121, or 365(c), 20 years from the earliest effective U.S. filing date, while the term of a design patent is 14 years measured from the date of grant (see 35 U.S.C. 173).

(B) Maintenance fees are required for utility patents (see 37 CFR 1.20), while no maintenance fees are required for design patents.

(C) Design patent applications include only a single claim, while utility patent applications can have multiple claims.

(D) Restriction between plural, distinct inventions is discretionary on the part of the examiner in utility patent applications (see MPEP § 803), while it is mandatory in design patent applications (see MPEP § 1504.05).

(E) An international application naming various countries may be filed for utility patents under the

Patent Cooperation Treaty (PCT), while no such provision exists for design patents.

(F) Foreign priority under 35 U.S.C. 119(a)-(d) can be obtained for the filing of utility patent applications up to 1 year after the first filing in any country subscribing to the Paris Convention, while this period is only 6 months for design patent applications (see 35 U.S.C. 172).

(G) Utility patent applications may claim the benefit of a provisional application under 35 U.S.C. 119(e) whereas design patent applications may not. See 35 U.S.C. 172 and 37 CFR 1.78 (a)(4).

(H) A Request for Continued Examination (RCE) under 37 CFR 1.114 may only be filed in utility and plant applications filed under 35 U.S.C. 111(a) on or after June 8, 1995, while RCE is not available for design applications (see 37 CFR 1.114(e)).

(I) \* >Effective July 14, 2003, continued< prosecution application (CPA) practice under 37 CFR 1.53(d) is >only< available for design applications \*\*>(see 37 CFR 1.53(d)(1)(i)). Prior to July 14, 2003, CPA practice was< available for utility and plant applications only where the prior application has a filing date prior to May 29, 2000 \*\*.

(J) Utility patent applications filed on or after November 29, 2000 are subject to application publication under 35 U.S.C. 122(b)(1)(A), whereas design applications are not subject to application publication (see 35 U.S.C. 122(b)(2)).

Other distinctions between design and utility patent practice are detailed in this chapter. Unless otherwise provided, the rules for applications for utility patents are equally applicable to applications for design patents (35 U.S.C. 171 and 37 CFR 1.151).

### 1503 Elements of a Design Patent Application [R-2]

A design patent application has essentially the elements required of an application for a utility patent filed under 35 U.S.C. 101 (see Chapter 600). The arrangement of the elements of a design patent application and the sections of the specification are as specified in 37 CFR 1.154.

A claim in a specific form is a necessary element of a design patent application. See MPEP § \*>1503.01, subsection III<.

A drawing is an essential element of a design patent application. See MPEP § 1503.02 for requirements for drawings.

### 1503.01 Specification [R-2]

*37 CFR 1.153. Title, description and claim, oath or declaration.*

(a) The title of the design must designate the particular article. No description, other than a reference to the drawing, is ordinarily required. The claim shall be in formal terms to the ornamental design for the article (specifying name) as shown, or as shown and described. More than one claim is neither required nor permitted.

(b) The oath or declaration required of the applicant must comply with § 1.63.

*37 CFR 1.154. Arrangement of application elements in a design application.*

(a) The elements of the design application, if applicable, should appear in the following order:

- (1) Design application transmittal form.
- (2) Fee transmittal form.
- (3) Application data sheet (see § 1.76).
- (4) Specification.
- (5) Drawings or photographs.
- (6) Executed oath or declaration (see § 1.153(b)).

(b) The specification should include the following sections in order:

- (1) Preamble, stating the name of the applicant, title of the design, and a brief description of the nature and intended use of the article in which the design is embodied.
- (2) Cross-reference to related applications (unless included in the application data sheet).
- (3) Statement regarding federally sponsored research or development.
- (4) Description of the figure or figures of the drawing.
- (5) Feature description.
- (6) A single claim.

(c) The text of the specification sections defined in paragraph (b) of this section, if applicable, should be preceded by a section heading in uppercase letters without underlining or bold type.

#### ¶ 15.05 Design Patent Specification Arrangement

The following order or arrangement should be observed in framing a design patent specification:

- (1) Preamble, stating name of the applicant, title of the design, and a brief description of the nature and intended use of the article in which the design is embodied.
- (2) Cross-reference to related applications unless included in the application data sheet.
- (3) Statement regarding federally sponsored research or development.
- (4) Description of the figure or figures of the drawing.
- (5) Feature Description, if any.
- (6) A single claim.

### I. PREAMBLE AND TITLE

A preamble, if included, should state the name of the applicant, the title of the design, and a brief description of the nature and intended use of the article in which the design is embodied (37 CFR 1.154).

The title of the design identifies the article in which the design is embodied by the name generally known and used by the public but it does not define the scope of the claim. See MPEP § 1504.04, subsection I.A. The title may be directed to the entire article embodying the design while the claimed design shown in full lines in the drawings may be directed to only a portion of the article. However, the title may not be directed to less than the claimed design shown in full lines in the drawings. A title descriptive of the actual article aids the examiner in developing a complete field of search of the prior art and further aids in the proper assignment of new applications to the appropriate class, subclass, and patent examiner, and the proper classification of the patent upon allowance of the application. It also helps the public in understanding the nature and use of the article embodying the design after the patent has been issued. For example, a broad title such as “Adapter Ring” provides little or no information as to the nature and intended use of the article embodying the design. If a broad title is used, the description of the nature and intended use of the design may be incorporated into the preamble. Absent an amendment requesting deletion of the description, it would be printed on any patent that would issue.

When a design is embodied in an article having multiple functions or comprises multiple independent parts or articles that interact with each other, the title must clearly define them as a single entity, for example, combined or combination, set, pair, unit assembly.

Since 37 CFR 1.153 requires that the title must designate the particular article, and since the claim must be in formal terms to the “ornamental design for the article (specifying name) as shown, or as shown and described,” the title and claim must correspond. When the title and claim do not correspond, the title should be objected to under 37 CFR 1.153 as not corresponding to the claim.

However, it is emphasized that, under the second paragraph of 35 U.S.C. 112, the claim defines “the subject matter which the applicant regards as his invention” (emphasis added); that is, the ornamental

design to be embodied in or applied to an article. Thus, the examiner should afford the applicant substantial latitude in the language of the title/claim. The examiner should only require amendment of the title/claim if the language is clearly misdescriptive, inaccurate, or unclear (i.e., the language would result in a rejection of the claim under 35 U.S.C. 112, second paragraph; see MPEP § 1504.04, subsection \*>III<). The use of language such as “or the like” or “or similar article” in the title when directed to the environment of the article embodying the design will not be the basis for a rejection of the claim under 35 U.S.C. 112\*>< second paragraph. Such language is improper only when used to broaden the article, *per se*, which embodies the design. An acceptable title would be “door for cabinets, houses, or the like,” while the title “door or the like” would be unacceptable and the claim will be rejected under 35 U.S.C. 112, second paragraph. *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992). See also MPEP § 1504.04; subsection \*>III<.

Amendments to the title, whether directed to the article in which the design is embodied or its environment, must have antecedent basis in the original disclosure and may not introduce new matter. *Ex parte Strijland*, 26 USPQ2d 1259 (Bd. Pat. App. & Inter. 1992). If an amendment to the title is directed to the environment in which the design is used and the amendment would introduce new matter, the amendment to the title must be objected to under 35 U.S.C. 132. If an amendment to the title is directed to the article in which the design is embodied and the amendment would introduce new matter, in addition to the objection under 35 U.S.C. 132, the claim must be rejected under 35 U.S.C. 112, first paragraph.

Any amendment to the language of the title should also be made at each occurrence thereof throughout the application, except in the oath or declaration. If the title of the article is not present in the original figure descriptions, it is not necessary to incorporate the title into the descriptions as part of any amendment to the language of the title.

#### ¶ 15.05.01 Title of Design Invention

The title of a design being claimed must correspond to the name of the article in which the design is embodied or applied to. See MPEP § 1503.01.

#### ¶ 15.59 Amend Title

For [1], the title [2] amended throughout the application, original oath or declaration excepted, to read: [3]

#### Examiner Note:

1. In bracket 1, insert reason.
2. In bracket 2, insert --should be-- or --has been--.

## II. DESCRIPTION

No description of the design in the specification beyond a brief description of the drawing is generally necessary, since as a rule the illustration in the drawing views is its own best description. However, while not required, such a description is not prohibited and may be incorporated, at applicant's option, into the specification or may be provided in a separate paper. Descriptions of the figures are not required to be written in any particular format, however, if they do not describe the views of the drawing clearly and accurately, the examiner should object to the unclear and/or inaccurate descriptions and suggest language which is more clearly descriptive of the views.

In addition to the figure descriptions, the following types of statements are permissible in the specification:

(A) Description of the appearance of portions of the claimed design which are not illustrated in the drawing disclosure. Such a description, if provided, must be in the design application as originally filed, and may not be added by way of amendment after the filing of the application as it would be considered new matter.

(B) Description disclaiming portions of the article not shown in the drawing as forming no part of the claimed design.

(C) Statement indicating the purpose of broken lines in the drawing, for example, environmental structure or boundaries that form no part of the design to be patented.

(D) Description denoting the nature and environmental use of the claimed design, if not included in the preamble pursuant to 37 CFR 1.154 and MPEP § 1503.01, subsection I.

It is the policy of the Office to attempt to resolve questions about the nature and intended use of the claimed design prior to examination by making a telephone inquiry at the time of initial docketing of the application. This will enable the application to be

properly classified and docketed to the appropriate examiner and to be searched when the application comes up for examination in its normal course without the need for a rejection under 35 U.S.C. 112 prior to a search of the prior art. Explanation of the nature and intended use of the article may be added to the specification provided it does not constitute new matter. It may alternately, at applicant's option, be submitted in a separate paper without amendment of the specification.

(E) A "characteristic features" statement describing a particular feature of the design that is considered by applicant to be a feature of novelty or nonobviousness over the prior art (37 CFR 1.71(c)).

This type of statement may not serve as a basis for determining patentability by an examiner. In determining the patentability of a design, it is the overall appearance of the claimed design which must be taken into consideration. *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977). Furthermore, the inclusion of such a statement in the specification is at the option of applicant and will not be suggested by the examiner.

\*\*>

#### ¶ 15.47 Characteristic Feature Statement

A "characteristic features" statement describing a particular feature of novelty or nonobviousness in the claimed design may be permissible in the specification. Such a statement should be in terms such as "The characteristic feature of the design resides in [1]," or if combined with one of the Figure descriptions, in terms such as "the characteristic feature of which resides in [2]." While consideration of the claim goes to the total or overall appearance, the use of a "characteristic feature" statement may serve later to limit the claim (*McGrady v. Aspenglas Corp.*, 487 F. Supp. 859, 208 USPQ 242 (S.D.N.Y. 1980)).

#### Examiner Note:

In brackets 1 and 2, insert brief but accurate description of the feature of novelty or nonobviousness of the claimed design.

<

#### ¶ 15.47.01 Feature Statement Caution

The inclusion of a feature statement in the specification is noted. However, the patentability of the claimed design is not based on the specified feature but rather on a comparison of the overall appearance of the design with the prior art. *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977).

The following types of statements are not permissible in the specification:

(A) A disclaimer statement directed to any portion of the claimed design that is shown in solid lines in the drawings is not permitted in the specification of an issued design patent. However, the disclaimer statement may be included in the design application as originally filed to provide antecedent basis for a future amendment. See *Ex parte Remington*, 114 O.G. 761, 1905 C.D. 28 (Comm'r Pat. 1904); *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967).

(B) Statements which describe or suggest other embodiments of the claimed design which are not illustrated in the drawing disclosure, except one that is a mirror image of that shown >or has a shape and appearance that would be evident from the one shown<, are not permitted in the specification of an issued design patent. However, such statements may be included in the design application as originally filed to provide antecedent basis for a future amendment. In addition, statements which attempt to broaden the scope of the claimed design beyond that which is shown in the drawings are not permitted.

(C) Statements describing matters which are directed to function unrelated to the design.

>

#### ¶ 15.41 Functional, Structural Features Not Considered

Attention is directed to the fact that design patent applications are concerned solely with the ornamental appearance of an article of manufacture. The functional and/or structural features stressed by applicant in the papers are of no concern in design cases, and are neither permitted nor required. Function and structure fall under the realm of utility patent applications.

<

#### ¶ 15.46.01 Impermissible Special Description

The special description included in the specification is impermissible because [1]. See MPEP § 1503.01, subsection II. Therefore, the description should be canceled as any description of the design in the specification, other than a brief description of the drawing, is generally not necessary, since as a general rule, the illustration in the drawing views is its own best description.

#### Examiner Note:

In bracket 1, insert the reason why the special description is improper.

#### ¶ 15.60 Amend All Figure Descriptions

For [1], the figure descriptions [2] amended to read: [3]

**Examiner Note:**

1. In bracket 1, insert reason.
2. In bracket 2, insert --should be-- or --have been--.
3. In bracket 3, insert amended text.

## ¶ 15.61 Amend Selected Figure Descriptions

For [1], the description(s) of Fig(s). [2] [3] amended to read: [4]

**Examiner Note:**

1. In bracket 1, insert reason.
2. In bracket 2, insert selected Figure descriptions.
3. In bracket 3, insert --should be-- or --have been--.
4. In bracket 4, insert amended text.

&gt;

**III. DESIGN CLAIM**

The requirements for utility claims specified in 37 CFR 1.75 do not apply to design claims. Instead, the form and content of a design claim is set forth in 37 CFR 1.153:

*37 CFR 1.153. ... claim...*

(a) ... The claim shall be in formal terms to the ornamental design for the article (specifying name) as shown or as shown and described. More than one claim is neither required nor permitted.

\*\*\*\*\*

A design patent application may only include a single claim. The single claim should normally be in formal terms to “The ornamental design for (the article which embodies the design or to which it is applied) as shown.” The description of the article in the claim should be consistent in terminology with the title of the invention. See MPEP § 1503.01, subsection I.

When the specification includes a proper special description of the design (see MPEP § 1503.01, subsection II), or a proper showing of modified forms of the design or other descriptive matter has been included in the specification, the words “and described” must be added to the claim following the term “shown”; i.e., the claim must read “The ornamental design for (the article which embodies the design or to which it is applied) as shown and described.”

The claimed design is shown by full lines in the drawing. It is not permissible to show any portion of the claimed design in broken lines. There are no portions of the claimed design which are immaterial or unimportant, and elements shown in broken lines in the drawing are not part of the claim. See MPEP

§ 1503.02, subsection III, and In re Blum, 374 F.2d 904, 153 USPQ 177 (CCPA 1967).

## ¶ 15.62 Amend Claim “As Shown”

For proper form (37 CFR 1.153), the claim [1] amended to read: “[2] claim: The ornamental design for [3] as shown.”

**Examiner Note:**

1. In bracket 1, insert --must be--.
2. In bracket 2, insert --I-- or --We--.
3. In bracket 3, insert title of the article in which the design is embodied or applied.

## ¶ 15.63 Amend Claim “As Shown and Described”

For proper form (37 CFR 1.153), the claim [1] amended to read: “[2] claim: The ornamental design for [3] as shown and described.”

**Examiner Note:**

1. In bracket 1, insert --must be--.
2. In bracket 2, insert --I-- or --We--.
3. In bracket 3, insert title of the article in which the design is embodied or applied.

## ¶ 15.64 Addition of “And Described” to Claim

Because of [1] -- and described -- [2] added to the claim after “shown.”

**Examiner Note:**

1. In bracket 1, insert reason.
2. In bracket 2, insert --must be--.

&lt;

**1503.02 Drawing [R-2]***37 CFR 1.152. Design drawings.*

The design must be represented by a drawing that complies with the requirements of § 1.84 and must contain a sufficient number of views to constitute a complete disclosure of the appearance of the design. Appropriate and adequate surface shading should be used to show the character or contour of the surfaces represented. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast. Broken lines may be used to show visible environmental structure, but may not be used to show hidden planes and surfaces that cannot be seen through opaque materials. Alternate positions of a design component, illustrated by full and broken lines in the same view are not permitted in a design drawing. Photographs and ink drawings are not permitted to be combined as formal drawings in one application. Photographs submitted in lieu of ink drawings in design patent applications must not disclose environmental structure but must be limited to the design claimed for the article.

Every design patent application must include either a drawing or a photograph of the claimed design. As the drawing or photograph constitutes the entire visual disclosure of the claim, it is of utmost importance that the drawing or photograph be clear and

complete, and that nothing regarding the design sought to be patented is left to conjecture.

When inconsistencies are found among the views, the examiner should object to the drawings and request that the views be made consistent. *Ex parte Asano*, 201 USPQ 315, 317 (Bd. Pat. App. & Inter. 1978); *Hadco Products, Inc. v. Lighting Corp. of America Inc.*, 312 F. Supp. 1173, 1182, 165 USPQ 496, 503 (E.D. Pa. 1970), *vacated on other grounds*, 462 F.2d 1265, 174 USPQ 358 (3d Cir. 1972). When the inconsistencies are of such magnitude that the overall appearance of the design is unclear, the claim should be rejected under 35 U.S.C. 112, first >and second paragraphs<, as >nonenabling and indefinite<. See MPEP § 1504.04, subsection I.A.

>

#### ¶ 15.05.03 Drawing/Photograph Disclosure Objected To

The drawing/photograph disclosure is objected to [1].

#### Examiner Note:

In bracket 1, insert statutory or regulatory basis for objection and an explanation.

#### ¶ 15.05.04 Replacement Drawing Sheets Required

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as amended. If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled Replacement Sheet in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action.

#### ¶ 15.05.05 Drawing Correction Required Prior to Appeal

Any appeal of the design claim must include the correction of the drawings approved by the examiner in accordance with *Ex parte Bevan*, 142 USPQ 284 (Bd. App. 1964).

#### Examiner Note:

This form paragraph can be used in a FINAL rejection where an outstanding requirement for a drawing correction has not been satisfied.

#### ¶ 15.07 Avoidance of New Matter

When preparing new drawings in compliance with the requirement therefor, care must be exercised to avoid introduction of

anything which could be construed to be new matter prohibited by 35 U.S.C. 132 and 37 CFR 1.121.

<

Form paragraph 15.48 may be used to notify applicant of the necessity for good drawings.

#### ¶ 15.48 Necessity for Good Drawings

The necessity for good drawings in a design patent application cannot be overemphasized. As the drawing constitutes the whole disclosure of the design, it is of utmost importance that it be so well executed both as to clarity of showing and completeness, that nothing regarding the design sought to be patented is left to conjecture. An insufficient drawing may be fatal to validity (35 U.S.C. 112, first paragraph). Moreover, an insufficient drawing may have a negative effect with respect to the effective filing date of a continuing application.

In addition to the criteria set forth in 37 CFR 1.81-1.88, design drawings must also comply with 37 CFR 1.152 as follows:

### I. VIEWS

The drawings or photographs should contain a sufficient number of views to disclose the complete appearance of the design claimed, which may include the front, rear, top, bottom and sides. Perspective views are suggested and may be submitted to clearly show the appearance of three dimensional designs. If a perspective view is submitted, the surfaces shown would normally not be required to be illustrated in other views if these surfaces are clearly understood and fully disclosed in the perspective.

Views that are merely duplicative of other views of the design or that are flat and include no >surface ornamentation< may be omitted from the drawing if the specification makes this explicitly clear. See MPEP § 1503.01, subsection II. For example, if the left and right sides of a design are identical or a mirror image, a view should be provided of one side and a statement made in the drawing description that the other side is identical or a mirror image. If the design has a flat bottom, a view of the bottom may be omitted if the specification includes a statement that the bottom is flat and >devoid of surface ornamentation<. The term “unornamented” should not be used to describe visible surfaces which include structure that is clearly not flat. *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413 (D. Del. 1961).

Sectional views presented solely for the purpose of showing the internal construction or functional/

mechanical features are unnecessary and may lead to confusion as to the scope of the claimed design. *Ex parte Tucker*, 1901 C.D. 140, 97 O.G. 187 (Comm'r Pat. 1901); *Ex parte Kohler*, 1905 C.D. 192, 116 O.G. 1185 (Comm'r Pat. 1905). Such views should be objected to under 35 U.S.C. 112, second paragraph, and their cancellation should be required. However, where the exact contour or configuration of the exterior surface of a claimed design is not apparent from the views of the drawing, and no attempt is made to illustrate features of internal construction, a sectional view may be included to clarify the shape of said design. *Ex parte Lohman*, 1912 C.D. 336, 184 O.G. 287 (Comm'r Pat. 1912). When a sectional view is added during prosecution, the examiner must determine whether there is antecedent basis in the original disclosure for the material shown in hatching in the sectional view (37 CFR 1.84(h)(3) and MPEP § 608.02).

## II. SURFACE SHADING

While surface shading is not required under 37 CFR 1.152, it may be necessary in particular cases to shade the figures to show clearly the character and contour of all surfaces of any 3-dimensional aspects of the design. Surface shading is also necessary to distinguish between any open and solid areas of the article. However, surface shading should not be used on unclaimed subject matter, shown in broken lines, to avoid confusion as to the scope of the claim.

Lack of appropriate surface shading in the drawing as filed may render the design nonenabling and indefinite under 35 U.S.C. 112, first and second paragraphs. Additionally, if the surface shape is not evident from the disclosure as filed, the addition of surface shading after filing may comprise new matter. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast. Oblique line shading must be used to show transparent, translucent and highly polished or reflective surfaces, such as a mirror. A contrast in materials may be shown by using line shading and stippling to differentiate between the areas; such technique broadly claims this surface treatment without being limited to specific colors or materials.

Form paragraph 15.49 may be used to notify applicant that surface shading is necessary.

### ¶ 15.49 Surface Shading Necessary

The drawing figures should be appropriately and adequately shaded to show clearly the character and/or contour of all surfaces represented. See 37 CFR 1.152. This is of particular importance in the showing of three (3) dimensional articles where it is necessary to delineate plane, concave, convex, raised, and/or depressed surfaces of the subject matter, and to distinguish between open and closed areas. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast.

## III. BROKEN LINES

The two most common uses of broken lines are to disclose the environment related to the claimed design and to define the bounds of the claim. Structure that is not part of the claimed design, but is considered necessary to show the environment in which the design is associated, may be represented in the drawing by broken lines. This includes any portion of an article in which the design is embodied or applied to that is not considered part of the claimed design. *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980). A broken line showing is for illustrative purposes only and forms no part of the claimed design or a specified embodiment thereof. A boundary line may be shown in broken lines if it is not intended to form part of the claimed design. Applicant may choose to define the bounds of a claimed design with broken lines when the boundary does not exist in reality in the article embodying the design. It would be understood that the claimed design extends to the boundary but does not include the boundary. Where no boundary line is shown in a design application as originally filed, but it is clear from the design specification that the boundary of the claimed design is a straight broken line connecting the ends of existing full lines defining the claimed design, applicant may amend the drawing(s) to add a straight broken line connecting the ends of existing full lines defining the claimed subject matter. Any broken line boundary other than a straight broken line may constitute new matter prohibited by 35 U.S.C. 132 and 37 CFR 1.121(f).

However, broken lines are not permitted for the purpose of indicating that a portion of an article is of less importance in the design. *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967). Broken lines may not be used to show hidden planes and surfaces which cannot be seen through opaque materials. The use of broken lines indicates that the environmental structure or the portion of the article depicted in broken lines

forms no part of the design, and is not to indicate the relative importance of parts of a design.

In general, when broken lines are used, they should not intrude upon or cross the showing of the claimed design and should not be of heavier weight than the lines used in depicting the claimed design. When broken lines cross over the full line showing of the claimed design and are defined as showing environment, it is understood that the surface which lies beneath the broken lines is part of the claimed design. When the broken lines crossing over the design are defined as boundaries, it is understood that the area within the broken lines is not part of the claimed design. Therefore, when broken lines are used which cross over the full line showing of the design, it is critical that the description of the broken lines in the specification explicitly identifies their purpose so that the scope of the claim is clear. As it is possible that broken lines with different purposes may be included in a single application, the description must make a visual distinction between the two purposes; such as --The broken lines immediately adjacent the shaded areas represent the bounds of the claimed design while all other broken lines are >directed to environment and are< for illustrative purposes only; the broken lines form no part of the claimed design.-- Where a broken line showing of environmental structure must necessarily cross or intrude upon the representation of the claimed design and obscures a clear understanding of the design, such an illustration should be included as a separate figure in addition to the other figures which fully disclose the subject matter of the design. Further, surface shading should not be used on unclaimed subject matter shown in broken lines to avoid confusion as to the scope of the claim.

The following form paragraphs may be used, where appropriate, to notify applicant regarding the use of broken lines in the drawings.

¶ 15.50 Design Claimed Shown in Full Lines

The ornamental design which is being claimed must be shown in solid lines in the drawing. Dotted lines for the purpose of indicating unimportant or immaterial features of the design are not permitted. There are no portions of a claimed design which are immaterial or unimportant. See *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967) and *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980).

¶ 15.50.01 Use of Broken Lines in Drawing

Environmental structure may be illustrated by broken lines in the drawing if clearly designated as environment in the specification. See 37 CFR 1.152 and MPEP § 1503.02, subsection III.

¶ 15.50.02 Description of Broken Lines

The following statement must be used to describe the broken lines on the drawing (MPEP § 1503.02, subsection III):

-- The broken line showing of [1] is for illustrative purposes only and forms no part of the claimed design. --

The above statement [2] inserted in the specification preceding the claim.

**Examiner Note:**

1. In bracket 1, insert name of structure.
2. In bracket 2, insert --must be-- or --has been--.

¶ 15.50.03 Objectionable Use of Broken Lines In Drawings

Dotted lines or broken lines used for environmental structure should not cross or intrude upon the representation of the claimed design for which design protection is sought. Such dotted lines may obscure the claimed design and render the disclosure indefinite (35 U.S.C. 112).

¶ 15.50.04 Proper Drawing Disclosure With Use of Broken Lines

Where broken lines showing environmental structure obscure the full line disclosure of the claimed design, a separate figure showing the broken lines must be included in the drawing in addition to the figures showing only claimed subject matter, 35 U.S.C. 112, first paragraph.

¶ 15.50.05 Description of Broken Lines as Boundary of Design

The following statement must be used to describe the broken line boundary of a design (MPEP § 1503.02, subsection III):

-- The broken line(s) which define the bounds of the claimed design form no part thereof.--

#### IV. SURFACE TREATMENT

The ornamental appearance of a design for an article includes its shape and configuration as well as any indicia, contrasting color or materials, graphic representations, or other ornamentation applied to the article ("surface treatment"). Surface treatment must be applied to or embodied in an article of manufacture. Surface treatment, *per se* (i.e., not applied to or embodied in a specific article of manufacture), is not proper subject matter for a design patent under 35 U.S.C. 171. Surface treatment may either be disclosed with the article to which it is applied or in which it is embodied and must be shown in full lines or in broken lines (if unclaimed) to meet the statutory requirement. See MPEP § 1504.01. The guidelines that apply for

disclosing computer-generated icons apply equally to all types of surface treatment. See MPEP § 1504.01(a).

A disclosure of surface treatment in a design drawing or photograph will normally be considered as *prima facie* evidence that the inventor considered the surface treatment shown as an integral part of the claimed design. An amendment canceling two-dimensional surface treatment or reducing it to broken lines will be permitted if it is clear from the application that applicant had possession of the underlying configuration of the basic design without the surface treatment at the time of filing of the application. See *In re Daniels*, 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998). Applicant may remove surface treatment shown in a drawing or photograph of a design without such removal being treated as new matter, provided that the surface treatment does not obscure or override the underlying design. The removal of three-dimensional surface treatment that is an integral part of the configuration of the claimed design, for example, removal of beading, grooves, and ribs, will introduce prohibited new matter as the underlying configuration revealed by this amendment would not be apparent in the application as originally filed. See MPEP § 1504.04, subsection II.

## V. PHOTOGRAPHS AND COLOR DRAWINGS

Drawings are normally required to be submitted in black ink on white paper. See 37 CFR 1.84(a)(1). Photographs are acceptable only in applications in which the invention is not capable of being illustrated in an ink drawing or where the invention is shown more clearly in a photograph (e.g., photographs of ornamental effects are acceptable). See also 37 CFR 1.81(c) and 1.83(c), and MPEP § 608.02.

Photographs submitted in lieu of ink drawings must comply with 37 CFR 1.84(b). Only one set of black and white photographs is required. Color photographs and color drawings may be submitted in design applications if filed with a petition under 37 CFR 1.84(a)(2). Petitions to accept color photographs or color drawings will be considered by the Primary Examiners as delegated by the TC Director. A grantable petition under 37 CFR 1.84(a)(2) must explain that color drawings or color photographs are necessary because color is an integral part of the

claimed design. Any other explanation as to why color drawings or color photographs are necessary will normally not be acceptable. A grantable petition must also be accompanied by: (1) the fee set forth in 37 CFR 1.17(h); (2) three sets of the color photographs or color drawings; and (3) an amendment to the specification inserting the following statement --The file of this patent contains at least one drawing/photograph executed in color. Copies of this patent with color drawing(s)/photograph(s) will be provided by the Office upon request and payment of the necessary fee.-- See 37 CFR 1.84(a)(2)(iv) and MPEP § 608.02. The U.S. Patent and Trademark Office has waived 37 CFR 1.84(a)(2)(iii), and is no longer requiring a black and white photocopy of any color drawing or photograph. See 1246 O.G. 106 (May 22, 2001). If the photographs are not of sufficient quality so that all details in the photographs are reproducible, this will form the basis of subsequent objection to the quality of the photographic disclosure. No application will be issued until objections directed to the quality of the photographic disclosure have been resolved and acceptable photographs have been submitted and approved by the examiner. If the details, appearance and shape of all the features and portions of the design are not clearly disclosed in the photographs, this would form the basis of a rejection of the claim under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite.

Photographs and ink drawings must not be combined in a formal submission of the visual disclosure of the claimed design in one application. The introduction of both photographs and ink drawings in a design application would result in a high probability of inconsistencies between corresponding elements on the ink drawings as compared with the photographs.

When filing informal photographs or informal drawings with the original application, a disclaimer included in the specification or on the photographs themselves may be used to disclaim any surface ornamentation, logos, written matter, etc. which form no part of the claimed design. See also MPEP § 1504.04, subsection II.

Color photographs and color drawings may be submitted in design applications if filed with a petition under 37 CFR 1.84(a)(2). Color may also be shown in pen and ink drawings by lining the surfaces of the design for color in accordance with the symbols in

MPEP § 608.02. If the formal drawing in an application is lined for color, the following statement should be inserted in the specification for clarity and to avoid possible confusion that the lining may be surface treatment --The drawing is lined for color.-- However, lining a surface for color may interfere with a clear showing of the design as required by 35 U.S.C. 112, first paragraph, as surface shading cannot be used to define the contours of the design.

If color photographs or color drawings are filed with the original application, color will be considered an integral part of the disclosed and claimed design. The omission of color in later filed formal photographs or drawings will be permitted if it is clear from the application that applicant had possession of the >underlying configuration of the< basic design without the color at the time of filing of the application. See *In re Daniels*, 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998) and MPEP 1504.04, subsection \*>II<. Note also 37 CFR 1.152, which requires that the disclosure in formal photographs be limited to the design for the article claimed.

\*\*

¶ 15.05.041 *Informal Color Drawing(s)/Photograph(s) Submitted*

Informal color photographs or drawings have been submitted for the purposes of obtaining a filing date. When formal drawings are submitted, any showing of color in a black and white drawing is limited to the symbols used to line a surface to show color (MPEP § 608.02). Lining entire surfaces of a design to show color(s) may interfere with a clear showing of the design as required by 35 U.S.C. 112 because surface shading cannot be used simultaneously to define the contours of those surfaces. However, a surface may be partially lined for color with a description that the color extends across the entire surface; this technique would allow for the use of shading on the rest of the surface showing the contours of the design (37 CFR 1.152). In the alternative, a separate view, properly shaded to show the contours of the design but omitting the color(s), may be submitted if identified as shown only for clarity of illustration.

In any drawing lined for color, the following special description must be inserted in the specification (the specific colors may be identified for clarity):

--The drawing is lined for color.--

However, some designs disclosed in informal color photographs/drawings cannot be depicted in black and white drawings lined for color. For example, a design may include multiple shades of a single color which cannot be accurately represented by the single symbol for a specific color. Or, the color may be a shade other than a true primary or secondary color as represented by the drafting symbols and lining the drawing with one of the

drafting symbols would not be an exact representation of the design as originally disclosed. In these situations, applicant may file a petition to accept formal color drawings or color photographs under 37 CFR 1.84(a)(2).

\*\*>

¶ 15.45 *Color Photographs/Drawings As Informal Drawings*

For filing date purposes, in those design patent applications containing color photographs/drawings contrary to the requirement for ink drawings or black and white photographs, the Office of Initial Patent Examination has been authorized to construe the color photographs/drawings as informal drawings rather than to hold the applications incomplete as filed. By so doing, the Patent and Trademark Office can accept the applications without requiring applicants to file petitions to obtain the original deposit date as the filing date. However, color photographs or color drawings are not permitted in design applications in the absence of a grantable petition pursuant to 37 CFR 1.84(a)(2). Before the color photographs or color drawings in this application can be treated as formal drawings, applicant must submit [1].

**Examiner Note:**

In bracket 1, insert --a petition--, --the fee--, --statement in the specification--, --explanation of why color disclosure is necessary--, and -- three full sets of color photographs or color drawings--.

<

\*\*

## 1504 Examination [R-2]

In design patent applications, ornamentality, novelty\*>< nonobviousness >enablement and definiteness< are necessary prerequisites to the grant of a patent. The inventive novelty or unobviousness resides in the ornamental shape or configuration of the article in which the design is embodied or the surface ornamentation which is applied to or embodied in the design.

Novelty and nonobviousness of a design claim must generally be determined by a search in the pertinent design classes. It is also mandatory that the search be extended to the mechanical classes encompassing inventions of the same general type. Catalogs and trade journals >as well as available foreign patent databases< are also to be consulted.

If the examiner determines that the claim of the design patent application does not satisfy the statutory requirements, the examiner will set forth in detail, and may additionally summarize, the basis for all rejec-

tions in an Official action. \*>If a reply to an Office action overcomes a rejection either by way of an amendment to the claim or by providing convincing arguments that the rejection should be withdrawn, that rejection must be indicated as withdrawn in the next Office action, unless such action is a notice of allowability. Likewise, any amendment to the specification or claim, or new drawing or drawing correction submitted in reply to an objection or objections in an Office action must be acknowledged in the next Office action, unless such action is a notice of allowability. When< an examiner determines that the claim in a design application is patentable under all statutory requirements, but formal matters still need to be addressed and corrected prior to allowance, an *Ex parte Quayle* action will be sent to applicant indicating allowability of the claim and identifying the necessary corrections.

¶ 15.19.01 *Summary Statement of Rejections*

The claim stands rejected under [1].

**Examiner Note:**

1. Use as summary statement of rejection(s) in Office action.
2. In bracket 1, insert appropriate basis for rejection, i.e., statutory provisions, etc.

¶ 15.58 *Claimed Design Is Patentable (Ex parte Quayle Actions)*

The claimed design is patentable over the references cited.

¶ 15.72 *Quayle Action*

This application is in condition for allowance except for the following formal matters: [1].

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.

>If it is determined that a rejection of the claim should be given after a reply to a Quayle action, the indication of allowability set forth in the previous action must be withdrawn and prosecution reopened using the following form paragraph:

¶ 15.90 *Indication of allowability withdrawn*

The indication of allowability set forth in the previous action is withdrawn and prosecution is reopened in view of the following new ground of rejection.

<

With respect to *pro se* design applications, the examiner should notify applicant in the first Office action that it may be desirable for applicant to employ

the services of a registered patent attorney or agent to prosecute the application. Applicant should also be notified that the U.S. Patent and Trademark Office cannot aid in the selection of an attorney or agent. If it appears that patentable subject matter is present and the disclosure of the claimed design complies with the requirements of 35 U.S.C.112, the examiner should include a copy of the “Guide To Filing A Design Patent Application” with the first Office action and notify applicant that it may be desirable to employ the services of a professional patent draftsman familiar with design practice to prepare the formal drawings. Applicant should also be notified that the U.S. Patent and Trademark Office cannot aid in the selection of a draftsman. The following form paragraph, where appropriate, may be used.

¶ 15.66 *Employ Services of Patent Attorney or Agent (Design Application Only)*

As the value of a design patent is largely dependent upon the skillful preparation of the drawings and specification, applicant might consider it desirable to employ the services of a registered patent attorney or agent. The U.S. Patent and Trademark Office cannot aid in the selection of an attorney or agent.

Applicant is advised of the availability of the publication “Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office.” This publication is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

¶ 15.66.01 *Employ Services of Professional Patent Draftsman (Design Application Only)*

As the value of a design patent is largely dependent upon the skillful preparation of the drawings, applicant might consider it desirable to employ the services of a professional patent draftsman familiar with design practice. The U.S. Patent and Trademark Office cannot aid in the selection of a draftsman.

**Examiner Note:**

This form paragraph should only be used in *pro se* applications where it appears that patentable subject matter is present and the disclosure of the claimed design complies with the requirements of 35 U.S.C. 112.

## 1504.01 Statutory Subject Matter for Designs

### 35 U.S.C. 171. Patents for designs.

Whoever invents any new, original, and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

The language “new, original and ornamental design for an article of manufacture” set forth in 35 U.S.C. 171 has been interpreted by the case law to include at least three kinds of designs:

(A) a design for an ornament, impression, print, or picture applied to or embodied in an article of manufacture (surface indicia);

(B) a design for the shape or configuration of an article of manufacture; and

(C) a combination of the first two categories.

See *In re Schnell*, 46 F.2d 203, 8 USPQ 19 (CCPA 1931); *Ex parte Donaldson*, 26 USPQ2d 1250 (Bd. Pat. App. & Int. 1992).

A picture standing alone is not patentable under 35 U.S.C. 171. The factor which distinguishes statutory design subject matter from mere picture or ornamentation, *per se* (i.e., abstract design), is the embodiment of the design in an article of manufacture. Consistent with 35 U.S.C. 171, case law and USPTO practice, the design must be shown as applied to or embodied in an article of manufacture.

A claim to a picture, print, impression, etc. *per se*, that is not applied to or embodied in an article of manufacture should be rejected under 35 U.S.C. 171 as directed to nonstatutory subject matter. The following paragraphs may be used.

¶ 15.07.01 *Statutory Basis, 35 U.S.C. 171*

The following is a quotation of 35 U.S.C. 171:

Whoever invents any new, original, and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

¶ 15.09 *35 U.S.C. 171 Rejection*

The claim is rejected under 35 U.S.C. 171 as directed to non-statutory subject matter because the design is not shown embodied in or applied to an article.

**Examiner Note:**

This rejection should be used when the claim is directed to surface treatment which is not shown with an article in either full or broken lines.

¶ 15.44 *Design Inseparable From Article to Which Applied*

Design is inseparable from the article to which it is applied, and cannot exist alone merely as a scheme of ornamentation. It

must be a definite preconceived thing, capable of reproduction, and not merely the chance result of a method or of a combination of functional elements (35 U.S.C. 171; 35 U.S.C. 112, first and second paragraphs). See *Blisscraft of Hollywood v. United Plastics Co.*, 189 F. Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961).

Form paragraphs 15.38 and 15.40 may be used in a second or subsequent action, where appropriate (see MPEP § 1504.02).

## 1504.01(a) Computer-Generated Icons

To be directed to statutory subject matter, design applications for computer-generated icons must comply with the “article of manufacture” requirement of 35 U.S.C. 171.

### I. GUIDELINES FOR EXAMINATION OF DESIGN PATENT APPLICATIONS FOR COMPUTER-GENERATED ICONS

The following guidelines have been developed to assist USPTO personnel in determining whether design patent applications for computer-generated icons comply with the “article of manufacture” requirement of 35 U.S.C. 171.

#### A. *General Principle Governing Compliance With the “Article of Manufacture” Requirement*

Computer-generated icons, such as full screen displays and individual icons, are 2-dimensional images which alone are surface ornamentation. See, e.g., *Ex parte Strijland*, 26 USPQ2d 1259 (Bd. Pat. App. & Int. 1992) (computer-generated icon alone is merely surface ornamentation). The USPTO considers designs for computer-generated icons embodied in articles of manufacture to be statutory subject matter eligible for design patent protection under 35 U.S.C. 171. Thus, if an application claims a computer-generated icon shown on a computer screen, monitor, other display panel, or a portion thereof, the claim complies with the “article of manufacture” requirement of 35 U.S.C. 171. Since a patentable design is inseparable from the object to which it is applied and cannot exist alone merely as a scheme of surface ornamentation, a computer-generated icon must be embodied in a computer screen, monitor, other display panel, or portion thereof, to satisfy 35 U.S.C. 171. See MPEP § 1502.

“We do not see that the dependence of the existence of a design on something outside itself is a reason for holding it is not a design ‘for an article of manufacture.’ ” *In re Hruby*, 373 F.2d 997, 1001, 153 USPQ 61, 66 (CCPA 1967) (design of water fountain patentable design for an article of manufacture). The dependence of a computer-generated icon on a central processing unit and computer program for its existence itself is not a reason for holding that the design is not for an article of manufacture.

**B. Procedures for Evaluating Whether Design Patent Applications Drawn to Computer-Generated Icons Comply With the “Article of Manufacture” Requirement**

USPTO personnel shall adhere to the following procedures when reviewing design patent applications drawn to computer-generated icons for compliance with the “article of manufacture” requirement of 35 U.S.C. 171.

(A) Read the entire disclosure to determine what the applicant claims as the design and to determine whether the design is embodied in an article of manufacture. 37 CFR 1.71 and 1.152-1.154.

Since the claim must be in formal terms to the design “as shown, or as shown and described,” the drawing provides the best description of the claim. 37 CFR 1.153.

(1) Review the drawing to determine whether a computer screen, monitor, other display panel, or portion thereof, is shown. 37 CFR 1.152.

Although a computer-generated icon may be embodied in only a portion of a computer screen, monitor, or other display panel, the drawing “must contain a sufficient number of views to constitute a complete disclosure of the appearance of the article.” 37 CFR 1.152. In addition, the drawing must comply with 37 CFR 1.84.

(2) Review the title to determine whether it clearly describes the claimed subject matter. 37 CFR 1.153.

The following titles do not adequately describe a design for an article of manufacture under 35 U.S.C. 171: “computer icon”; or “icon.” On the other hand, the following titles do adequately describe a design for an article of manufacture under 35 U.S.C. 171: “computer screen with an icon”; “display panel with a computer icon”; “portion of a computer screen with

an icon image”; “portion of a display panel with a computer icon image”; or “portion of a monitor displayed with a computer icon image.”

(3) Review the specification to determine whether a characteristic feature statement is present. 37 CFR 1.71. If a characteristic feature statement is present, determine whether it describes the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof. See *McGrady v. Aspenglas Corp.*, 487 F.2d 859, 208 USPQ 242 (S.D.N.Y. 1980) (descriptive statement in design patent application narrows claim scope).

(B) If the drawing does not depict a computer-generated icon embodied in a computer screen, monitor, other display panel, or a portion thereof, in either solid or broken lines, reject the claimed design under 35 U.S.C. 171 for failing to comply with the article of manufacture requirement.

(1) If the disclosure as a whole does not suggest or describe the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof, indicate that:

(a) The claim is fatally defective under 35 U.S.C. 171; and

(b) Amendments to the written description, drawings and/or claim attempting to overcome the rejection will ordinarily be entered, however, any new matter will be required to be canceled from the written description, drawings and/or claims. If new matter is added, the claim should be rejected under 35 U.S.C. 112, first paragraph.

(2) If the disclosure as a whole suggests or describes the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof, indicate that the drawing may be amended to overcome the rejection under 35 U.S.C. 171. Suggest amendments which would bring the claim into compliance with 35 U.S.C. 171.

(C) Indicate all objections to the disclosure for failure to comply with the formal requirements of the Rules of Practice in Patent Cases. 37 CFR 1.71, 1.81-1.85, and 1.152-1.154. Suggest amendments which would bring the disclosure into compliance with the formal requirements of the Rules of Practice in Patent Cases.

(D) Upon reply by applicant:

(1) Enter any amendments; and

(2) Review all arguments and the entire record, including any amendments, to determine whether the drawing, title, and specification clearly disclose a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof.

(E) If, by a preponderance of the evidence (see *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992) (“After evidence or argument is submitted by the applicant in response, patentability is determined on the totality of the record, by a preponderance of evidence with due consideration to persuasiveness of argument.”)), the applicant has established that the computer-generated icon is embodied in a computer screen, monitor, other display panel, or portion thereof, withdraw the rejection under 35 U.S.C. 171.

## II. EFFECT OF THE GUIDELINES ON PENDING DESIGN APPLICATIONS DRAWN TO COMPUTER-GENERATED ICONS

USPTO personnel shall follow the procedures set forth above when examining design patent applications for computer-generated icons pending in the USPTO as of April 19, 1996.

## III. TREATMENT OF TYPE FONTS

Traditionally, type fonts have been generated by solid blocks from which each letter or symbol was produced. Consequently, the USPTO has historically granted design patents drawn to type fonts. USPTO personnel should not reject claims for type fonts under 35 U.S.C. 171 for failure to comply with the “article of manufacture” requirement on the basis that more modern methods of typesetting, including computer-generation, do not require solid printing blocks.

### 1504.01(b) Design Comprising Multiple Articles or Multiple Parts Embodied in a Single Article

While the claimed design must be embodied in an article of manufacture as required by 35 U.S.C. 171, it may encompass multiple articles or multiple parts within that article. *Ex parte Gibson*, 20 USPQ 249

(Bd. App. 1933). Multiple independent parts forming the claimed design may be disclosed in the drawing with or without the article being shown in broken lines. If the article is not disclosed in broken lines in the drawing, then the title must disclose the article in which the design is embodied and the association of the claimed parts must be shown by a bracket. In either case, the title must clearly define the articles or parts as a single entity, for example, set, pair, combination, unit, assembly, etc. See MPEP § 1503.01.

### 1504.01(c) Lack of Ornamentality [R-2]

#### I. FUNCTIONALITY VS. ORNAMENTALITY

An ornamental feature or design has been defined as one which was “created for the purpose of ornamenting” and cannot be the result or “merely a by-product” of functional or mechanical considerations. *In re Carletti*, 328 F.2d 1020, 140 USPQ 653, 654 (CCPA 1964); *Blisscraft of Hollywood v. United Plastic Co.*, 189 F. Supp. 333, 337, 127 USPQ 452, 454 (S.D.N.Y. 1960), *aff’d*, 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961). It is clear that the ornamentality of the article must be the result of a conscious act by the inventor, as 35 U.S.C. 171 requires that a patent for a design be given only to “whoever *invents* any new, original, and ornamental design for an article of manufacture.” Therefore, for a design to be ornamental within the requirements of 35 U.S.C. 171, it must be “created for the purpose of ornamenting.” *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964).

To be patentable, a design must be “primarily ornamental.” “In determining whether a design is *primarily functional or primarily ornamental* the claimed design is viewed in its entirety, for the ultimate question is not the functional or decorative aspect of each separate feature, but the overall appearance of the article, in determining whether the claimed design is dictated by the utilitarian purpose of the article.” *L. A. Gear Inc. v. Thom McAn Shoe Co.*, 988 F.2d 1117, 1123, 25 USPQ2d 1913, 1917 (Fed. Cir. 1993). The court in *Norco Products, Inc. v. Mecca Development, Inc.*, 617 F.Supp. 1079, 1080, 227 USPQ 724, 725 (D. Conn. 1985), held that a “primarily functional invention is not patentable” as a design.

A determination of ornamentality is not a quantitative analysis based on the size of the ornamental feature or features but rather a determination based on their ornamental contribution to the design as a whole.

While ornamentality must be based on the entire design, “[i]n determining whether a design is primarily functional, the purposes of the particular elements of the design necessarily must be considered.” *Power Controls Corp. v. Hybrinetics, Inc.*, 806 F.2d 234, 240, 231 USPQ 774, 778 (Fed. Cir. 1986). The court in *Smith v. M & B Sales & Manufacturing*, 13 USPQ2d 2002, 2004 (N. D. Cal. 1990), states that if “significant decisions about how to put it [the item] together and present it in the marketplace were informed by primarily ornamental considerations”, this information may establish the ornamentality of a design.

“However, a distinction exists between the *functionality of an article* or features thereof and the *functionality of the particular design of such article* or features thereof that perform a function.” *Avia Group International Inc. v. L. A. Gear California Inc.*, 853 F.2d 1557, 1563, 7 USPQ2d 1548, 1553 (Fed. Cir. 1988). The distinction must be maintained between the ornamental design and the article in which the design is embodied. The design for the article cannot be assumed to lack ornamentality merely because the article of manufacture would seem to be primarily functional.

\*\*>

## II. < ESTABLISHING A *PRIMA FACIE* BASIS FOR REJECTIONS UNDER 35 U.S.C. 171

To properly reject a claimed design under 35 U.S.C. 171 on the basis of a lack of ornamentality, an examiner must make a *prima facie* showing that the claimed design lacks ornamentality and provide a sufficient evidentiary basis for factual assumptions relied upon in such showing. The court in *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992), stated that “the examiner bears the initial burden, on review of the prior art or on any other ground, of presenting a *prima facie* case of unpatentability.”

>The proper evidentiary basis for a rejection under 35 U.S.C. 171 that a claim is lacking in ornamentality is *an evaluation of the appearance of the design itself*. The examiner’s knowledge of the art, a reply to a letter of inquiry, a brochure emphasizing the functional/

mechanical features of the design, the specification of an analogous utility patent (the applicant’s or another inventor), or information provided in the specification may be used to *supplement* the analysis of the design. If a design is embodied in a specific mechanical article, the analysis that the design lacks ornamentality because its appearance is dictated by functional requirements should be supported by reference to utility patents or some other source of information about the function of the design. If the design is embodied in an article that has a more general use, such as a clip, the analysis and explanation as to why the design lacks ornamentality should be detailed and specific. The examiner’s contention that the specific appearance of the claimed design lacks ornamentality may be supported by the holding of the court in *In re Carletti et al.*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964), that a design to be patentable must be “created for the purpose of ornamenting” the article in which it is embodied. The presence or lack of ornamentality must be made on a case by case basis.

Knowledge that the article would be hidden during its end use based on the examiner’s experience in a given art or information that may have been submitted in the application itself would **not** be considered *prima facie* evidence of the functional nature of the design. See *Seiko Epson Corp v. Nu-Kote Int’l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999). “Visibility during an article’s ‘normal use’ is not a statutory requirement of §171, but rather a guideline for courts to employ in determining whether the patented features are ‘ornamental’.” *Larson v. Classic Corp.*, 683 F. Supp. 1202, 7 USPQ2d 1747 (N.D. Ill. 1988). If there is sufficient evidence to show that a specific design “is clearly intended to be noticed during the process of sale and equally clearly intended to be completely hidden from view in the final use,” it is not necessary that a rejection be made under 35 U.S.C. 171. *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990). The mere fact that an article would be hidden during its ultimate end use is **not** the basis for a rejection under 35 U.S.C. 171, but this information provides additional evidence to be used in support of the contention that the design lacks ornamentality. The only basis for rejecting a claim under 35 U.S.C. 171 as lacking in ornamentality is **an evaluation of the design itself** in light of additional information, such as that identified above.<

Examples of proper evidentiary basis for a rejection under 35 U.S.C. 171 that a claim is lacking in ornamentality would be: (A) common knowledge in the art; (B) the appearance of the design itself; (C) the specification of a related utility patent; >or< (D) information provided in the specification\*\*.

A rejection under 35 U.S.C. 171 for lack of ornamentality must be supported by evidence and rejections should not be made in the absence of such evidence.

\*>

### III. < REJECTIONS MADE UNDER 35 U.S.C. 171

Rejections under 35 U.S.C. 171 for lack of ornamentality based on a proper *prima facie* showing fall into two categories:

(A) a design visible in its ultimate end use which is primarily functional based on the evidence of record; or

(B) a design not visible in its \*\* >normal and intended use as evidence that its appearance is not a matter of concern.< *In re Stevens*, 173 F.2d 1015, 81 USPQ 362 (CCPA 1949) \*\* >;< *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990).

When the examiner has established a proper *prima facie* case of lack of ornamentality, “the burden of coming forward with evidence or argument shifts to the applicant.” *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992). A rejection under 35 U.S.C. 171 for lack of ornamentality may be overcome by providing evidence from the inventor himself or a representative of the company that commissioned the design that there was an intent to create a design for the “purpose of ornamenting.” *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). >Attorney’s arguments are not a substitute for evidence. Once a proper *prima facie* case of lack of ornamentality is established by the examiner, it is incumbent upon applicant to come forth with countervailing evidence to rebut the rejection made by the examiner. Evidence may be provided by the applicant or a representative of the company which commissioned the design to establish the ornamentality of the design by providing evidence of the motivation behind the creation of a design. *Ex parte Webb*, 30 USPQ2d 1064, 1067-68 (Bd. Pat.

App. & Int. 1993).< Form paragraph 15.08 or 15.08.01, where appropriate, may be used to reject a claim under 35 U.S.C. 171 for lack of ornamentality. \*\*>

#### ¶ 15.08 Lack of Ornamentality (Article Visible in End Use)

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that it lacks ornamentality. To be patentable, a design must be “created for the purpose of ornamenting” the article in which it is embodied. See *Seiko Epson Corp. v. Nu-Kote Int’l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999); *Best Lock Corp. v. Ilco Unican Corp.*, 94 F.3d 1563, 40 USPQ2d 1048 (Fed. Cir. 1996); *Avia Group International Inc. v. L. A. Gear California Inc.*, 853 F.2d 1557, 7 USPQ2d 1548 (Fed. Cir. 1988); *Power Controls Corp. v. Hybrinetics, Inc.*, 806 F.2d 234, 231 USPQ 774 (Fed. Cir. 1986); *In re Carletti*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964); *Hygienic Specialties Co. v. H.G. Salzman, Inc.*, 302 F.2d 614, 133 USPQ 96 (2d Cir. 1962); *A & H Manufacturing Co. v. Contempo Card Co.*, 576 F. Supp. 894, 221 USPQ 67 (D. R.I. 1983); *Blisscraft of Hollywood v. United Plastic Co.*, 189 F.Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961); *Jones v. Progress Ind. Inc.*, 163 F.Supp. 824, 119 USPQ 92 (D. R.I. 1958); and *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993) .

The following evidence establishes a *prima facie* case of a lack of ornamentality: [1]

An affidavit/declaration under 37 CFR 1.132 may be submitted from applicant or a representative of the company, which commissioned the design, explaining specifically and in depth, which features or area of the claim were created with a concern for the appearance of the design not dictated by function.

Within the above affidavit/declaration, possible alternative ornamental designs which could have served the same function may also be submitted as evidence that the appearance of the claimed design was the result of ornamental considerations. *L. A. Gear v. Thom McAn Shoe Co.*, 988 F.2d 1117, 25 USPQ2d 1913 (Fed. Cir. 1993). Advertisements which emphasize the ornamentality of the article embodying the claimed design may also be submitted as evidence to rebut this rejection. *Berry Sterling Corp. v. Pescor Plastics Inc.*, 122 F.3d 1452, 43 USPQ2d 1953 (Fed. Cir. 1997). Evidence that the appearance of the design is ornamental may be shown by distinctness from the prior art as well as an attempt to develop or to maintain consumer recognition of the article embodying the design. *Seiko Epson Corp. v. Nu-Kote Int’l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999).

Attorney arguments are not a substitute for evidence to establish the ornamentality of the claim. *Ex parte Webb*, 30 USPQ2d 1064, 1067-68 (Bd. Pat. App. & Inter. 1993).

Evidence may be provided by the applicant or a representative of the company which commissioned the design to establish the ornamentality of the design by providing evidence of the motivating factors behind the creation of the design. This information will enable the examiner to determine if the design as a whole was created with “thought of ornament” meeting the requirement of 35 U.S.C. 171 that a design be ornamental. *In re Carletti*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964); *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Int. 1993).

**Examiner Note:**

In bracket 1, insert source of evidence of lack of ornamentality, for example, a utility patent, a brochure, a response to a letter of inquiry, etc.

¶ 15.08.01 *Lack of Ornamentality (Article Not Visible in its Normal and Intended Use)*

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that the design lacks ornamentality. To be patentable, a design must be “created for the purpose of ornamenting” the article in which it is embodied. The fact that the claim is hidden during its normal and intended use establishes that the design would be “primarily functional” and its appearance would not be a matter of concern. See *Seiko Epson Corp. v. Nu-Kote Int’l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999); *In re Webb*, 916 F.2d 1553, 16 USPQ 2d 1433 (Fed. Cir. 1990); *In re Carletti*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964); *In re Cornwall*, 230 F.2d 457, 109 USPQ 57 (CCPA 1956); *In re Stevens*, 173 F.2d 1015, 81 USPQ 362 (CCPA 1949); *Larson v. ClassicCorp.*, 683 F. Supp. 1202, 7 USPQ2d 1747 (N.D. Ill. 1988); *Norco Products, Inc. v. Mecca Development, Inc.*, 617 F. Supp. 1079, 227 USPQ 724 (D. Conn. 1985); *C & M Fiberglass Septic Tanks, Inc. v. T & N Fiberglass Mfg. Co.*, 214 USPQ 159 (D. S.C. 1981); *Blisscraft of Hollywood v. United Plastic Co.*, 189 F.Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961); and *Ex parte Webb*, 30 USPQ 2d 1064 (Bd. Pat. App. & Inter. 1993).

The following evidence establishes a *prima facie* case of lack of ornamentality: [1]

In an attempt to establish that the appearance of the design is a “matter of concern” during the period between its manufacture and its ultimate end use, applicant may submit a showing that the ornamental appearance of the article was of concern to prospective customers/users or an affidavit/declaration from actual customers/users attesting to their concern with the design of the article. The “normal use” of a design during its commercial life is “limited to the ordinary function for which it was designed ... items are not designed for sale, display, replacement or repair”, *Norco Products, inc. v. Mecca Development, Inc.*, 617 F. Supp. 1079, 227 USPQ 724 (D. Conn. 1985). Visibility during sale, display, replacement or repair does not demonstrate that the design is visible during normal use and will not avoid the requirement that applicant must establish that its ornamental appearance is of concern during its commercial life. Unless applicant is directly involved with the sale of the design or works with users of the design, he cannot provide factual evidence as to the reasons for the purchase/selection of the article embodying the design.

It would then be necessary to establish that during this period of visibility the design as a whole was created for the “purpose of ornamenting” or with “thought of ornament,” and therefore, that the design is “primarily ornamental.”

An affidavit/declaration under 37 CFR 1.132 may be submitted from applicant or a representative of the company, which commissioned the design, explaining specifically and in depth, which features or area of the claim were created with a concern for the appearance of the design not dictated by function.

Within the above affidavit/declaration, possible alternative ornamental designs which could have served the same function may also be submitted as evidence that the appearance of the claimed design was the result of ornamental considerations. *L. A. Gear v. Thom McAn Shoe Co.*, 988 F.2d 1117, 25 USPQ2d 1913 (Fed. Cir. 1993). Advertisements which emphasize the ornamentality of the article embodying the claimed design may also be submitted as evidence to rebut this rejection. *Berry Sterling Corp. v. Pescor Plastics Inc.*, 122 F.3d 1452, 43 USPQ2d 1953 (Fed. Cir. 1997). Evidence that the appearance of the design is ornamental may be shown by distinctness from the prior art as well as an attempt to develop or to maintain consumer recognition of the article embodying the design. *Seiko Epson Corp. v. Nu-Kote Int’l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999).

Attorney arguments are insufficient to establish the ornamentality of the claim as only the applicant or a representative of the company which commissioned the design can provide evidence of the motivating factors behind the creation of the design. *Power Controls Corp. v. Hybrinetics, Inc.*, 806 F.2d 234, 231 USPQ 774 (Fed. Cir. 1986); *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993).

This information will enable the examiner to determine if the design as a whole was created with “thought of ornament” meeting the requirement of 35 U.S.C. 171 that a design be ornamental. (*In re Carletti*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964); *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Int. 1993)).

**Examiner Note:**

In bracket 1, insert source of evidence of design lacking ornamentality, for example, an analysis of the design and a utility patent, a brochure, a response to a letter of inquiry.

<

\*>

#### IV. < EVALUATION OF EVIDENCE SUBMITTED TO OVERCOME A REJECTION UNDER 35 U.S.C. 171

In order to overcome a rejection of the claim under 35 U.S.C. 171 as lacking in ornamentality, applicant must provide evidence that he or she created the design claimed for the “purpose of ornamenting” as required by the court in *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). This information must be submitted in the form of an affidavit or declaration under 37 CFR 1.132 over applicant’s signature clearly explaining, specifically and in depth, which areas of the claimed design were created for primarily ornamental reasons. This may be demonstrated by showing that the creation of specific features was done with “thought of ornament.” *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 655 (CCPA 1964). Evidence to show ornamentality

may also be submitted by way of an affidavit or declaration under 37 CFR 1.132 from a representative of the company which commissioned the design, as these sources could establish the intent behind the creation of the design. Applicant may also show that the functional features of the design can be equally accomplished in other ways by giving specific examples which establish that design choice was the basis for the selection of features. *Best Lock Corp. v. Ilco Unican Corp.*, 94 F.3d 1563, 40 USPQ2d 1048 (Fed. Cir. 1996); *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993). Attorney arguments are insufficient to establish such intent, as only the applicant can know the motivation behind the creation of a design. *Power Controls Corp. v. Hybrinetics, Inc.*, 806 F.2d 234, 231 USPQ 774 (Fed. Cir. 1986); *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993).

The mere display of the article embodying the design at trade shows or its inclusion in catalogs is insufficient to establish ornamentality. *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993). There must be some clear and specific indication of the ornamentality of the design in this evidence for it to be given probative weight in overcoming the *prima facie* lack of ornamentality. *Berry Sterling Corp. v. Pescor Plastics Inc.*, 122 F.3d 1452, 43 USPQ2d 1953 (Fed. Cir. 1997).

The examiner must then evaluate this evidence in light of the design as a whole to decide if the claim is primarily ornamental. It is important to be aware that this determination is not based on the size or amount of the features identified as ornamental but rather on their influence on the overall appearance of the design.

In a rejection of a claim under 35 U.S.C. 171 in which >some of< the evidentiary basis for the rejection is that the design would be hidden during its end use, the applicant must establish that the “article’s design is a ‘matter of concern’ because of the nature of its visibility at some point between its manufacture or assembly and its ultimate use.” *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990). >This concern may be shown by the submission of evidence that the appearance of the article was of concern during its period of commercial life by declarations from prospective/actual customers/users attesting that the ornamentality of the article was of

concern to them. Unless applicant is directly involved with the sale of the design or works with users of the design, he or she cannot provide factual evidence as to the reasons for the purchase/selection of the article embodying the design.<

Once applicant has proven that there is a period of visibility during which the ornamentality of the design is a “matter of concern,” it is then necessary to determine whether the claimed design was primarily ornamental during that period. *Larson v. Classic Corp.*, 683 F. Supp. 1202, 7 USPQ2d 1747 (N. D. Ill. 1988). The fact that a design would be visible during its commercial life is not sufficient evidence that the design was “created for the purpose of ornamenting” as required by the court in *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). Examiners should follow the standard for determining ornamentality as outlined above.

“The possibility of encasing a heretofore concealed design element in a transparent cover for no reason other than to avoid this rule cannot avoid the visibility [guideline]... , lest it become meaningless.” *Norco Products Inc. v. Mecca Development Inc.*, 617 F. Supp. 1079, 1081, 227 USPQ 724, 726 (D. Conn. 1985). Applicant cannot rely on mere possibilities to provide factual evidence of ornamentality for the claimed design.

The requirements >for< visibility >of< the design **and** that it was created for the “purpose of ornamenting” must be met for a rejection under 35 U.S.C. 171 to be overcome if the design would be hidden during its end use.<

### 1504.01(d) Simulation

35 U.S.C. 171 requires that a design to be patentable be “original.” Clearly, a design which simulates an existing object or person is not original as required by the statute. The Supreme Court in *Gorham Manufacturing Co. v. White*, 81 U.S. (14 Wall) 511 (1871), described a design as “the thing invented or produced, for which a patent is given.” “The arbitrary chance selection of a form of a now well known and celebrated building, to be applied to toys, inkstands, paper - weights, etc. does not, in my opinion, evince the slightest exercise of invention...” *Bennage v. Phillippi*, 1876 C.D. 135, 9 O.G. 1159 (Comm’r Pat. 1876). This logic was reinforced by the CCPA in *In re Smith*, 25 USPQ 359, 360, 1935 C.D. 565, 566

(CCPA 1935), which stated that “to take a natural form, in a natural pose, ... does not constitute invention” when affirming the rejection of a claim to a baby doll. This premise was also applied in *In re Smith*, 25 USPQ 360, 362, 1935 C.D. 573, 575 (CCPA 1935), which held that a “baby doll simulating the natural features...of a baby without embodying some grotesqueness or departure from the natural form” is not patentable.

Therefore, a claim directed to a design for an article which simulates a well known or naturally occurring object or person should be rejected under 35 U.S.C. 171 as nonstatutory subject matter in that the claimed design lacks originality. Form paragraph 15.08.02 should be used. However, when a claim is rejected on this basis, examiners should provide evidence, if possible, of the appearance of the object, person or naturally occurring form in question so that a comparison may be made to the claimed design. Form paragraph 15.08.03 should be used. It would also be appropriate, if the examiner has prior art which anticipates or renders the claim obvious, to reject the claim under either 35 U.S.C. 102 or 103(a) concurrently. *In re Wise*, 340 F.2d 982, 144 USPQ 354 (CCPA 1965).

¶ 15.08.02 *Simulation (Entire Article)*

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that the design lacks originality. The design is merely simulating [1] which applicant himself did not invent. See *In re Smith*, 25 USPQ 359, 1935 C.D. 565 (CCPA 1935); *In re Smith*, 25 USPQ 360, 1935 C.D. 573 (CCPA 1935); and *Bennage v. Phillippi*, 1876 C.D. 135, 9 O.G. 1159.

**Examiner Note:**

1. In bracket 1, insert the name of the article or person being simulated, e.g., the White House, Marilyn Monroe, an animal which is not stylized or caricatured in any way, a rock or shell to be used as paperweight, etc.
2. This form paragraph should be followed by form paragraph 15.08.03 when evidence has been cited to show the article or person being simulated.

¶ 15.08.03 *Explanation of evidence cited in support of simulation rejection*

Applicant's design has in no way departed from the natural appearance of [1]. This reference is not relied on in this rejection but is supplied merely as representative of the usual or typical appearance of [2] in order that the claim may be compared to that which it is simulating.

**Examiner Note:**

1. In bracket 1, insert name of article or person being simulated and source (patent, publication, etc.).

2. In bracket 2, insert name of article or person being simulated.

## 1504.01(e) Offensive Subject Matter

Design applications which disclose subject matter which could be deemed offensive to any race, religion, sex, ethnic group, or nationality, such as those which include caricatures or depictions, should be rejected as nonstatutory subject matter under 35 U.S.C. 171. See also MPEP § 608. Form paragraph 15.10 should be used.

¶ 15.10 *Offensive Subject Matter*

The disclosure, and therefore the claim in this application, is rejected as being offensive and therefore improper subject matter for design patent protection under 35 U.S.C. 171. Such subject matter does not meet the statutory requirements of 35 U.S.C. 171. Moreover, since 37 CFR 1.3 proscribes the presentation of papers which are lacking in decorum and courtesy, and this includes depictions of caricatures in the disclosure, drawings, and/or a claim which might reasonably be considered offensive, such subject matter as presented herein is deemed to be clearly contrary to 37CFR 1.3. See MPEP § 608.

## 1504.02 Novelty [R-2]

35 U.S.C. 102. *Conditions for patentability; novelty and loss of right to patent.*

A person shall be entitled to a patent unless —

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for patent, or
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of the application for patent in the United States, or
- (c) he has abandoned the invention, or
- (d) the invention was first patented or caused to be patented, or was the subject of an inventor's certificate, by the applicant or his legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than twelve months before the filing of the application in the United States, or

\*\*>

- (e) the invention was described in — (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the international application designated the United States and was

published under Article 21(2) of such treaty in the English language; or<

(f) he did not himself invent the subject matter sought to be patented, or

(g)(1)during the course of an interference conducted under section 135 or section 291, another inventor involved therein establishes, to the extent permitted in section 104, that before such person's invention thereof the invention was made by such other inventor and not abandoned, suppressed, or concealed, or (2) before such person's invention thereof, the invention was made in this country by another inventor who had not abandoned, suppressed, or concealed it. In determining priority of invention under this subsection, there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.

### 35 U.S.C. 172. Right of priority.

The right of priority provided for by subsections (a) through (d) of section 119 of this title and the time specified in section 102(d) shall be six months in the case of designs. The right of priority provided for by section 119(e) of this title shall not apply to designs.

The standard for determining novelty under 35 U.S.C. 102 was set forth by the court in *In re Bartlett*, 300 F.2d 942, 133 USPQ 204 (CCPA 1962). "The degree of difference [from the prior art] required to establish novelty occurs when the average observer takes the new design for a different, and not a modified, already-existing design." 300 F.2d at 943, 133 USPQ at 205 (quoting Shoemaker, Patents For Designs, page 76). In design patent applications, the factual inquiry in determining anticipation over a prior art reference is the same as in utility patent applications. That is, the reference "must be identical in all material respects." *Hupp v. Siroflex of America Inc.*, 122 F.3d 1456, 43 USPQ2d 1887 (Fed. Cir. 1997).

The "average observer" test does not require that the claimed design and the prior art be from analogous arts when evaluating novelty. *In re Glavas*, 230 F.2d 447, 450, 109 USPQ 50, 52 (CCPA 1956). Insofar as the "average observer" under 35 U.S.C. 102 is not charged with knowledge of any art, the issue of analogousness of prior art need not be raised. This distinguishes 35 U.S.C. 102 from 35 U.S.C. 103(a) which requires determination of whether the claimed design would have been obvious to "a person of ordinary skill in the art."

When a claim is rejected under 35 U.S.C. 102 as being unpatentable over prior art, those features of the

design which are functional and/or hidden during end use may not be relied upon to support patentability. *In re Cornwall*, 230 F.2d 447, 109 USPQ 57 (CCPA 1956); *Jones v. Progress Ind. Inc.*, 119 USPQ 92 (D. R.I. 1958). Further, in a rejection of a claim under 35 U.S.C. 102, mere differences in functional considerations do not negate a finding of anticipation when determining design patentability. *Black & Decker, Inc. v. Pittway Corp.*, 636 F.2d 1193, 231 USPQ 252 (N.D. Ill. 1986).

It is not necessary for the examiner to cite or apply prior art to show that functional and/or hidden features are old in the art as long as the examiner has properly relied on evidence to support the *prima facie* lack of ornamentality of these individual features. If applicant wishes to rely on functional or hidden features as a basis for patentability, the same standard for establishing ornamentality under 35 U.S.C. 171 must be applied before these features can be given any patentable weight. See MPEP § 1504.01(c).

In evaluating a statutory bar based on 35 U.S.C. 102(b), the experimental use exception to a statutory bar for public use or sale (see MPEP § 2133.03(e)) does not usually apply for design patents. See *In re Mann*, 861 F.2d 1581, 8 USPQ2d 2030 (Fed. Cir. 1988). However, *Tone Brothers, Inc. v. Sysco Corp.*, 28 F.3d 1192, 1200, 31 USPQ2d 1321, 1326 (Fed. Cir. 1994) held that "experimentation directed to functional features of a product also containing an ornamental design may negate what otherwise would be considered a public use within the meaning of section 102(b)." See MPEP § 2133.03(e)(6).

Registration of a design abroad is considered to be equivalent to patenting under 35 U.S.C. 119(a)-(d) and 35 U.S.C. 102(d), whether or not the foreign grant is published. (See *Ex parte Lancaster*, 151 USPQ 713 (Bd. App. 1965); *Ex parte Marinissen*, 155 USPQ 528 (Bd. App. 1966); *Appeal No. 239-48, Decided April 30, 1965*, 151 USPQ 711, (Bd. App. 1965); *Ex parte Appeal decided September 3, 1968*, 866 O.G. 16 (Bd. App. 1966). The basis of this practice is that if the foreign applicant has received the protection offered in the foreign country, no matter what the protection is called ("patent," "Design Registration," etc.), if the United States application is timely filed, a claim for priority will vest. If, on the other hand, the U.S. application is not timely filed, a statutory bar arises under 35 U.S.C. 102(d) as modified by 35 U.S.C. 172.

In order for the filing to be timely for priority purposes and to avoid possible statutory bars, the U.S. design patent application must be made within 6 months of the foreign filing. See also MPEP § 1504.10.

The laws of each foreign country vary in one or more respects.

The following table sets forth the dates on which design rights can be enforced in a foreign country (INID Code (24)) and thus, are also useable in a 35 U.S.C. 102(d) rejection as modified by 35 U.S.C. 172. It should be noted that in many countries the date of registration or grant is the filing date.

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes <sup>1</sup> (INID Code (24))	Comment
AT-Austria	Protection starts on the date of publication of the design in the official gazette	
AU-Australia	Date of registration or grant which is the filing date	
BG-Bulgaria	Date of registration or grant which is the filing date	
BX-Benelux (Belgium, Luxembourg, and the Netherlands)	Date on which corresponding application became complete and regular according to the criteria set by the law	
CA-Canada	Date of registration or grant	
CH-Switzerland	Date of registration or grant which is the filing date	Minimum requirements: deposit application, object, and deposit fee
CL-Chile	Date of registration or grant	
CU-Cuba	Date of registration or grant which is the filing date	
CZ-Czech Republic	Date of registration or grant which is the filing date	
DE-Germany	Date of registration or grant	The industrial design right can be enforced by a court from the date of registration although it is in force earlier (as from the date of filing—as defined by law).
DK-Denmark	Date of registration or grant which is the filing date	
EG-Egypt	Date of registration or grant which is the filing date	
ES-Spain	Date of registration or grant	
FI-Finland	Date of registration or grant which is the filing date	
FR-France	Date of registration or grant which is the filing date	

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes <sup>1</sup> (INID Code (24))	Comment
GB-United Kingdom	Date of registration or grant which is the filing date	Protection arises automatically under the Design Right provision when the design is created. Proof of the date of the design creation needs to be kept in case the design right is challenged. The protection available to designs can be enforced in the courts following the date of grant of the Certificate of Registration as of the date of registration which stems from the date of first filing of the design in the UK or, if a priority is claimed under the Convention, as another country.
HU-Hungary	Date of registration or grant	With retroactive effect as from the filing date
JP-Japan	Date of registration or grant	
KR-Republic of Korea	Date of registration or grant	
MA-Morocco	Date of registration or grant which is the filing date	
MC-Monaco	Date of registration or grant which is the filing date	Date of prior disclosure declared on deposit
NO-Norway	Date of registration or grant which is the filing date	
OA-African Intellectual Property Organization (OAPI) (Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Congo, Cote d'Ivoire, Gabon, Guinea, Mali, Mauritania, Niger, Senegal, and Togo)	Date of registration or grant which is the filing date	
PT-Portugal	Date of registration or grant	
RO-Romania	Date of registration or grant which is the filing date	
RU-Russian Federation	Date of registration or grant which is the filing date	

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes <sup>1</sup> (INID Code (24))	Comment
SE-Sweden	Date of registration or grant	
TN-Tunisia	Date of registration or grant which is the filing date	
TT-Trinidad and Tobago	Date of registration or grant which is the filing date	
WO-World Intellectual Property Organization (WIPO)		Subject to Rule 14.2 of the Regulations (on defects), the International Bureau enters the international deposit in the International Register on the date on which it has in its possession the application together with the items required. Reproductions, samples, or models pursuant to Rule 12, and the prescribed fees.

<sup>1</sup>Based on information taken from the “Survey of Filing Procedures and Filing Requirements, as well as of Examination Methods and Publication Procedures, Relating to Industrial Designs” as adopted by the PCIPI Executive Coordination Committee of the World Intellectual Property Organization (WIPO) at its fifteenth session on November 25, 1994.

Rejections under 35 U.S.C. 102(d) as modified by 35 U.S.C. 172 should only be made when the examiner knows that the application for foreign registration/patent has actually issued before the U. S. filing date based on an application filed more than six (6) months prior to filing the application in the United States. If the grant of a registration/patent based on the foreign application is not evident from the record of the U. S. application or from information found within the preceding charts, then the statement below should be included in the first action on the merits of the application:

*¶ 15.03.01 Foreign Filing More Than 6 Months Before U.S. Filing*

Acknowledgment is made of the [1] application identified in the declaration which was filed more than six months prior to the filing date of the present application. Applicant is reminded that if the [2] application matured into a form of patent protection before the filing date of the present application it would constitute a statutory bar to the issuance of a design patent in the United States under 35 U.S.C. 102(d) in view of 35 U.S.C. 172.

**Examiner Note:**

In brackets 1 and 2, insert the name of country where application was filed.

Form paragraphs for use in rejections under 35 U.S.C. 102 are set forth below.

*¶ 15.11 35 U.S.C. 102(a) Rejection*

The claim is rejected under 35 U.S.C. 102(a) as being clearly anticipated by [1] because the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country before the invention thereof by the applicant for patent.

*¶ 15.12 35 U.S.C. 102(b) Rejection*

The claim is rejected under 35 U.S.C. 102(b) as being clearly anticipated by [1] because the invention was patented or described in a printed publication in this or a foreign country, or in public use or on sale in this country more than one (1) year prior to the application for patent in the United States.

*¶ 15.13 35 U.S.C. 102(c) Rejection*

The claim is rejected under 35 U.S.C. 102(c) because the invention has been abandoned.

*¶ 15.14 35 U.S.C. 102(d)/172 Rejection*

The claim is rejected under 35 U.S.C. 102(d), as modified by 35 U.S.C. 172, as being clearly anticipated by [1] because the invention was first patented or caused to be patented, or was the subject of an inventor's certificate by the applicant, or his/her legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than six (6) months before the filing of the application in the United States.

*¶ 15.15 35 U.S.C. 102(e) Rejection*

The claim is rejected under 35 U.S.C. 102(e) as being clearly anticipated by [1] because the invention was described in a patented or published application for patent by another filed in the United States before the invention thereof by the applicant for patent.

*¶ 15.16 35 U.S.C. 102(f) Rejection*

The claim is rejected under 35 U.S.C. 102(f) because applicant did not himself invent the subject matter sought to be patented.

*¶ 15.17 35 U.S.C. 102(g) Rejection*

The claim is rejected under 35 U.S.C. 102(g) because, before the applicant's invention thereof, the invention was made in this country by another who had not abandoned, suppressed or concealed it.

\*\*>

*¶ 15.24.05 Identical Claim: Common Assignee*

The claim is directed to the same invention as that of the claim of commonly assigned copending Application No. [1]. The issue of priority under 35 U.S.C. 102(g) and possibly 35 U.S.C. 102(f) of this single invention must be resolved. Since the U.S. Patent and Trademark Office normally will not institute an interference between applications or a patent and an application of common ownership (see MPEP § 2302), the assignee is required to state which entity is the prior inventor of the conflicting subject matter. A terminal disclaimer has no effect in this situation since the basis for refusing more than one patent is priority of invention under 35 U.S.C. 102(f) or (g) and not an extension of monopoly. Failure to comply with this requirement will result in a holding of abandonment of this application.

The following form paragraph should be included after the form paragraph setting forth the rejection under 35 U.S.C. 102 (a), (b), (d) or (e) to provide an explanation of the applied reference.

*¶ 15.15.01 Explanation of rejection under 35 U.S.C. 102(a), (b), (d), or (e)*

The shape and appearance of [1] is identical in all material respects to that of the claimed design, *Hupp v. Siroflex of America Inc.*, 122 F.3d 1456, 43 USPQ2d 1887 (Fed. Cir. 1997).

**Examiner Note:**

1. This paragraph should be included after paragraph 15.11, 15.12, 15.14 or 15.15 to explain the basis of the rejection.
2. In bracket [1], identify the reference applied against the claimed design.

The following form paragraphs may be used to reject a claim under 35 U.S.C. 102(e) over an application or patent having an earlier effective U.S. filing date with a common inventor and/or assignee, or that discloses but does not claim the design.

\*\*>

*¶ 15.15.02 Provisional 35 U.S.C. 102(e) rejection - design disclosed but not claimed in another application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 102(e) as being anticipated by copending Application No. [1] which has a common [2] with the instant application.

Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e), if published under 35 U.S.C. 122(b) or patented. This provisional rejection under 35 U.S.C. 102(e) is based upon a presumption of future publication or patenting of the copending application.

Since the design claimed in the present application is not the same invention claimed in the [3] application, the examiner suggests overcoming this provisional rejection in one of the following ways: (A) a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention 'by another;' (B) a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131; (C) Perfecting a claim to priority under 35 U.S.C. 119 that antedates the reference by filing a certified priority document in the application that satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph; or (D) Perfecting priority under 35 U.S.C. 120 by amending the specification of the application to contain a specific reference to a prior application or by filing an application data sheet under 37 CFR 1.76 which contains a specific reference to a prior application in accordance with 37 CFR 1.78(a) and establishing that the prior application satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph.

This rejection may not be overcome by the filing of a terminal disclaimer. See *In re Bartfeld*, 925 F.2d 1450, 17 USPQ2d 1885 (Fed. Cir. 1991).

**Examiner Note:**

1. This form paragraph is used to provisionally reject over a copending application (utility or design) with an earlier filing date that discloses (but does not claim) the claimed invention which has not been patented or published under 35 U.S.C. 122. The copending application must have either a common assignee or at least one common inventor.
2. Use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act (form paragraph 7.12) to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) (form paragraph 7.12.01) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365 (c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the 35 U.S.C. 102(e) date.

3. In bracket 2, insert inventor or assignee.

*¶ 15.15.03 Provisional 35 U.S.C. 102(e) rejection - design claimed in an earlier filed design patent application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 102(e) as being anticipated by the claim in copending Design Patent Application No. [1] which has a common [2] with the instant application.

Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e), if patented. This provisional rejection under 35 U.S.C. 102(e) is based upon a presumption of future patenting of the copending application. The rejection may be overcome by abandoning the earlier filed copending application.

**Examiner Note:**

1. In bracket 2, insert inventor or assignee.
2. This form paragraph must be preceded by form paragraph 15.24.05 to notify the applicant that the question of patentability under 35 U.S.C. 102(f)/(g) also exists.

<

*¶ 15.15.04 35 U.S.C. 102(e) rejection - design disclosed but not claimed in a patent*

The claim is rejected under 35 U.S.C. 102(e) as being anticipated by patent [1].

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Since the design claimed in the present application is not the same invention claimed in patent [2], the examiner suggests overcoming this rejection in one of the following ways: A) a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention "by another;" (B) a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131; (C) Perfecting a claim to priority under 35 U.S.C. 119 that antedates the reference by filing a certified priority document in the application that satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph; or (D) Perfecting priority under 35 U.S.C. 120 by amending the specification of the application to contain a specific reference to a prior application or by filing an application data sheet under 37 CFR 1.76 which contains a specific reference to a prior application in accordance with 37 CFR 1.78(a) and establishing that the prior application satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph

This rejection may not be overcome by the filing of a terminal disclaimer. See *In re Bartfeld*, 925 F.2d 1450, 17 USPQ2d 1885 (Fed. Cir. 1991).

**Examiner Note:**

1. This form paragraph should be used when the claimed design in the application being examined is disclosed in the drawings of an earlier filed design or utility patent but is not claimed therein.

When the design claimed in the application being examined is disclosed in the drawings of an earlier filed design patent, it would most often be in the form of subcombination subject matter, (part or portion of an article), that is patentably distinct from the claim for the design embodied by the combination or whole article. It may also be unclaimed subject matter depicted in broken lines in the earlier filed application.

2. In brackets 1 and 2, insert number of patent.

<

The following form paragraphs may be used in a second or subsequent action, where appropriate.

¶ 15.38 *Rejection Maintained*

The arguments presented have been carefully considered, but are not persuasive that the rejection of the claim under [1] should be withdrawn.

**Examiner Note:**

In bracket 1, insert basis of rejection.

\*\*>

¶ 15.40.01 *Final Rejection Under Other Statutory Provisions*

The claim is again and FINALLY REJECTED under [1] as [2].

**Examiner Note:**

1. In bracket 1, insert statutory basis.
2. In bracket 2, insert reasons for rejection.
3. See paragraphs in MPEP Chapter 700, for “Action is Final” and “Advisory after Final” paragraphs.

<

### 1504.03 Nonobviousness [R-2]

35 U.S.C. 103. *Conditions for patentability; non-obvious subject matter.*

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

\*\*\*\*\*

(c) Subject matter developed by another person, which qualifies as prior art only under one or more of subsections (e), (f), and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

A claimed design that meets the test of novelty must additionally be evaluated for nonobviousness under 35 U.S.C. 103(a).

#### I. GATHERING THE FACTS

The basic factual inquiries guiding the evaluation of obviousness, as outlined by the Supreme Court in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), are applicable to the evaluation of design patentability:

- (A) Determining the scope and content of the prior art;
- (B) Ascertaining the differences between the claimed invention and the prior art;
- (C) Resolving the level of ordinary skill in the art; and
- (D) Evaluating any objective evidence of nonobviousness (i.e., so-called “secondary considerations”).

##### A. *Scope of the Prior Art*

The scope of the relevant prior art for purposes of evaluating obviousness under 35 U.S.C. 103(a) extends to all “analogous arts.”

While the determination of whether arts are analogous is basically the same for both design and utility inventions (see MPEP § 904.01(c) and § 2141.01(a)), *In re Glavas*, 230 F.2d 447, 450 109 USPQ 50, 52 (CCPA 1956) provides specific guidance for evaluating analogous arts in the design context, which should be used to supplement the general requirements for analogous art as follows:

The question in design cases is not whether the references sought to be combined are in analogous arts in the mechanical sense, but whether they are so related that the appearance of certain ornamental features in one would suggest the application of those features to the other.

Thus, if the problem is merely one of giving an attractive appearance to a surface, it is immaterial whether the surface in question is that of wall paper, an oven door, or a piece of crockery. . . .

On the other hand, when the proposed combination of references involves material modifications of the basic form of one article in view of another, the nature of the article involved is a definite factor in determining whether the proposed change involves [patentable] invention.

Therefore, where the differences between the claimed design and the prior art are limited to the application of ornamentation to the surface of an arti-

cle, any prior art reference which discloses substantially the same surface ornamentation would be considered analogous art. Where the differences are in the shape or form of the article, the nature of the articles involved must also be considered.

### **B. Differences Between the Prior Art and the Claimed Design**

In determining patentability under 35 U.S.C. 103(a), it is the overall appearance of the design that must be considered. *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977). The mere fact that there are differences between a design and the prior art is not alone sufficient to justify patentability. *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

All differences between the claimed design and the closest prior art reference should be identified in any rejection of the design claim under 35 U.S.C. 103(a). If any differences are considered *de minimis* or inconsequential from a design viewpoint, the rejection should so state.

### **C. Level of Ordinary Skill in the Art**

In order to be unpatentable, 35 U.S.C. 103(a) requires that an invention must have been obvious to a designer having “ordinary skill in the art” to which the subject matter sought to be patented pertains. The “level of ordinary skill in the art” from which obviousness of a design claim must be evaluated under 35 U.S.C. 103(a) has been held by the courts to be the perspective of the “designer of . . . articles of the types presented.” *In re Nalbandian*, 661 F.2d 1214, 1216, 211 USPQ 782, 784 (CCPA 1981); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982).

### **D. Objective Evidence of Nonobviousness (Secondary Considerations)**

Secondary considerations, such as commercial success and copying of the design by others, are relevant to the evaluation of obviousness of a design claim. Evidence of nonobviousness may be present at the time a *prima facie* case of obviousness is evaluated or it may be presented in rebuttal of a prior obviousness rejection.

## **II. PRIMA FACIE OBVIOUSNESS**

Once the factual inquiries mandated under *Graham v. John Deere Co.*, 383 U. S. 1, 148 USPQ 459 (1966), have been made, the examiner must determine whether they support a conclusion of *prima facie* obviousness. To establish *prima facie* obviousness, all the claim limitations must be taught or suggested by the prior art.

In determining *prima facie* obviousness, the proper standard is whether the design would have been obvious to a designer of ordinary skill with the claimed type of article. *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

As a whole, a design must be compared with something in existence, and not something brought into existence by selecting and combining features from prior art references. *In re Jennings*, 182 F.2d 207, 86 USPQ 68 (CCPA 1950). The “something in existence” referred to in *Jennings* has been defined as “...a reference... the design characteristics of which are basically the same as the claimed design...” *In re Rosen*, 673 F.2d 388, 391, 213 USPQ 347, 350 (CCPA 1982) (the primary reference did “...not give the same visual impression...” as the design claimed but had a “...different overall appearance and aesthetic appeal...”.) Hence, it is clear that “design characteristics” means overall visual appearance. This definition of “design characteristics” is reinforced in the decision of *In re Harvey*, 12 F.3d 1061, 1063, 29 USPQ2d 1206, 1208 (Fed. Cir. 1993), and is supported by the earlier decisions of *In re Yardley*, 493 F.2d 1389, 181 USPQ 331, 334 (CCPA 1974) and *In re Leslie*, 547 F.2d 116, 192 USPQ 427, 431 (CCPA 1977). Specifically, in the *Yardley* decision, it was stated that “[t]he basic consideration in determining the patentability of designs over prior art is similarity of appearance.” 493 F.2d at 1392-93, 181 USPQ at 334. Therefore, in order to support a holding of obviousness, a basic reference must be more than a design concept; it must have an appearance substantially the same as the claimed design. *In re Harvey*, 12 F.3d 1061, 29 USPQ2d 1206 (Fed. Cir. 1993). Absent such a reference, no holding of obviousness under 35 U.S.C. 103(a) can be made, whether based on a single reference alone or in view of modifications suggested by secondary prior art.

A rejection under 35 U.S.C. 103(a) based on a single non-analogous reference would not be proper. The

reason is that under 35 U.S.C. 103(a), a designer of ordinary skill would not be charged with knowledge of prior art that is not analogous to the claimed design.

Examiners are advised that differences between the claimed design and a basic reference may be held to be minor in nature and unrelated to the overall aesthetic appearance of the design with or without the support of secondary references. *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981). If such differences are shown by secondary references, they should be applied so as to leave no doubt that those differences would have been obvious to a designer of ordinary skill in the art. *In re Sapp*, 324 F.2d 1021, 139 USPQ 522 (CCPA 1963).

When a claim is rejected under 35 U.S.C. 103(a) as being unpatentable over prior art, features of the design which are functional and/or hidden during end use may not be relied upon to support patentability. “[A] design claim to be patentable must also be ornamental; and functional features or forms cannot be relied upon to support its patentability.” *Jones v. Progress, Ind. Inc.*, 119 USPQ 92, 93 (D. R.I. 1958). “It is well settled that patentability of a design cannot be based on elements which are concealed in the normal use of the device to which the design is applied.” *In re Cornwall*, 230 F.2d 457, 459, 109 USPQ 57, 58 (CCPA 1956); *In re Garbo*, 287 F.2d 192, 129 USPQ 72 (CCPA 1961). It is not necessary that prior art be relied upon in a rejection under 35 U.S.C. 103(a) to show similar features to be functional and/or hidden in the art. However, examiners must provide evidence to support the *prima facie* functionality of such features. Furthermore, hidden portions or functional features cannot be relied upon as a basis for patentability. If applicant wishes to rely on functional or hidden features as a basis for patentability, then the same standard for establishing ornamentality under 35 U.S.C. 171 must be applied before these features can be given any patentable weight. See MPEP § 1504.01(c).

#### A. Combining Prior Art References

A rejection under 35 U.S.C. 103(a) would be appropriate if a designer of ordinary skill would have been motivated to modify a basic reference by deleting features thereof or by interchanging with or adding features from pertinent secondary references. In order for secondary references to be considered, there

must be some suggestion in the prior art to modify the basic design with features from the secondary references. *In re Borden*, 90 F.3d 1570, 1572, 39 USPQ2d 1524, 1526 (Fed. Cir. 1996). The long-standing test for properly combining references has been “...whether they are so related that the appearance of certain ornamental features in one would suggest the application of those features to the other.” *In re Glavas*, 230 F.2d 447, 450, 109 USPQ 50, 52 (CCPA 1956).

The prohibition against destroying the function of the design is inherent in the logic behind combining references to render a claimed invention obvious under 35 U.S.C. 103(a). If the proposed combination of the references so alters the primary reference that its broad function can no longer be carried out, the combination of the prior art would not have been obvious to a designer of ordinary skill in the art. It is permissible to modify the primary reference to the extent that the specific function of the article may be affected while the broad function is not affected. For example, a primary reference to a cabinet design claimed as airtight could be modified to no longer be airtight so long as its function as a cabinet would not be impaired.

#### 1. Analogous Art

When a modification to a basic reference involves a change in configuration, both the basic and secondary references must be from analogous arts. *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). The reason for this is two-fold. First, a designer of ordinary skill is only charged with knowledge of art related to that of the claimed design. Second, the ornamental features of the references must be closely related in order for a designer of ordinary skill to have been motivated to have modified one in view of the other. Hence, when modifying a basic reference, a designer of ordinary skill would have looked at design features of other related references for precisely the purpose of observing the ornamental characteristics they disclosed.

Analogous art can be more broadly interpreted when applied to a claim that is directed to a design with a portion simulating a well known or naturally occurring object or person. The simulative nature of that portion of the design is *prima facie* evidence that

art which simulates that portion would be within the level of ordinary skill under 35 U.S.C. 103(a).

## 2. Non-analogous Art

When modifying the surface of a basic reference so as to provide it with an attractive appearance, it is immaterial whether the secondary reference is analogous art, since the modification does not involve a change in configuration or structure and would not have destroyed the characteristics (appearance and function) of the basic reference. *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956).

## III. REBUTTAL OF THE PRIMA FACIE CASE

Once a *prima facie* case of obviousness has been established, the burden shifts to the applicant to rebut it, if possible, with objective evidence of nonobviousness. Examples of secondary considerations are commercial success, expert testimony and copying of the design by others. Any objective evidence of nonobviousness or rebuttal evidence submitted by applicant, including affidavits or declarations under 37 CFR 1.132, must be considered by examiners in determining patentability under 35 U.S.C. 103(a).

When evidence of commercial success is submitted, examiners must evaluate it to determine whether there is objective evidence of success, and whether the success can be attributed to the ornamental design. *Litton System, Inc. v. Whirlpool Corp.*, 728 F.2d 1423, 221 USPQ 97 (Fed. Cir. 1984); *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981). An affidavit or declaration under 37 CFR 1.132 has minimal evidentiary value on the issue of commercial success if there is no nexus or connection between the sales of the article in which the design is embodied and the ornamental features of the design. *Avia Group Int'l Inc. v. L.A. Gear*, 853 F.2d 1557, 7 USPQ2d 1548 (Fed. Cir. 1988).

Submission of expert testimony must establish the professional credentials of the person signing the affidavit or declaration, and should not express an opinion on the ultimate legal issue of obviousness since this conclusion is one of law. *Avia Group Int'l Inc. v. L.A. Gear*, 853 F.2d 1557, 7 USPQ2d 1548 (Fed. Cir. 1988); *Panduit Corp. v. Dennison Mfg. Co.*, 774 F.2d 1082, 227 USPQ 337 (Fed. Cir. 1985).

With regard to evidence submitted showing that competitors in the marketplace are copying the

design, more than the mere fact of copying is necessary to make that action significant because copying may be attributable to other factors such as lack of concern for patent property or indifference with regard to the patentee's ability to enforce the patent. *Cable Electric Products, Inc. v. Genmark, Inc.*, 770 F.2d 1015, 226 USPQ 881 (Fed. Cir. 1985).

"A *prima facie* case of obviousness can be rebutted if the applicant...can show that the art in any material respect 'taught away' from the claimed invention...A reference may be said to teach away when a person of ordinary skill, upon reading the reference...would be led in a direction divergent from the path that was taken by the applicant." *In re Haruna*, 249 F.3d 1327, 58USPQ2d 1517 (Fed. Cir. 2001).

For additional information regarding the issue of objective evidence of nonobviousness, attention is directed to MPEP § 716 through § 716.06.

The following form paragraph may be used in an obviousness rejection under 35 U.S.C. 103(a), where appropriate.

### ¶ 15.18 35 U.S.C. 103(a) Rejection (Single Reference)

The claim is rejected under 35 U.S.C. 103(a) as being unpatentable over [1]. Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

### ¶ 15.70 Preface, 35 U.S.C. 103(a) Rejection

It would have been obvious to a designer of ordinary skill in the art at the time the invention was made to [1].

### Examiner Note:

Insert explanation of the use of the reference applied in bracket 1.

### ¶ 15.67 Rationale for 35 U.S.C. 103(a) Rejection (Single Reference)

It is well settled that it is unobviousness in the overall appearance of the claimed design, when compared with the prior art, rather than minute details or small variations in design as appears to be the case here, that constitutes the test of design patentability. See *In re Frick*, 275 F.2d 741, 125 USPQ 191 (CCPA 1960) and *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

### ¶ 15.19 35 U.S.C. 103(a) Rejection (Multiple References)

The claim is rejected under 35 U.S.C. 103(a) as being unpatentable over [1] in view of [2].

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the sub-

ject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer of ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

¶ *15.68 Rationale for 35 U.S.C. 103(a) Rejection (Multiple References)*

This modification of the basic reference in light of the secondary prior art is proper because the applied references are so related that the appearance of features shown in one would suggest the application of those features to the other. See *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982), and *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). Further, it is noted that case law has held that a designer skilled in the art is charged with knowledge of the related art; therefore, the combination of old elements, herein, would have been well within the level of ordinary skill. See *In re Antle*, 444 F.2d 1168, 170 USPQ 285 (CCPA 1971) and *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

\*\*>

The following form paragraphs may be used when making a rejection under 35 U.S.C. 103(a), where the reference application or patent is prior art under 35 U.S.C. 102(e).

¶ *15.19.02 Preface 35 U.S.C. 102(e)/103(a) rejection - Different inventors, common assignee, obvious designs, no evidence of common ownership at time later design was made*

The claim is directed to a design not patentably distinct from the design of commonly assigned [1]. Specifically, the claimed design is different from the one in [2] in that [3]. These differences are considered obvious and do not patentably distinguish the overall appearance of the claimed design over the design in [4].

The commonly assigned [5], discussed above, has a different inventive entity from the present application. Therefore, it qualifies as prior art under 35 U.S.C. 102(e), (f) or (g) and forms the basis for a rejection of the claim in the present application under 35 U.S.C. 103(a) if the conflicting design claims were not commonly owned at the time the design in this application was made. In order to resolve this issue, the applicant, assignee or attorney of record can state that the conflicting designs were commonly owned at the time the design in this application was made, or the assignee can name the prior inventor of the conflicting subject matter.

A showing that the designs were commonly owned at the time the design in this application was made will overcome a rejection under 35 U.S.C. 103(a) based upon the commonly assigned case as a reference under 35 U.S.C. 102(f) or (g), or 35 U.S.C. 102(e) for applications filed on or after November 29, 1999.

**Examiner Note:**

1. This form paragraph should be used when the application being examined is commonly assigned with a conflicting applica-

tion or patent, but there is no indication that they were commonly assigned at the time the invention was actually made.

2. If the conflicting claim is in a patent with an earlier U.S. filing date, a rejection under 35 U.S.C. 102(e)/103(a) should be made.

3. If the conflicting claim is in a commonly assigned, copending application with an earlier filing date, a provisional rejection under 35 U.S.C. 102(e)/103(a) should be made.

4. An obviousness double patenting rejection may also be included in the action.

5. In brackets 1, 2, 4 and 5, insert patent and number, or copending application and serial number.

6. In bracket 3, identify differences between design claimed in present application and that claimed in earlier filed patent or copending application.

7. This form paragraph should only be used ONCE in an Office action.

8. If the rejection relies upon prior art under 35 U.S.C. 102(e), use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference's 35 U.S.C. 102(e) date.

¶ *15.19.03 Provisional 35 U.S.C. 102(e)/103(a) rejection - design disclosed but not claimed in another application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 103(a) as being obvious over copending Application No. [1] which has a common [2] with the instant application. Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e) if published under 35 U.S.C. 122(b) or patented. This provisional rejection under 35 U.S.C. 103(a) is based upon a presumption of future publication or patenting of the conflicting application.

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[3]

Since the design claimed in the present application is not the same invention claimed in the [4] application, this provisional rejection may be overcome by a showing under 37 CFR 1.132 that

the design in the reference was derived from the designer of this application and is thus not the invention “by another,” or by a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(1)(1) and § 706.02(1)(2).

#### Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over subject matter disclosed in the drawings of an earlier filed design or utility application but is not claimed therein. The design claimed in the application being examined can be an obvious version of subject matter disclosed in the drawings of an earlier filed design application. This subject matter may be depicted in broken lines, or may be in the form of a subcombination (part or portion of an article) that is patentably distinct from the claim for the design embodied by the combination or whole article.
2. In brackets 1 and 4 insert serial number of copending application.
3. In bracket 2, insert inventor or assignee.
4. In bracket 3, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.
5. This form paragraph must be preceded by form paragraph 15.19.02.
6. Use 35 U.S.C. 102(e) as amended by the American Inventor’s Protection Act to determine the reference’s prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference’s 35 U.S.C. 102(e) date.

#### ¶ 15.19.04 Provisional 35 U.S.C. 102(e)/103(a) rejection - design claimed in an earlier filed design patent application with common inventor and/or assignee

The claim is provisionally rejected under 35 U.S.C. 103(a) as being obvious over the claim in copending Design Patent Application No. [1] which has a common [2] with the instant application. Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e) if patented. This provisional rejection under 35 U.S.C. 103(a) is based upon a presumption of future patenting of the conflicting application.

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[3]

Since the design claimed in the present application is not patentably distinct from the design claimed in the [4] application, this provisional rejection may be overcome by merging the two applications into a single continuation-in-part and abandoning the separate parent applications. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(1)(1) and § 706.02(1)(2).

#### Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in an earlier filed copending application.
2. A provisional obviousness-type double patenting rejection must also be included in the action.
3. In brackets 1 and 4, insert serial number of copending application.
4. In bracket 2, insert inventor or assignee.
5. In bracket 3, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.
6. This form paragraph must be preceded by form paragraph 15.19.02.

#### ¶ 15.19.05 35 U.S.C. 102(e)/103(a) rejection - design disclosed but not claimed

The claim is rejected under 35 U.S.C. 103(a) as being obvious over [1].

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

Since the design claimed in the present application is not the same invention claimed in the [3] patent, this rejection may be overcome by a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention ‘by another,’ or by a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made,

owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(1)(1) and § 706.02(1)(2).

**Examiner Note:**

1. This form paragraph should be used when the claimed design in the application being examined is obvious over subject matter disclosed in the drawings of an earlier filed design or utility patent, or application publication, but is not claimed therein. The design claimed in the application being examined can be an obvious version of subject matter disclosed in the drawings of an earlier filed design application. This subject matter may be depicted in broken lines, or may be in the form of a subcombination (part or portion of an article) that is patentably distinct from the claim for the design embodied by the combination or whole article.

2. In brackets 1 and 3, insert number of the U.S. patent, U.S. patent application publication, or the WIPO publication of an international application that qualifies as prior art under 35 U.S.C. 102(e). See note 5 below.

3. In bracket 2, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.

4. This form paragraph must be preceded by form paragraph 15.19.02.

5. Use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference's 35 U.S.C. 102(e) date.

¶ *15.19.06 35 U.S.C. 102(e)/103(a) rejection - design claimed in a design patent with an earlier effective filing date and common assignee*

The claim is rejected under 35 U.S.C. 103(a) as being obvious over the claim in design patent [1].

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

Since the design claimed in the present application is not patentably distinct from the design claimed in the [3] patent, this rejection may be overcome by submitting an oath or declaration

under 37 CFR 1.130 stating that this application and the reference are currently owned by the same party and that the inventor named in this application is the prior inventor of the subject matter in the reference under 35 U.S.C. 104. In addition, a terminal disclaimer in accordance with 37 CFR 1.321(c) is also required. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(1)(1) and § 706.02(1)(2)

**Examiner Note:**

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in a design patent having an earlier effective date and a common assignee.

2. An obviousness-type double patenting rejection must also be included in the action.

3. In brackets 1 and 3, insert number of patent.

4. In bracket 2, provide explanation of obviousness including differences and follow the explanation by form paragraphs 15.70 and 15.67 or 15.68.

5. This form paragraph must be preceded by form paragraph 15.19.02.

¶ *15.19.07 35 U.S.C. 102(e)/103(a) rejection - design claimed in a design patent having an earlier effective filing date and no common assignee*

The claim is rejected under 35 U.S.C. 103(a) as being obvious over the claim in design patent [1].

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

**Examiner Note:**

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in a design patent having an earlier effective filing date.

2. In bracket 2, provide explanation of obviousness including differences and follow explanation with form paragraphs 15.70 and 15.67 or 15.68.

<

The following form paragraphs may be used in a second or subsequent action where appropriate.

¶ *15.38 Rejection Maintained*

The arguments presented have been carefully considered, but are not persuasive that the rejection of the claim under [1] should be withdrawn.

**Examiner Note:**

In bracket 1, insert basis of rejection.

¶ 15.39 *Obviousness Under 35 U.S.C. 103(a) Repeated*

It remains the examiner's position that the [1] design claimed is obvious under 35 U.S.C. 103(a) over [2].

**Examiner Note:**

In bracket 1, insert name of design.

¶ 15.39.01 *35 U.S.C. 103(a) Rejection Repeated (Multiple References)*

It remains the examiner's position that the claim is obvious under 35 U.S.C. 103(a) over [1] in view of [2].

\*\*>

¶ 15.39.02 *Final Rejection Under 35 U.S.C. 103(a) (Single Reference)*

The claim is again and FINALLY REJECTED under 35 U.S.C. 103(a) over [1].

**Examiner Note:**

See form paragraphs in MPEP Chapter 700, for "Action is Final" and "Advisory after Final" paragraphs.

¶ 15.40 *Final Rejection Under 35 U.S.C. 103(a) (Multiple References)*

The claim is again and FINALLY REJECTED under 35 U.S.C. 103(a) as being unpatentable over [1] in view of [2].

**Examiner Note:**

See form paragraphs in MPEP Chapter 700 for "Action is Final" and "Advisory after Final" paragraphs.

<

\*\*

## 1504.04 Considerations Under 35 U.S.C. 112 [R-2]

### 35 U.S.C. 112. *Specification.*

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

\*\*\*\*\*

The drawing in a design application is incorporated into the claim by use of the claim language "as shown."

Additionally, the drawing disclosure can be supplemented by narrative description in the specification (see MPEP § 1503.01, subsection II). This description is incorporated into the claim by use of the language "as shown and described." See MPEP § 1503.01, subsection III.

### I. 35 U.S.C. 112, FIRST AND SECOND PARAGRAPH

#### \* Enablement and Scope of Protection

Any analysis for compliance with 35 U.S.C. 112 should begin with a determination of whether the claims satisfy the requirements of the second paragraph before moving on to the first paragraph. See *In re Moore*, 439 F.2d 1232, 169 USPQ 236 (CCPA 1971). Therefore, before any determination can be made as to whether the disclosure meets the requirements of 35 U.S.C. 112, first paragraph, for enablement, a determination of the scope of protection sought by the claim must be made. However, since the drawing disclosure and any narrative description in the specification are incorporated into the claim by the use of the language "as shown and described," any determination of the scope of protection sought by the claim is also a determination of the subject matter that must be enabled by the disclosure. Hence, if the appearance and shape or configuration of the design for which protection is sought cannot be determined or understood due to an inadequate visual disclosure, then the claim, which incorporates the visual disclosure, fails to particularly point out and distinctly claim the subject matter applicant regards as their invention, in violation of the second paragraph of 35 U.S.C. 112. Furthermore, such disclosure fails to enable a designer of ordinary skill in the art to reproduce the shape and appearance of the design for which protection is sought. In such case, a rejection of the claim under both the first and second paragraphs of 35 U.S.C. 112 would be warranted. An evaluation of the scope of the claim under 35 U.S.C. 112, second paragraph, to determine whether the disclosure of the design meets the enablement requirement of 35 U.S.C. 112, first paragraph, cannot be based on the drawings alone. The scope of a claimed design is understood to be limited to those surfaces or portions of the article shown in the drawing in full lines in combination with any additional written description

in the specification. The title does not define the scope of the claimed design but merely identifies the article in which it is embodied. See MPEP § 1503.01, subsection I. It is assumed that the claim has been crafted to protect that which the applicant “regards as his invention.” *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980). Therefore, when visible portions of the article embodying the design are not shown, it is because they form no part of the claim to be protected. It is *prima facie* evidence that the scope of the claimed design is limited to those surfaces “as shown” in the application drawing(s) in the absence of any additional written disclosure. See MPEP § 1503.01, subsection II. “[T]he adequacy of the disclosure must be determined by reference to the scope asserted.” *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413, 418 (D. Del. 1961). However, it should be understood that when a surface or portion of an article is disclosed in full lines in the drawing it is considered part of the claimed design and its shape and appearance must be clearly and accurately depicted in order to satisfy the requirements of the first and second paragraphs of 35 U.S.C. 112.<

Only those surfaces of the article that are visible at the point of sale or during use must be disclosed to meet the requirement of 35 U.S.C. 112, first \*and second paragraphs<. “The drawing should illustrate the design as it will appear to purchasers and users, since the appearance is the only thing that lends patentability to it under the design law.” *Ex parte Kohler*, 1905 C.D. 192, 192, 116 O.G. 1185, 1185 (Comm’r Pat. 1905). The lack of disclosure of those surfaces of the article which are hidden during sale or use does not violate the \* requirements of the first >and second< paragraph>s< of 35 U.S.C. 112 because the “patented ornamental design has no use other than its visual appearance....” *In re Harvey*, 12 F.3d 1061, 1064, 29 USPQ2d 1206, 1208 (Fed. Cir. 1993). Therefore, to make the “visual appearance” of the design merely involves the reproduction of what is shown in the drawings; it is not necessary that the functionality of the article be reproduced as this is not claimed. The function of a design is “that its appearance adds attractiveness, and hence commercial value, to the article embodying it.” *Ex parte Cady*, 1916 C.D. 57, 61, 232 O.G. 619, 621 (Comm’r Pat. 1916).

The undisclosed surfaces not seen during sale or use are not required to be described in the specifica-

tion even though the title of the design is directed to the complete article because the design is embodied only in those surfaces which are visible. *Ex parte Salisbury*, 38 USPQ 149, 1938 C.D. 6 (Comm’r Pat. 1938). While it is not necessary to show in the drawing those visible surfaces that are flat and \* >devoid of surface ornamentation<, they should be described in the specification by way of a special description if they are considered part of the claimed design. *Ex parte Salisbury*, 38 USPQ 149, 1938 C.D. 6 (Comm’r Pat. 1938). Such special description may not be used to describe visible surfaces which include structure that is clearly not flat. *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413 (D. Del. 1961). See also MPEP § 1503.02.

Applications filed in which the title (in the claim) defines an entire article but the drawings and the specification fail to disclose portions or surfaces of the article that would be visible either during use or on sale, will not be considered to violate the \* requirements of the first >and second< paragraph>s< of 35 U.S.C. 112. Therefore, amendment to the title will not be required in such applications. However, examiners should include a statement in the first Office action on the merits (including a notice of allowability) indicating that the surface(s) or portion(s) of the article that would be normally visible but are not shown in the drawing or described in the specification are understood to form no part of the claimed design and therefore, the determination of patentability of the claimed design is based on the views of the article shown in the drawing and the description in the specification. Form paragraph 15.85 may be used for this purpose.

>When a claim is rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite due to an insufficient drawing disclosure, examiners must specifically identify in the Office action what the deficiencies are in the drawing. A mere statement that the claim is nonenabling and indefinite due to the poor quality of the drawing is not a sufficient explanation of the deficiencies in the drawing disclosure. Examiners must specifically point out those portions of the drawing that are insufficient to permit an understanding of the shape and appearance of the design claimed, and, if possible, suggest how the rejection may be overcome. Form paragraphs 15.21 and 15.20.02 may be used.<

When inconsistencies between the views of the drawings are so great that the overall appearance of the design is unclear, the claim should be rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite, and the rejection should specifically identify all of the inconsistencies between the views of the drawing. Otherwise, inconsistencies between drawing views will be objected to by the examiner and correction required by the applicant. See MPEP § 1503.02.

If the visual disclosure of the claimed design as originally filed is of such poor quality that its overall shape and appearance cannot be understood, applicant should be advised that the claim might be fatally defective by using form paragraph 15.65.

As indicated above, a narrative description in the specification can supplement the drawing disclosure to define the scope of protection sought by the claim. Furthermore, such description is incorporated into the claim by the use of the language “and described” therein. However, if a description in the specification refers to embodiments or modified forms not shown in the drawing, or includes vague and nondescriptive words such as “variations” and “equivalents,” or a statement indicating that the claimed design is not limited to the exact shape and appearance shown in the drawing, the claim should be rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite. The reason being the description fails to enable a designer of ordinary skill in the art to reproduce the shape and appearance of those other embodiments, modified forms or “variations” and “equivalents” referred to in the description in the absence of additional drawing views. Furthermore, in the absence of additional drawing views, the description, which is incorporated into the claim, fails to particularly point out and distinctly claim the shape and appearance of those other embodiments, modified forms or “variations” and “equivalents” that applicants regard as their invention. Form paragraph 15.21 may be used to reject a claim for the above reasons.

**¶ 15.85 Undisclosed visible surface(s)/portion(s) of article not forming part of the claimed design**

As the decision of *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980) holds that an ornamental design may be embodied in less than a complete article, it is understood that the surface(s) or portion(s) of the article that would normally be visible but are not shown in the drawing or described in the specification of the

present application form(s) no part of the claimed design. Therefore, the determination of patentability of the claimed design is based on the views of the article shown in the drawing and the description in the specification.

**Examiner Note:**

In an examiner’s amendment, the above statement should be included after form paragraph 13.02.

>

**¶ 15.21 Rejection, 35 U.S.C. 112, First And Second Paragraphs**

The claim is rejected under 35 U.S.C. 112, first and second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and fails to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is indefinite and nonenabling [1].

**Examiner Note:**

1. This form paragraph should not be used when it is appropriate to make one or more separate rejections under the first and/or the second paragraph of 35 U.S.C. 112.
2. In bracket 1, a complete explanation of the basis for the rejection should be provided.

<

\*\*>

**¶ 15.20.02 Suggestion To Overcome Rejection Under 35 U.S.C. 112, First and Second Paragraphs**

It is suggested that applicant may submit large, clear informal drawings or photographs which show [1] in order that the examiner may be in a position to determine if the claim may be clarified without the addition of new matter (35 U.S.C. 132, 37 CFR 1.121). In the alternative, applicant may disclaim the areas or portions of the design which are considered indefinite and nonenabling by converting them to broken lines and amend the specification to include a statement that the portions of the [2] shown in broken lines form no part of the claimed design.

**Examiner Note:**

1. In bracket 1, identify the areas or portions of the design which are unclear.
2. In bracket 2, insert title of the article.

<

**¶ 15.65 Amendment May Not Be Possible**

The claim might be fatally defective; that is, it might not be possible to [1] without introducing new matter (35 U.S.C. 132, 37 CFR 1.121).

**Examiner Note:**

In bracket 1, identify portion of the claimed design which is insufficiently disclosed.

\*\*>

¶ 15.73 *Corrected Drawing Sheets Required*

Failure to submit replacement correction sheets overcoming all of the deficiencies in the drawing disclosure set forth above, or an explanation why the drawing corrections or additional drawing views are not necessary will result in the rejection of the claim under 35 U.S.C. 112, first and second paragraphs, being made FINAL in the next Office action.

<

\* *New Matter*

New matter is subject matter which has no antecedent basis in the original specification, drawings or claim (MPEP § 608.04). An amendment to the claim must have antecedent basis in the original disclosure. 35 U.S.C. 132; 37 CFR 1.121(f). Prior to final action, all amendments will be entered in the \*>application< and will be considered by the examiner. *Ex parte Hanback*, 231 USPQ 739 (Bd. Pat. App. & Inter. 1986). An amendment to the claim which has no antecedent basis in the specification and/or drawings as originally filed introduces new matter because that subject matter is not described in the application as originally filed. The claim must be rejected under 35 U.S.C. 112, first paragraph. An amendment to the disclosure not affecting the claim (such as environment in the title or in broken lines in the drawings), which has no antecedent basis in the application as originally filed, must be objected to under 35 U.S.C. 132 as lacking support in the application as originally filed and a requirement must be made to cancel the new matter.

The scope of a design claim is defined by what is shown in full lines in the application drawings. *In re Mann*, 861 F.2d 1581, 8 USPQ2d 2030 (Fed. Cir. 1988). The claim may be amended by broadening or narrowing its scope within the bounds of the disclosure as originally filed.

A change in the configuration of the claimed design is considered a departure from the original disclosure and introduces prohibited new matter (37 CFR 1.121(f)). See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). This includes the removal of three-dimensional surface treatment that is an integral part of the configuration of the claimed design, for example, beading, grooves, and ribs. The underlying configuration revealed by such an amendment would not be apparent in the application as filed and, therefore, it could not be established that applicant was in possession of this amended configuration

at the time the application was filed. >However, an amendment that changes the scope of a design by either reducing certain portions of the drawing to broken lines or converting broken line structure to solid lines is not a change in configuration as defined by the court in *Salmon*. The reason for this is because applicant was in possession of everything disclosed in the drawing at the time the application was filed and the mere reduction of certain portions to broken lines or conversion of broken line structure to solid lines is not a departure from the original disclosure. Examiners are cautioned that if broken line structure is converted to solid lines by way of amendment, the shape and configuration of that structure must have been fully disclosed and enabling at the time the application was filed.< An amendment which alters the appearance of the claimed design by removing two-dimensional, superimposed surface treatment may be permitted if it is clear from the application that applicant had possession of the underlying configuration of the design without the surface treatment at the time of filing of the application. See *In re Daniels*, 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998).

Amendments to the title must have antecedent basis in the original application to be permissible. If an amendment to the title directed to the article in which the design is embodied has no antecedent basis in the original application, the claim will be rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement thereof. *Ex parte Strijland*, 26 USPQ2d 1259 (Bd. Pat. App. & Inter. 1992). If an amendment to the title directed to the environment in which the design is used has no antecedent basis in the original application, it will be objected to under 35 U.S.C. 132 as introducing new matter into the disclosure. See MPEP § 1503.01, subsection I.

Examples of permissible amendments filed with the original application include: (A) a preliminary amendment filed simultaneously with the application papers, that is specifically identified in the original oath/declaration as required by 37 CFR 1.63 and MPEP § 608.04(b); and (B) the inclusion of a disclaimer in the original specification or on the drawings/photographs as filed. See 37 CFR 1.152 and MPEP § 1503.01 and § 1503.02.

An example of a permissible amendment submitted after the filing of the application would be an amend-

ment that does not involve a departure from the configuration of the original disclosure (37 CFR 1.121(f)).

An example of an impermissible amendment which introduces new matter would be an amendment to the claim without antecedent basis in the original disclosure which would change the configuration or surface appearance of the original design by the addition of previously undisclosed subject matter. *In re Berkman*, 642 F.2d 427, 209 USPQ 45 (CCPA 1981).

When an amendment affecting the claim is submitted that introduces new matter into the drawing, specification or title and a rejection under 35 U.S.C. 112, first paragraph is made, the examiner should specifically identify in the Office action the subject matter which is not considered to be supported by the original disclosure. A statement by the examiner that merely generalizes that the amended drawing, specification or title contains new matter is not sufficient. Examiners should specifically identify the differences or changes made to the claimed design that are considered to introduce new matter into the original disclosure, and if possible, suggest how the amended drawing, specification or title can be corrected to overcome the rejection. Form paragraph 15.51 may be used.

If an amendment that introduces new matter into the claim is the result of a rejection under 35 U.S.C. 112, first and second paragraph for lack of enablement and indefiniteness, and it is clear that the disclosure of the claimed design as originally filed cannot be corrected without the introduction of new matter, the record of the application should reflect that the claim is seen to be fatally defective. Form paragraph 15.65 may be used to set forth this position.

¶ 15.51 35 U.S.C. 112, First Paragraph Rejection (New Matter)

The claim is rejected under 35 U.S.C. 112, first paragraph as failing to comply with the description requirement thereof since the [1] introduces new matter not supported by the original disclosure. The original disclosure does not reasonably convey to a designer of ordinary skill in the art that applicant was in possession of the design now claimed at the time the application was filed. See *In re Daniels*, 144 F.3d 1452, 46 USPQ2d 1788 (Fed. Cir. 1998); *In re Rasmussen*, 650 F.2d 1212, 211 USPQ 323 (CCPA 1981).

Specifically, there is no support in the original disclosure [2].

To overcome this rejection, applicant may attempt to demonstrate that the original disclosure establishes that he or she was in possession of the amended claim or [3].

**Examiner Note:**

1. In bracket 1, specify whether new drawing or amendment to the drawing, title or specification.
2. In bracket 2, specifically identify what is new matter so that the basis for the rejection is clear.
3. In bracket 3, insert specific suggestion how rejection may be overcome depending on the basis; such as, “the bracket in figures 3 and 4 of the new drawing may be corrected to correspond to the original drawing” or “the specification may be amended by deleting the special description.”

¶ 15.65 Amendment May Not Be Possible

The claim might be fatally defective; that is, it might not be possible to [1] without introducing new matter (35 U.S.C. 132, 37 CFR 1.121).

**Examiner Note:**

In bracket 1, identify portion of the claimed design which is insufficiently disclosed.

¶ 15.51.01 Amendment to Disclosure Not Affecting Claim - 35 U.S.C. 132 Objection (New Matter)

The [1] is objected to under 35 U.S.C. 132 and 37 CFR 1.121 as introducing new matter not supported by the original disclosure. The original disclosure does not reasonably convey to a designer of ordinary skill in the art that applicant was in possession of the amended subject matter at the time the application was filed. See *In re Rasmussen*, 650 F.2d 1212, 211 USPQ 323 (CCPA 1981).

Specifically, there is no support in the original disclosure [2].

To overcome this objection, applicant may attempt to demonstrate that the original disclosure establishes that he or she was in possession of the amended subject matter or [3].

**Examiner Note:**

1. In bracket 1, specify whether new drawing or amendment to the drawing, title or specification.
2. In bracket 2, specifically identify what is new matter so that the basis for the objection is clear.
3. In bracket 3, insert specific suggestion how the objection may be overcome depending on the basis; such as, “the broken line showing of environmental structure in Fig. 1 of the new drawing may be omitted to correspond to the original drawing” or “the title may be amended by deleting the reference to environmental structure”.

\*->

### III. < 35 U.S.C. 112, SECOND PARAGRAPH

Defects in claim language give rise to a rejection of the claim under the second paragraph of 35 U.S.C. 112. The fact that claim language, including terms of degree, may not be precise, does not automatically render the claim indefinite under 35 U.S.C. 112, sec-

ond paragraph. “[T]he definiteness of the language employed must be analyzed – not in a vacuum, but always in light of the teachings of the prior art and of the particular application disclosure as it would be interpreted by one possessing the ordinary level of skill in the pertinent art.” *In re Moore*, 439 F.2d 1232, 1235, 169 USPQ 236, 238 (CCPA 1971). A claim may appear indefinite when read in a vacuum, but may be definite upon reviewing the application disclosure or prior art teachings. Moreover, an otherwise definite claim in a vacuum may be uncertain when reviewing the application disclosure and prior art. *Moore*, 439 F.2d at 1235 n.2, 169 USPQ at 238 n.2. See also MPEP § 2173.05(b).

Use of \* phrases in the claim such as “or similar article,” “or the like,” or equivalent terminology has been held to be indefinite. See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992). However, the use of broadening language such as “or the like,” or “or similar article” in the title when directed to the environment of the article embodying the design should not be the basis for a rejection under 35 U.S.C. 112, second paragraph. See MPEP § 1503.01, subsection I.

Examiners are reminded that there is no *per se* rule, and that the definiteness of claim language must be evaluated on the facts and circumstances of each application. The following form paragraphs may be used.

¶ 15.22.02 *Rejection, 35 U.S.C. 112, 2nd Paragraph (“Or the Like” In Claim)*

The claim is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is indefinite because of the use of the phrase “[1]” following the title. Cancellation of said phrase in the claim and each occurrence of the title throughout the papers, except the oath or declaration, will overcome the rejection. See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992) and 37 CFR 1.153.

**Examiner Note:**

1. This rejection should be used where there is another rejection in the Office action. For issue with an examiner’s amendment, see form paragraph 15.69.01.
2. In bracket 1, insert --or the like-- or --or similar article--.
3. This form paragraph should not be used when “or the like” or “or similar article” in the title is directed to the environment of the article embodying the design.

¶ 15.69.01 *Remove Indefinite Language (“Or The Like”)*  
by Examiner’s Amendment

The phrase [1] in the claim following the title renders the claim indefinite. By authorization of [2] in a telephone interview on [3], the phrase has been cancelled from the claim and at each occurrence of the title throughout the papers, except the oath or declaration (35 U.S.C. 112, second paragraph, and 37 CFR 1.153). See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992).

**Examiner Note:**

In bracket 1, insert objectionable phrase, e.g., --or the like--, --or similar article--, etc.

>Rejections under 35 U.S.C. 112, second paragraph, should be made when the scope of protection sought by the claim cannot be determined from the disclosure. For instance, a drawing disclosure in which the boundaries between claimed (solid lines) and unclaimed (broken lines) portions of an article are not defined or cannot be understood may be enabling under 35 U.S.C. 112, first paragraph, in that the shape and appearance of the article can be reproduced, but such disclosure fails to particularly point out and distinctly claim the subject matter that applicant regards as the invention. Form paragraph 15.22 may be used.

¶ 15.22 *Rejection, 35 U.S.C. 112, 2nd Paragraph*

The claim is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is indefinite [1].

**Examiner Note:**

1. Use this form paragraph when the scope of the claimed design cannot be determined.
2. In bracket 1, provide a full explanation of the basis for the rejection.

<

The claim should be rejected as indefinite when it cannot be determined from the designation of the design as shown in the drawing, referenced in the title and described in the specification what article of manufacture is being claimed, e.g., a design claimed as a “widget” which does not identify a known or recognizable article of manufacture. The following form paragraphs may be used.

\*\*>

¶ 15.22.03 *Rejection, 35 U.S.C. 112, Second Paragraph (Title Fails to Specify a Known Article of Manufacture)*

The claim is rejected under 35 U.S.C. 112, second paragraph, as indefinite in that the title, as set forth in the claim, fails to iden-

tify an article of manufacture and the drawing disclosure does not inherently identify the article in which the design is embodied. *Ex parte Strijland*, 26 USPQ2d 1259, 1263 (Bd. Pat. App. & Int. 1992). Therefore, any attempt to clarify the title by specifying the article in which the design is embodied may introduce new matter. See 35 U.S.C. 132 and 37 CFR 1.121.

<

¶ 15.21.01 *Rejection, 35 U.S.C. 112 (Second Paragraph) (Information Requested)*

The claim is rejected for failing to particularly point out and distinctly claim the invention as required in 35 U.S.C. 112, second paragraph. The title of the article in which the design is embodied or applied is too ambiguous and therefore indefinite for the examiner to make a proper examination of the claim under 37 CFR 1.104.

Applicant is therefore required to provide a sufficient explanation of the nature and intended use of the article in which the claimed design is embodied or applied, so that a proper classification and reliable search can be made. See 37 CFR 1.154(b)(1); MPEP 1503.01. Additional information, if available, regarding analogous fields of search, pertinent prior art, advertising brochures and the filing of copending utility applications would also prove helpful. If a utility application has been filed, please furnish its application number.

This information should be submitted in the form of a separate paper, and should not be inserted in the specification (37 CFR 1.56). See also 37 CFR 1.97, 1.98 and 1.99.

\*\*

Where the design claim would otherwise be patentable but for the presence of any rejection under 35 U.S.C. 112, first and/or second paragraphs, form paragraph 15.58.01 may be used.

¶ 15.58.01 *Claimed Design Is Patentable (35 U.S.C. 112 Rejections)*

The claimed design is patentable over the references cited. However, a final determination of patentability will be made upon resolution of the above rejection.

Form paragraphs 15.38 and 15.40.01 may be used in a second or subsequent action, where appropriate (see MPEP § 1504.02).

## 1504.05 Restriction [R-2]

General principles of utility restriction are set forth in Chapter 800 of the MPEP. These principles are also applicable to design restriction practice with the exception of those differences set forth in this section.

Unlike a utility patent application, which can contain plural claims directed to plural inventions, a design patent application may only have a single claim and thus must be limited to patentably indistinct

designs. Therefore, the examiner will require restriction in each design application which contains more than one patentably distinct design.

Restriction will be required under 35 U.S.C. 121 if a design patent application discloses multiple designs that are either independent or patentably distinct from each other and cannot be supported by a single claim. The issue of whether a search and examination of an entire application can be made without serious burden to an examiner (as noted in MPEP § 803) is not applicable to design applications when determining whether a restriction requirement should be made. >Clear admission on the record by the applicant that the embodiments are not patentably distinct will not overcome a requirement for restriction if the embodiments do not have overall appearances that are basically the same as each other.< If multiple designs are held to be patentably indistinct and can be covered by a single claim, any rejection of one over prior art will apply equally to all. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965).

### I. INDEPENDENT INVENTIONS

Design inventions are independent if there is no apparent relationship between two or more disparate articles disclosed in the drawings; for example, a pair of eyeglasses and a door handle; a bicycle and a camera; an automobile and a bathtub. Also note examples in MPEP § 806.04. Restriction in such cases is clearly proper. This situation may be rarely presented since design patent applications are seldom filed containing disclosures of independent articles.

### II. DISTINCT INVENTIONS

Design inventions are distinct if the overall appearance of two or more embodiments of an article as disclosed in the drawings are different in appearance or scope; for example, two embodiments of a brush, and their appearances are patentable (novel and unobvious) over each other. Restriction in such cases is also clearly proper. Distinct designs may constitute either multiple embodiments of the same article or they may be related as a combination and subcombination of the overall design. In addition, applications that include one or more embodiments disclosing all surfaces of an article as well as other embodiments disclosing only a portion of an article must be evaluated to determine whether the differences in scope patent-

ably distinguish the overall appearance of the fully disclosed embodiments over the partially disclosed embodiments. If the differences in scope between the embodiments render them patentably distinct, then restriction would be proper. In determining the question of patentable distinctness under 35 U.S.C. 121 in a design patent application, a search of the prior art may be necessary.

#### A. *Multiple Embodiments - Difference in Appearance*

It is permissible to illustrate more than one embodiment of a design invention in a single application. However, such embodiments may be presented only if they involve a single inventive concept and are not patentably distinct from one another. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct over one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The disclosure of plural embodiments does not require or justify more than a single claim, which claim must be in the formal terms stated in MPEP § 1503.01, subsection III. The specification should make clear that multiple embodiments are disclosed and should particularize the differences between the embodiments. If the disclosure of any embodiment relies on the disclosure of another embodiment for completeness to satisfy the requirements of 35 U.S.C. 112, first paragraph, the differences between the embodiments must be identified either in the figure descriptions or by way of a special description in the specification of the application as filed. For example, the second embodiment of a cabinet discloses a single view showing only the difference in the front door of the cabinet of the first embodiment; the figure description should state that this view “is a second embodiment of Figure 1, the only difference being the configuration of the door, it being understood that all other surfaces are the same as those of the first embodiment.” This type of statement in the description is understood to incorporate the disclosure of the first embodiment to complete the disclosure of the second embodiment. However, in the absence of such a statement in the specification of an application as filed, the disclosure of one embodiment will normally not be permitted to pro-

vide antecedent basis for any written or visual amendment to the disclosure of other embodiments.

The obviousness standard under 35 U.S.C. 103(a) must be applied in determining whether multiple embodiments may be retained in a single application. See MPEP § 1504.03. That is, it must first be determined whether the embodiments have overall appearances that are basically the same as each other. If the appearances of the embodiments are considered to be basically the same, then it must be determined whether the differences are either minor between the embodiments and not a patentable distinction, or obvious to a designer of ordinary skill in view of the analogous prior art. If embodiments meet both of the above criteria they may be retained in a single application. If embodiments do not meet either one of the above criteria, restriction must be required. It should be noted, that if the embodiments do not have overall appearances that are basically the same, restriction must be required since their appearances are patentably distinct. In such case it doesn't matter for restriction purposes, if the differences between the appearances of the embodiments are shown to be obvious in view of analogous prior art.

Form paragraph 15.27.02 or 15.27.03, if appropriate, may be used to notify applicant that restriction is not required because the embodiments are not patentably distinct.

\*\*>

#### ¶ 15.27.02 *Restriction Not Required - Change In Appearance (First Action - Non Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. [1]

Embodiment 2 - Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between the appearances of the embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. See *Ex parte Appeal No. 315-40*, 152 USPQ

71 (Bd. App. 1965). No argument asserting patentability based on the differences between the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this action will be considered an admission of lack of patentable distinction between the above identified embodiments.

**Examiner Note:**

In bracket 3, add embodiments as necessary.

¶ 15.27.03 *Restriction Not Required - Change In Appearance (First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. [1]

Embodiment 2 - Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between the appearances of the embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application.

**Examiner Note:**

In bracket 3, add embodiments as necessary.

<

The following form paragraphs may be used in a restriction requirement. >Examiners must include a brief explanation of the differences between the appearances of the embodiments that render them patentably distinct.

¶ 15.27 *Restriction Under 35 U.S.C. 121*

This application discloses the following embodiments:

Embodiment 1 - Figs. [1]

Embodiment 2 - Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The [4] create(s) patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences

are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [5]

Group II: Embodiment [6]

[7]

Restriction is required under 35 U.S.C. 121 to one of the above identified patentably distinct groups of designs.

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed, 37 CFR 1.143. Any reply that does not include election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other embodiments. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

**Examiner Note:**

1. In bracket 3, add embodiments as necessary.
2. In bracket 4, insert an explanation of the difference(s) between the embodiments.
3. In bracket 7, add groups as necessary.

¶ 15.27.01 *Restriction Under 35 U.S.C. 121 (Obvious Variations Within Group)*

This application discloses the following embodiments:

Embodiment 1 - Figs. [1]

Embodiment 2 - Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [4]

Group II: Embodiment [5]

[6]

The embodiments disclosed within each group have overall appearances that are basically the same. Furthermore, the differ-

ences between them are considered minor and patentably indistinct, or are shown to be obvious in view analogous prior art cited. Therefore, they are considered by the examiner to be obvious variations of one another within the group. These embodiments thus comprise a single inventive concept and are grouped together. However, the [7] patentably distinguishes each group from the other(s).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of the designs.

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed, 37 CFR 1.143. Any reply that does not include election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other groups. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

#### Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 6, add groups as necessary.
3. In bracket 7, insert an explanation of the difference(s) between the groups.

#### ¶ 15.28 Telephone Restriction Under 35 U.S.C. 121

This application discloses the following embodiments:

Embodiment 1 - Figs. [1]

Embodiment 2 - Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The [4] create(s) patentably distinct designs. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or, if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

The above disclosed embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [5]

Group II: Embodiment [6]

[7]

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with [8] on [9], a provisional election was made [10] traverse to prosecute the design(s) of group [11]. Affirmation of this election should be made by applicant in replying to this Office action.

Group [12] is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design(s).

#### Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 4, insert an explanation of the difference(s) between the embodiments.
3. In bracket 7, add groups as necessary.
4. In bracket 10, insert --with-- or --without--.

#### ¶ 15.28.01 Telephone Restriction Under 35 U.S.C.121 (Obvious Variations Within Group)

This application discloses the following embodiments:

Embodiment 1 – Figs. [1]

Embodiment 2 – Figs. [2]

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [4]

Group II: Embodiment [5]

[6]

The embodiments disclosed within each group have overall appearances that are basically the same. Furthermore, the differences between them are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Therefore, they are considered by the examiner to be obvious variations of one another within the group. These embodiments thus comprise a single inventive concept and are grouped together. However, the [7] patentably distinguishes each group from the other(s).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differ-

ences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with [8] on [9], a provisional election was made [10] traverse to prosecute the design(s) of group [11]. Affirmation of this election should be made by applicant in replying to this Office action.

Group [12] is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design(s).

#### Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 6, add groups as necessary.
3. In bracket 7, insert an explanation of the differences between the groups.
4. In bracket 10, insert --with--or --without--.

<

#### ¶ 15.31 Provisional Election Required (37 CFR 1.143)

Applicant is advised that the **reply** to be complete must include a provisional election of one of the enumerated designs, even though the requirement may be traversed (37 CFR 1.143).

#### B. Combination/Subcombination - Difference in Scope

A design claim covers the entire design as a whole. **\*\*>**Furthermore, claim protection to the whole design does not extend to any individual part or portion thereof. See *KeyStone Retaining Wall Systems Inc. v. Westrock Inc.*, 997 F.2d 1444, 27 USPQ2d 1297 (Fed. Cir. 1993). Embodiments directed to a design as a whole (combination) as well as individual parts or portions (subcombination) thereof may not be included in a single application if the appearances are patentably distinct. In such instance restriction would be required since patentably distinct combination/subcombination subject matter must be supported by separate claims.< However, a design claim may cover embodiments of different scope directed to the same inventive concept within a single application if the designs are not patentably distinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). The court held that the inventive concept of a design is not limited to its embodiment in a single specific article, and as long as the various embodiments are not patentably distinct, they may be protected by a single claim. *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965). The determination that the design of the subcombination/element is patentably indistinct

from the combination means that the designs are not patentable (novel and unobvious) over each other and may remain in the same application. If the embodiments are patentably distinct, the designs are considered to be separate inventions which require separate claims, and restriction to one or the other is necessary. See *In re Kelly*, 200 USPQ 560 (Comm'r Pat. 1978); *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960). >In determining whether embodiments of different scope can be retained in a single application they must have overall appearances that are basically the same, and the difference in scope must be minor and not a patentable distinction. That is, they must, by themselves, be considered obvious over each other under 35 U.S.C. 103(a) without the aid of analogous prior art. The reason for this, as stated above, is because claim protection to the whole design does not extend to any individual part or portion thereof. Therefore, if the difference in scope between embodiments has an impact on the overall appearance that distinguishes one over the other, they must be restricted since the difference in scope creates patentably distinct designs that must be supported by separate claims.< Form paragraph 15.27.04 or **\*\*>**15.27.05<, if appropriate, may be used to notify applicant that restriction is not required because the embodiments required are not patentably distinct.

**\*\*>**

#### ¶ 15.27.04 Restriction Not Required – Change In Scope (First Action – Non Issue)

This application discloses the following embodiments:

Embodiment 1 – Figs. [1]

Embodiment 2 – Figs. [2]

[3]

Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design patent protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the difference in scope between embodiments is considered minor and patentably indistinct. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between

the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this Office action will be considered an admission of lack of patentable distinction between the embodiments.

**Examiner Note:**

In bracket 3, add embodiments as necessary.

¶ 15.27.05 *Restriction Not Required – Change In Scope (First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 – Figs. [1]

Embodiment 2 – Figs. [2]

[3]

Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design patent protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm’r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the difference in scope between embodiments is considered minor and patentably indistinct. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application.

**Examiner Note:**

In bracket 3, add embodiments as necessary.

<

Form paragraph 15.29 or 15.30, if appropriate, may be used to make a restriction requirement.

¶ 15.29 *Restriction Under 35 U.S.C. 121 (Segregable Parts or Combination/Subcombination)*

This application discloses the following embodiments:

Embodiment 1 – Figs. [1] drawn to a [2].

Embodiment 2 – Figs. [3] drawn to a [4].

[5]

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I – Embodiment [6]

Group II – Embodiment [7]

[8]

The designs as grouped are distinct from each other since under the law a design patent covers only the invention disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. See *Ex parte Sanford*, 1914 CD 69, 204 OG 1346 (Comm’r Pat. 1914); and *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965). It is further noted that patentably distinct combination/subcombination subject matter must be supported by separate claims, whereas only a single claim is permissible in a design patent application. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

[9]

Because the designs are distinct for the reason(s) given above, and have acquired separate status in the art, restriction for examination purposes as indicated is proper (35 U.S.C. 121).

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed. 37 CFR 1.143. Any reply that does not include an election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over the prior art will apply equally to all other groups. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

**Examiner Note:**

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.
3. In bracket 9, add comments, if necessary.

¶ 15.30 *Telephone Restriction Under 35 U.S.C. 121 (Segregable Parts or Combination/Subcombination)*

This application discloses the following embodiments:

Embodiment 1 – Figs. [1] drawn to a [2].

Embodiment 2 – Figs. [3] drawn to a [4].

[5]

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I – Embodiment [6]

Group II – Embodiment [7]

[8]

The designs as grouped are distinct from each other since under the law a design patent covers only the invention disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. See *Ex parte Sanford*, 1914 CD 69, 204 OG 1346 (Comm’r Pat. 1914); and *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965). It is further noted that patentably distinct combination/subcombination subject matter must be supported by separate claims, whereas only a single claim is permissible in a design patent application. See *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

[9]

During a telephone discussion with [10] on [11], a provisional election was made [12] traverse to prosecute the invention of Group [13]. Affirmation of this election should be made by applicant in replying to this Office action.

Group [14] withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being for a nonelected invention.

**Examiner Note:**

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.
3. In bracket 9, insert additional comments, if necessary.

Form paragraph 15.27.06 or 15.27.07, if appropriate, may be used to notify applicant that restriction is not required because the designs are not patentably distinct.

\*\*>

¶ 15.27.06 *Restriction Not Required (Change in Appearance and Scope – First Action Non Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. [1] drawn to a [2].

Embodiment 2 - Figs. [3] drawn to a [4].

[5]

Embodiments [6] involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Embodiment(s) [7] directed to the combination(s) in relation to Embodiment(s) [8] directed to the subcombination(s)/element(s). Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C.1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this action will be considered an admission of lack of patentable distinction between the embodiments.

**Examiner Note:**

1. In bracket 5, add embodiments as necessary.
2. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.

3. It is possible and proper that embodiments may be listed in both explanatory paragraphs.

¶ 15.27.07 *Restriction Not Required (Change in Appearance and Scope – First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 – Figs. [1] drawn to a [2].

Embodiment 2 – Figs. [3] drawn to a [4].

[5]

Embodiment(s) [6] involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Embodiment(s) [7] directed to the combination(s) in relation to Embodiment(s) [8] directed to the subcombination(s)/element(s). Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C.1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they were deemed to be obvious variations and are being retained and examined in the same application. Accordingly, they were deemed to comprise a single inventive concept and have been examined together.

**Examiner Note:**

1. In bracket 5, add embodiments as necessary.
2. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
3. It is possible and proper that embodiments may be listed in both explanatory paragraphs.

<

The following form paragraphs may be used in a restriction requirement.

\*\*>

Examiners must include a brief explanation of the differences between embodiments that render them patentably distinct.

¶ 15.27.08 *Restriction with Differences in Appearance and Scope*

This application discloses the following embodiments:

Embodiment 1: Figs. [1] drawn to a [2].

Embodiment 2: Figs. [3] drawn to a [4].

[5]

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [6]

Group II: Embodiment [7]

[8]

Group(s) [9] involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platter*, 155 USPQ 222 (Comm'r Pat. 1967). The [10] creates patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Group(s) [11] directed to the combination(s) in relation to Group(s) [12] directed to the subcombination(s)/element(s). The designs as grouped are distinct from each other since under the law a design patent covers only the design disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C.1965). It is further noted that combination/subcombination subject matter, if patentably distinct, must be supported by separate claims, whereas only a single claim is permissible in a design patent application. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

In any groups that include multiple embodiments, the embodiments are considered by the examiner to be obvious variations of one another within the group and, therefore, patentably indistinct. These embodiments thus comprise a single inventive concept and are grouped together.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

A reply to this requirement must include an election of a single group for prosecution on the merits even if this requirement is traversed. 37 CFR 1.143. Any reply that does not include an election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other groups. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

#### Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add embodiments as necessary.
3. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
4. It is possible and proper that embodiments may be listed in both explanatory paragraphs.
5. In bracket 10, insert an explanation of the differences between the designs.

#### ¶ 15.28.02 Telephone Restriction with Differences in Appearance and Scope

This application discloses the following embodiments:

Embodiment 1: Figs. [1] drawn to a [2].

Embodiment 2: Figs. [3] drawn to a [4].

[5]

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment [6]

Group II: Embodiment [7]

[8]

Group(s) [9] involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platter*, 155 USPQ 222 (Comm'r Pat. 1967). The [10] creates patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Group(s) [11] directed to the combination(s) in relation to Group(s) [12] directed to the subcombination(s)/element(s). The designs as grouped are distinct from each other since under the law a design patent covers only the design disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburg v. Ladd*, 144 USPQ 562 (D.D.C.1965). It is further noted that combination/subcombination subject matter, if patentably distinct, must be supported by separate claims, whereas only a single claim is permissible in a design patent application. *In re Rubinfeld*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

In any groups that include multiple embodiments, the embodiments are considered by the examiner to be obvious variations of one another within the group and, therefore, patentably indistinct. These embodiments thus comprise a single inventive concept and are grouped together.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with [13] on [14], a provisional election was made [15] traverse to prosecute the invention of Group [16]. Affirmation of this election should be made by applicant in replying to this Office action.

Group [17] is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected invention.

#### Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.
3. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
4. It is possible and proper that embodiments may be listed in both explanatory paragraphs.
5. In bracket 10, insert an explanation of the differences between the designs.
6. In bracket 15, insert --with-- or --without--.

<

#### ¶ 15.33 *Qualifying Statement To Be Used In Restriction When A Common Embodiment Is Included In More Than One Group*

The common embodiment is included in more than a single group as it is patentably indistinct from the other embodiment(s) in those groups and to give applicant the broadest possible choices in his or her election. If the common embodiment is elected in this application, then applicant is advised that the common embodiment should not be included in any continuing application to avoid a rejection on the ground of double patenting under 35 U.S.C. 171 in the new application.

The following form paragraphs may be used to notify applicant that the nonelected invention(s) are withdrawn from consideration.

\*\*>

#### ¶ 15.34 *Groups Withdrawn From Consideration After Traverse*

Group [1] withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design, the requirement having been traversed in the reply filed on [2].

#### ¶ 15.35 *Cancel Nonelected Design (Traverse)*

The restriction requirement maintained in this application is or has been made final. Applicant must cancel Group [1] directed to the design(s) nonelected with traverse in the reply filed on [2], or take other timely appropriate action (37 CFR 1.144).

#### ¶ 15.36 *Groups Withdrawn From Consideration Without Traverse*

Group [1] withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for the nonelected design. Election was made without traverse in the reply filed on [2].

#### ¶ 15.37 *Cancellation of Nonelected Groups, No Traverse*

In view of the fact that this application is in condition for allowance except for the presence of Group [1] directed to a design or designs nonelected without traverse in the reply filed on [2], and without the right to petition, such Group(s) have been canceled.

<

>

### III. TRAVERSAL OF RESTRICTION REQUIREMENT

If a response to a restriction requirement includes an election with traverse on the grounds that the groups are not patentably distinct, applicant must present evidence or identify such evidence of record showing the groups to be obvious variations of one another. Traversal of a restriction requirement alone without an explanation in support thereof will be treated as an election without traverse. See MPEP § 818.03(a) and form paragraph 8.25.02.

A traversal of a restriction requirement based on there being no serious burden to an examiner to search and examine an entire application (as noted in MPEP § 803) is not applicable to design patent applications. The fact that the embodiments may be searched together cannot preclude a requirement for restriction if their appearances are considered patentably distinct, since patentably distinct embodiments cannot be supported by a single formal design claim. Also, clear admission on the record by the applicant that the embodiments are not patentably distinct (as noted in MPEP § 809.02(a)) will not overcome a requirement for restriction if the embodiments do not have overall appearances that are basically the same as each other.

When a traversal specifically points out the supposed errors in a restriction, examiners must reevaluate the requirement in view of these remarks. If the restriction requirement is to be maintained, it must be repeated and made final in the next Office action and the arguments answered. See MPEP § 821.01. No application should be allowed on the next Office action where a response to a restriction requirement includes an election with traverse, unless the traversal is withdrawn in view of a telephone interview, or the examiner withdraws the restriction requirement.<

## 1504.06 Double Patenting [R-2]

There are generally two types of double patenting rejections. One is the “same invention” type double patenting rejection based on 35 U.S.C. 171 which states in the singular that an inventor “may obtain a patent.” The second is the “nonstatutory-type” double patenting rejection based on a judicially created doctrine grounded in public policy and which is primarily intended to prevent prolongation of the patent term by prohibiting claims in a second patent not patentably distinct from claims in a first patent. Nonstatutory double patenting includes rejections based on one-way determination of obviousness, and two-way determination of obviousness.

The charts in MPEP § 804 outline the procedure for handling all double patenting rejections.

Double patenting rejections are based on a comparison of the claims in a patent and an application or between two applications; the disclosure of the patent or application may be relied upon only to define the claim. 35 U.S.C. 171 specifically states that “a patent” may be obtained if certain conditions are met; this use of the singular makes it clear that only one patent may issue for a design.

Determining if a double patenting rejection is appropriate involves \* answering the following inquiries: Is the same design being claimed twice? If the answer is yes, then a rejection under 35 U.S.C. 171 should be given on the grounds of “same invention” type double patenting. If not, are the designs directed to patentably indistinct variations of the same inventive concept? If the answer is yes, then a rejection based on the nonstatutory type double patenting should be given.

Double patenting rejections are based on a comparison of claims. While there is a direct correlation between the drawings in a design application and the claim, examiners must be aware that no such correlation is necessary in a utility application or patent. Several utility patents may issue with the identical drawing disclosure but with claims directed to different inventions. So any consideration of possible double patenting rejections between a utility application or patent with a design application cannot be based on the utility drawing disclosure alone. *Anchor Hocking Corp. v. Eyelet Specialty Co.*, 377 F. Supp. 98, 183 USPQ 87 (D. Del. 1974). The examiner must be

able to recreate the design claimed from the utility claims without any reliance whatsoever on the drawings.

If a provisional double patenting rejection (of any type) is the only rejection remaining in two conflicting applications, the examiner should withdraw that rejection in one of the applications (e.g., the application with the earlier filing date) and permit the application to issue as a patent. The examiner should maintain the provisional double patenting rejection in the other application which rejection will be converted into a double patenting rejection when the first application issues as a patent. If more than two applications conflict with each other and one is allowed, the remaining applications should be cross rejected against the others as well as the allowed application. For this type of rejection to be appropriate, there must be either at least one inventor in common, or a common assignee. If the claims in copending design applications or a design patent and design applications have a common assignee but different inventive entities, rejections under 35 U.S.C. 102(e), (f) and (g)/103(a) must be considered in addition to the double patenting rejection. See MPEP § 804, § 2136, § 2137 and § 2138.

### I. “SAME INVENTION” DOUBLE PATENTING REJECTIONS

A design - design statutory double patenting rejection based on 35 U.S.C. 171 prevents the issuance of a second patent for a design already patented. For this type of double patenting rejection to be proper, identical designs with identical scope must be twice claimed. *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993). A design - utility “same invention” double patenting rejection is based on judicial doctrine as there is no statutory basis for this rejection because neither 35 U.S.C. 101 nor 35 U.S.C. 171 can be applied against both claims. *In re Thornton*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969). The “same invention” type of double patenting rejection, whether statutory or nonstatutory, cannot be overcome by a terminal disclaimer. *In re Swett*, 145 F.2d 631, 172 USPQ 72 (CCPA 1971).

#### ¶ 15.23.02 Summary for “Same Invention” – Type Double Patenting Rejections

Applicant is advised that a terminal disclaimer may not be used to overcome a “same invention” type double patenting rejection.

*In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969); MPEP § 804.02.

**Examiner Note:**

This form paragraph should follow all “same invention” type double patenting rejections.

¶ 15.23 35 U.S.C. 171 Double Patenting Rejection (Design-Design)

The claim is rejected under 35 U.S.C. 171 on the ground of double patenting since it is claiming the same design as that claimed in United States Design Patent No. [1].

**Examiner Note:**

Form paragraph 15.23.02 should follow all “same invention” type double patenting rejections.

¶ 15.23.01 35 U.S.C. 171 Provisional Double Patenting Rejection (Design-Design)

The claim is provisionally rejected under 35 U.S.C. 171 on the ground of double patenting since it is claiming the same design as that claimed in copending Application No. [1]. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

**Examiner Note:**

Form paragraph 15.23.02 should follow all “same invention” type double patenting rejections.

¶ 15.24.07 Double Patenting Rejection (Design-Utility)

The claim is rejected under the judicially created doctrine of double patenting as being directed to the same invention as that set forth in claim [1] of United States Patent No. [2]. See *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

**Examiner Note:**

Form paragraph 15.23.02 should follow all “same invention” type double patenting rejections.

¶ 15.24.08 Provisional Double Patenting Rejection (Design-Utility)

The claim is provisionally rejected under the judicially created doctrine of double patenting as being directed to the same invention as that set forth in claim [1] of copending Application No. [2]. See *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

This is a provisional double patenting rejection because the claims have not in fact been patented.

**Examiner Note:**

Form paragraph 15.23.02 should follow all “same invention” type double patenting rejections.

\*\*

## II. NONSTATUTORY DOUBLE PATENTING REJECTIONS

A rejection based on nonstatutory double patenting is based on a judicially created doctrine grounded in

public policy so as to prevent the unjustified or improper timewise extension of the right to exclude granted by a patent. *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993).

A nonstatutory double patenting rejection of the obviousness-type applies to claims directed to the *same inventive concept with different appearances or differing scope which are patentably indistinct from each other*. Nonstatutory categories of double patenting rejections which are not the “same invention” type may be overcome by the submission of a terminal disclaimer.

An obviousness-type double patenting rejection must be based on the obviousness standard of 35 U.S.C. 103(a). That is, >the conflicting designs must have overall appearances that are basically the same, and the< differences between \*\*>them< must either be \*\*>minor and patentably indistinct< or \*\* obvious to a designer of ordinary skill in the art \*\* in view of \*>analogous< prior art or case law. If the claims are considered obvious under 35 U.S.C. 103(a), an obviousness-type double patenting rejection must be made. While the earlier patent (if less than a year older than the application) or application is not technically “prior art,” the principle involved is the same. *In re Zickendraht*, 319 F.2d 225, 138 USPQ 22 (CCPA 1963)(see concurring opinion of Judge Rich).

In determining whether to make an obviousness-type double patenting rejection between designs having differing scope, the examiner should compare the reference claim with the application claim. A rejection is appropriate if:

(A) The difference in scope is \*\*>minor and patentably indistinct between< the claims being compared;

(B) Patent protection for the design, fully disclosed in and covered by the claim of the reference, would be extended by the allowance of the claim in the later filed application; and

(C) No terminal disclaimer has been filed.

This kind of obviousness-type double patenting rejection in designs will occur between designs which may be characterized as a combination (narrow claim) and a subcombination/element thereof (broad claim). >See discussion in MPEP § 1504.05, subsection II, B.< If the designs are patentably indistinct and are

directed to the same inventive concept the examiner must determine whether the subject matter of the narrower claim is fully disclosed in and covered by the broader claim of the reference. If the reference does *not* fully disclose the narrower claim, then a double patenting rejection should not be made. The additional disclosure necessary to establish that the applicant was in possession of the narrower claim at the time the broader claim was filed may be in a title or special description as well as in a broken line showing in the drawings. If the broader claim of the reference does not disclose the additional subject matter claimed in the narrower claim, then applicant could not have claimed the narrower claim at the time the application with the broader claim was filed and a rejection under nonstatutory double patenting would be inappropriate.

A nonstatutory double patenting rejection may be made between a patent and an application or provisionally between applications. Such rejection over a patent should only be given if the patent issued less than a year before the filing date of the application. If the patent is more than a year older than the application, the patent is considered to be “prior art” which may be applied in a rejection under 35 U.S.C. 102(b)/103(a). The purpose of a terminal disclaimer is to obviate a double patenting rejection by removing potential harm to the public by issuing a second patent. See MPEP § 804.

If the issue of double patenting is raised between a patent and a *continuing* application, examiners are reminded that this ground of rejection can only be made when the filing of the continuing application is voluntary and not the direct, unmodified result of restriction requirement under 35 U.S.C. 121. See MPEP § 804.01.

Examiners should particularly note that a design-design nonstatutory double patenting rejection does not *always* have to be made in both of the conflicting applications. For the most part, these rejections will be made in each of the conflicting applications; but, if the rejection is only appropriate in one direction, it is proper to reject only one application. The criteria for determining whether a one-way obviousness determination is necessary or a two-way obviousness determination is necessary is set forth in MPEP § 804. However, in design-utility situations, a two-way obviousness determination is necessary for the rejection to

be proper. *In re Dembiczak*, 175 F.3d 994, 50 USPQ2d 1614 (Fed. Cir. 1999).

The following form paragraphs may be used in making a double patenting rejection. >Explanation should be provided in the appropriate brackets.<

¶ 15.24.06 *Basis for Nonstatutory Double Patenting, “Heading Only”*

The non-statutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

**Examiner Note:**

This form paragraph must precede all nonstatutory double patenting rejections as a heading, except “same invention” type.

\*\*>

¶ 15.24 *Obviousness-type Double Patenting Rejection (Single Reference)*

The claim is rejected under the judicially created doctrine of the obviousness-type double patenting of the claim in United States Patent No. [1]. Although the conflicting claims are not identical, they are not patentably distinct from each other because [2].

**Examiner Note:**

1. In bracket 1, insert prior U.S. Patent Number.
2. In bracket 2, the differences between the conflicting claims must be identified and indicated as being minor and not distinguishing the overall appearance of one over the other.
3. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.67.

¶ 15.24.03 *Provisional Obviousness-Type Double Patenting Rejection (Single Reference)*

The claim is provisionally rejected under the judicially created doctrine of the obviousness-type double patenting of the claim of copending Application No. [1]. Although the conflicting claims are not identical, they are not patentably distinct from each other because [2]. This is a provisional obviousness-type double pat-

enting rejection because the conflicting claims have not in fact been patented.

**Examiner Note:**

1. In bracket 1, insert conflicting application number.
2. In bracket 2, the differences between the conflicting claims must be identified and indicated as being minor and not distinguishing the overall appearance of one over the other.
3. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.67.

<

¶ 15.67 *Rationale for 35 U.S.C. 103(a) Rejection (Single Reference)*

It is well settled that it is unobviousness in the overall appearance of the claimed design, when compared with the prior art, rather than minute details or small variations in design as appears to be the case here, that constitutes the test of design patentability. See *In re Frick*, 275 F.2d 741, 125 USPQ 191 (CCPA 1960) and *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

\*\*>

¶ 15.25 *Obviousness-Type Double Patenting Rejection (Multiple References)*

The claim is rejected under the judicially created doctrine of the obviousness-type double patenting of the claim(s) in United States Patent No. [1] in view of [2]. At the time applicant made the design, it would have been obvious to a designer of ordinary skill in the art to [3] as demonstrated by [4].

**Examiner Note:**

1. In bracket 1, insert conflicting patent number.
2. In bracket 2, insert secondary reference(s).
3. In bracket 3, insert an explanation of how the conflicting claim in the patent is modified.
4. In bracket 4, identify the secondary reference(s) teaching the modification(s).
5. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.68.

¶ 15.24.04 *Provisional Obviousness-Type Double Patenting Rejection (Multiple References)*

The claim is provisionally rejected under the judicially created doctrine of the obviousness-type double patenting of the claim of copending Application No. [1] in view of [2]. At the time applicant made the design, it would have been obvious to a designer of ordinary skill in the art to [3] as demonstrated by [4]. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

**Examiner Note:**

1. In bracket 1, insert conflicting application number.
2. In bracket 2, insert secondary reference(s).
3. In bracket 3, insert an explanation of how the conflicting claim in the copending application is modified.
4. In bracket 4, identify the secondary reference(s) teaching the modification(s).

5. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.68.

<

¶ 15.68 *Rationale for 35 U.S.C. 103(a) Rejection (Multiple References)*

This modification of the basic reference in light of the secondary prior art is proper because the applied references are so related that the appearance of features shown in one would suggest the application of those features to the other. See *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982), and *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). Further, it is noted that case law has held that a designer skilled in the art is charged with knowledge of the related art; therefore, the combination of old elements, herein, would have been well within the level of ordinary skill. See *In re Antle*, 444 F.2d 1168, 170 USPQ 285 (CCPA 1971) and *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

## 1504.10 Priority Under 35 U.S.C. 119(a)-(d) [R-2]

### 35 U.S.C. 172. Right of priority.

The right of priority provided for by subsections (a) through (d) of section 119 of this title and the time specified in section 102(d) shall be six months in the case of designs. The right of priority provided for by section 119(e) of this title shall not apply to designs.

The provisions of 35 U.S.C. 119(a)-(d) apply to design patent applications. However, in order to obtain the benefit of an earlier foreign filing date, the United States application must be filed within 6 months of the earliest date on which any foreign application for the same design was filed. Design applications may not make a claim for priority of a provisional application under 35 U.S.C. 119(e).

### ¶ 15.01 *Conditions Under 35 U.S.C. 119(a)-(d)*

Applicant is advised of conditions as specified in 35 U.S.C. 119(a)-(d). An application for a design patent for an invention filed in this country by any person who has, or whose legal representatives have previously filed an application for a design patent, or equivalent protection for the same design in a foreign country which offers similar privileges in the case of applications filed in the United States or in a WTO member country, or to citizens of the United States, shall have the same effect as the same application would have if filed in this country on the date on which the application for patent for the same invention was first filed in such foreign country, if the application in this country is filed within six (6) months from the earliest date on which such foreign application was filed.

>

¶ 15.01.01 *Conditions Under 35 U.S.C. 172 Not Met*

The claim for priority under 35 U.S.C. 119(a)-(d) to the [1] application is acknowledged, however, the claim for priority cannot be based on such application since it was filed more than six (6) months before the filing of the application in the United States. 35 U.S.C. 172.

**Examiner Note:**

1. In bracket, insert the name of the foreign country.

<

\*\*>

¶ 15.03 *Untimely Priority Papers*

Receipt is acknowledged of the filing on [1] of a certified copy of the [2] application referred to in the oath or declaration. A claim for priority cannot be based on said application, since the United States application was filed more than six (6) months thereafter (35 U.S.C. 172).

<

The United States will recognize claims for the right of priority under 35 U.S.C. 119(a)-(d) based on applications filed under such bilateral or multilateral treaties as the “Hague Agreement Concerning the International Deposit of Industrial Designs>,<” \*\* “Uniform Benelux Act on Designs and Models” >and “European Community Design.”< In filing a claim for priority of a foreign application previously filed under such a treaty, certain information must be supplied to the United States Patent and Trademark Office. In addition to the application number and the date of filing of the foreign application, the following information is required:

(A) the name of the treaty under which the application was filed,

(B) the name of at least one country other than the United States in which the application has the effect of, or is equivalent to, a regular national filing and

(C) the name and location of the national or inter-governmental authority which received the application.

\*\*>

¶ 15.02 *Right of Priority Under 35 U.S.C. 119(b)*

No application for design patent shall be entitled to the right of priority under 35 U.S.C. 119(b) unless a claim therefor and a certified copy of the original foreign application, specification and drawings upon which it is based are filed in the United States Patent and Trademark Office before the issue fee is paid, or at such time during the pendency of the application as required by the Director not earlier than six (6) months after the filing of the application in this country. Such certification shall be made by the Patent Office, or other proper authority of the foreign country

in which filed, and show the date of the application and of the filing of the specification and other papers. The Director may require a translation of the papers filed if not in the English language, and such other information as deemed necessary.

<

The notation requirement on design patent application file wrappers when foreign priority is claimed is set forth in MPEP § 202.03.

\*\*>

¶ 15.04 *Priority Under Bilateral or Multilateral Treaties*

The United States will recognize claims for the right of priority under 35 U.S.C. 119(a)-(d) based on applications filed under such bilateral or multilateral treaties as the Hague Agreement Concerning the International Deposit of Industrial Designs, the Benelux Designs Convention and European Community Design. In filing a claim for priority of a foreign application previously filed under such a treaty, certain information must be supplied to the United States Patent and Trademark Office. In addition to the application number and the date of filing of the application, the following information is requested: (1) the name of the treaty under which the application was filed; (2) the name of at least one country other than the United States in which the application has the effect of, or is equivalent to, a regular national filing; and (3) the name and location of the national or international governmental authority which received such application.

¶ 15.52 *Examination of Priority Papers*

While the U.S. Patent and Trademark Office does not normally examine the priority papers to determine whether the applicant is in fact entitled to the right of priority, in the case of a Design Patent application, the priority papers will normally be inspected to determine that the foreign application is in fact for the same invention as the application in the United States (35 U.S.C. 119). Inspection of the papers herein indicates that the prior foreign application was not for the same invention as claimed in this application. Accordingly, the priority claim is improper.

<

Attention is also directed to the paragraphs dealing with the requirements where an actual model was originally filed in Germany (MPEP § 201.14(b)).

See MPEP Chapter 200 and 37 CFR 1.55 for further discussion of the practice and procedure under 35 U.S.C. 119(a)-(d).

**1504.20 Benefit Under 35 U.S.C. 120 [R-2]**

*35 U.S.C. 120. Benefit of earlier filing date in the United States.*

An application for patent for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in an application previously filed in the United States, or as provided by section 363 of this title, which is filed by an inventor or inventors

named in the previously filed application shall have the same effect, as to such invention, as though filed on the date of the prior application, if filed before the patenting or abandonment of or termination of proceedings on the first application or on an application similarly entitled to the benefit of the filing date of the first application and if it contains or is amended to contain a specific reference to the earlier filed application. No application shall be entitled to the benefit of an earlier filed application under this section unless an amendment containing the specific reference to the earlier filed application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this section. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section.

If applicant is entitled under 35 U.S.C. 120 to the benefit of an earlier U.S. filing date, the statement that, “This is a division [continuation] of design Application No. — — — —, filed — — —.” should appear in the first sentence of the specification. As set forth in 37 CFR 1.78(a)(2), the specification must contain or be amended to contain such a reference in the first sentence following the title unless the reference is included in an application data sheet (37 CFR 1.76). The failure to timely submit such a reference is considered a waiver of any benefit under 35 U.S.C. 120.

>Form paragraph 15.26 may be used to remind applicant that a reference to the prior application must be included in the first sentence of the specification or in an application data sheet.

¶ 15.26 *Identification of Prior Application(s) in Nonprovisional Applications - Benefit of Priority Claimed*

Applicant is reminded of the following requirement:

In a continuation or divisional application (other than a continued prosecution application filed under 37 CFR 1.53(d)), the first sentence of the specification or the application data sheet (37 CFR 1.76) should include a reference to the prior application(s) from which benefit of priority is claimed. See 37 CFR 1.78. The following format is suggested: “This is a continuation (or division) of Application No. \_\_\_\_\_, filed \_\_\_\_\_, now (abandoned, pending or U.S. Patent No. \_\_\_\_\_).”

<

Attention is directed to the requirements for “continuing” applications set forth in MPEP § 201.07, § 201.08, and § 201.11. Applicants are entitled to claim the benefit of the filing date of earlier applications for later claimed inventions under 35 U.S.C. 120

only when the earlier application discloses that invention in the manner required by 35 U.S.C. 112, first paragraph. In all continuation and divisional applications, a determination must be made by the examiner as to whether the conditions for priority under 35 U.S.C. 120 have been met. The disclosure of the claimed design in a continuation and divisional application must be the same as that of the original application. If this condition is not met, \*>the application< is not entitled to the benefit of the earlier filing date and the examiner should notify applicant accordingly by specifying the reasons why applicant is not entitled to claim the benefit under 35 U.S.C. 120. Form paragraphs 2.09 and 2.10 may be used >followed by a specific explanation as to why the later filed application fails to comply with the requirements of 35 U.S.C. 120<. The examiner should also require applicant to cancel the claim for priority in the first sentence of the specification.

In the absence of a statement in the application as originally filed incorporating by reference the disclosure of an earlier filed application, the disclosure in a continuing application may not be amended to conform to that of the earlier filed application for which priority is claimed. A mere statement that an application is a continuation or division of an earlier filed application is not an incorporation of anything into the application containing such reference for purposes of satisfying the disclosure requirements of 35 U.S.C. 112, first paragraph. *In re de Seversky*, 474 F.2d 671, 177 USPQ 144 (CCPA 1973). See also MPEP 608.01(p).

When the first application is found to be fatally defective under 35 U.S.C. 112 because of insufficient disclosure to support an allowable claim and such position has been made of record by the examiner, a second design patent application filed as an alleged “continuation-in-part” of the first application to supply the deficiency is not entitled to the benefit of the earlier filing date. See *Hunt Co. v. Mallinckrodt Chemical Works*, 177 F.2d 583, 83 USPQ 277 (F2d Cir. 1949) and cases cited therein. Also, a design application filed as a “continuation-in-part” that changes the shape or configuration of a design disclosed in an earlier application is not entitled to the benefit of the filing date of the earlier application. See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). >However, a later filed application that

changes the scope of a design claimed in an earlier filed application by reducing certain portions of the drawing to broken lines is not a change in configuration as defined by the court in *Salmon*. See MPEP § 1504.04, subsection II.<

Unless the filing date of an earlier application is actually needed, for example, in the case of an interference or to avoid an intervening reference, there is no need for the examiner to make a determination in a continuation-in-part application as to whether the requirement of 35 U.S.C. 120 is met. Note the holdings in *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

Form paragraph 15.74 may be used in a first Office action on the merits in any application >identified as a continuation-in-part< which claims priority under 35 U.S.C. 120 to a prior application.

¶ 15.74 *Continuation-In-Part Caution*

Reference to this design application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that design case law holds that any change to the shape or configuration of a design disclosed in an earlier application constitutes an entirely new design that cannot rely upon the earlier one for priority. See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). Therefore, a later filed application that changes the shape or configuration of a design disclosed in a prior application does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date. In addition, where an application is found to be fatally defective under 35 U.S.C. 112 because of an inadequate disclosure to support an allowable claim, a second design patent application filed as an alleged "continuation-in-part" of the first application to supply the deficiency is not entitled to the benefit of the earlier filing date. See *Hunt Co. v. Mallinckrodt Chemical Works*, 177 F.2d 583, 83 USPQ 277 (Fed. Cir. 1949). However, unless the filing date of the earlier application is actually needed, such as to avoid intervening prior art, the entitlement to priority in this CIP application will not be considered. See *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

**Examiner Note:**

This form paragraph should be used in the first action on the merits in any application which claims priority under 35 U.S.C. 120 as a continuation-in-part.

Where a continuation-in-part application claims benefit under 35 U.S.C. 120 of the filing date of an earlier application, a determination as to the propriety of this claim must be made if the earlier application claims the benefit of a foreign application under 35 U.S.C. 119(a) - (d). To determine the status of the foreign application, the charts in MPEP § 1504.02 should be used. If the conditions of 35 U.S.C. 120 are

not met, then the claim for benefit of the earlier filing date under 35 U.S.C. 120 as a continuation-in-part should be denied and the claim for priority under 35 U.S.C. 119(a) - (d) should also be denied. If the foreign application for patent/registration has matured into a form of patent protection and would anticipate or render the claim in the alleged CIP application obvious, the design shown in the foreign application papers would qualify as prior art under 35 U.S.C. 102(d)/172 and the claim should be rejected under 35 U.S.C. 102/103. Form paragraph 15.75 may be used.

¶ 15.75 *Preface to Rejection in Alleged CIP Based on 35 U.S.C. 102(d)/172*

Reference to this design application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that design case law holds that any change to the shape or configuration of a design disclosed in an earlier application constitutes an entirely new design that cannot rely upon the earlier one for priority. See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). Therefore, a later filed application that changes the shape or configuration of a design disclosed in a prior application, as in the present case, does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date.

The parent application claimed foreign priority under 35 U.S.C. 119(a) - (d). Insofar as the foreign application has matured into a patent/registration more than six months before the filing date of the present application, it qualifies as prior art under 35 U.S.C. 102(d)/172.

**Examiner Note:**

This form paragraph should be followed with a rejection under 35 U.S.C. 102 or 103(a) depending on the difference(s) between this claim and the design shown in the priority papers.

>If the status of the foreign application cannot be determined the following form paragraph should be used instead.

¶ 15.75.01 *C-I-P Caution, Claim to Foreign Priority in Earlier Filed Application*

Reference to this application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that design case law holds that any change to the shape or configuration of a design disclosed in an earlier application constitutes an entirely new design that cannot rely upon the earlier one for priority. See *In re Salmon et al.*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). Therefore, a later filed application that changes the shape or configuration of a design disclosed in a prior application does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date.

However, unless the filing date of the earlier application is actually needed, such as to avoid intervening prior art, entitlement

to priority in this CIP application will not be considered. See *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

The parent application claimed foreign priority under 35 U.S.C. 119(a) - (d). Applicant is reminded that if the foreign application to which priority was claimed matured into a form of patent protection prior to the filing of this application it qualifies as prior art under 35 U.S.C. 102(d)/172.

<

Where the conditions of 35 U.S.C. 120 are met, a design application may be considered a continuing application of an earlier utility application. Conversely, this also applies to a utility application relying on the benefit of the filing date of an earlier filed design application. See *In re Chu*, 66 F.3d 292, 36 USPQ2d 1089 (Fed. Cir. 1995); *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). In addition, a design application may claim benefit from an earlier filed PCT application under 35 U.S.C. 120 if the U.S. was designated in the PCT application.

Note also *In re Berkman*, 642 F.2d 427, 209 USPQ 45 (CCPA 1981) where the benefit of a design patent application filing date requested under 35 U.S.C. 120 was denied in the later filed utility application of the same inventor. The Court of Customs and Patent Appeals took the position that the design application did not satisfy 35 U.S.C. 112, first paragraph, as required under 35 U.S.C. 120.

\*\*

### 1504.30 Expedited Examination [R-2]

37 CFR 1.155. *Expedited examination of design applications*

(a) The applicant may request that the Office expedite the examination of a design application. To qualify for expedited examination.

(1) The application must include drawings in compliance with § 1.84;

(2) The applicant must have conducted a preexamination search; and

(3) The applicant must file a request for expedited examination including:

(i) The fee set forth in § 1.17(k); and

(ii) A statement that a preexamination search was conducted. The statement must also indicate the field of search and include an information disclosure statement in compliance with § 1.98.

(b) The Office will not examine an application that is not in condition for examination (*e.g.*, missing basic filing fee) even if the applicant files a request for expedited examination under this section.

37 CFR 1.155 establishes an expedited procedure for design applications. This expedited procedure became effective on September 8, 2000 and is available to all design applicants who first conduct a preliminary examination search and file a request for expedited treatment accompanied by the fee specified in 37 CFR 1.17(k). This expedited treatment is intended to fulfill a particular need by affording rapid design patent protection that may be especially important where marketplace conditions are such that new designs on articles are typically in vogue for limited periods of time.

A design application may qualify for expedited examination provided the following requirements are met:

(A) A request for expedited examination is filed (Form PTO/SB/27 may be used);

(B) The design application is complete and it includes drawings in compliance with 37 CFR 1.84 (see 37 CFR 1.154 and MPEP § 1503 concerning the requirements for a complete design application);

(C) A statement is filed indicating that a preexamination search was conducted (a search made by a foreign patent office satisfies this requirement). The statement must also include a list of the field of search such as by U.S. Class and Subclass (including domestic patent documents, foreign patent documents and nonpatent literature);

(D) An information disclosure statement in compliance with 37 CFR 1.98 is filed;

(E) The basic design application filing fee set forth in 37 CFR 1.16(f) is paid; and

(F) The fee for expedited examination set forth in 37 CFR 1.17(k) is paid.

#### EXPEDITED EXAMINATION PROCEDURE

Design applications requesting expedited examination and complying with the requirements of 37 CFR 1.155 are examined with priority and undergo expedited processing throughout the entire course of prosecution in the Office, including appeal, if any, to the Board of Patent Appeals and Interferences. All processing is expedited from the date the request is granted.

Design applicants seeking expedited examination may file a design application in the Office together with a corresponding request under 37 CFR 1.155 by hand-delivering the application papers and the request directly to the Design Technology Center (TC) Director's Office. For applicants who choose to file a design application and the corresponding request under 37 CFR 1.155 by mail, the envelope should be addressed to:

\*\*>

Mail Stop Expedited Design  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450  
<

\*>Mail Stop< Expedited Design should only be used for the initial filing of design applications accompanied by a corresponding request for expedited examination under 37 CFR 1.155. \*>Mail Stop< Expedited Design should NOT be used for a request under 37 CFR 1.155 filed subsequent to the filing of the corresponding design application. Instead, a subsequently filed request under 37 CFR 1.155 should be made by facsimile transmission to the \*\*>centralized facsimile number 703-872-9306 with the notation "SPECIAL PROCEDURES SUBMISSION" included at the top of the first page and< the corresponding application number >identified<.

Design application filings addressed to \* >Mail Stop< Expedited Design will be forwarded immediately to the Design TC Director's office. Whether an application requesting expedited examination is hand-delivered to the Design TC Director's office or mailed to \* >Mail Stop< Expedited Design, expedited processing is initiated at the Design TC Director's office provided the application (including the design application filing fee) is in condition for examination and a complete request under 37 CFR 1.155 (including the fee specified at 37 CFR 1.17(k)) qualifies the application for expedited examination.

Upon a decision by the Design TC Director to grant the request for expedited examination, >the< fees are immediately processed, the application papers are promptly assigned an application number, and the application is dispatched to an examiner for expedited examination. In addition, the applicant is

notified that examination is being expedited. The expedited treatment under 37 CFR 1.155 occurs through initial examination processing and throughout the entire prosecution in the Office. Whereas, an application granted special status pursuant to a successful "petition to make special" under MPEP § 708.02 is prioritized while it is on the examiner's docket so that the application will be examined out of turn responsive to each successive communication from the applicant requiring Office action. For a patentable design application, the expedited treatment under 37 CFR 1.155 would be a streamlined filing-to-issuance procedure. This procedure further expedites design application processing by decreasing clerical processing time as well as the time spent routing the application between processing steps.

Although a request under 37 CFR 1.155 may be filed subsequent to the filing of the design application, it is recommended that the request and the corresponding design application be filed together in order to optimize expeditious processing.

If an application requesting expedited examination is incomplete (not in condition for examination), an appropriate notice will be mailed to the applicant identifying the reasons why the application is incomplete and requiring correction thereof. The Office will not examine an application that is not in condition for examination even if the applicant files a request for expedited examination.

If an application requesting expedited examination fails to comply with one or more of the requirements for expedited examination under 37 CFR 1.155, but the application is otherwise complete, the applicant will be promptly notified and required to comply with all requirements under 37 CFR 1.155 within a shortened time period extendable under 37 CFR 1.136(a). Unless all requirements under 37 CFR 1.155 are timely met, the application will await action in its regular turn.

Once a request under 37 CFR 1.155 is granted, examiners will expedite examination by examining the application out-of-turn. Examiners are strongly encouraged to use telephone interviews to resolve minor problems. Clerical processing of the application will be expedited as well.

If the overall appearance of two or more patentably distinct embodiments of an article as disclosed in the drawings are different in appearance or scope,

restriction will be required in accordance with MPEP § 1504.05. If applicant refuses to make an election without traverse, the application will not be further examined at that time, and the application will await action in its regular turn. Divisional applications directed to nonelected inventions will not qualify for expedited examination unless the divisional application meets on its own all requirements for expedited examination under 37 CFR 1.155. Similarly, expedited status will not carry over to a continuing application, including a CPA, unless the continuing application meets on its own all requirements for expedited examination under 37 CFR 1.155.

Once a request for expedited examination is granted, prosecution will proceed according to the procedure under 37 CFR 1.155. There is no provision for “withdrawal” from expedited examination procedure.

## 1505 Allowance and Term of Design Patent

35 U.S.C. 173. *Term of design patent.*

Patents for designs shall be granted for the term of fourteen years from the date of grant.

## 1509 Reissue of a Design Patent [R-2]

See MPEP Chapter 1400 for practice and procedure in reissue applications. >See also MPEP § 1457 regarding design reissue applications.<

For design reissue application fee, see 37 CFR 1.16(h). For fee for issuing a reissue design patent, see 37 CFR 1.18(b).

The term of a design patent may not be extended by reissue. *Ex parte Lawrence*, 70 USPQ 326 (Comm’r Pat. 1946). >If a reissue application is filed for the purpose of correcting the drawing of a design patent, either by canceling views, amending views or adding new views, the provisions of 37 CFR 1.173(b)(3) must be followed. All changes to the patent drawing shall be explained, in detail, beginning on a separate sheet accompanying the papers including the amendment to the drawing. A marked-up copy of any amended drawing figure, including annotations indicating the changes made, should be submitted. The marked-up copy must be clearly labeled as “Annotated Marked-up Drawings” and it must be presented

in the amendment or remarks section that explains the change to the drawing.

A reissue application must be filed with a copy of all drawing views of the design patent regardless of whether certain views are being cancelled or amended in the reissue application. Inasmuch as the drawing is the primary means for showing the design being claimed, it is important for purposes of comparison that the reissue of the design patent shows a changed drawing view in both its canceled and amended versions and/or show a previously printed drawing view that has been canceled but not replaced. In addition to drawing views that are unchanged from the original design patent, the drawing in the reissue application may include the following views, all of which will be printed as part of the design reissue patent:

(1) CANCELED drawing view. Such a drawing view must be surrounded by brackets and must be labeled as “Canceled.” For example, FIG. 3 (Canceled). If a drawing view is canceled but not replaced the corresponding figure description in the reissue specification must also be cancelled. However, if a drawing view is cancelled and replaced by an amended drawing view the corresponding figure description in the reissue specification may or may not need to be amended.

(2) AMENDED drawing view. Such a drawing view must be labeled as “Amended.” For example, FIG. 3 (Amended). When an amended drawing view is present, there may or may not be a corresponding canceled drawing view. If there is such a corresponding canceled drawing view, the amended and canceled drawing views should have the same figure number. The specification of the reissue application need not indicate that there is both a canceled version and an amended version of the drawing view.

(3) NEW drawing view. Such a drawing view must be labeled as “New” For example, FIG. 5 (New). The new drawing view should have a new figure number, that is, a figure number that did not appear in the original design patent. The specification of the reissue application must include a figure description of the new drawing view.

If a drawing view includes both a cancelled and amended version, and the change in the amended version is for the purpose of converting certain solid lines to broken lines, the reissue specification must include

a statement indicating the purpose of the broken lines.<

## 1510 Reexamination

See MPEP Chapter 2200 for practice and procedure for reexamination applications.

## 1511 Protest

See MPEP Chapter 1900 for practice and procedure in protest.

## 1512 Relationship Between Design Patent, Copyright, and Trademark [R-2]

### I. DESIGN PATENT/COPYRIGHT OVERLAP

There is an area of overlap between copyright and design patent statutes where the author/inventor can secure both a copyright and a design patent. Thus an ornamental design may be copyrighted as a work of art and may also be subject matter of a design patent. The author/inventor may not be required to elect between securing a copyright or a design patent. See *In re Yardley*, 493 F.2d 1389, 181 USPQ 331. In *Mazer v. Stein*, 347 U.S. 201, 100 USPQ 325 (1954), the Supreme Court noted the election of protection doctrine but did not express any view on it since a design patent had been secured in the case and the issue was not before the Court.

See form paragraph 15.55 which repeats this information.

### II. INCLUSION OF COPYRIGHT NOTICE

It is the policy of the U.S. Patent and Trademark Office to permit the inclusion of a copyright notice in a design patent application, and thereby any patent issuing therefrom, under the following conditions.

(A) A copyright notice must be placed adjacent to the copyright material and, therefore, may appear at any appropriate portion of the patent application disclosure including the drawing. However, if appearing on the drawing, the notice must be limited in print size from 1/8 inch to 1/4 inch and must be placed within the “sight” of the drawing immediately below the figure representing the copyright material. If placed on a drawing in conformance with these provisions, the

notice will not be objected to as extraneous matter under 37 CFR 1.84.

(B) The content of the copyright notice must be limited to only those elements required by law. For example, “© 1983 John Doe” would be legally sufficient under 17 U.S.C. 401 and properly limited.

(C) Inclusion of a copyright notice will be permitted only if the following waiver is included at the beginning (preferably as the first paragraph) of the specification to be printed for the patent:

A portion of the disclosure of this patent document contains material to which a claim for copyright is made. The copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but reserves all other copyright rights whatsoever.

(D) Inclusion of a copyright notice after a Notice of Allowance has been mailed will be permitted only if the criteria of 37 CFR 1.312 have been satisfied.

Any departure from these conditions may result in a refusal to permit the desired inclusion. If the waiver required under condition (C) above does not include the specific language “(t)he copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the U.S. Patent and Trademark Office patent file or records....”, the copyright notice will be objected to as improper.

See form paragraph 15.55 which repeats this information.

>

#### ¶ 15.55 Design Patent-Copyright Overlap

There is an area of overlap between Copyright and Design Patent Statutes where an author/inventor can secure both a Copyright and a Design Patent. Thus, an ornamental design may be copyrighted as a work of art and may also be the subject matter of a Design Patent. The author/inventor may not be required to elect between securing a copyright or a design patent. See *In re Yardley*, 181 USPQ 331 (CCPA 1974). In *Mazer v. Stein*, 100 USPQ 325 (U.S. 1954), the Supreme Court noted the election of protection doctrine but did not express any view on it since a Design Patent had been secured in the case and the issue was not before the Court.

It is the policy of the Patent and Trademark Office to permit the inclusion of a copyright notice in a Design Patent application, and thereby any patent issuing therefrom, under the following conditions:

(1) A copyright notice must be placed adjacent to the copyright material and, therefore, may appear at any appropriate por-

tion of the patent application disclosure including the drawing. However, if appearing on the drawing, the notice must be limited in print size from 1/8 inch to 1/4 inch and must be placed within the “sight” of the drawing immediately below the figure representing the copyright material. If placed on a drawing in conformance with these provisions, the notice will not be objected to as extraneous matter under 37 CFR 1.84.

(2) The content of the copyright notice must be limited to only those elements required by law. For example, “© 1983 John Doe” would be legally sufficient under 17 U.S.C. 401 and properly limited.

(3) Inclusion of a copyright notice will be permitted only if the following waiver is included at the beginning (preferably as the first paragraph) of the specification to be printed for the patent:

A portion of the disclosure of this patent document contains material to which a claim for copyright is made. The copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but reserves all other copyrights whatsoever.

(4) Inclusion of a copyright notice after a Notice of Allowance has been mailed will be permitted only if the criteria of 37 CFR 1.312 have been satisfied.

Any departure from these conditions may result in a refusal to permit the desired inclusion. If the waiver required under condition (3) above does not include the specific language “(t)he copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records...,” the copyright notice will be objected to as improper.

<

The files of design patents D-243,821, D-243,824, and D-243,920 show examples of an earlier similar procedure.

### III. DESIGN PATENT/TRADEMARK OVERLAP

A design patent and a trademark may be obtained on the same subject matter. The CCPA, in *In re Mogen David Wine Corp.*, 328 F.2d 925, 140 USPQ 575 (CCPA 1964), later reaffirmed by the same court at 372 F.2d 539, 152 USPQ 593 (CCPA 1967), held that the underlying purpose and essence of patent rights are separate and distinct from those pertaining to trademarks, and that no right accruing from one is dependent or conditioned by the right concomitant to the other.

See form paragraph 15.55.01 which repeats this information.

>

#### ¶ 15.55.01 Design Patent - Trademark Overlap

A design patent and a trademark may be obtained on the same subject matter. The Court of Customs and Patent Appeals, in *In re Mogen David Wine Corp.*, 328 F.2d 925, 140 USPQ 575 (CCPA 1964), later reaffirmed by the same court at 372 F.2d 539, 152 USPQ 593 (CCPA 1967), has held that the underlying purpose and essence of patent rights are separate and distinct from those pertaining to trademarks, and that no right accruing from the one is dependent upon or conditioned by any right concomitant to the other.

<

## IV. INCLUSION OF TRADEMARKS IN DESIGN PATENT APPLICATIONS

### A. Specification

The use of trademarks in design patent application specifications is permitted under limited circumstances. See MPEP § 608.01(v). This section assumes that the proposed use of a trademark is a legal use under Federal trademark law.

### B. Title

It is improper to use a trademark alone or coupled with the word “type” (e.g., Band-Aid type Bandage) in the title of a design. Examiners must object to the use of a trademark in the title of a design application and require its deletion therefrom.

### C. Drawings

When a trademark is used in the drawing disclosure of a design application, the specification must include a statement preceding the claim identifying the trademark material forming part of the claimed design and the name of the owner of the registered trademark. Form paragraph 15.76 may be used.

#### ¶ 15.76 Trademark in Drawing

The [1] forming part of the claimed design is a registered trademark of [2]. The specification must be amended to include a statement preceding the claim identifying the trademark material forming part of the claimed design and the name of the owner of the trademark.

#### Examiner Note:

1. In bracket 1, identify the trademark material.
2. In bracket 2, identify the trademark owner.

Any derogatory use of a trademark in a design application is prohibited and will result in a rejection of the claim under 35 U.S.C. 171 as being offensive

and, therefore, improper subject matter for design patent protection. Cf. *Dallas Cowboys Cheerleaders, Inc. v. Pussycat Cinema, Ltd.*, 604 F.2d 200, 203 USPQ 161 (2d Cir. 1979) and *Coca-Cola Co. v. Gemini Rising Inc.*, 346 F. Supp. 1183, 175 USPQ 56 (E.D.N.Y. 1972).

### 1513 Miscellaneous

With respect to copies of references being supplied to applicant in a design patent application, see MPEP § 707.05(a).

Effective May 8, 1985, the Statutory Invention Registration (SIR), 35 U.S.C. 157, and 37 CFR 1.293 - 1.297 replaced the former Defensive Publication Program. The Statutory Invention Registration (SIR) Program applies to utility, plant, and design applications. See MPEP Chapter 1100.

# Chapter 1600 Plant Patents

<b>1601</b>	<b>Introduction: The Act, Scope, Type of Plants Covered</b>
<b>1602</b>	<b>Rules Applicable</b>
<b>1603</b>	<b>Elements of a Plant Application</b>
<b>1604</b>	<b>Applicant, Oath or Declaration</b>
<b>1605</b>	<b>Specification and Claim</b>
<b>1606</b>	<b>Drawings</b>
<b>1607</b>	<b>Specimens</b>
<b>1608</b>	<b>Examination</b>
<b>1609</b>	<b>Report of Agricultural Research Service</b>
<b>1610</b>	<b>The Action</b>
<b>1611</b>	<b>Issue</b>
<b>1612</b>	<b>UPOV Convention</b>
<b>1613</b>	<b>Right of Priority Based Upon Application for Plant Breeder's Rights</b>

## 1601 Introduction: The Act, Scope, Type of Plants Covered

The right to a plant patent stems from:

*35 U.S.C. 161. Patents for plants.*

Whoever invents or discovers and asexually reproduces any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and newly found seedlings, other than a tuber propagated plant or a plant found in an uncultivated state, may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for plants, except as otherwise provided.

Asexually propagated plants are those that are reproduced by means other than from seeds, such as by the rooting of cuttings, by layering, budding, grafting, inarching, etc. Plants capable of sexual reproduction are not excluded from consideration if they have also been asexually reproduced.

With reference to tuber propagated plants, for which a plant patent cannot be obtained, the term "tuber" is used in its narrow horticultural sense as meaning a short, thickened portion of an underground branch. Such plants covered by the term "tuber propagated" are the Irish potato and the Jerusalem artichoke. This exception is made because this group alone, among asexually reproduced plants, is propagated by the same part of the plant that is sold as food.

The term "plant" has been interpreted to mean "plant" in the ordinary and accepted sense and not in the strict scientific sense and thus excludes bacteria. *In re Arzberger*, 112 F. 2d 834, 46 USPQ 32 (CCPA 1940). The term "plant" thus does not include asexual propagating material, *per se*. *Ex parte Hibberd*, 227 USPQ 443, 447 (Bd. Pat. App. & Int. 1985).

An asexually reproduced plant may alternatively be protected under 35 U.S.C. 101, as the Plant Patent Act (35 U.S.C. 161) is not an exclusive form of protection which conflicts with the granting of utility patents to plants. *Ex parte Hibberd*, 227 USPQ 443 (Bd. Pat. App. & Int. 1985). Inventions claimed under 35 U.S.C. 101 may include the same asexually reproduced plant which is claimed under 35 U.S.C. 161, as well as plant materials and processes involving plant materials. The filing of a terminal disclaimer may be used in appropriate situations to overcome an obviousness-type double patenting rejection based on claims to the asexually reproduced plant and/or fruit and propagating material thereof in an application under 35 U.S.C. 101 and the claim to the same asexually reproduced plant in an application under 35 U.S.C. 161.

*35 U.S.C. 163. Grant.*

In the case of a plant patent, the grant shall include the right to exclude others from asexually reproducing the plant, and from using, offering for sale, or selling the plant so reproduced, or any of its parts, throughout the United States, or from importing the plant so reproduced, or any parts thereof, into the United States.

As provided in 35 U.S.C. 161, the rights associated with a plant patent include the rights associated with a utility patent, and the "right to exclude" has additional terms provided in 35 U.S.C. 163. A plant patent issuing from an application filed after June 7, 1995 has a term which expires 20 years after the filing date of the application, or any earlier filing date claimed under 35 U.S.C. 120, 121 or 365(c). See MPEP § 2701. Plant patent applications will be published pursuant to 35 U.S.C. 122(b).

## 1602 Rules Applicable

*37 CFR 1.161. Rules applicable.*

The rules relating to applications for patent for other inventions or discoveries are also applicable to applications for patents for plants except as otherwise provided.

**1603 Elements of a Plant Application**

37 CFR 1.163. *Specification and arrangement of application elements in a plant application.*

\*\*\*\*\*

(b) The elements of the plant application, if applicable, should appear in the following order:

- (1) Plant application transmittal form.
- (2) Fee transmittal form.
- (3) Application data sheet (see § 1.76).
- (4) Specification.
- (5) Drawings (in duplicate).
- (6) Executed oath or declaration (§ 1.162).

\*\*\*\*\*

An application for a plant patent consists of the same parts as other applications. For information pertaining to the oath or declaration, specification and claim, or drawings, see MPEP § 1604, § 1605, or § 1606, respectively.

**1604 Applicant, Oath or Declaration**

37 CFR 1.162. *Applicant, oath or declaration.*

The applicant for a plant patent must be the person who has invented or discovered and asexually reproduced the new and distinct variety of plant for which a patent is sought (or as provided in §§ 1.42, 1.43 and 1.47). The oath or declaration required of the applicant, in addition to the averments required by § 1.63, must state that he or she has asexually reproduced the plant. Where the plant is a newly found plant, the oath or declaration must also state that it was found in a cultivated area.

A Plant Patent Application (35 U.S.C. 161) Declaration, Form PTO/SB/03, may be used to submit a declaration. Form PTO/SB/81 may be used to appoint an attorney or agent. See MPEP § 402.

In an application for a plant patent, there can be joint inventors. See *Ex parte Kluis*, 70 USPQ 165 (Bd. App. 1945).

**As a below named inventor, I hereby declare that:**

My residence, mailing address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the new and distinct variety of:

plant named:

which is claimed and for which a plant patent is sought, the specification of which

is attached hereto OR  was filed on (MM/DD/YYYY)  as United States

Application Number  and was amended on (MM/DD/YYYY)  (if applicable).

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claim, as amended by any amendment specifically referred to above.

I have asexually reproduced the plant to which this application applies.

Said plant was found in a cultivated area (check this box for newly found plant only)

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the National or PCT International filing date of the continuation-in-part.

I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or 365(b) of any foreign application(s) for patent or inventor's certificate, or 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below, by checking the box, any foreign application for patent or inventor's certificate, or any PCT international application having a filing date before that of the application on which priority is claimed.

## 1605 Specification and Claim

### 35 U.S.C. 162. *Description, claim.*

No plant patent shall be declared invalid for noncompliance with section 112 of this title if the description is as complete as is reasonably possible.

The claim in the specification shall be in formal terms to the plant shown and described.

### 37 CFR 1.163. *Specification and arrangement of application elements in a plant application.*

(a) The specification must contain as full and complete a disclosure as possible of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, and must particularly point out where and in what manner the variety of plant has been asexually reproduced. For a newly found plant, the specification must particularly point out the location and character of the area where the plant was discovered.

(b) The elements of the plant application, if applicable, should appear in the following order:

- (1) Plant application transmittal form.
- (2) Fee transmittal form.
- (3) Application data sheet (see § 1.76).
- (4) Specification.
- (5) Drawings (in duplicate).
- (6) Executed oath or declaration (§ 1.162).

(c) The specification should include the following sections in order:

(1) Title of the invention, which may include an introductory portion stating the name, citizenship, and residence of the applicant.

(2) Cross-reference to related applications (unless included in the application data sheet).

(3) Statement regarding federally sponsored research or development.

(4) Latin name of the genus and species of the plant claimed.

- (5) Variety denomination.
- (6) Background of the invention.
- (7) Brief summary of the invention.
- (8) Brief description of the drawing.
- (9) Detailed botanical description.
- (10) A single claim.
- (11) Abstract of the disclosure.

(d) The text of the specification or sections defined in paragraph (c) of this section, if applicable, should be preceded by a section heading in upper case, without underlining or bold type.

### 37 CFR 1.164. *Claim.*

The claim shall be in formal terms to the new and distinct variety of the specified plant as described and illustrated, and may also recite the principal distinguishing characteristics. More than one claim is not permitted.

The specification should include a complete detailed description of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, expressed in botanical terms in the general form followed in standard botanical textbooks or publications dealing with the varieties of the kind of plant involved (evergreen tree, dahlia plant, rose plant, apple tree, etc.), rather than a mere broad nonbotanical characterization such as commonly found in nursery or seed catalogs. The specification should also include the origin or parentage and the genus and species designation of the plant variety sought to be patented. The Latin name of the genus and species of the plant claimed should be stated and preceded by the heading set forth in 37 CFR 1.163(c)(4). The specification must particularly point out where, e.g., location or place of business, and in what manner the variety of plant has been asexually reproduced.

Form Paragraphs 16.01, 16.09, and 16.10 may be used to object to the disclosure under 37 CFR 1.163(a).

#### ¶ 16.01 *Specification, Manner of Asexually Reproducing*

The application is objected to under 37 CFR 1.163(a) because the specification does not “particularly point out where and in what manner the variety of plant has been asexually reproduced”. Correction is required.

#### ¶ 16.09 *Specification, Less Than Complete Description*

The disclosure is objected to under 37 CFR 1.163(a) because the specification presents less than a full and complete botanical description and the characteristics which distinguish over related known varieties. More specifically: [1].

#### ¶ 16.10 *Specification, Location of Plant Not Disclosed*

The disclosure is objected to under 37 CFR 1.163(a) because the specification does not particularly point out the location and character of the area where the plant was discovered.

Where color is a distinctive feature of the plant, the color should be positively identified in the specification by reference to a designated color as given by a recognized color dictionary or color chart.

Form Paragraphs 16.02 and 16.03 may be used to object to the disclosure or reject the claim, respectively, because of a lack of a clear and complete disclosure with regard to colors.

¶ *16.02 Colors Specified Do Not Correspond With Those Shown*

The disclosure is objected to under 35 U.S.C. 112, first paragraph, because the [1] colors specified fail to correspond with those shown.

¶ *16.03 Rejection, 35 U.S.C. 112, 1st Paragraph, Non-Support for Colors*

The claim is rejected under 35 U.S.C. 112, first paragraph, as being unsupported by a clear and complete disclosure with regard to [1] colors, for the following reasons: [2].

If the written description of a plant is deficient in certain respects (see, e.g., *In re Greer*, 484 F.2d 488, 179 USPQ 301 (CCPA 1973)), a clarification or additional description of the plant, or even a wholesale substitution of the original description so long as not totally inconsistent and unrelated to the original description and photograph of the plant may be submitted in reply to an Office action. Such submission will not constitute new matter under 35 U.S.C. 132. *Jessel v. Newland*, 195 USPQ 678, 684 (Dep. Comm'r Pat. 1977).

The rules on Deposit of Biological Materials, 37 CFR 1.801-1.809, do not apply to plant patent applications in view of the reduced disclosure requirements of 35 U.S.C. 162, even where a deposit of a plant has been made in conjunction with a utility application (35 U.S.C. 101).

A plant patent is granted only on the entire plant. It, therefore, follows that only one claim is necessary and only one is permitted. A method claim in a plant patent application is improper. An example of a proper claim would be "A new and distinct variety of hybrid tea rose plant, substantially as illustrated and described herein."

## 1606 Drawings

### *37 CFR 1.165. Plant drawings.*

(a) Plant patent drawings should be artistically and competently executed and must comply with the requirements of § 1.84. View numbers and reference characters need not be employed unless required by the examiner. The drawing must disclose all the distinctive characteristics of the plant capable of visual representation.

(b) The drawings may be in color. The drawing must be in color if color is a distinguishing characteristic of the new variety.

Two copies of color drawings or photographs and a black and white photocopy that accurately depicts, to the extent possible, the subject matter shown in the color drawing or photograph must be submitted.

If the drawings or photographs are in color, two color copies of each drawing or photograph are required. If the required copies of the drawings are not included, the application will be accorded a filing date, but correction will be required before the application is forwarded for examination. The requirement under 37 CFR 1.165(b) for a black and white photocopy of any color drawing or photograph has been waived. See 1246 O.G. 106 (May 22, 2001).

### *37 CFR 1.84. Standards for drawings.*

\*\*\*\*\*

(c) *Identification of drawings.* Identifying indicia, if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet and centered within the top margin.

\*\*\*\*\*

(e) *Type of paper.* Drawings submitted to the Office must be made on paper which is flexible, strong, white, smooth, non-shiny, and durable. All sheets must be reasonably free from cracks, creases, and folds. Only one side of the sheet may be used for the drawing. Each sheet must be reasonably free from erasures and must be free from alterations, overwritings, and interlineations. Photographs must be developed on paper meeting the sheet-size requirements of paragraph (f) of this section and the margin requirements of paragraph (g) of this section. See paragraph (b) of this section for other requirements for photographs.

(f) *Size of paper.* All drawing sheets in an application must be the same size. One of the shorter sides of the sheet is regarded as its top. The size of the sheets on which drawings are made must be:

- (1) 21.0 cm. by 29.7 cm. (DIN size A4), or
- (2) 21.6 cm. by 27.9 cm. (8 1/2 by 11 inches).

(g) *Margins.* The sheets must not contain frames around the sight (*i.e.*, the usable surface), but should have scan target points (*i.e.*, cross-hairs) printed on two cater-corner margin corners. Each sheet must include a top margin of at least 2.5 cm. (1 inch), a left side margin of at least 2.5 cm. (1 inch), a right side margin of at least 1.5 cm. (5/8 inch), and a bottom margin of at least 1.0 cm. (3/8 inch), thereby leaving a sight no greater than 17.0 cm. by 26.2 cm. on 21.0 cm. by 29.7 cm. (DIN size A4) drawing sheets, and a sight no greater than 17.6 cm. by 24.4 cm. (6 15/16 by 9 5/8 inches) on 21.6 cm. by 27.9 cm. (8 1/2 by 11 inch) drawing sheets.

\*\*\*\*\*

(i) *Arrangement of views.* One view must not be placed upon another or within the outline of another. All views on the same sheet should stand in the same direction and, if possible, stand so that they can be read with the sheet held in an upright position. If views wider than the width of the sheet are necessary for the clearest illustration of the invention, the sheet may be turned on its side so that the top of the sheet, with the appropriate top margin to be used as the heading space, is on the right-hand side. Words must appear in a horizontal, left-to-right fashion when the page is either upright or turned so that the top becomes the right side, except for graphs utilizing standard scientific convention to denote the axis of abscissas (of X) and the axis of ordinates (of Y).

\*\*\*\*\*

(t) *Numbering of sheets of drawings.* The sheets of drawings should be numbered in consecutive Arabic numerals, starting with 1, within the sight as defined in paragraph (g) of this section. These numbers, if present, must be placed in the middle of the top of the sheet, but not in the margin. The numbers can be placed on the right-hand side if the drawing extends too close to the middle of the top edge of the usable surface. The drawing sheet numbering must be clear and larger than the numbers used as reference characters to avoid confusion. The number of each sheet should be shown by two Arabic numerals placed on either side of an oblique line, with the first being the sheet number and the second being the total number of sheets of drawings, with no other marking.

(u) *Numbering of views.*

(1) The different views must be numbered in consecutive Arabic numerals, starting with 1, independent of the numbering of the sheets and, if possible, in the order in which they appear on the drawing sheet(s). Partial views intended to form one complete view, on one or several sheets, must be identified by the same number followed by a capital letter. View numbers must be preceded by the abbreviation "FIG." Where only a single view is used in an application to illustrate the claimed invention, it must not be numbered and the abbreviation "FIG." must not appear.

(2) Numbers and letters identifying the views must be simple and clear and must not be used in association with brackets, circles, or inverted commas. The view numbers must be larger than the numbers used for reference characters.

\*\*\*\*\*

(x) *Holes.* No holes should be made by applicant in the drawing sheets.

Form Paragraphs 16.06, 16.06.01, 16.07, and 16.11 may be used to object to the drawing disclosure.

¶ *16.06 Drawings Must Be in Duplicate*

The disclosure is objected to under 37 CFR 1.165(b) because applicant has not provided copies of the drawing in duplicate. Correction is required.

¶ *16.07 Drawing Figures Not Competently Executed*

The disclosure is objected to under 37 CFR 1.165(a) because Fig. [1] not artistically and/or competently executed.

¶ *16.11 Drawings in Improper Scale*

The disclosure is objected to under 37 CFR 1.165(a) because the drawings are of an inadequate scale to show the distinguishing features of the plant.

## 1607 Specimens

*37 CFR 1.166. Specimens.*

The applicant may be required to furnish specimens of the plant, or its flower or fruit, in a quantity and at a time in its stage of growth as may be designated, for study and inspection. Such specimens, properly packed, must be forwarded in conformity with instructions furnished to the applicant. When it is not possible to forward such specimens, plants must be made available for official inspection where grown.

Specimens of the plant variety, its flower or fruit, should not be submitted unless specifically called for by the examiner.

Form Paragraph 16.13 may be used to require specimens.

¶ *16.13 Specimens Are Required*

Applicant [1] required to submit [2] in accordance with 37 CFR 1.166.

## 1608 Examination

*37 CFR 1.167. Examination.*

Applications may be submitted by the Patent and Trademark Office to the Department of Agriculture for study and report.

The authority for submitting plant applications to the Department of Agriculture for report is given in:

*Executive Order No. 5464, October 17, 1930. Facilitating the consideration of applications for plant patents.*

I, Herbert Hoover, President of the United States of America, under the authority conferred upon me by act of May 23, 1930 (Public No. 245) [now 35 U.S.C. 164], entitled "An act to provide for plant patents," and by virtue of all other powers vested in me relating thereto, do hereby direct the Secretary of Agriculture: (1) to furnish the Commissioner of Patents such available information of the Department of Agriculture, or (2) to conduct through the appropriate bureau or division of the department such research upon special problems, or (3) to detail to the Commissioner of Patents such officers and employees of the department, as the Commissioner may request for the purpose of carrying said act into effect.

*35 U.S.C. 164. Assistance of Department of Agriculture.*

The President may by Executive order direct the Secretary of Agriculture, in accordance with the requests of the Director, for the purpose of carrying into effect the provisions of this title with respect to plants (1) to furnish available information of the Department of Agriculture, (2) to conduct through the appropriate bureau or division of the Department research upon special problems, or (3) to detail to the Director officers and employees of the Department.

Plant applications are subject to the same examination process as any other national application. As such, the statutory provisions with regard to patentable subject matter, utility, novelty, obviousness, disclosure, and claim specificity requirements apply (35 U.S.C. 101, 102, 103, and 112). The sole exception in terms of applicability of these statutory provisions is set forth in 35 U.S.C. 162.

The prior art considered by the examiner is developed by a search of appropriate subclasses of the United States patent classification system as well as patent and nonpatent literature data bases. Where appropriate, a report may be obtained from the Agricultural Research Service, Horticultural Research Branch, Department of Agriculture.

### **1609 Report of Agricultural Research Service**

Where the examiner considers it necessary to the examination of the plant patent application, a copy of the file and drawing of the application are forwarded to the National Program Leader for Horticultural Crops, Agricultural Research Service (ARS), U.S. Department of Agriculture, along with a request for a report as to whether the plant variety disclosed is new and distinct over known plant varieties. As the report is merely advisory to the Office, it is placed in the file but is not given a paper number. The copy of the report is customarily utilized by the examiner in the preparation of his or her action on the application.

The report may embody criticisms and objections to the disclosure, may offer suggestions for correction of such, or the report may merely state that:

“Examination of the specification submitted indicates that the variety described is not identical with others with which our specialists are familiar.”

### **1610 The Action**

The action on the application by the examiner will include all matters as provided for in other types of patent applications. See 37 CFR 1.161.

With reference to the examination of the claim, the language must be such that it is directed to the “new and distinct variety of plant.” This is important as under no circumstance should the claim be directed to a new variety of flower or fruit in contradistinction to the plant bearing the flower or the tree bearing the fruit. This is in spite of the fact that it is accepted and general botanical parlance to say “A variety of apple or a variety of blackberry” to mean a variety of apple tree or a variety of blackberry plant.

Where the application is otherwise allowable, a claim which recites, for example “A new variety of apple characterized by,” may be amended by the insertion of — tree — after “apple” by an examiner’s amendment.

By the same token, the title of the invention must relate to the entire plant and not to its flower or fruit, thus: Apple Tree, Rose Plant.

Care should also be exercised that the specification does not contain unwarranted advertising, for example, “the disclosed plant being grown in the XYZ Nurseries of Topeka, Kansas.” It follows, also, that in the drawings any showing in the background of a plant, as a sign carrying the name of an individual, nursery, etc., is objectionable and deletion thereof is required. Nor should the specification include laudatory expressions, such as, “The rose is prettier than any other rose.” Such expressions are wholly irrelevant. Where the fruit is described, statements in the specification as to the character and quality of products made from the fruit are not necessary and should be deleted.

The Office action may include so much of any report of the ARS as the examiner deems necessary, or may embody no part of it. In the event of an interview, the examiner, in his or her discretion, may show the entire report to the inventor or attorney.

Form Paragraph 16.12 may be used to reference portions of the ARS report.

¶ *16.12 Report From U.S. Dept. of Agriculture*

This application has been submitted to the U.S. Department of Agriculture for a report. Pertinent portions follow: [1]

The report of the ARS is not in the nature of a publication and matters raised therein within the personal knowledge of the specialists of the ARS are not sufficient basis for a rejection unless it is first ascertained by the examiner that the same can be supported by affidavits by said specialists (37 CFR 1.104(d)(2)). See *Ex parte Rosenberg*, 46 USPQ 393 (Bd. App. 1939).

Form Paragraphs 16.04 and 16.08, as appropriate, may be used to reject the claim.

¶ *16.04 Rejection, 35 U.S.C. 102*

The claim is rejected under 35 U.S.C. 102 as failing to patentably distinguish over [1].

¶ *16.08 Rejection, 35 U.S.C. 112*

The claim is rejected under 35 U.S.C. 112 [1] because [2].

## 1611 Issue

The preparation of a plant patent application for issue involves the same procedure as for other applications (37 CFR 1.161), with the exception that where there are color drawings, the better one of the two judged, for example, by its sharpness or cleanliness is selected to be printed in the patent.

The International Patent Classification symbols, most recent edition, should be placed in the issuing classification boxes on the file wrapper or on the Issue Classification slip of all plant patent applications being sent to issue.

All plant patent applications should contain an abstract when forwarded to the Office of Patent Publication.

## 1612 UPOV Convention

On November 8, 1981, the 1978 text of the “International Convention for the Protection of New Varieties of Plants” (generally known by its French acronym as the UPOV Convention) took effect in the United States and two other states that had not been party to the 1961 text, Ireland and New Zealand. As of September 24, 2000, 46 states were party to the UPOV Convention: Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile,

China, Colombia, Czech Republic, Denmark, Ecuador, Estonia, Finland, France, Germany, Hungary, Ireland, Israel, Italy, Japan, Kenya, Kyrgyzstan, Mexico, Netherlands, New Zealand, Norway, Panama, Paraguay, Poland, Portugal, Republic of Moldova, Russian Federation, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Trinidad and Tobago, Ukraine, United Kingdom, United States of America, and Uruguay. Most states adhere to the 1978 text. The United States adheres to the 1991 text, and has a reservation under Article 35(2) of the text (which allows plant patents rather than breeder’s rights certificates to be granted).

The 1961, 1978, and 1991 texts guarantee to plant breeders in each member state both national treatment and the right of priority in all other member states. In many states, new plant varieties are protected by breeders’ rights laws rather than patent laws. Accordingly, the Paris (Industrial Property) Convention cannot always be relied on to provide these and other rights.

Insofar as the patenting of asexually reproduced plants in the United States is concerned, both national treatment and the right of priority have been accorded to foreign plant breeders since enactment of the plant patent law in 1930 (now 35 U.S.C. 161-164). See MPEP § 1613 for the right of priority based upon an application for plant breeder’s rights.

Application of the UPOV Convention in the United States does not affect the examination of plant patent applications, except in one instance. It is now necessary as a condition for receiving a plant patent to register a variety denomination for that plant. Inclusion of the variety denomination in the patent comprises its registration.

The registration process in general terms consists of inclusion of a proposed variety denomination in the plant patent application. The examiner must evaluate the proposed denomination in light of UPOV Convention, Article 13. Basically, this Article requires that the proposed variety denomination not be identical with or confusingly similar to other names utilized in the United States or other UPOV member countries for the same or a closely related species. In addition, the proposed denomination must not mislead the average consumer as to the characteristics, value, or identity of the patented plant. Ordinarily, the denomination proposed for registration in the United States

must be the same as the denomination registered in another member state of UPOV.

Form Paragraph 16.05 may be used to object to the disclosure as lacking a common or market name or “denomination” of the plant.

¶ 16.05 *Name or Denomination for Plant Missing*

The disclosure is objected to under 37 CFR 1.121(e) because no “variety denomination” of the instant plant has been set forth in the disclosure. 37 CFR 1.163(c)(4). Correction by adding such a name is required.

¶ 16.05.01 *Latin Name of Genus and Species of the Plant Claimed Missing*

The disclosure is objected to under 37 CFR 1.121(e) because the Latin name of the genus and species of the instant plant has

not been set forth in the disclosure. 37 CFR 1.163(c)(4). Correction by adding such a name is required.

**1613 Right of Priority Based upon Application for Plant Breeder’s Rights**

Pursuant to 35 U.S.C. 119(f), an application for a plant patent may rely upon an application for plant breeder’s rights filed in a WTO member country (or in a foreign UPOV Contracting Party) for priority under 35 U.S.C. 119(a) through (c).

## Chapter 1700 Miscellaneous

### 1701 Office Personnel Not To Express Opinion on Validity or Patentability of Patent

\*\*

- 1701.01 Office Personnel Not To Testify
- 1702 Restrictions on Former Examiners
- 1703 The *Official Gazette*
- 1704 Application Records and Reports
- 1705 Examiner Docket, Time, and Activity Recordation
- 1706 Disclosure Documents
- 1711 U.S.-Philippines Search Exchange
- 1720 Dissemination of Court and Board of Patent Appeals and Interferences Decisions
- 1721 Treatment of Court and Board of Patent Appeals and Interferences Decisions Affecting Patent and Trademark Office Policy and Practice
- 1730 Information Sources

### 1701 Office Personnel Not To Express Opinion on Validity or Patentability of Patent

Every patent is presumed to be valid. 35 U.S.C. 282, first sentence. Public policy demands that every employee of the United States Patent and Trademark Office (USPTO) refuse to express to any person any opinion as to the validity or invalidity of, or the patentability or unpatentability of any claim in any U.S. patent, except to the extent necessary to carry out

- (A) an examination of a reissue application of the patent,
- (B) a reexamination proceeding to reexamine the patent, or
- (C) an interference involving the patent.

The question of validity or invalidity is otherwise exclusively a matter to be determined by a court. Members of the patent examining corps are cautioned to be especially wary of any inquiry from any person outside the USPTO, including an employee of another U.S. Government agency, the answer to which might indicate that a particular patent should not have issued. No USPTO employee may pursue a bounty offered by a private sector source for identifying prior art. The acceptance of payments from outside sources

for prior art search activities may subject the employee to administrative disciplinary action.

When a field of search for an invention is requested, examiners should routinely inquire whether the invention has been patented in the United States. If the invention has been patented, no field of search should be suggested.

Employees of the USPTO, particularly patent examiners who examined an application which matured into a patent or a reissued patent or who conducted a reexamination proceeding, should not discuss or answer inquiries from any person outside the USPTO as to whether or not a certain reference or other particular evidence was considered during the examination or proceeding and whether or not a claim would have been allowed over that reference or other evidence had it been considered during the examination or proceeding. Likewise, *employees* are cautioned against answering any inquiry concerning any entry in the patent or reexamination file, including the extent of the field of search and any entry relating thereto. The record of the file of a patent or reexamination proceeding must speak for itself.

Practitioners can be of material assistance in this regard by refraining from making improper inquiries of members of the patent examining corps. Inquiries from members of the public relating to the matters discussed above must of necessity be refused and such refusal should not be considered discourteous or an expression of opinion as to validity or patentability.

### 1701.01 Office Personnel Not To Testify [R-2]

It is the policy of the United States Patent and Trademark Office (USPTO) that its employees, including patent examiners, will not appear as witnesses or give testimony in legal proceedings, except under the conditions specified in \*\*>37 CFR Part 104, Subpart C<. Any employee who testifies contrary to this policy will be *dismissed or removed*. \*\*

Whenever an employee of the USPTO, including a patent examiner, is asked to testify or receives a subpoena, the employee shall immediately notify the Office of the USPTO General Counsel. Inquiries requesting testimony shall be also referred immediately to the Office of the USPTO General Counsel.

Patent examiners and other USPTO employees performing or assisting in the performance of quasi-judicial functions, are forbidden to testify as experts or to express opinions as to the validity of any patent.

Any individual desiring the testimony of an employee of the USPTO, including the testimony of a patent examiner or other quasi-judicial employee, must comply with the provisions of 37 CFR Part 104, Subpart C.

A request by a third party to take deposition testimony of a patent examiner in a pending *ex parte* reexamination proceeding will generally be denied in view of the *ex parte* nature of the reexamination proceeding.

A request for testimony of an employee of the USPTO should be made to the Office of the USPTO General Counsel at least **10 working days** prior to the date of the expected testimony.

If an employee is authorized to testify, the employee will be limited to testifying about facts within the employee's personal knowledge. Employees are prohibited from giving expert or opinion testimony. *Fischer & Porter Co. v. Corning Glass Works*, 61 F.R.D. 321, 181 USPQ 329 (E.D. Pa. 1974). Likewise, employees are prohibited from answering hypothetical or speculative questions. *In re Mayewsky*, 162 USPQ 86, 89 (E.D. Va. 1969) (deposition of an examiner must be restricted to relevant matters of fact and must avoid any hypothetical or speculative questions or conclusions based thereon); *Shaffer Tool Works v. Joy Mfg. Co.*, 167 USPQ 170 (S.D. Tex. 1970) (deposition of examiner should be limited to matters of fact and must not go into hypothetical or speculative areas or the bases, reasons, mental processes, analyses, or conclusions of the examiner in acting upon a patent application). Employees will not be permitted to give testimony with respect to subject matter which is privileged. Several court decisions limit testimony with respect to quasi-judicial functions performed by employees. Those decisions include *United States v. Morgan*, 313 U.S. 409, 422 (1941) (improper to inquire into mental processes of quasi-judicial officer or to examine the manner and extent to which the officer considered an administrative record); *Western Electric Co. v. Piezo Technology, Inc.*, 860 F.2d 428, 8 USPQ2d 1853 (Fed. Cir. 1988) (patent examiner may not be compelled to answer questions which probe the examiner's techni-

cal knowledge of the subject matter of a patent); *McCulloch Gas Processing Co. v. Department of Energy*, 650 F.2d 1216, 1229 (Temp. Emer. Ct. App. 1981) (discovery of degree of expertise of individuals performing governmental functions not permitted); *In re Nilssen*, 851 F.2d 1401, 7 USPQ2d 1500 (Fed. Cir. 1988) (technical or scientific qualifications of examiners-in-chief are not legally relevant in appeal under 35 U.S.C. 134 since board members need not be skilled in the art to render obviousness decision); *Lange v. Commissioner*, 352 F. Supp. 166, 176 USPQ 162 (D.D.C. 1972) (technical qualifications of examiners-in-chief not relevant in 35 U.S.C. 145 action).

In view of the discussion above, if an employee is authorized to testify in connection with the employee's involvement or assistance in a quasi-judicial proceeding which took place before the USPTO, the employee will not be permitted to give testimony in response to questions that the Office determines are impermissible. Impermissible questions include, but are not limited to, questions directed to discovering the mental processes or expertise of a quasi-judicial official, such as:

- (A) Information about that employee's:
  - (1) Background;
  - (2) Expertise;
  - (3) Qualifications to examine or otherwise consider a particular patent or trademark application;
  - (4) Usual practice or whether the employee followed a procedure set out in any Office manual of practice (including the MPEP or TMEP) in a particular case;
  - (5) Consultation with another Office employee;
  - (6) Understanding of:
    - (a) A patented invention, an invention sought to be patented, or patent application, patent, reexamination or interference file;
    - (b) Prior art;
    - (c) Registered subject matter, subject matter sought to be registered, or a trademark application, registration, opposition, cancellation, interference, or concurrent use file;
    - (d) Any Office manual of practice;
    - (e) Office regulations;
    - (f) Patent, trademark, or other law; or
    - (g) The responsibilities of another Office employee;

(7) Reliance on particular facts or arguments;

(B) To inquire into the manner in and extent to which the employee considered or studied material in performing a quasi-judicial function; or

(C) To inquire into the bases, reasons, mental processes, analyses, or conclusions of that Office employee in performing the quasi-judicial function.

Any request for testimony addressed or delivered to the Office of the USPTO General Counsel shall comply with 37 CFR 104.22(c). All requests must be in *writing*. The need for a subpoena may be obviated where the request complies with 37 CFR 104.22(c) if the party requesting the testimony further meets the following conditions:

(A) The party requesting the testimony identifies the civil action or other legal proceeding for which the testimony is being taken. The identification shall include the:

- (1) Style of the case;
- (2) Civil action number;
- (3) District in which the civil action is pending;
- (4) Judge assigned to the case; and
- (5) Name, address, and telephone number of counsel for all parties in the civil action.

(B) The party agrees not to ask questions seeking information which is precluded by 37 CFR 104.23;

(C) The party shall comply with applicable provisions of the Federal Rules of Civil Procedure, including Rule 30, and give 10 working days notice to the Office of the USPTO General Counsel prior to the date a deposition is desired. Fifteen working days notice is required for any deposition which is desired to be taken between November 15 and January 15;

(D) The party agrees to notice the deposition at a place convenient to the USPTO. The Conference Room in the Office of the USPTO General Counsel is deemed to be a place convenient to the Office; and

(E) The party agrees to supply a copy of the transcript of the deposition to the USPTO for its records.

Absent a written agreement meeting the conditions specified in paragraphs (A) through (E), a party must comply with the precise terms of 37 CFR 104.22(c) and the USPTO will not permit a deposition without issuance of a subpoena.

## 1702 Restrictions on Former Examiners

*37 CFR 10.10. Restrictions on practice in patent cases.*

(a) Only practitioners who are registered under § 10.6 or individuals given limited recognition under § 10.9 will be permitted to prosecute patent applications of others before the Office.

(b) No individual who has served in the patent examining corps of the Office may practice before the Office after termination of his or her service, unless he or she signs a written undertaking,

(1) Not to prosecute or aid in any manner in the prosecution of any patent application pending in any patent examining group during his or her period of service therein and

(2) Not to prepare or prosecute or to assist in any manner in the preparation or prosecution of any patent application of another (i) assigned to such group for examination and (ii) filed within two years after the date he or she left such group, without written authorization of the Director. Associated and related classes in other patent examining groups may be required to be included in the undertaking or designated classes may be excluded from the undertaking. When an application for registration is made after resignation from the Office, the applicant will not be registered if he or she has prepared or prosecuted or assisted in the preparation or prosecution of any patent application as indicated in the paragraph. Knowingly preparing or prosecuting or providing assistance in the preparation or prosecution of any patent application contrary to the provisions of this paragraph shall constitute misconduct under § 10.23(c)(13) of this part.

(c) A practitioner who is an employee of the Office cannot prosecute or aid in any manner in the prosecution of any patent application before the Office.

(d) Practice before the Office by Government employees is subject to any applicable conflict of interest laws, regulations or codes of professional responsibility.

See also MPEP § 309.

## 1703 The Official Gazette [R-2]

The *Official Gazette of the United States Patent and Trademark Office (Official Gazette)* is published >electronically< every Tuesday in two sections, the *Official Gazette – Patents* and the *Official Gazette – Trademarks*. \*\*

The *Official Gazette — Patents* reports the reexamination certificates, reissues, plant patents, utility patents, and design patents issued and statutory invention registrations (if any) published on that day. \*\*>The *Official Gazette — Patents* (eOG:P) allows browsing through the issued patents for the week. The eOG:P can be browsed by classification or type of patent, for example, utility, design, and plant. Specific patents can be accessed by class/subclass or patentee name. Links are provided to the various pages of the eOG:P:

(A) *Browse by Class/Subclass* page to access patents by a specific classification;

(B) *Classification of Patents* page with links to patents by a range of classifications;

(C) *Browse Granted Patents* page to access a patent by patent number or link to patents by type;

(D) *Index of Patentees* page to browse by names of inventors and assignees in either a cumulative alphabetical index or individual indexes by type of patent. Each patentee listing contains a link to the patent;

(E) *Geographical Index of Inventors* to link to patents by the state or country of residence of the first listed inventor; and

(F) *Notices* page containing the text of important notices for the week.<

As to each patent, the following information is given:

- (A) Patent number;
- (B) Title of the invention;
- (C) Applicant's name;
- (D) Applicant's city and state of residence and, if unassigned, applicant's mailing address;
- (E) Assignee's name, city and state of residence, if assigned;
- (F) U.S. or PCT parent application data, if any;
- (G) Filing date;
- (H) Application number;
- (I) Foreign priority application data, if any;
- (J) International classification;
- (K) U.S. classification by class and subclass;
- (L) Number of claims;
- (M) Selected figure of the drawing, if any \*\*;
- (N) A claim or claims; \*
- (O) For reissue patents, the original patent number and issue date, and the original application number and filing date>; and
- (P) Patent Application Publication Number and Publication date, if any.<

The *Official Gazette – Trademarks* >is published electronically and< contains \*\* an illustration of each trademark published for opposition, an alphabetical list of registered trademarks, a classified list of registered trademarks, an index of registrants, a list of can-

celed trademark registrations, and a list of renewed trademark registrations.

\*\*The information in the *Official Gazette* pertaining to each issued patent and each trademark registration can be obtained from the Patent Grants Database and the U.S. Trademark Electronic Search System (TESS) respectively, both also available on the USPTO web site.

>Regular and special notices of the United States Patent and Trademark Office are published in the *Official Gazette Notices*, both as part of the *Official Gazette – Patents* (eOG:P) and as a separate publication. The notices that are included in this publication include notices of patent and trademark suits, disclaimers filed, Certificates of Correction issued, lists of applications and patents available for license or sale, notices of 37 CFR 1.47 applications, and general information such as orders, notices, changes in rules, changes in classification, certain adverse decisions in interferences, the condition of work in the Office, registration of attorneys and agents, reprimands, suspensions, and exclusions of registered attorneys and agents, and notices to parties not reached by mail. The *Official Gazette Notices* are available on the United States Patent and Trademark Office web site (www.uspto.gov).< Paper copies of the *Official Gazette* \*\* *Notices* are available from the Government Printing Office. Orders >for the *Official Gazette Notices*< should be addressed and subscriptions should be made payable to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

## 1704 Application Records and Reports [R-2]

The PALM (Patent Application Locating and Monitoring) System is the automated data management system used by the United States Patent and Trademark Office (USPTO) for the retrieval and/or online updating of the computer record of each patent application. The PALM System also maintains examiner time, activity, docket, and technical support staff backlog records.

Information retrieval from PALM is by means of \*\* the PALM intranet. \*\*>Transactions are< entered via bar code readers>, by keyed entries, or by making an appropriate choice in a drop down menu<. Among other items, classification, examiner docket, attorney,

inventor, and prosecution history data as well as the location of each application can be retrieved and updated online with PALM.

>

## **I. < DOCKET REPORTS**

The recording of changes to examiner dockets is accomplished by PALM simultaneously with the recording of incoming and outgoing communications, transfers of applications to and from dockets, and other types of updating of the application record. The status of each examiner's docket can be determined by means of \*\* the PALM intranet and is supplemented by periodic printed reports. Docket reports that are generated by PALM include the individual examiner new, special, and amended docket which lists applications in priority order; the individual examiner rejected application docket; the individual examiner new application profile, which lists the totals of new applications in each docket, sorted by month of filing; and various summaries of the above reports at the art unit, Technology Center (TC), and corps levels.

>

## **II. < BIWEEKLY TIME AND ACTIVITY REPORTS**

All reporting of examiner time and activity is on a biweekly basis. Each examiner's examining and non-examining time, as listed on the examiner's Biweekly Time Worksheet, PTO-690E, is entered into PALM for use in the computation of productivity data. The biweekly reports produced include the individual Biweekly Examiner Time and Activity Report which lists, by application number, all applications for which actions have been counted during the biweekly period. The type of action counted for each application is also indicated on the report. This report also includes examiner time data, an action summary, and cumulative summaries to date for the current quarter and fiscal year. Various summary reports at the Art Unit, TC, and Corps levels are also produced.

## **1705 Examiner Docket, Time, and Activity Recordation [R-2]**

Actions prepared by examiners are submitted to their respective legal instrument examiners for processing in accordance with the procedures set forth below.

>

### **I. < PROCEDURES FOR REPORTING AN EXAMINER'S ACTION**

(A) The examiner completes an Examiner's Case Action Worksheet, Form PTO-1472, which identifies the type of action prepared. The worksheet is attached to the application >if the application is maintained in a paper file, or placed in an Action folder with the Office action if the application is an Image File Wrapper (IFW) application< for processing by the legal instrument examiner;

(B) The legal instrument examiner checks the worksheet to verify that the examiner provided all necessary information relating to that action;

(C) The legal instrument examiner enters the type of action and the count date thereof on the Contents flap of the file wrapper >if the application is maintained in a paper file, or has the action added to the IFW (see IFW Manual)<; and

(D) The legal instrument examiner enters the examiner's action for the application directly into PALM \*\*.

Each examiner's action that is counted and reported to the PALM system will be listed by application number on the Biweekly Examiner Time and Activity Report. The examiner should check his/her Biweekly Examiner Time and Activity Report to verify that all applications worked on for the biweekly report period are properly listed.

Examples of examiner's actions that are reported to PALM by the legal instrument examiner, but are not listed on the Biweekly Examiner Time and Activity Report, include examiner's amendments, actions in reexamination proceedings, interview summaries, transfers of applications, and supplemental Office actions and miscellaneous Office letters which do not set a period for reply.

\*\*>

**AU:**

## II. < COUNTING OF FIRST ACTION ON THE MERITS (FAOM) >

Office actions on the merits consist of rejections (final and non-final), *Ex parte Quayle* actions, and allowances.

The first time an examiner performs one of the above merit actions, he/she receives credit for a First Action on the Merits (FAOM) on the production reports.

A second/subsequent but FAOM usually occurs when the first action is a restriction/election action and the second action is an action on the merits. The examiner indicates the type of second action on the Examiner's Case Action Worksheet, and the PALM system will automatically determine if it is a FAOM. If the second action is a FAOM, the action will be listed and credited on the Biweekly Examiner Time and Activity Report as a Second/Subsequent FAOM.

>

## III. < COUNTING OF DISPOSALS

An examiner receives a "disposal" count for the following actions:

- (A) Allowance;
- (B) Abandonment;
- (C) Examiner's Answer;
- (D) International Preliminary Examination Report;
- (E) Statutory Invention Registration (SIR) disposal (only after a FAOM; see MPEP § 1101); and
- (F) Interference wherein the application would be in condition for allowance but for the interference.

These same items constitute the "disposals" for performance evaluation of examining art units and TCs. However, disposals at the Office level consist only of allowances and abandonments.

For either an allowance or an abandonment after an Examiner's Answer or decision by a court or the Board of Patent Appeals and Interferences, no disposal credit is received, though these actions are indicated on the Biweekly Examiner Time and Activity Report.

## IV. < CORRECTION INFORMATION

(A) If any information is either missing from or incorrect on the Biweekly Examiner Time and Activity Report, the examiner should promptly notify the legal instrument examiner by providing all the pertinent information necessary to make the changes to the PALM system (e.g., examining hours, application number, type of action, etc.).

(B) The legal instrument examiner will report the necessary changes and corrections directly into PALM. These changes will be listed on the next Biweekly Examiner Time and Activity Report.

(C) If any information is missing from the last Biweekly Examiner Time and Activity Report of a quarter (except at the end of a fiscal year) or is incorrect, the examiner should promptly notify the legal instrument examiner and his/her supervisory patent examiner (SPE). The legal instrument examiner will make the appropriate changes directly into the PALM system. The changes will be listed on the next Biweekly Examiner Time and Activity Report. However, these changes will not be reflected in the last Quarter's Report; the examiner's SPE may manually make an adjustment to the records to show these changes.

(D) In order to ensure that all PALM reports are correct at the end of the fiscal year (rating period), a special correction cycle is provided on the PALM system. If any information is missing from or is incorrect on the last Biweekly Examiner Time and Activity Report, the examiner should immediately notify the legal instrument examiner and his/her SPE. These changes will be reflected in the examiner's final biweekly report for the entire fiscal year.

## 1706 Disclosure Documents [R-2]

A service provided by the United States Patent and Trademark Office (USPTO) is the acceptance and preservation for two years of "Disclosure Documents" as evidence of the date of conception of an invention. >However, inventors are strongly encouraged to file a provisional patent application instead of a Disclosure Document. A provisional application for patent is a U.S. national application for patent filed in the USPTO under 35 U.S.C. 111(b). It allows filing without a formal patent claim, oath or declaration, or any

information disclosure (prior art) statement. It provides the means to establish an early effective filing date in a non-provisional patent application filed under 35 U.S.C. 111(a). It also allows the term "Patent Pending" to be applied to products for which a patent application has been filed. A provisional application has a pendency lasting 12 months from the date the provisional application is filed. The 12-month pendency period cannot be extended. Unlike a Disclosure Document, the benefit of the filing date of the provisional application may be relied upon pursuant to 35 U.S.C. 119(e) in a corresponding non-provisional application or for foreign priority purposes when filing a patent application on the invention in other countries. See MPEP § 201.04(b) and § 601.01(b).

## I. < THE PROGRAM

A paper disclosing an invention (called a Disclosure Document) and signed by the inventor or inventors may be forwarded to the USPTO by the inventor (or by any one of the inventors when there are joint inventors), by the owner of the invention, or by the attorney or agent of the inventor(s) or owner. The Disclosure Document will be retained for two years, and then be destroyed unless it is referred to in a separate letter in a related patent application filed within those two years.

**THE DISCLOSURE DOCUMENT IS NOT A PATENT APPLICATION, AND THE DATE OF ITS RECEIPT IN THE USPTO WILL NOT BECOME THE EFFECTIVE FILING DATE OF ANY PATENT APPLICATION SUBSEQUENTLY FILED. THESE DOCUMENTS WILL BE KEPT IN CONFIDENCE BY THE USPTO.**

This program does not diminish the value of the conventional, witnessed, permanently bound, and page-numbered laboratory notebook or notarized records as evidence of conception of an invention.

>

## II. < CONTENT OF DISCLOSURE

The benefits afforded by the Disclosure Document will depend directly upon the adequacy of the disclosure. It is strongly recommended that the document contain a clear and complete explanation of the manner and process of making and using the invention in

sufficient detail to enable a person having ordinary knowledge in the field of the invention to make and use the invention. When the nature of the invention permits, a drawing or sketch should be included. The use or utility of the invention should be described, especially in chemical inventions. Where the invention is directed to a design, the appearance presented by the object should be described.

>

## III. < PREPARATION OF THE DOCUMENT

A standard format for the Disclosure Document is required to facilitate the USPTO's electronic data capture and storage. The Disclosure Document (including drawings or sketches) must be on white letter-size (8 1/2 by 11-inch) or A4 (21.0 by 29.7 cm) paper, written on one side only, with each page numbered. Text and drawings must be sufficiently dark to permit reproduction with commonly used office copying machines. Oversized papers, even if foldable to the above dimensions, will not be accepted. Attachments such as videotapes and working models will not be accepted and will be returned.

>

## IV. < OTHER ENCLOSURES

The Disclosure Document must be accompanied by a separate cover letter signed by the inventor stating that he or she is the inventor and requesting that the material be received under the Disclosure Document Program. The inventor's request may take the following form:

The undersigned, being the inventor of the disclosed invention, requests that the enclosed papers be accepted under the Disclosure Document Program, and that they be preserved for a period of two years.

A Disclosure Document Deposit Request form (PTO/SB/95) can also be used as a cover letter. This form is available at the USPTO's Internet site or by calling the USPTO General Information Services Division (see MPEP § 1730).

A notice with an identifying number and date of receipt in the USPTO will be mailed to the customer, indicating that the Disclosure Document may be relied upon only as evidence of conception and that a

patent application should be diligently filed if patent protection is desired. The USPTO prefers that applicants send two copies of the cover letter or Disclosure Document Deposit Request form and one copy of the Disclosure Document, along with a self-addressed stamped envelope. The second copy of the cover letter or form will be returned with the notice. It is not necessary to submit more than one copy of the document in order for it to be accepted under the Disclosure Document Program.

>

## V. < DISPOSITION

The Disclosure Document will be preserved by the USPTO for two years after its receipt. It will then be destroyed unless it is referred to in a separate letter in a related patent application filed within the two-year period. The separate letter filed in the related patent application must identify not only the patent application, but also the Disclosure Document by its title, number, and date of receipt in the USPTO. Acknowledgment of such letters will be made in the next official communication or in a separate letter from the USPTO.

>

## VI. < ACKNOWLEDGMENT

When a paper referring to a Disclosure Document is filed in a patent application within 2 years after the filing of a Disclosure Document, the examining Technology Center (TC) technical support staff member will prepare either (1) a memorandum indicating that a reference to Disclosure Document No. -- has been made in Patent Application No. --, or (2) a copy of the paper filed in the application referring to the Disclosure Document. The memorandum or copy is forwarded to the Customer Contact Team of the Office of Initial Patent Examination (OIPE).

Upon receipt, the Customer Service Branch of the OIPE prepares a retention label (PTO-150) and attaches it to the Disclosure Document, and indicates such on the forwarded memo or copy, and returns the memo or copy to the TC. The returned memo or copy is stapled to the inside left flap of the file wrapper >if the application is maintained in a paper file, or added to the Image File Wrapper (IFW) if the application is

an IFW application,< so that the examiner's attention is directed to it when the next Office action is prepared. If prosecution before the examiner has been concluded, a separate letter indicating that the Disclosure Document will be retained should be sent to the applicant by the examining TC technical support staff member.

After the acknowledging letter is mailed, the paper number of the acknowledgment is noted in the application file. The returned memo or copy is \*\* retained with the original paper referring to the Disclosure Document in the file wrapper.

>

## VII. < FEE

A fee of \$10, as set forth in 37 CFR 1.21(c), in the form of a check or money order made payable to “\* Commissioner for Patents” must accompany the Disclosure Document when it is submitted to the USPTO. Documents not accompanied by the full fee will be returned. Mail the Disclosure Document along with the fee to:

\*\*>Mail Stop DD  
Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450<

Applicants can request a copy of their Disclosure Document as filed in the USPTO if they are the original submitters of the document. The request must be made in writing and accompanied by a fee for \$25.

Fees are subject to change annually. To confirm current fees, contact the General Information Services Division or visit the USPTO's Internet site (see MPEP § 1730).

>

## VIII. < NOTICE TO INVENTORS

The two-year retention period is not a “grace period” during which the inventor can wait to file his or her patent application without possible loss of benefits. >As explained above, it may be advisable to file a provisional application instead of a Disclosure Document.< It must be recognized that, in order to establish priority of invention, an affidavit or testimony referring to a Disclosure Document must usually also

establish diligence in completing the invention or in filing the patent application after the filing of the Disclosure Document.

**Inventors are also reminded that any public use or sale in the United States or publication of the invention anywhere in the world more than one year prior to the filing of a patent application on that invention will prohibit the granting of a U.S. patent on it. See 35 U.S.C. 102(b). Foreign patent laws in this regard may be much more restrictive than U.S. laws.**

The USPTO advises inventors who are not familiar with the requirements of U.S. patent law and procedures to consult an attorney or agent registered to practice before the USPTO. A list of *Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office* can be found at the USPTO's Internet site. See MPEP § 1730 for additional sources of this list.

As a service to USPTO's customers, the three Partnership Patent and Trademark Depository Libraries (PTDLs) listed below have been authorized to act as USPTO's "agent" in accepting documents under the Disclosure Document Program. This service provides customers with a completed transaction on-site, eliminating the wait for USPTO notification of acceptance. The documents are stamped with an identifying number and date at the time of receipt by the PTDL. Original documents are sent to the USPTO for processing and retention.

Fax: 713-737-6341

To locate a Patent and Trademark Depository Library (PTDL) near you, consult the complete listing of PTDLs found in every issue of the *Official Gazette*, call the USPTO General Information Services Division, or access the USPTO's Internet site (see MPEP § 1730). The nationwide network of PTDLs has collections of patents and patent-related reference materials available to the public, including automated access to USPTO data bases. Contact the PTDL prior to your visit to learn about its collections, services, and hours.

## 1711 U.S.-Philippines Search Exchange

The United States-Philippines search exchange program involves patent applications filed in the United States which are subsequently followed by corresponding applications filed in the Republic of the Philippines and patent applications filed in the Philippines subsequently followed by corresponding applications filed in the United States.

The program operates as follows:

The applicant files his or her application in the United States Patent and Trademark Office (USPTO) which will process the application in the normal manner and examine the application in the usual time sequence.

If the applicant should later file a corresponding application in the Philippines Patent Office, he or she may elect to use the special filing procedure. Under this special filing procedure, applicant files his or her application in the Philippines accompanied by a notice of election to participate in the special procedure, which notice of election contains a certification that the description (excluding references to related applications), claims, and drawings are identical to those of the corresponding application originally filed in the United States. The earlier filed application must be fully identified, and, in applications without a claim of priority, a certified copy of the earlier filed U.S. application must be submitted to the Philippines

Patent Office. In addition, applicant must also agree that all amendments to his or her U.S. application will also be made with respect to his or her application filed in the Philippines.

In the USPTO, applicant will regularly file two copies of each amendment. One copy must be marked "Copy for Philippines Patent Office." Upon termination of prosecution, the USPTO shall remove all copies so marked from the U.S. file and promptly forward the same to the Philippines Patent Office.

Election forms for participation in this special program must be signed in duplicate and simultaneously accompany the application to be filed in the Philippines.

Upon receipt of properly filed notice of election, the Philippines Patent Office will notify the USPTO of the election by forwarding one copy of the election forms to the USPTO. The Philippines Patent Office will defer action on the Philippines application pending receipt of information as to the disposition of the application by the USPTO. If no such information is received by the Philippines Office within a reasonable amount of time from the date of filing in the Philippines, the Philippines Office may, either on its own initiative, or at applicant's request, inquire as to the status of the U.S. application and, if desired, proceed with its own independent examination.

Upon disposal of the application by the USPTO, appropriate information will be sent to the Philippines Patent Office which will include all necessary identifying data, whether allowed or abandoned, notice of allowance, copies of documents cited during examination, a copy of the last office action and, when necessary, any earlier actions which may be included by reference in the last action. The Philippines Office will then make its own complete office action based upon the claims as amended with USPTO, performing whatever checks desired and searching for copending interfering applications. Alternatively, the Philippines may request applicant to show cause why the results of the U.S. examination should not be accepted in the Philippines. All avenues of appeal will remain open to the applicant.

Where copending applications are cited and applied during examination in the USPTO full examination will not be forwarded to the Philippines Patent Office, and the fact that a U.S. copending application was

cited would be noted as a matter of information, since such references are inapplicable in the Philippines.

Where the application originates in the Philippines Patent Office and is subsequently filed in the USPTO, a similar procedure as outlined above, consonant with U.S. law, will be followed.

It is believed that this program will facilitate the handling of U.S. origin applications filed in the Republic of the Philippines resulting in a savings in time and expense of prosecution to U.S. applicants.

## **1720 Dissemination of Court and Board of Patent Appeals and Interferences Decisions [R-2]**

>

### **I. < COURT DECISIONS**

The Office of the Solicitor forwards to the Office of the \* Commissioner for Patents copies of all recent court decisions in patent cases where a precedential opinion is issued. The Office of the \* Commissioner for Patents will routinely \*\*>forward< these opinions to TC Directors, the Patent Academy, and the Director of the Office of Patent Quality \* >Assurance<.

TC Directors, in turn, are to make copies available to supervisors and other individuals as the TC Director determines to be appropriate. TC Directors are encouraged to discuss the contents of the opinions in their staff meetings, particularly where such meetings are being held to reinforce examination quality.

>

### **II. < BOARD OF PATENT APPEALS AND INTERFERENCES DECISIONS**

A decision rendered by the Board of Patent Appeals and Interferences (Board) is returned to the examiner through the TC Director and the examiner's supervisor. The examiner takes action consistent with the decision rendered by the Board unless rehearing of the Board decision will be requested (MPEP § 1214.04). The TC Director may circulate and discuss the decision among some or all of the supervisors in the TC, and the supervisors, in turn, may circulate the decision among the examiners in their art units, depending on the subject matter or issues in the decisions.

## 1721 Treatment of Court and Board of Patent Appeals and Interferences Decisions Affecting Patent and Trademark Office Policy and Practice [R-2]

In the event the Board of Patent Appeals and Interferences (Board) or court decision is one that significantly adds to the body of law by, for example, addressing a new legal or procedural issue, or providing a new interpretation of a prior decision, such a decision may result in an internal United States Patent and Trademark Office (USPTO) memorandum pointing out the significance of the decision to the examination process.

When any examiner or supervisor in the Patent Examining Corps concludes that a recent decision of the Board or a court affects existing USPTO policy or practice, he or she should bring the matter to the attention of his/her TC Director through normal chain-of-command procedures.

When the TC Director believes that guidance to the Corps is warranted as a result of a decision, the TC Director should consult with the Deputy Commissioner for Patent Examination Policy and provide a draft of the guidance that is recommended as appropriate under the circumstances. The Deputy \* Commissioner for Patent Examination Policy will then consult appropriate Office officials, as necessary, to formulate a recommendation to the \* Commissioner for Patents on the policy implications of the opinion.

It may be necessary for the \*>Director<, General Counsel, Solicitor, Chief Administrative Patent Judge, \*>Commissioner< for Patents, Deputy \*>Commissioner< for Patent Examination Policy, Deputy \*>Commissioner< for \*>Patent Operations< and TC Director making the recommendation to meet to review and discuss the policy ramifications of the \*\*>opinion and recommended guidance to enable< the \*>Director< to decide how the USPTO will proceed.

Communication of the decision on the policy implications of the court or Board decision will normally take place by either notice in the *Official Gazette* and/or via memorandum to USPTO personnel. Ultimately, the policy implications of the decision will be officially incorporated into the Manual of Patent Examining Procedure and Patent Academy curriculum

materials during the next update cycle for these reference materials.

## 1730 Information Sources [R-2]

>

### I. < IN GENERAL

General information about patents, trademarks, products and services offered by the United States Patent and Trademark Office (USPTO), and other related information is available by contacting the USPTO's General Information Services Division at:

800-PTO-9199 or 703-308-HELP  
(FAX) 703-305-7786  
(TDD) 703-305-7785

An automated message system is available 7 days a week, 24 hours a day providing informational responses to frequently asked questions and the ability to order certain documents. Customer service representatives are available to answer questions, send materials or connect customers with other offices of the USPTO from 8:30 a.m. - 8:00 p.m. EST/EDT, Monday-Friday excluding federal holidays.

For other technical patent information needs, the \*>Inventors< Assistance Center can be reached through customer service representatives at the above numbers, Monday through Friday (except federal holidays) from 8:30 a.m. to 5:00 p.m. EST/EDT.

For questions or concerns relating to other technical trademark matters, the Trademark Assistance Center can be reached at 703-308-9000 or by facsimile at 703-308-7016.

General information brochures can also be obtained in person from the Patent Search Room located in Crystal Plaza 3, Room 1A03, 2021 South Clark Place, Arlington, VA 22202.

>

### II. < USPTO INTERNET SITE

>

#### A. < General Information

The USPTO web site (<http://www.uspto.gov> or <ftp.uspto.gov>) provides a wealth of information to all users. The USPTO web site offers links to news and

notices (such as announcements, press releases, *Official Gazette* Notices and *Federal Register* Notices), USPTO contacts and addresses, activities and education related pages (such as the PTDL and Independent Inventor programs and the Kids Pages), patent specific information (such as issued patents and published patent applications, general information pertaining to applying for a patent, electronic filing of patent applications, and reference materials such as the MPEP and examination guidelines), and trademark specific information (such as the Trademark Manual of Examining Procedure and the U.S. Trademark Electronic Search System (TESS)). In addition, the web site allows downloading of a variety of USPTO forms (including PCT forms), ordering copies of patents and trademarks, accessing a list of all current fees, paying patent maintenance fees, replenishing deposit accounts, accessing various legal materials, linking to related web sites, etc.

&gt;

### **B. < Patent Related Databases**

The USPTO web site offers two patent database collections which provide the public with flexible and powerful search capabilities. The Patent Grants Database provides access to the full-text of all U.S. patents issued since 1976, and to the full-page images of all U.S. patents issued since 1790. The Patent Applications Database provides both full-text and full-page images of all U.S. patent applications published since March 15, 2001.

&gt;

### **C. < Patent Electronic Business Center**

The Patent Electronic Business Center (EBC) allows USPTO customers to retrieve data, check the status of pending actions, and submit information and applications. The tools currently available in the Patent EBC are Patent Application Information Retrieval (PAIR) and the Electronic Filing System (EFS). >The hours of operation of the EBC are Monday to Friday 6 am - Midnight Eastern Standard time. The EBC can be reached by telephone at (866-217-9197) (toll-free), 703-305-3028, or 703-308-6845. The EBC may be reached by e-mail at [ebc@uspto.gov](mailto:ebc@uspto.gov).

PAIR (<http://pair.uspto.gov>) provides customers direct secure access to their own patent application \* information >, and, if available, the Image File Wrapper (IFW) of the application (Private PAIR)<, as well as to general patent information publicly available >(Public PAIR). Private PAIR allows customers access to their own patent application when a Customer Number is associated with the correspondence address for the patent application and the customer is associated with the customer number. *Pro se* inventors and registered patent attorneys and patent agents can be associated with a Customer Number. See MPEP § 403 for Customer Number practice. Questions about IFW images viewed in PAIR should be directed to the Patent EBC. Public PAIR provides access to patent application information related to applications that have been published as patent application publications or issued as patents. For example, Public PAIR provides information on the patent term adjustment calculation, as well as the maintenance fee payment information for a patent<.

EFS allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in eXtensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS \* allows the submission of Computer Readable Format (CRF) sequence listings >and electronic information disclosure statements< for pending \* patent applications which were filed in paper form. >EFS can also be used to submit provisional applications as well as assignment documents for patent applications and patents.

### **III. < PCT**

For questions and information concerning the Patent Cooperation Treaty (PCT), the PCT Help Desk is available to provide assistance and may be reached by telephone at (703) 305-3257 between the hours of 9:00 am and 4:30 pm (EST/EDT), Monday through Friday, or by facsimile at (703) 305-2919, 24 hours a day. In addition, helpful information is available through the internet at the >Office of< PCT Legal \*>Administration< page of the USPTO web site and

at the World Intellectual Property Office web site (<http://www.wipo.org/>).

>

#### IV. < USPTO SEARCH AND INFORMATION RESOURCE FACILITIES

The following USPTO search and information resource facilities are accessible to the public:

(A) Patent Search Room (Crystal Plaza 3, 1A03) at **\*\*>(703) 308-0044<**

(Hours: Weekdays, 8:00 a.m. to 8:00 p.m., EST/EDT);

(B) **\*\*Patent Assignment Search Room** (Crystal Plaza 3, **\*\*>1A03**) at 703-308-0044<

(Hours: Weekdays, 8:30 a.m. to 5:00 p.m., EST/EDT); and

**\*>**

(C) < Scientific and Technical Information Center

**\*\*>(1) Main Library** (Crystal Plaza 3/4, 2C08) at (703) 308-1076

(2) Biotech/Chemical Library (Remsen 1D58) at (571) 272-2520<

(Hours: Weekdays, 8:30 a.m. to 5:00 p.m., EST/EDT).

>

#### V. < REGISTERED PRACTITIONERS

The USPTO cannot recommend any particular attorney or agent, or aid in the selection of an attorney or agent. A list of *Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office* may be purchased **\*\*>on DVD-ROM<** from the USPTO's Office of Electronic Information Products and Services (703-306-2600). **\*>The DVD-ROM<** is also available on the USPTO web site **>(http://www.uspto.gov)** from the "Products and Services Catalog"<.

To obtain a list of registered patent attorneys and agents for a particular area, customers may either **\*\*** contact a customer service representative through the USPTO's General Information Services Division (see "In General" above), or acquire the information from the USPTO web site. The attorneys and agents list may be examined without charge at Patent and Trade-

mark Depository Libraries (PTDLs) and at many other libraries throughout the U.S. Many large cities also have associations of patent attorneys and agents which may be consulted.

>

#### VI. < MISCELLANEOUS

>

##### A. < *Recently Filed Applications*

For information and questions concerning recently filed patent applications and filing receipts, contact the Customer Service Center of the Office of Initial Patent Examination at (703) 308-1202 (hours: weekdays, 8:30 a.m. to 5:00 p.m., EST/EDT; the Customer Service Center hours for receipt of mail are weekdays, 8:30 a.m. to 12 midnight, EST/EDT).

>

##### B. *Pre-Grant Publication*

For inquiries concerning projected pre-grant publication dates, contact the Pre-Grant Publication Division at (703) 605-4823.

##### C. < *Status Information*

For information on the status of a patent application, **>patent applicants who have access to PAIR should check PAIR. Alternatively, applicants may<** contact the File Information Unit at (703) 308-2733.

>

##### D. *Correspondence*

For information pertaining to mail, facsimile, or hand-delivery of correspondence to the USPTO, see MPEP §§ 502 - 502.01.

##### E. < *Copies of Documents*

Inquiries regarding certified copies of documents, including patent applications-as-filed, patent related file wrappers, patent copies, and reproduced copies of individual replacement pages or previous revisions of the MPEP, should be directed to the Certification Division at (703) 308-9726 or 1-800-972-6382. Orders for certified copies may be placed by facsimile

when paying by VISA®, MasterCard®, American Express®, Discover®, or USPTO Deposit Account at (703) 308-7048. Orders for uncertified copies of patents may be placed by phone at (703) 305-8716\*,< by fax at (703) 305-8759>, or on the USPTO web site<. To order file histories for self-service copying, contact the File Information Unit at (703) 308-2733.

>

**F. < Maintenance Fees**

Information regarding maintenance fees may be obtained \*\*>from the Patent Application Information Retrieval (PAIR) system on the USPTO web site, or by contacting the Maintenance Fee Branch< at (703) 308-5068 \*\*. Status requests can also be faxed to the \*\*>Maintenance Fee Branch< at (703) 308-5077.

>

**G < Assignments**

For questions pertaining to filing assignments or other documents affecting title, contact the Assign-

ment Division at (703) 308-9723. Documents may be submitted to the Assignment Division by facsimile at (703) 306-5995. See MPEP § 302.09 for additional information.

>

**H. < Petitions**

For matters decided by the Office of Petitions, the appropriate USPTO personnel may be reached at (703) 305-9282 or by facsimile at \*\*>(703) 872-9306<.

>

**I. < PatentIn**

For information regarding orders for the PatentIn software program, call the Office of Electronic Information Products and Services at (703) 306-2600. For assistance using PatentIn, \*\*>contact the Patent Electronic Business Center, see paragraph II.C., above<.

## INTRODUCTION

This chapter is designed to be a guide for patent examiners in searching and examining applications filed under the Patent Cooperation Treaty (PCT). Applicants desiring additional information for filing international applications should obtain a copy of the PCT Applicant's Guide from the World Intellectual Property Organization (WIPO) in Geneva, Switzerland.

The Articles and Regulations under the PCT are reproduced in Appendix T of this Manual and the Administrative Instructions are reproduced in Appendix AI of this Manual. The text of the *PCT Applicant's Guide*, the monthly *PCT Newsletter*, the weekly *PCT Gazette*, downloadable PCT forms, and additional information about the processing of international applications are available from WIPO's website ([www.wipo.int/pct](http://www.wipo.int/pct)).

PCT applications are processed by the International Application Processing Division within the U.S. Patent and Trademark Office.

## 1801 Basic Patent Cooperation Treaty (PCT) Principles [R-2]

### MAJOR CONCEPTS OF THE PCT

The Patent Cooperation Treaty (PCT) enables the U.S. applicant to file one application, "an international application," in a standardized format in English in the U.S. Receiving Office (the U.S. Patent and Trademark Office), and have that application acknowledged as a regular national >or regional< filing in as many \*\*>Contracting States< to the PCT as the applicant "designates" or "elects," that is, names, as countries >or regions< in which patent protection is desired. >(For international applications filed on or after January 1, 2004, the filing of an international application will automatically constitute the designation of all contracting countries to the PCT on that filing date.)< In the same manner, the PCT enables foreign applicants to file a PCT international application, designating the United States of America, in their home language in their home patent office and have the application acknowledged as a regular U.S. national filing. The PCT also provides for \*\*>an international search report and written opinion (for international applications filed on or after January 1, 2004) that are established normally at 16 months from the priority date,< and publication >of the international application< after 18 months from the priority date. Upon payment of national fees and the furnishing of any required translation, usually 30 months after the filing of any priority application for the invention, or the international filing date if no priority is claimed, the application will be subjected to national procedures for granting of patents in each of the designated countries. For \*>any< countries >remaining< whose national laws are not compatible with the 30 month period set forth in PCT Article 22(1), the filing of a demand for an international preliminary examination electing such countries within 19 months from the priority date will result in an extension of the period for entering the national stage to 30 months from the priority date. >An up-to-date list of such countries may be found on WIPO's web site ([www.wipo.int/pct/en/index.html](http://www.wipo.int/pct/en/index.html)).< A brief description of the basic flow under the PCT is provided in MPEP § 1842.

The PCT offers an alternative route to filing patent applications directly in the patent offices of those

countries which are *>Contracting States<* of the PCT. It does not preclude taking advantage of the priority rights and other advantages provided under the Paris Convention and the WTO administered Agreement on Trade-Related Aspects of Intellectual Property (TRIPS Agreement). The PCT provides an additional and optional foreign filing route to patent applicants.

The filing, search and publication procedures are provided for in Chapter I of the PCT. Additional procedures for a preliminary examination of PCT international applications are provided for in optional PCT Chapter II.

In most instances a national U.S. application *\** is filed first. An international application for the same subject matter will then be filed subsequently within the priority year provided by the Paris Convention and the priority benefit of the U.S. national application filing date will be claimed.

### RECEIVING OFFICE (RO)

The international application (IA) must be filed in the prescribed receiving Office (RO) (PCT Article 10). The United States Patent and Trademark Office will act as a receiving Office for United States residents and nationals (35 U.S.C. 361(a)). Under PCT Rule 19.1(a)(iii), the International Bureau of the World Intellectual Property Organization will also act as a Receiving Office for U.S. residents and nationals. The receiving Office functions as the filing and formalities review organization for international applications. International applications must contain upon filing the designation of at least one *>Contracting State<* in which patent protection is desired and must meet certain standards for completeness and formality (PCT Articles 11(1) and 14(1)).

Where a priority claim is made, the date of the earlier filed national application is used as the date for determining the timing of international processing, including the various transmittals, the payment of certain international and national fees, and publication of the application. Where no priority claim is made, the international filing date will be considered to be the "priority date" for timing purposes (PCT Article 2(xi)).

The international application is subject to the payment of certain fees *\*\** within 1 month *\*\*>*from the date of filing<. The receiving Office will grant an

international filing date to the application, collect fees, handle informalities by direct communication with the applicant, and monitor all corrections (35 U.S.C. 361(d)). By 13 months from the priority date, the receiving Office should prepare and transmit a copy of the international application, called the search copy (SC), to the International Searching Authority (ISA); and forward the original, called the record copy (RC), to the International Bureau (IB) (PCT Rules 22.1 and 23). A second copy of the international application, the home copy (HC), remains in the receiving Office (PCT Article 12(1)). Once the receiving Office has transmitted copies of the application, the International Searching Authority becomes the focus of international processing.

### INTERNATIONAL SEARCHING AUTHORITY (ISA)

The basic *>functions<* of the International Searching Authority (ISA) *>are<* to conduct a prior art search of inventions claimed in international applications; it does this by searching in at least the minimum documentation defined by the Treaty (PCT Articles 15 and 16 and PCT Rule 34)>, and for international applications filed on or after January 1, 2004, to issue a written opinion (PCT Rule 43<sup>bis</sup>) which will normally be considered to be the first written opinion of the International Preliminary Examining Authority where international preliminary examination is demanded. See PCT Rule 66.1<sup>bis</sup><.

For most applications filed with the United States Receiving Office, the applicant may choose (in the Request form) either the U.S. Patent and Trademark Office or the European Patent Office to act as the International Searching Authority. However, the European Patent Office *\*\*>*may not be< competent to act as an International Searching Authority for certain applications filed by nationals or residents of the United States. See MPEP § 1840.01 for a discussion of applications and subject matter that will not be searched by the European Patent Office. The International Searching Authority is also responsible for checking the content of the title and abstract (PCT Rules 37.2 and 38.2).

An international search report (ISR)>, and for international applications filed on or after January 1, 2004, a written opinion,< will normally be issued by the International Searching Authority within 3 months

from the receipt of the search copy (usually about 16 months after the priority date) (PCT Rule 42). Copies of the international search report and prior art cited will be sent to the applicant by the ISA (PCT Rules 43 and 44.1). The international search report will contain a listing of documents found to be relevant and will identify the claims in the application to which they are pertinent. \*\*>In applications filed on or after January 1, 2004, the ISA will normally issue a written opinion as to whether each claim appears to satisfy the PCT Article 33 criteria of “novelty,” “inventive step,” and “industrially applicable.” The written opinion may also indicate defects in the form or content of the international application under the PCT articles and regulations, as well as any observations the ISA wishes to make on the clarity of the claims, the description, and the drawings, or on the question of whether the claims are fully supported by the description.

Once the international search report and written opinion are established, the ISA transmits one copy of each to the applicant and the International Bureau, and international processing continues before the International Bureau.<

### **INTERNATIONAL BUREAU (IB)**

The basic functions of the International Bureau (IB) are to maintain the master file of all international applications and to act as the publisher and central coordinating body under the Treaty. The World Intellectual Property Organization (WIPO) in Geneva, Switzerland performs the duties of the International Bureau.

If the applicant has not filed a certified copy of the priority document in the receiving Office with the international application, or requested upon filing that the receiving Office prepare and transmit to the International Bureau a copy of the prior U.S. national application, the priority of which is claimed, the applicant must submit such a document directly to the International Bureau or the receiving Office not later than 16 months after the priority date (PCT Rule 17). The \*\*>request (Form PCT/RO/101)< contains a box which can be checked requesting that the receiving Office prepare the certified copy. This is only possible, of course, if the receiving Office is a part of the same national Office where the priority application was filed.

The applicant has normally 2 months from the date of transmittal of the international search report to amend the claims by filing an amendment >and may file a brief statement explaining the amendment< directly with the International Bureau (PCT Article 19 and PCT Rule 46). The International Bureau will then normally publish the international application along with the search report and any amended claims \* at the expiration of 18 months from the priority date (PCT Article 21). >The written opinion, on the other hand, will not be made publicly available until the expiration of 30 months from the priority date. See PCT Rule 44<sup>ter</sup>.< The international publication is in pamphlet form with a front page containing bibliographical data, the abstract, and a figure of the drawing (PCT Rule 48). The pamphlet also contains the search report and any amendments to the claims submitted by the applicant. If the application is published in a language other than English, the search report and abstract are also published in English. The International Bureau publishes a *PCT Gazette* in the French and English languages which contains information similar to that on the front pages of published international applications, as well as various indexes and announcements (PCT Rule 86). The International Bureau also transmits copies of the international application to all the designated Offices (PCT Article 20 and PCT Rule 47).

### **DESIGNATED OFFICE (DO) and ELECTED OFFICE (EO)**

The designated Office is the national Office (for example, the USPTO) acting for the state or region designated under Chapter I. Similarly, the elected Office is the national Office acting for the state or region elected under Chapter II.

PCT Article 22(1) was amended, effective April 1, 2002, to specify that a copy of the international application, a translation thereof (as prescribed), and the national fee are due to the designated Office not later than at the expiration of 30 months from the priority date. Accordingly, the time period for filing the copy of the international application, the translation, and the fee under PCT Article 22 is now the same as the 30 month time period set forth in PCT Article 39. >The USPTO has adopted the 30 month time limit set forth in PCT Article 22(1).< However, not all Contracting States have changed their national laws for

consistency with PCT Article 22(1) as amended. Accordingly, if no “Demand” for international preliminary examination has been filed within 19 months of the priority date, the applicant may be required to complete the requirements for entering the national stage within 20 months from the priority date of the international application in some national or regional offices. When entering the national stage following Chapter I, the applicant has the right to amend the application within the time limit set forth in PCT Rule 52.1. After this time limit has expired (PCT Article 28 and PCT Rule 52), each designated Office will make its own determination as to the patentability of the application based upon its own specific national or regional laws (PCT Article 27(5)).

If the applicant desires to obtain the benefit of delaying the entry into the national stage until 30 months from the priority date in one or more countries \*\*>where< the 30 month time limit set forth in PCT Article 22(1) as amended >does not apply<, a Demand for international preliminary examination must be filed with an appropriate International Preliminary Examining Authority within 19 months of the priority date. Those states in which the Chapter II procedure is desired must be “elected” in the Demand. >For international applications filed on or after January 1, 2004, the applicant should file the demand with the competent International Preliminary Examining Authority (IPEA) before the expiration of the later of the following time limits: (A) three months from the date of transmittal to the applicant of the international search report and written opinion under PCT Rule 43<sup>bis</sup>.1, or of the declaration referred to in PCT Article 17(2)(a); or (B) 22 months from the priority date of the international application. However, applicant may still desire to file the demand by 19 months from the priority date for those countries that have not yet adopted PCT Article 22(1) as amended.<

The original Demand is forwarded to the International Bureau by the \*\*>IPEA<. The International Bureau then notifies the various elected Offices that the applicant has entered Chapter II >and sends a copy of any amendments filed under PCT Article 19 and any statement explaining the amendments to the IPEA. See PCT Rule 62. In applications filed on or after January 1, 2004, the International Bureau also sends the IPEA a copy of the written opinion established by the International Searching Authority unless

the International Searching Authority is also acting as IPEA. See PCT Rule 62.1(i)<.

\*\*>

### **INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY (IPEA)**

The International Preliminary Examining Authority (IPEA) normally starts the examination process when it is in possession of the demand, the amount due, and if the applicant is required to furnish a translation under PCT Rule 55.2, that translation and either the international search report (and the written opinion established under PCT Rule 43<sup>bis</sup>.1 if the international application has a filing date on or after January 1, 2004) or a notice of the declaration by the International Searching Authority (ISA) that no international search report will be established. However, for international applications having an international filing date on or after January 1, 2004, the IPEA shall not start the international preliminary examination before the expiration of the later of three months from the transmittal of the international search report and written opinion or of the declaration that no international search report will be established; or the expiration of 22 months from the priority date unless the applicant expressly requests an earlier start, with the exception of the situations provided for in PCT Rule 69.1(b)-(e).

The written opinion of the ISA is usually considered the first written opinion of the IPEA unless the IPEA has notified the International Bureau that written opinions established by specified International Searching Authorities shall not be considered a written opinion for this purpose. See PCT Rule 66.1<sup>bis</sup>. Also, the IPEA may, at its discretion issue further written opinions provided sufficient time is available. See PCT Rule 66.4.

The IPEA establishes the international preliminary examination report (entitled “international preliminary report on patentability” for applications having an international filing date on or after January 1, 2004),< which presents the examiner’s final position as to whether each claim is “novel,” involves “inventive step,” and is “industrially applicable” by 28 months from the priority date. A copy of the international preliminary examination report is sent to the applicant and to the International Bureau. The International Bureau then communicates a copy of the

international preliminary examination report to each elected Office.

The applicant must complete the requirements for entering the national stage by the expiration of 30 months from the priority date to avoid any question of withdrawal of the application as to that elected Office, however, some elected Offices provide a longer period to complete the requirements.

A listing of all national and regional offices, and the corresponding time limits for entering the national stage after PCT Chapter I and PCT Chapter II, may be found on WIPO's web site at: <http://www.wipo.int/pct/en/index.html>.

## 1802 PCT Definitions [R-1]

The PCT contains definitions in PCT Article 2 and in PCT Rule 2, which are found in MPEP Appendix T. Additional definitions are in 35 U.S.C. 351, found in MPEP Appendix L, in 37 CFR 1.9 and 1.401, found in MPEP Appendix R, and in PCT Administrative Instructions Section 101, found in MPEP Appendix AI.

## 1803 Reservations Under the PCT Taken by the United States of America

The United States of America had originally declared that it was not bound by Chapter II (PCT Article 64 (1)), but withdrew that reservation on July 1, 1987.

It has also declared that, as far as the United States of America is concerned, international publication is not required (PCT Article 64 (3)). Accordingly, under PCT Article 64(3)(b), if the United States is the only PCT Contracting State designated in an international application, the international application will not be published by the International Bureau (IB) at 18 months. Even though the United States Patent and Trademark Office has begun pre-grant publication under 35 U.S.C. 122(b), the United States has not removed its reservation under PCT Article 64(3) because not all United States patent applications are published. See 35 U.S.C. 122(b)(2). The application will, however, be published under 35 U.S.C. 122(b) if it enters the national stage in the United States. It will be published again if it is allowed to issue as a United States patent.

The United States of America also made a reservation under PCT Article 64(4) which relates to the

prior art effective date of a U.S. patent issuing from an international application. See 35 U.S.C. 102(e) and 363.

The above reservations under PCT Article 64(3) and (4) are still in effect.

The U.S. Receiving Office continues to accept applications only in English. See 35 U.S.C. 361(c). PCT Rules 20.4(c), 26.3<sup>ter</sup>(a) and 26.3<sup>ter</sup>(c) permit an international filing date to be accorded even though portions of an international application are in a language not acceptable to the Receiving Office. PCT Rules 20.4(c), 26.3<sup>ter</sup>(a) and 26.3<sup>ter</sup>(c) are not compatible with the national law applied by the United States Patent and Trademark Office (USPTO) as Receiving Office. Thus, the USPTO has taken a reservation on adherence to these Rules pursuant to PCT Rules 20.4(d), 26.3<sup>ter</sup>(b) and 26.3<sup>ter</sup>(d). As a result, PCT Rules 20.4(c), 26.3<sup>ter</sup>(a) and 26.3<sup>ter</sup>(c) shall not apply to the USPTO as Receiving Office for as long as the aforementioned incompatibility exists.

Also, PCT Rules 49.5(c<sup>bis</sup>) and 49.5(k) continue not to be compatible with the national law applied by the USPTO as a Designated Office. See 35 U.S.C. 371(c)(2). As a result, PCT Rules 49.5(c<sup>bis</sup>) and 49.5(k) shall not apply to the USPTO as Designated Office for as long as the aforementioned incompatibility exists. See the International Bureau's notice published in *PCT Gazette* No. 07/1992.

## 1805 Where To File an International Application [R-2]

35 U.S.C. 361. *Receiving Office.*

(a) The Patent and Trademark Office shall act as a Receiving Office for international applications filed by nationals or residents of the United States. In accordance with any agreement made between the United States and another country, the Patent and Trademark Office may also act as a Receiving Office for international applications filed by residents or nationals of such country who are entitled to file international applications.

\*\*\*\*\*

See 37 CFR 1.421 - 1.423 as to who can file an international application.

Only if at least one of the applicants is a resident or national of the United States of America may an international application be filed in the United States Receiving Office (PCT Article 9(1) and (3), PCT Rules 19.1 and 19.2, 35 U.S.C. 361(a) and 37 CFR

1.412(a), 1.421). The concepts of residence and nationality are defined in PCT Rule 18.1. For the purpose of filing an international application, the applicant may be either the inventor or the successor in title of the inventor (assignee or owner). However, the laws of the various designated States regarding the requirements for applicants must also be considered when filing an international application. For example, the patent law of the United States of America requires that, for the purposes of designating the United States of America, the applicant(s) must be the inventor(s) (35 U.S.C. 373, PCT Article 27(3)).

The United States Receiving Office is located in Crystal Plaza, Building 2, 8th floor, 2011 South Clark Place, Arlington, Virginia. International applications and related papers may be deposited directly with the United States Receiving Office or be mailed to: \*\*>Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450<. It should be noted that the “Express Mail” provisions of 37 CFR 1.10 apply to the filing of all applications and papers filed in the U.S. Patent and Trademark Office, including PCT international applications and related papers and fees. It should be further noted, however, that PCT international applications and papers relating to international applications are specifically excluded from the Certificate of Mailing or Transmission procedures under 37 CFR 1.8. \*\*>See MPEP § 1834.< If 37 CFR 1.8 is improperly used, the date to be accorded the paper will be the date of actual receipt in the Office unless the receipt date falls on a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6).

Irrespective of the Certification practice under 37 CFR 1.8(a), facsimile transmission (without the benefit of the certificate under 37 CFR 1.8(a)) may be used to submit certain papers in international applications. However, facsimile transmission may not be used for the filing of an international application, the filing of drawings under 37 CFR 1.437, or the filing of a copy of the international application, and the basic national fee to enter the U.S. national stage under 35 U.S.C. 371. See 37 CFR 1.6(d)(3) and (4), 1.8(a)(2)(i)(D), and 1.8(a)(2)(i)(F). The Demand for international preliminary examination may be filed by facsimile transmission. See MPEP § 1834.01.

The United States Receiving Office staff is available to offer guidance on PCT requirements and procedures. See MPEP § 1730 for information on contacting the staff and other available means for obtaining information.

**WARNING** - although the United States patent law at 35 U.S.C. 21(a) authorizes the \*>Director< to prescribe by rule that any paper or fee required to be filed in the Patent and Trademark Office will be considered filed in the Office on the date on which it was deposited with the United States Postal Service, PCT Rule 20.1(a) provides for marking the “date of actual receipt on the request.” Although the “Express Mail” provisions under 37 CFR 1.10 have not been contested to date regarding PCT applications, applicants should be aware of a possible different interpretation by foreign authorities.

PCT Rule 19.4 provides for transmittal of an international application to the International Bureau as Receiving Office in certain instances. For example, when the international application is filed with the United States Receiving Office and the language in which the international application is filed is not accepted by the United States Receiving Office, or if the applicant does not have the requisite residence or nationality, the application may be forwarded to the International Bureau for processing in its capacity as a Receiving Office. See 37 CFR 1.412(c)(6). The Receiving Office of the International Bureau will consider the international application to be received as of the date accorded by the United States Receiving Office. This practice will avoid the loss of a filing date in those instances where the United States Receiving Office is not competent to act, but where the international application indicates an applicant to be a national or resident of a PCT Contracting state or is in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office. Of course, where questions arise regarding residence or nationality, i.e., the U.S. is not clearly competent, the application will be forwarded to the International Bureau as Receiving Office. Note, where no residence or nationality is indicated, the U.S. is not competent, and the application will be forwarded to the International Bureau as Receiving Office so long as the necessary fee is paid. The fee is an amount equal to the transmittal fee.

If all of the applicants are indicated to be residents or nationals of non-PCT Contracting States, PCT Rule 19.4 does not apply, and the application is denied an international filing date.

**1807 Agent or Common Representative and General Power of Attorney [R-2]**

*37 CFR 1.455. Representation in international applications.*

(a) Applicants of international applications may be represented by attorneys or agents registered to practice before the Patent and Trademark Office or by an applicant appointed as a common representative (PCT Art. 49, Rules 4, 8 and 90 and § 10.10). If applicants have not appointed an attorney or agent or one of the applicants to represent them, and there is more than one applicant, the applicant first named in the request and who is entitled to file in the U.S. Receiving Office shall be considered to be the common representative of all the applicants. An attorney or agent having the right to practice before a national office with which an international application is filed and for which the United States is an International Searching Authority or International Preliminary Examining Authority may be appointed to represent the applicants in the international application before that authority. An attorney or agent may appoint an associate attorney or agent who shall also then be of record (PCT Rule 90.1(d)). The appointment of an attorney or agent, or of a common representative, revokes any earlier appointment unless otherwise indicated (PCT Rule 90.6(b) and (c)).

\*\*>

(b) Appointment of an agent, attorney or common representative (PCT Rule 4.8) must be effected either in the Request form, signed by applicant, in the Demand form, signed by applicant, or in a separate power of attorney submitted either to the United States Receiving Office or to the International Bureau.<

(c) Powers of attorney and revocations thereof should be submitted to the United States Receiving Office until the issuance of the international search report.

(d) The addressee for correspondence will be as indicated in section 108 of the Administrative Instructions.

>

*PCT Rule 90.  
Agents and Common Representatives*

\*\*\*\*\*

*90.4.Manner of Appointment of Agent or Common Representative*

(a) The appointment of an agent shall be effected by the applicant signing the request, the demand, or a separate power of attorney. Where there are two or more applicants, the appointment of a common agent or common representative shall be effected by

each applicant signing, at his choice, the request, the demand or a separate power of attorney.

(b) Subject to Rule 90.5, a separate power of attorney shall be submitted to either the receiving Office or the International Bureau, provided that, where a power of attorney appoints an agent under Rule 90.1(b), (c), or (d)(ii), it shall be submitted to the International Searching Authority or the International Preliminary Examining Authority, as the case may be.

(c) If the separate power of attorney is not signed, or if the required separate power of attorney is missing, or if the indication of the name or address of the appointed person does not comply with Rule 4.4, the power of attorney shall be considered nonexistent unless the defect is corrected.

(d) Subject to paragraph (e), any receiving Office, any International Searching Authority, any International Preliminary Examining Authority and the International Bureau may waive the requirement under paragraph (b) that a separate power of attorney be submitted to it, in which case paragraph (c) shall not apply.

(e) Where the agent or the common representative submits any notice of withdrawal referred to in Rules 90<sup>bis</sup>.1 to 90<sup>bis</sup>.4, the requirement under paragraph (b) for a separate power of attorney shall not be waived under paragraph (d).

\*\*\*\*\*

<

Where an appointment of an agent or common representative is effected by a separate power of attorney, that power of attorney must be submitted to either the receiving Office or the International Bureau. However, a power of attorney appointing an agent or sub-agent to represent the applicant specifically before the International Searching Authority or the International Preliminary Examining Authority must be submitted directly to that Authority. >See PCT Rule 90.4(b).<

**“GENERAL” POWER OF ATTORNEY**

>

*PCT Rule 90.  
Agents and Common Representatives*

\*\*\*\*\*

*90.5.General Power of Attorney*

(a) Appointment of an agent in relation to a particular international application may be effected by referring in the request, the demand, or a separate notice to an existing separate power of attorney appointing that agent to represent the applicant in relation to any international application which may be filed by that applicant (i.e., a “general power of attorney”), provided that:

(i) the general power of attorney has been deposited in accordance with paragraph (b), and

(ii) a copy of it is attached to the request, the demand or the separate notice, as the case may be; that copy need not be signed.

(b) The general power of attorney shall be deposited with the receiving Office, provided that, where it appoints an agent under Rule 90.1(b), (c), or (d)(ii), it shall be deposited with the International Searching Authority or the International Preliminary Examining Authority, as the case may be.

(c) Any receiving Office, any International Searching Authority and any International Preliminary Examining Authority may waive the requirement under paragraph (a)(ii) that a copy of the general power of attorney is attached to the request, the demand or the separate notice, as the case may be.

(d) Notwithstanding paragraph (c), where the agent submits any notice of withdrawal referred to in Rules 90bis.1 to 90bis.4 to the receiving Office, the International Searching Authority or the International Preliminary Examining Authority, a copy of the general power of attorney shall be submitted to that Office or Authority.

\*\*\*\*\*

<

“General” powers of attorney are recognized for the purpose of filing and prosecuting an international application before the international authorities. \*\*>See PCT Rule 90.5.<

Any general power of attorney must be filed with the receiving Office if the appointment was for the purposes of the international phase generally, or with the International Searching Authority or International Preliminary Examining Authority if the appointment was specifically to represent the applicant before that Authority. The appointment will then be effective in relation to any particular application filed by that applicant provided that the general power of attorney is referred to in the request, the Demand or a separate notice, and that a copy of the general power of attorney is attached to that request, Demand or separate notice. That copy of the signed original need not, itself, be separately signed. \*\*

#### >WAIVER OF REQUIREMENT FOR A POWER OF ATTORNEY

Pursuant to new PCT Rules 90.4(d) and 90.5(c), which are applicable to international applications having an international filing date on or after January 1, 2004, the receiving Office, International Bureau, International Searching Authority and International Preliminary Examining Authority may waive the requirement for a separate power of attorney or copy of the general power of attorney in all cases except

with respect to notice of withdrawals under PCT Rule 90<sup>bis</sup> (i.e., notices withdrawing international applications, designations, priority claims, demands or elections). The USPTO, when acting in its capacity as a receiving Office, International Searching Authority, or International Preliminary Examining Authority, will in most cases waive the requirement for a separate power of attorney and copy of the general power of attorney in international applications having an international filing date on or after January 1, 2004. However, a separate power of attorney or copy of the general power of attorney may still be required in certain cases, e.g., where an agent’s authority to act on behalf of the applicant is in doubt.

Model power of attorney and general power of attorney forms are available online from WIPO’s web site ([www.wipo.int/pct/en/index.html](http://www.wipo.int/pct/en/index.html)).<

### 1808 Change in or Revocation of the Appointment of an Agent or a Common Representative [R-2]

*PCT Rule 90.*

*Agents and Common Representatives*

\*\*\*\*\*

#### 90.6.Revocation and Renunciation

(a) Any appointment of an agent or common representative may be revoked by the persons who made the appointment or by their successors in title, in which case any appointment of a subagent under Rule 90.1(d) by that agent shall also be considered as revoked. Any appointment of a subagent under Rule 90.1(d) may also be revoked by the applicant concerned.

(b) The appointment of an agent under Rule 90.1(a) shall, unless otherwise indicated, have the effect of revoking any earlier appointment of an agent made under that Rule.

(c) The appointment of a common representative shall, unless otherwise indicated, have the effect of revoking any earlier appointment of a common representative.

(d) An agent or a common representative may renounce his appointment by a notification signed by him.

(e) Rule 90.4(b) and (c) shall apply, *mutatis mutandis*, to a document containing a revocation or renunciation under this Rule.

#### 37 CFR 1.455. Representation in international applications.

(a) Applicants of international applications may be represented by attorneys or agents registered to practice before the Patent and Trademark Office or by an applicant appointed as a common representative (PCT Art. 49, Rules 4, 8 and 90 and § 10.10). If applicants have not appointed an attorney or agent or one of the applicants to represent them, and there is more than one

applicant, the applicant first named in the request and who is entitled to file in the U.S. Receiving Office shall be considered to be the common representative of all the applicants. An attorney or agent having the right to practice before a national office with which an international application is filed and for which the United States is an International Searching Authority or International Preliminary Examining Authority may be appointed to represent the applicants in the international application before that authority. An attorney or agent may appoint an associate attorney or agent who shall also then be of record (PCT Rule 90.1(d)). The appointment of an attorney or agent, or of a common representative, revokes any earlier appointment unless otherwise indicated (PCT Rule 90.6(b) and (c)).

\*\*>

(b) Appointment of an agent, attorney or common representative (PCT Rule 4.8) must be effected either in the Request form, signed by applicant, in the Demand form, signed by applicant, or in a separate power of attorney submitted either to the United States Receiving Office or to the International Bureau.<

(c) Powers of attorney and revocations thereof should be submitted to the United States Receiving Office until the issuance of the international search report.

(d) The addressee for correspondence will be as indicated in section 108 of the Administrative Instructions.

The appointment of an agent or a common representative can be revoked. The document containing the revocation must be signed by the persons who made the appointment or by their successors in title. The appointment of a sub-agent may also be revoked by the applicant concerned. If the appointment of an agent is revoked, any appointment of a sub-agent by that agent is also considered revoked.

The appointment of an agent for the international phase in general automatically has the effect, unless otherwise indicated, of revoking any earlier appointment of an agent. The appointment of a common representative similarly has the effect, unless otherwise indicated, of revoking any earlier appointment of a common representative.

\*\*

Renunciation of an appointment may be made by means of a notification signed by the agent or common representative. \*\* The applicant is informed of the renunciation by the International Bureau.

>The rules for signing and submission of a power of attorney set forth in PCT Rule 90.4(b) and (c) also apply to a revocation or renunciation of an appointment. See PCT Rule 90.6(e).<

U.S. attorneys or agents wishing to withdraw from representation in international applications may request to do so. To expedite the handling of requests for permission to withdraw as attorney, the request

should be submitted \*\* to \*>Mail Stop< PCT and should indicate the present mailing addresses of the attorney who is withdrawing and of the applicant. Because the United States Patent and Trademark Office (USPTO) does not recognize law firms, each attorney of record must sign the notice of withdrawal, or the notice of withdrawal must contain a clear indication of one attorney signing on behalf of another.

The USPTO usually requires that there be at least 30 days between approval of withdrawal and the expiration date of a time response period so that the applicant will have sufficient time to obtain other representation or take other action. If less than 30 days remains in a running response period, a request to withdraw is normally disapproved.

For withdrawal of attorney or agent in the national stage, see MPEP § 402.06.

## 1810 Filing Date Requirements [R-2]

### *PCT Article 11.*

#### *Filing Date and Effects of the International Application*

(1) The receiving Office shall accord as the international filing date the date of receipt of the international application, provided that that Office has found that, at the time of receipt:

(i) the applicant does not obviously lack, for reasons of residence or nationality, the right to file an international application with the receiving Office,

(ii) the international application is in the prescribed language,

(iii) the international application contains at least the following elements:

(a) an indication that it is intended as an international application,

(b) the designation of at least one Contracting State,

(c) the name of the applicant, as prescribed,

(d) a part which on the face of it appears to be a description,

(e) a part which on the face of it appears to be a claim or claims.

\*\*\*\*\*

#### *35 U.S.C. 363. International application designating the United States: Effect.*

An international application designating the United States shall have the effect, from its international filing date under article 11 of the treaty, of a national application for patent regularly filed in the Patent and Trademark Office except as otherwise provided in section 102(e) of this title.

#### *35 U.S.C. 373. Improper Applicant.*

An international application designating the United States, shall not be accepted by the Patent and Trademark Office for the

national stage if it was filed by anyone not qualified under chapter 11 of this title to be an applicant for the purpose of filing a national application in the United States. Such international applications shall not serve as the basis for the benefit of an earlier filing date under section 120 of this title in a subsequently filed application, but may serve as the basis for a claim of the right of priority under subsections (a) through (d) of section 119 of this title, if the United States was not the sole country designated in such international application.

*37 CFR 1.431. International application requirements.*

(a) An international application shall contain, as specified in the Treaty and the Regulations, a Request, a description, one or more claims, an abstract, and one or more drawings (where required). (PCT Art. 3(2) and Section 207 of the Administrative Instructions.)

(b) An international filing date will be accorded by the United States Receiving Office, at the time of receipt of the international application, provided that:

(1) At least one applicant is a United States resident or national and the papers filed at the time of receipt of the international application so indicate (35 U.S.C. 361(a), PCT Art. 11(1)(i)).

(2) The international application is in the English language (35 U.S.C. 361(c), PCT Art. 11(1)(ii)).

\*\*>

(3) The international application contains at least the following elements (PCT Art. 11(1)(iii)):

(i) An indication that it is intended as an international application (PCT Rule 4.2);

(ii) The designation of at least one Contracting State of the International Patent Cooperation Union (§ 1.432);

(iii) The name of the applicant, as prescribed (note §§ 1.421-1.423);

(iv) A part which on the face of it appears to be a description; and

(v) A part which on the face of it appears to be a claim.

(c) Payment of the international filing fee (PCT Rule 15.2) and the transmittal and search fees (§ 1.445) may be made in full at the time the international application papers required by paragraph (b) of this section are deposited or within one month thereafter. The international filing, transmittal, and search fee payable is the international filing, transmittal, and search fee in effect on the receipt date of the international application.

(1) If the international filing, transmittal and search fees are not paid within one month from the date of receipt of the international application and prior to the sending of a notice of deficiency which imposes a late payment fee, applicant will be notified and given one month within which to pay the deficient fees plus the late payment fee. Subject to paragraph (c)(2) of this section, the late payment fee will be equal to the greater of:

- (i) Fifty percent of the amount of the deficient fees; or
- (ii) An amount equal to the transmittal fee.

(2) The late payment fee shall not exceed an amount equal to fifty percent of the international filing fee not taking into

account any fee for each sheet of the international application in excess of thirty sheets (PCT Rule 16<sup>bis</sup>).

(3) The one-month time limit set pursuant to paragraph (c) of this section to pay deficient fees may not be extended.

(d) If the payment needed to cover the transmittal fee, the international filing fee, the search fee, and the late payment fee pursuant to paragraph (c) of this section is not timely made in accordance with PCT Rule 16<sup>bis</sup>.1(e), the Receiving Office will declare the international application withdrawn under PCT Article 14(3)(a).<

## THE “INTERNATIONAL FILING DATE”

An international filing date is accorded \*\*>to the earliest date on which the requirements under PCT Article 11(1) were satisfied. If the requirements under PCT Article 11(1) are not satisfied as of the date of initial receipt of the international application papers, the receiving Office will invite applicant to correct the deficiency within a set time limit. See PCT Article 11(2) and PCT Rule 20.6. In such case, the international filing date will be the date on which a timely filed correction is received by the receiving Office. If the defect under PCT Article 11(1) is not timely corrected, the receiving Office will promptly notify the applicant that the application is not and will not be treated as an international application. See PCT Rule 20.7.< Where all the sheets pertaining to the same international application are not received on the same day by the receiving Office, in most instances, the date of receipt of the application will be amended to reflect the date on which the last missing sheets were received. As an amended date of receipt may cause the priority claim to be forfeited, applicants should assure that all sheets of the application are deposited with the receiving Office on the same day. For particulars see PCT Rule 20.2.

An all too common occurrence is that applicants will file an international application in the U.S. Receiving Office and no applicant has a U.S. residence or nationality. Applicants are cautioned to be sure that at least one applicant is a resident or national of the U.S. before filing in the U.S. Receiving Office. Where no applicant indicated on the request papers is a resident or national of the United States, the USPTO is not a competent receiving Office for the international application under PCT Rule 19.1(a). Nonetheless, the date the international application was filed in the USPTO will not be lost as a filing date for the international application if at least one applicant is a

resident or national of any PCT Contracting State. Under PCT Rule 19.4, the USPTO will receive the application on behalf of the International Bureau as receiving Office (PCT Rule 19.4(a)) and, upon payment of a fee equal to the transmittal fee, the USPTO will promptly transmit the international application to the International Bureau under PCT Rule 19.4(b). However, if all of the applicants are indicated to be both residents and nationals of non-PCT Contracting States, PCT Rule 19.4 does not apply, and the application is denied an international filing date.

The USPTO is also not competent to receive international applications that are not in the English language and, upon payment of a fee equal to the transmittal fee, the USPTO will forward such applications to the International Bureau under PCT Rule 19.4 provided they are in a language accepted by the International Bureau as receiving Office.

A discussion of PCT Rule 19.4 is also included in MPEP § 1805.

## 1812 Elements of the International Application [R-2]

### *PCT Article 3.*

#### *The International Application*

(1) Applications for the protection of inventions in any of the Contracting States may be filed as international applications under this Treaty.

(2) An international application shall contain, as specified in this Treaty and the Regulations, a request, a description, one or more claims, one or more drawings (where required), and an abstract.

(3) The abstract merely serves the purpose of technical information and cannot be taken into account for any other purpose, particularly not for the purpose of interpreting the scope of the protection sought.

(4) The international application shall:

- (i) be in a prescribed language;
- (ii) comply with the prescribed physical requirements;
- (iii) comply with the prescribed requirement of unity of invention;
- (iv) be subject to the payment of the prescribed fees.

Any international application must contain the following elements: request, description, claim or claims, abstract and one or more drawings (where drawings are necessary for the understanding of the invention (PCT Article 3(2) and PCT Article 7(2)). The elements of the international application are to be arranged in the following order: the request, the description (other than any sequence listing part thereof), the claims, the abstract, the drawings, and the sequence listing part of the description (where applicable) (Administrative Instructions Section 207(a)). All the sheets contained in the international application must be numbered in consecutive Arabic numerals by using the following separate series of numbers: a first series applying to the request; a second series to the description, claims and abstract; a third series to the drawings (where applicable); and a further series to the sequence listing part of the description (where applicable) (PCT Rule 11.7 and Administrative Instructions Section 207(b)). Only one copy of the international application need be filed in the United States Receiving Office (37 CFR 1.433(a)). The request is made on a standardized form (Form PCT/RO/101), copies of which can be obtained from the USPTO or online from WIPO's web site ([www.wipo.int/pct/en/index.html](http://www.wipo.int/pct/en/index.html)). The "Request" form can also be presented as a computer printout prepared using the PCT-SAFE software. This software can be downloaded from the PCT-SAFE web site ([www.wipo.int/pct-safe](http://www.wipo.int/pct-safe)). The details of a computer generated Request form are provided in Administrative Instructions Section 102<sup>bis</sup>.

## 1817 PCT Member States [R-2]

An updated list of PCT Contracting States is available from WIPO's web site ([www.wipo.int/pct/guide/en/gdvol1/annexes/annexa/ax\\_a.pdf](http://www.wipo.int/pct/guide/en/gdvol1/annexes/annexa/ax_a.pdf)). The following list of PCT Contracting States was updated at the time of publication of the MPEP:

State	Ratification, Accession or Declaration	Date of Ratification, Accession or Declaration	Date From Which State May Be Designated
(1) Central African Republic <sup>o</sup>	Accession	15 September 1971	01 June 1978
(2) Senegal <sup>o</sup>	Ratification	08 March 1972	01 June 1978
(3) Madagascar	Ratification	27 March 1972	01 June 1978
(4) Malawi	Accession	16 May 1972	01 June 1978
(5) Cameroon <sup>o</sup>	Accession	15 March 1973	01 June 1978
(6) Chad <sup>o</sup>	Accession	12 February 1974	01 June 1978

<p><sup>o</sup>Members of Africa Intellectual Property Organization (OAPI) regional patent system. Only regional patent protection is available for OAPI member states. A designation of any state is an indication that all OAPI states have been designated. Note: only one designation fee is due regardless of the number of OAPI member states designated.</p>			
<p><sup>oo</sup>Members of European Patent Convention (EPC) regional patent system. Either national patents or European patents for member States are available through PCT, except for Belgium, Cyprus, France, Greece, Ireland, Italy, Monaco, Netherlands, and Slovenia, for which only European patents are available if the PCT is used. Note: only one PCT designation fee is due if European patent protection is sought for one, several, or all EPC member countries.</p>			

State	Ratification, Accession or Declaration	Date of Ratification, Accession or Declaration	Date From Which State May Be Designated
<p>The following states are members of African Regional Industrial Property Organization (ARIPO) regional patent system and are Contracting States of both the Harare Protocol and the PCT: (4) Malawi, (34) Sudan, (68) Kenya, (73) Swaziland, (75) Uganda, (81) Lesotho, (89) Ghana, (90) Zimbabwe, (91) Sierra Leone, (93) Gambia, (103) United Republic of Tanzania, (107) Mozambique, (114) Zambia, and (122) Botswana. Note that with the accession of Botswana to the PCT, all 14 States party to the Harare Protocol are now also Contracting States of the PCT. State (73) Swaziland can only be designated for the purposes of an ARIPO patent and not for the purposes of a national patent. All other PCT Contracting States which are also party to the Harare Protocol can be designated either for a national or an ARIPO patent, or both a national and an ARIPO patent.</p>			
<p>The following states are members of the Eurasian Patent Organization (EAPO) regional patent system: (15) Russian Federation, (57) Kazakhstan, (58) Belarus, (65) Kyrgyzstan, (66) Republic of Moldova, (67) Tajikistan, (70) Armenia, (78) Turkmenistan, and (82) Azerbaijan. All PCT Contracting States which are also party to the Eurasian Patent Convention can be designated either for a national or a Eurasian patent, or both a national and a Eurasian patent. Note, however, that it is not possible to designate only some of these States for a Eurasian patent and that any designation of one or more States for a Eurasian patent will be treated as a designation of all the States which are party to both the Convention and the PCT for a Eurasian patent.</p>			

### **1817.01 >Designation of States in International Applications Having an International Filing Date On or After January 1, 2004 [R-2]**

[Note: The regulations under the PCT were changed effective January 1, 2004. A corresponding change was made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure*, 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). All international applications having an international filing date before January 1, 2004, will continue to be processed under the procedures in effect on the international filing date. For the designation of states in international applications having an international filing date before January 1, 2004, see MPEP § 1817.01(a) for the information that previously appeared in this section].

*37 CFR 1.432. Designation of States by filing an international application.*

The filing of an international application request shall constitute:

(a) The designation of all Contracting States that are bound by the Treaty on the international filing date;

(b) An indication that the international application is, in respect of each designated State to which PCT Article 43 or 44 applies, for the grant of every kind of protection which is available by way of the designation of that State; and

(c) An indication that the international application is, in respect of each designated State to which PCT Article 45(1) applies, for the grant of a regional patent and also, unless PCT Article 45(2) applies, a national patent.

For international applications having an international filing date on or after January 1, 2004, the filing of an international application request constitutes: (A) the designation of all Contracting States that are bound by the Treaty on the international filing date; (B) an indication that the international application is, in respect of each designated State to which PCT Article 43 or 44 applies, for the grant of every kind of protection which is available by way of the designation of that State; and (C) an indication that the international application is, in respect of each designated State to which PCT Article 45(1) applies, for the grant of a regional patent and also, unless PCT Article 45(2) applies, a national patent. See 37 CFR 1.432 and PCT Rule 4.9. This automatic indication of all designations and all types of protection possible overcomes a pit-

fall in the designation system in effect for applications having an international filing prior to January 1, 2004, where applicants inadvertently omitted a designation or type of protection and failed to timely satisfy the requirements under former PCT Rule 4.9(b) to perfect a precautionary designation.

### **APPLICANT FOR PURPOSES OF EACH DESIGNATION**

Where there is but a single applicant, the right to file an international application and to designate Contracting States or regions exists if the applicant is a resident or national of a PCT Contracting State. The applicant can be an individual, corporate entity or other concern. In the case where there are several applicants who are different for different designated states, the right to file an international application and to designate Contracting States or regions exists if at least one of them is a resident or national of a Contracting State. If entry into the U.S. national phase is desired, inventors must be indicated as applicants at least for purposes of the United States.

### **1817.01(a) < Designation of States and Precautionary Designations >in International Applications Having an International Filing Date Before January 1, 2004< [R-2]**

[Note: For the designation of States in applications having an international filing date on or after January 1, 2004, see MPEP § 1817.01.]

*Former<*

*37 CFR 1.432. Designation of States and payment of designation and confirmation fees.*

(a) The designation of States including an indication that applicant wishes to obtain a regional patent, where applicable, shall appear in the Request upon filing and must be indicated as set forth in PCT Rule 4.9 and section 115 of the Administrative Instructions. Applicant must specify at least one national or regional designation on filing of the international application for a filing date to be granted.

(b) If the fees necessary to cover all the national and regional designations specified in the Request are not paid by the applicant within one year from the priority date or within one month from the date of receipt of the international application if that month expires after the expiration of one year from the priority date, applicant will be notified and given one month within which to pay the deficient designation fees plus a late payment fee. The late payment fee shall be equal to the greater of fifty percent of the

amount of the deficient fees up to a maximum amount equal to the basic fee, or an amount equal to the transmittal fee (PCT Rule 16<sup>bis</sup>). The one-month time limit set in the notification of deficient designation fees may not be extended. Failure to timely pay at least one designation fee will result in the withdrawal of the international application.

(1) The one designation fee must be paid:

(i) Within one year from the priority date;

(ii) Within one month from the date of receipt of the international application if that month expires after the expiration of one year from the priority date; or

(iii) With the late payment fee defined in this paragraph within the time set in the notification of the deficient designation fees or in accordance with PCT Rule 16<sup>bis</sup>.1(e).

(2) If after a notification of deficient designation fees the applicant makes timely payment, but the amount paid is not sufficient to cover the late payment fee and all designation fees, the Receiving Office will, after allocating payment for the basic, search, transmittal and late payment fees, allocate the amount paid in accordance with PCT Rule 16<sup>bis</sup>.1(c) and withdraw the unpaid designations. The notification of deficient designation fees pursuant to this paragraph may be made simultaneously with any notification pursuant to § 1.431(c).

(c) The amount payable for the designation fee set forth in paragraph (b) is:

(1) The designation fee in effect on the filing date of the international application, if such fee is paid in full within one month from the date of receipt of the international application;

(2) The designation fee in effect on the date such fee is paid in full, if such fee is paid in full later than one month from the date of receipt of the international application but within one year from the priority date;

(3) The designation fee in effect on the date one year from the priority date, if the fee was due one year from the priority date, and such fee is paid in full later than one month from the date of receipt of the international application and later than one year from the priority date; or

(4) The designation fee in effect on the international filing date, if the fee was due one month from the international filing date and after one year from the priority date, and such fee is paid in full later than one month from the date of receipt of the international application and later than one year from the priority date.

(d) On filing the international application, in addition to specifying at least one national or regional designation under PCT Rule 4.9(a), applicant may also indicate under PCT Rule 4.9(b) that all other designations permitted under the Treaty are made.

(1) Indication of other designations permitted by the Treaty under PCT Rule 4.9(b) must be made in a statement on the Request that any designation made under this paragraph is subject to confirmation (PCT Rule 4.9(c)) not later than the expiration of 15 months from the priority date by:

(i) Filing a written notice with the United States Receiving Office specifying the national and/or regional designations being confirmed;

(ii) Paying the designation fee for each designation being confirmed; and

(iii) Paying the confirmation fee specified in § 1.445(a)(4).

(2) Unconfirmed designations will be considered withdrawn. If the amount submitted is not sufficient to cover the designation fee and the confirmation fee for each designation being confirmed, the Receiving Office will allocate the amount paid in accordance with any priority of designations specified by applicant. If applicant does not specify any priority of designations, the allocation of the amount paid will be made in accordance with PCT Rule 16<sup>bis</sup>.1(c).

The designation of States is the indication, in Box No. V of the request (except in the last sub-box of that Box), of the specific regional patents, national patents, and/or other kinds of protection the applicant is seeking. Specific designations for the purpose of obtaining national and regional patents are effected by indicating each Contracting State or region concerned. On the printed form, this is accomplished by marking the appropriate check-boxes next to the names of the States or regions. For detailed instructions regarding “specific” designations, see the “Notes to the Request Form (PCT/RO/101),” available from WIPO’s website at [www.wipo.int/pct/en/index.html](http://www.wipo.int/pct/en/index.html).

All designations must be made in the international application on filing; none may be added later. However, there is a safety net designed to protect applicants who make mistakes or omissions among the specific designations, by way of making a precautionary designation of all other States which have not been specifically designated in the Request whose designation would be permitted under the Treaty.

In addition to specific designations described above, the applicant may, under PCT Rule 4.9(b), indicate in the request that all designations which would be permitted under the PCT are also made, provided that at least one specific designation is made and that the request also contains a statement relating to the confirmation of any precautionary designations so made. That statement must declare that any such designation is subject to confirmation (as provided in Rule 4.9(c)), and that any such designation which is not so confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit.

Precautionary designations are effected in practice by including the necessary statement in the last sub-box of Box No. V of the request (the statement is set out in the printed request form). Since the precaution-

ary designations are designed particularly to enable applicants to correct omissions and mistakes in the original list of specific designations, it is strongly recommended that applicants make the precautionary designations indication (by leaving the pre-printed statement in the printed form, if that form is used) unless there is a particular reason for doing otherwise. The request form makes provision for the applicant to omit designations if that is desired. It should be noted that no fees are payable in respect of precautionary designations except where the applicant later decides to confirm them.

Precautionary designations will be regarded as withdrawn by the applicant unless they are confirmed, but the applicant is not obliged to confirm them. The precautionary designation procedure enables the applicant to make, in the request, all designations permitted by the PCT in addition to those made specifically. For this purpose, the request must also contain a statement that any precautionary designations so made are subject to confirmation as provided in Rule 4.9(c) and that any designation which is not so confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. Noting that the confirmation of designations is entirely at the applicant's discretion, no notification is sent to the applicant reminding him or her that the time limit for confirming precautionary designations is about to expire. Applicants are cautioned that in order for the confirmation of a designation of the U.S. to be valid, the inventor must have been named in the application papers as filed, 37 CFR 1.421(b).

#### **APPLICANT FOR PURPOSES OF EACH DESIGNATION**

Where there is but a single applicant, the right to file an international application and to designate contracting states or regions exists if the applicant is a resident or national of a contracting state. The applicant can be an individual, corporate entity or other concern. If the United States is to be designated, it is particularly important to note that the applicant must also be the inventor.

In the case where there are several applicants who are different for different designated states, the right to file an international application and to designate contracting states or regions exists if at least one of

them is a resident or national of a contracting state. If the United States is to be designated, it is important to note that the applicant must also be the inventor. If the inventor is not also the applicant, the designation of the United States is invalid.

### **1817.02 Continuation or Continuation-in-Part Indication in the Request [R-2]**

*PCT Rule 4.  
The Request (Contents)*

\*\*\*\*\*

\*\*>

#### *4.11. Reference to Earlier Search, Continuation or Continuation-in-Part, or Parent Application or Grant*

(a) If:

\*\*\*\*\*

(iv) the applicant intends to make an indication under Rule 49<sup>bis</sup>.1(d) of the wish that the international application be treated, in any designated State, as an application for a continuation or a continuation-in-part of an earlier application;

the request shall so indicate and shall, as the case may be, identify the application in respect of which the earlier search was made or otherwise identify the search, or indicate the relevant parent application or parent patent or other parent grant.

\*\*\*\*\*

The Supplemental Box of the request form should be used where the applicant has an earlier pending United States nonprovisional application or international application designating the U.S. and wishes the later filed international application to be treated as a continuation or continuation-in-part of such earlier application. To properly identify the parent application, the specific reference must identify the parent application by application number and indicate the relationship to the parent application (i.e., "continuation" or "continuation-in-part"). The specific reference must also indicate the filing date of the parent application if the parent application is an international application. See 37 CFR 1.78(a).

Identification of the parent application in the request does not relieve applicants from having to perfect the benefit claim upon entry into the U.S. national stage by including a proper claim in an application data sheet or in the first sentence of the speci-

cation (see 37 CFR 1.78(a)(2)). However, inclusion of a proper reference to the parent application in the international phase does provide certain benefits to applicants, e.g., where applicant chooses to file a continuing application claiming benefit under 35 U.S.C. 365(c) to the international application (i.e., a bypass application) rather than entering the U.S. national phase under 35 U.S.C. 371.<

**1819 Earlier International or International-Type Search [R-2]**

*PCT Rule 4.  
Request (Contents)*

\*\*\*\*\*

*>4.11.Reference to Earlier Search, Continuation or Continuation-in-Part, or Parent Application or Grant*

(a) If:

(i) an international or international-type search has been requested on an application under Article 15(5);

\*\*\*\*\*

the request shall so indicate and shall, as the case may be, identify the application in respect of which the earlier search was made or otherwise identify the search, or indicate the relevant parent application or parent patent or other parent grant.

\*\*\*\*\*

*37 CFR 1.445. International application filing, processing and search fees.*

(a) The following fees and charges for international applications are established by the Director under the authority of 35 U.S.C. 376:

\*\*\*\*\*

(2) A search fee (see 35 U.S.C. 361(d)and PCT Rule 16):

(i) If a corresponding prior United States National application filed under 35 U.S.C. 111(a) with the filing fee under § 1.16(a) has been filed and the corresponding prior United States National application is identified by application number, if known, or if the application number is not known by the filing date, title, and name of applicant(and preferably the application docket number), in the international application or accompanying papers at the time of filing the international application.....\$300.00

\*\*\*\*\*

<

Certain International Searching Authorities refund part or all of the international search fee or reduce the amount of the international search fee where the international search can be based wholly or partly on an earlier search (whether an international, international-type, or other search) made by them. The United States provides for a reduced search fee where there is a corresponding prior U.S. \* nonprovisional application >and such application is adequately identified in the international application or accompanying papers at the time of filing the international application. Applicants must identify the prior nonprovisional application by the U.S. application number or, if such number is not yet known, by filing date, title, and name of applicant (and preferably the application docket number). See 37 CFR 1.445(a)(2)(i)<.

Where the earlier search by the International Searching Authority was made in relation to a national, regional (for instance, European) or international application, that application must be identified in >the request. Applicants should identify the application in< Box No. VII of the request by an indication of the country of filing (or the European Patent Office), and the number and filing date of that application. \*\* Where the earlier search was made independently of a patent granting procedure (for instance, a standard search by the European Patent Office), a reference must be made to the date of the request for that search and the number given to the request by the International Searching Authority.

The United States Patent and Trademark Office performs an international-type search on all U.S. national applications filed on and after 1 June 1978. No specific request by the applicant is required and no number identifying the international-type search is assigned by the Office. \*\*>See 37 CFR 1.104(a)(3).<

**1820 Signature of Applicant [R-2]**

>

*PCT Article 14.  
Certain Defects in the International Application*

(1)(a)The receiving Office shall check whether the international application contains any of the following defects, that is to say

(i) it is not signed as provided in the Regulations;

\*\*\*\*\*

<

*PCT Rule 4.  
The Request (Contents)*

\*\*\*\*\*

*4.15. Signature*

(a) Subject to paragraph (b), the request shall be signed by the applicant or, if there is more than one applicant, by all of them.

(b) Where two or more applicants file an international application which designates a State whose national law requires that national applications be filed by the inventor and where an applicant for that designated State who is an inventor refused to sign the request or could not be found or reached after diligent effort, the request need not be signed by that applicant if it is signed by at least one applicant and a statement is furnished explaining, to the satisfaction of the receiving Office, the lack of the signature concerned.

\*\*\*\*\*

>

*PCT Rule 26.*

*Checking by, and Correcting Before, the Receiving Office  
of Certain Elements of the International Application*

\*\*\*\*\*

*26.2<sup>bis</sup>. Checking of Requirements Under Article 14(1)(a)(i)  
and (ii)*

(a) For the purposes of Article 14(1)(a)(i), if there is more than one applicant, it shall be sufficient that the request be signed by one of them.

(b) For the purposes of Article 14(1)(a)(ii), if there is more than one applicant, it shall be sufficient that the indications required under Rule 4.5(a)(ii) and (iii) be provided in respect of one of them who is entitled according to Rule 19.1 to file the international application with the receiving Office.<

**SIGNATURE OF APPLICANT OR AGENT**

\*>Pursuant to PCT Rule 4.15, the< international application must be signed in Box No. IX of the request by the applicant, or, where there are two or more applicants, by all of them. \*\*>However, under new PCT Rule 26.2<sup>bis</sup>, which is applicable to international applications having an international filing date on or after January 1, 2004, it is sufficient for purposes of PCT Article 14(1)(a)(i) that the application is signed by only one of the applicants. Thus, for international applications having an international filing date on or after January 1, 2004, the United States Receiving Office will not issue an invitation to applicants to furnish missing signatures where the request

is signed by at least one of the applicants. Notwithstanding PCT Rule 26.2<sup>bis</sup>, any designated/elected office, in accordance with its national law, can still require confirmation of the international application by the signature of any applicant for such state who has not signed the request. PCT Rule 51<sup>bis</sup>(a)(vi).< Pursuant to 37 CFR 1.4(d), the request filed may be either an original, or a copy thereof. \*\*

The international application may be signed by an agent\*\*>.

For international applications having an international filing date on or after January 1, 2004, the requirement for the submission of a separate power of attorney may be waived by the receiving Office. The United States Receiving Office will, in most cases, waive the requirement for a separate power of attorney. See MPEP § 1807.

If the international application has an international filing date before January 1, 2004, then< the agent must be appointed as such by the applicant in a separate power of attorney signed by the applicant. If there are two or more applicants, the request may be signed by an agent on behalf of all or only some of them; in that case the agent must be appointed as such in one or more powers of attorney signed by the applicants on whose behalf the agent signs the application. Where a power of attorney appointing an agent who signs an international application >having an international filing date prior to January 1, 2004< is missing, the signature is treated as missing until the power of attorney is submitted.

The signature should be executed in black indelible ink. The name of each person signing the international application should be indicated (preferably typewritten) next to the signature. Where a person signs on behalf of a legal entity (an organization such as a corporation, university, nonprofit organization, or governmental agency), his or her name and the capacity in which he or she signs should be indicated. Proof of the person's authority to sign on behalf of the legal entity will be required if that person does not possess apparent authority to sign on behalf of the legal entity >and that person has not submitted a statement that he or she is authorized to sign on behalf of the legal entity (discussed below)<. An officer (President, Vice-President, Secretary, Treasurer, Chief Executive Officer, Chief Operating Officer or Chief Financial Officer) of an organization is presumed to have

authority to sign on behalf of that organization. The signature of the chairman of the board is also acceptable, but not the signature of an individual director. Variations of these titles (such as vice-president for sales, executive vice-president, assistant treasurer, vice-chairman of the board of directors) are acceptable. \*>In general, a< person having a title (manager, director, administrator, general counsel) that does not clearly set forth that person as an officer of the organization is not presumed to be an officer or to have the authority to sign on behalf of the organization. >However, an exception is made with respect to foreign juristic applicants. This is because in foreign countries, a person who holds the title “Manager” or “Director” is normally an officer or the equivalent thereof; therefore, those terms are generally acceptable as indicating proper persons to sign applications for foreign applicants. However, titles such as “Manager of Patents,” suggesting narrowly limited duties, are not acceptable.< An attorney does not generally have apparent authority to sign on behalf of an organization.

Proof that a person has the authority to sign on behalf of a legal entity may take the form of a copy of a resolution of the board of directors, a provision of the bylaws, or a copy of a paper properly delegating authority to that person to sign the international application on behalf of the legal entity.

It is \* acceptable to have a person sign the international application on behalf of a legal entity if that person submits a statement that the person has the authority to sign the international application on behalf of the legal entity. This statement should be on a separate paper and must not appear on the Request (or Demand) form itself. The statement must include a clause such as “The undersigned (whose title is supplied below) is empowered to sign the Request on behalf of the applicant.”

\*\*>The international application can be filed without applicant’s signature on the request. The lack of any required signature on the request< is a correctable defect under PCT Article 14(1)(a)(i) and (b), and can be remedied by filing a copy of the request (or, where the request has been signed by an agent, of a power of attorney) duly signed by the applicant within the time limit fixed by the receiving Office for the correction of this defect.

## **APPLICANT INVENTOR UNAVAILABLE OR UNWILLING TO SIGN THE INTERNATIONAL APPLICATION \*\***

\*\* PCT Rule 4.15(b) >provides< that, where an applicant inventor for the designation of \*\*>of a State whose national law requires that national applications be filed by the inventor (the United States of America is the only Contracting State to have such a requirement in its national law)< refused to sign the request or could not be found or reached after diligent effort, the request need not be signed by that applicant inventor if it is signed by at least one applicant and a statement is furnished explaining, to the satisfaction of the receiving Office, the lack of the signature concerned. \*\*>The significance of PCT Rule 4.15(b) has been greatly diminished with respect to international applications having an international filing date on or after January 1, 2004, in light of new PCT Rule 26.2<sup>bis</sup>(a), which provides that where there is more than one applicant, the signature requirements for purposes of PCT Article 14(1)(a)(i) will be considered to have been satisfied if the request is signed by one of the applicants.

For international applications having an international filing date prior to January 1, 2004, if the requisite statement under PCT Rule 4.15(b)< is furnished to the satisfaction of the receiving Office, the international application complies with the requirements of PCT Article 14(1)(a)(i) for the purposes of all designated States (including the United States of America) without adverse consequences in the international phase. However, additional proofs may be required by the United States Patent and Trademark Office after entry into the national phase if the required oath or declaration by the inventor is not signed by all the applicant inventors.

\*\*

## **\* INVENTOR DECEASED**

*37 CFR 1.422. When the inventor is dead.*

In case of the death of the inventor, the legal representative (executor, administrator, etc.) of the deceased inventor may file an international application which designates the United States of America.

\*\*>A legal representative of a deceased inventor may be indicated in the international application as an applicant for the purposes of the United States. In such case, the indication in the request (in Box II or

III, as appropriate) for the legal representative should be made as follows: SMITH, Alfred, legal representative of JONES, Bernard (deceased), followed by indications of the address, nationality and residence of the legal representative. The legal representative should be indicated as an “applicant only” except where the legal representative is also an inventor, in which case the legal representative should be indicated as an “applicant and inventor.” The name of the deceased inventor should also appear in a separate box (in Box III) with the indication of “deceased” (e.g., “JONES, Bernard (deceased)”) and identified as an “inventor only” and not as an applicant.<

## 1821 The Request [R-2]

A general overview of certain aspects of the request follows.

37 CFR 1.434. *The request.*

\*\*>

(a) The request shall be made on a standardized form (PCT Rules 3 and 4). Copies of printed Request forms are available from the United States Patent and Trademark Office. Letters requesting printed forms should be marked “Mail Stop PCT.”<

(b) The Check List portion of the Request form should indicate each document accompanying the international application on filing.

(c) All information, for example, addresses, names of States and dates, shall be indicated in the Request as required by PCT Rule 4 and Administrative Instructions 110 and 201.

\*\*>

(d) For the purposes of the designation of the United States of America, an international application shall include:

(1) The name of the inventor; and;

(2) A reference to any prior-filed national application or international application designating the United States of America, if the benefit of the filing date for the prior-filed application is to be claimed.

(e) An international application may also include in the Request a declaration of the inventors as provided for in PCT Rule 4.17(iv).<

The request must either be made on a printed form to be filled in with the required indications or be presented as a computer printout complying with the Administrative Instructions. Any prospective applicant may obtain copies of the printed request form, free of charge, from the receiving Office with which he/she plans to file his/her international application\*\*. >Applicants may obtain an English language request form from the United States Patent and Trademark Office using the following address: Mail Stop PCT,

Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Forms may also be obtained from the World Intellectual Property Organization (WIPO) web site ([www.wipo.int/pct/en/forms/index.htm](http://www.wipo.int/pct/en/forms/index.htm)).< Details of the requirements for the request if presented as a computer printout are set out in Administrative Instructions Section 102<sup>bis</sup>.

As provided in Administrative Instructions Section 102<sup>bis</sup>(c), reduced fees are payable in respect of an international application containing the request in PCT-EASY format filed, together with a PCT-EASY diskette, with a receiving Office which, under paragraph (a), accepts the filing of such international applications. \*\*>To prepare a request in PCT-EASY format and the PCT-EASY diskette, applicants must use PCT-SAFE software, which is available for downloading at WIPO’s web site ([www.wipo.int/pct-safe](http://www.wipo.int/pct-safe)). For technical support and assistance with the software, the web site also provides contact information for the PCT-SAFE Help Desk.<

The request contains a petition for the international application to be processed according to the PCT and must also contain certain indications. It must contain the title of the invention. It must identify the applicant \*\* and the agent (if any), and must contain the designation of at least one Contracting State. \*\*>For international applications having an international filing date on or after January 1, 2004, the filing of an international application request constitutes the designation of all Contracting States that are bound by the PCT on the international filing date. See MPEP § 1817.01. The request must contain an indication of any wish of the applicants to obtain a European patent rather than, or in addition to, a national patent in respect of a designated State.

The request may not contain any matter that is not specified in PCT Rules 4.1 to 4.17 or permitted under PCT Rule 4.18(a) by the Administrative Instructions. Any additional material will be deleted *ex officio*. See PCT Rule 4.18(b) and Administrative Instructions Section 303.<

## DATES

Each date appearing in the international application or in any correspondence must be indicated by the Arabic number of the day, the name of the month and the Arabic number of the year, in that order. In the request, after, below or above that indication, the date

should be repeated in parentheses with a two-digit Arabic numeral each for the number of the day \*\*>and for the number of the month and followed by the number of the year in four digits, in that order and separated by periods, slashes or hyphens after the digit pairs of the day and of the month, for example, “20 March 2004 (20.03.2004),” “20 March 2004 (20/03/2004),” or “20 March 2004 (20-03-2004).” See Administrative Instructions Section 110.<

### **SUPPLEMENTAL BOX**

This box is used for any material which cannot be placed in one of the previous boxes because of space limitations. The supplemental information placed in this box should be clearly entitled with the Box number from which it is continued, e.g., “Continuation of Box No. IV.”

### **FILE REFERENCE**

The applicant or his/her agent may indicate a file reference in the box provided for \*>this< purpose on the first sheet of the request form, on each page of the other elements of the international application, on the first sheet of the demand form, and in any other correspondence relating to the international application. PCT Rule 11.6(f) indicates that the file reference may be included in the top margin of the sheets of the international application. As provided in Administrative Instructions Section 109, the file reference may be composed either of letters of the Latin alphabet or Arabic numerals, or both. It may not exceed 12 characters >including spaces. If the file reference exceeds 12 characters, the receiving Office may *ex officio* truncate the reference number to 12 characters and notify the applicant<. The receiving Office, the International Bureau, the International Searching Authority and the International Preliminary Examining Authority (International Authorities) will use the file reference in correspondence with the applicant. \*\*

### **TITLE OF INVENTION**

The Request must contain the title of the invention; the title must be short (preferably 2 to 7 words) and precise (PCT Rule 4.3). The title in Box No. I of the Request is considered to be the title of the application. The title appearing on the first page of the description (PCT Rule 5.1(a)) and on the page containing the

abstract should be consistent with the title indicated in Box No. I of the Request form.

A title should not be changed by the examiner merely because it contains words which are not considered descriptive of the invention. Words, for example, such as “improved” or “improvement of” are acceptable. If the title is otherwise not descriptive of the invention, a change to a more descriptive title should be made and the applicant informed thereof in the search report.

Where the title is missing or is inconsistent with the title in the description, the receiving Office invites the applicant to correct the missing or inconsistent title.

### **APPLICANT**

Any resident or national of a Contracting State may file an international application. Where there are two or more applicants, at least one of them must be a national or a resident of a PCT Contracting State.

The question whether an applicant is a resident or national of a Contracting State depends on the national law of that State and is decided by the receiving Office. Also, possession of a real and effective industrial or commercial establishment in a Contracting State may be considered residence in that State, and a legal entity constituted according to the national law of a Contracting State is considered a national of that State.

The applicant must be identified by the indication of his/her name and address and by marking next to that indication, the check-box “This person is also inventor” in Box No. II, or “applicant and inventor” in Box No. III, where the applicant is also the inventor or one of the inventors, or the check-box “applicant only” where the applicant is not the inventor or one of the inventors. Where the applicant is a corporation or other legal entity (that is, not a natural person), the check-box “applicant only” must be marked. The applicant’s nationality and residence must also be indicated.

### **NAMES**

The names of a natural person must be indicated by the family name followed by the given name(s). Academic degrees or titles or other indications which are not part of the person’s name must be omitted. The family name should preferably be written in capital letters.

The name of a legal entity must be indicated by its full official designation (preferably in capital letters).

## ADDRESSES

Addresses must be indicated in such a way as to satisfy the requirements for prompt postal delivery at the address indicated and must consist of all the relevant administrative units up to and including the house number (if any). The address must also include the country.

### 1823 The Description [R-2]

*PCT Article 5.  
The Description*

The description shall disclose the invention in a manner sufficiently clear and complete for the invention to be carried out by a person skilled in the art.

*PCT Rule 5.  
The Description*

#### 5.1. Manner of the Description

(a) The description shall first state the title of the invention as appearing in the request and shall:

(i) specify the technical field to which the invention relates;

(ii) indicate the background art which, as far as known to the applicant, can be regarded as useful for the understanding, searching and examination of the invention, and, preferably, cite the documents reflecting such art;

(iii) disclose the invention, as claimed, in such terms that the technical problem (even if not expressly stated as such) and its solution can be understood, and state the advantageous effects, if any, of the invention with reference to the background art;

(iv) briefly describe the figures in the drawings, if any;

(v) set forth at least the best mode contemplated by the applicant for carrying out the invention claimed; this shall be done in terms of examples, where appropriate, and with reference to the drawings, if any; where the national law of the designated State does not require the description of the best mode but is satisfied with the description of any mode (whether it is the best contemplated or not), failure to describe the best mode contemplated shall have no effect in that State;

\*\*>

(vi) indicate explicitly, when it is not obvious from the description or nature of the invention, the way in which the invention is capable of exploitation in industry and the way in which it can be made and used, or, if it can only be used, the way in which it can be used; the term "industry" is to be understood in its broadest sense as in the Paris Convention for the Protection of Industrial Property.<

(b) The manner and order specified in paragraph (a) shall be followed except when, because of the nature of the invention, a different manner or a different order would result in a better understanding and a more economic presentation.

(c) Subject to the provisions of paragraph (b), each of the parts referred to in paragraph (a) shall preferably be preceded by an appropriate heading as suggested in the Administrative Instructions.

*PCT Administrative Instruction Section 204.  
Headings of the Parts of the Description*

The headings of the parts of the description should be as follows:

(i) for matter referred to in Rule 5.1(a)(i), "Technical Field";  
(ii) for matter referred to in Rule 5.1(a)(ii), "Background Art";

(iii) for matter referred to in Rule 5.1(a)(iii), "Disclosure of Invention";

(iv) for matter referred to in Rule 5.1(a)(iv), "Brief Description of Drawings";

(v) for matter referred to in Rule 5.1(a)(v), "Best Mode for Carrying Out the Invention," or, where appropriate, "Mode(s) for Carrying Out the Invention";

(vi) for matter referred to in Rule 5.1(a)(vi), "Industrial Applicability";

(vii) for matter referred to in Rule 5.2(a), "Sequence Listing";

(viii) for matter referred to in Rule 5.2(b), "Sequence Listing Free Text."

*PCT Administrative Instruction Section 209.  
Indications as to Deposited Biological Material on a Separate Sheet*

(a) To the extent that any indication with respect to deposited biological material is not contained in the description, it may be given on a separate sheet. Where any such indication is so given, it shall preferably be on Form PCT/RO/134 and, if furnished at the time of filing, the said Form shall, subject to paragraph (b), preferably be attached to the request and referred to in the check list referred to in Rule 3.3 (a)(ii).

\*\*>

(b) For the purposes of the Israel Patent Office, the Japan Patent Office, the Korean Intellectual Property Office, the Mexican Institute of Industrial Property, and the Turkish Patent Institute as designated Offices, paragraph (a) applies only to the extent that the said Form or sheet is included as one of the sheets of the description of the international application at the time of filing.<

#### 37 CFR 1.435. The description.

(a) The application must meet the requirements as to the content and form of the description set forth in PCT Rules 5, 9, 10, and 11 and sections 204 and 208 of the Administrative Instructions.

(b) In international applications designating the United States the description must contain upon filing an indication of the best mode contemplated by the inventor for carrying out the claimed invention.

The description must disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art. It must start with the title of the invention as appearing in Box No. I of the request. PCT Rule 5 contains detailed requirements as to the manner and order of the description, which, generally, should be in six parts. Those parts should have the following headings: “Technical Field,” “Background Art,” “Disclosure of Invention,” “Brief Description of Drawings,” “Best Mode for Carrying Out the Invention” or, where appropriate, “Mode(s) for Carrying Out the Invention,” “Industrial Applicability,” “Sequence Listing,” and “Sequence Listing Free Text,” where applicable.

The details required for the disclosure of the invention so that it can be carried out by a person skilled in the art depend on the practice of the national Offices. It is therefore recommended that due account be taken of national practice in the United States of America when the description is drafted.

The need to amend the description during the national phase may thus be avoided.

This applies likewise to the need to indicate the “best mode for carrying out the invention.” If at least one of the designated Offices requires the indication of the best mode (for instance, the United States Patent and Trademark Office), that best mode must be indicated in the description.

A description drafted with due regard to what is said in these provisions will be accepted by all the designated Offices. It might require more care than the drafting of a national patent application, but certainly much less effort than the drafting of multiple applications, which is necessary where the PCT route is not used for filing in several countries.

## 1823.01 Reference to Deposited Biological Material [R-2]

### *PCT Rule 13<sup>bis</sup>.*

#### *Inventions Relating to Biological Material*

##### *13<sup>bis</sup>.1. Definition*

For the purposes of this Rule, “reference to deposited biological material” means particulars given in an international application with respect to the deposit of a biological material with a depositary institution or to the biological material so deposited.

##### *13<sup>bis</sup>.2. References (General)*

Any reference to deposited biological material shall be made in accordance with this Rule and, if so made, shall be considered as satisfying the requirements of the national law of each designated State.

##### *13<sup>bis</sup>.3. References: Contents; Failure to Include Reference or Indication*

(a) A reference to deposited biological material shall indicate:

(i) the name and address of the depositary institution with which the deposit was made;

(ii) the date of deposit of the biological material with that institution;

(iii) the accession number given to the deposit by that institution; and

(iv) any additional matter of which the International Bureau has been notified pursuant to Rule 13<sup>bis</sup>.7(a)(i), provided that the requirement to indicate that matter was published in the Gazette in accordance with Rule 13<sup>bis</sup>.7(c) at least two months before the filing of the international application.

(b) Failure to include a reference to deposited biological material or failure to include, in a reference to deposited biological material, an indication in accordance with paragraph (a), shall have no consequence in any designated State whose national law does not require such reference or such indication in a national application.

##### *13<sup>bis</sup>.4. References: Time Limit for Furnishing Indications*

(a) Subject to paragraphs (b) and (c), if any of the indications referred to in Rule 13<sup>bis</sup>.3(a) is not included in a reference to deposited biological material in the international application as filed but is furnished to the International Bureau:

(i) within 16 months from the priority date, the indication shall be considered by any designated Office to have been furnished in time;

(ii) after the expiration of 16 months from the priority date, the indication shall be considered by any designated Office to have been furnished on the last day of that time limit if it reaches the International Bureau before the technical preparations for international publication have been completed.

(b) If the national law applicable by a designated Office so requires in respect of national applications, that Office may require that any of the indications referred to in Rule 13<sup>bis</sup>.3(a) be furnished earlier than 16 months from the priority date, provided that the International Bureau has been notified of such requirement pursuant to Rule 13<sup>bis</sup>.7(a)(ii) and has published such requirement in the Gazette in accordance with Rule 13<sup>bis</sup>.7(c) at least two months before the filing of the international application.

(c) Where the applicant makes a request for early publication under Article 21(2)(b), any designated Office may consider any indication not furnished before the technical preparations for international publication have been completed as not having been furnished in time.

(d) The International Bureau shall notify the applicant of the date on which it received any indication furnished under paragraph (a), and

(i) if the indication was received before the technical preparations for international publication have been completed, indicate that date, and include the relevant data from the indication, in the pamphlet published under Rule 48;

(ii) if the indication was received after the technical preparations for international publication have been completed, notify that date and the relevant data from the indication to the designated Offices.

*13<sup>bis</sup>.5. References and Indications for the Purposes of One or More Designated States; Different Deposits for Different Designated States; Deposits with Depositary Institutions Other Than Those Notified*

(a) A reference to deposited biological material shall be considered to be made for the purposes of all designated States, unless it is expressly made for the purposes of certain of the designated States only; the same applies to the indications included in the reference.

(b) References to different deposits of the biological material may be made for different designated States.

(c) Any designated Office may disregard a deposit made with a depositary institution other than one notified by it under Rule 13<sup>bis</sup>.7(b).

*13<sup>bis</sup>.6. Furnishing of Samples*

Pursuant to Articles 23 and 40, no furnishing of samples of the deposited biological material to which a reference is made in an international application shall, except with the authorization of the applicant, take place before the expiration of the applicable time limits after which national processing may start under the said Articles. However, where the applicant performs the acts referred to in Articles 22 or 39 after international publication but before the expiration of the said time limits, the furnishing of samples of the deposited biological material may take place, once the said acts have been performed. Notwithstanding the previous provision, the furnishing of samples of the deposited biological material may take place under the national law applicable by any designated Office as soon as, under that law, the international publication has the effects of the compulsory national publication of an unexamined national application.

*13<sup>bis</sup>.7. National Requirements: Notification and Publication*

(a) Any national Office may notify the International Bureau of any requirement of the national law:

(i) that any matter specified in the notification, in addition to those referred to in Rule 13<sup>bis</sup>.3(a)(i), (ii) and (iii), is required to be included in a reference to deposited biological material in a national application;

(ii) that one or more of the indications referred to in Rule 13<sup>bis</sup>.3(a) are required to be included in a national application as

filed or are required to be furnished at a time specified in the notification which is earlier than 16 months after the priority date.

(b) Each national Office shall notify the International Bureau of the depositary institutions with which the national law permits deposits of biological materials to be made for the purposes of patent procedure before that Office or, if the national law does not provide for or permit such deposits, of that fact.

(c) The International Bureau shall promptly publish in the Gazette requirements notified to it under paragraph (a) and information notified to it under paragraph (b).

*PCT Administrative Instruction Section 209.  
Indications as to Deposited Biological Material on a Separate Sheet*

(a) To the extent that any indication with respect to deposited biological material is not contained in the description, it may be given on a separate sheet. Where any such indication is so given, it shall preferably be on Form PCT/RO/134 and, if furnished at the time of filing, the said Form shall, subject to paragraph (b), preferably be attached to the request and referred to in the check list referred to in Rule 3.3 (a)(ii).

\*\*>

(b) For the purposes of the Israel Patent Office, the Japan Patent Office, the Korean Intellectual Property Office, the Mexican Institute of Industrial Property, and the Turkish Patent Institute as designated Offices, paragraph (a) applies only to the extent that the said Form or sheet is included as one of the sheets of the description of the international application at the time of filing.<

**REFERENCES TO DEPOSITED BIOLOGICAL MATERIAL IN THE CASE OF MICROBIOLOGICAL INVENTIONS**

The PCT does not require the inclusion of a reference to a biological material and/or to its deposit with a depositary institution in an international application; it merely prescribes the contents of any “reference to deposited biological material” (defined as “particulars given... with respect to the deposit of biological material... or to the biological material so deposited”) which is included in an international application, and when such a reference must be furnished. It follows that the applicant may see a need to make such a reference only when it is required for the purpose of disclosing the invention claimed in the international application in a manner sufficient for the invention to be carried out by a person skilled in the art that is, when the law of at least one of the designated States provides for the making, for this purpose, of a reference to a deposited biological material if the invention involves the use of a biological material that is not available to the public. Any reference to a deposited biological material furnished separately from the

description will be included in the pamphlet containing the published international application.

A reference to a deposited biological material made in accordance with the requirements of the PCT must be regarded by each of the designated Offices as satisfying the requirements of the national law applicable in that Office with regard to the contents of such references and the time for furnishing them.

A reference may be made for the purposes of all designated States or for one or only some of the designated States. A reference is considered to be made for the purpose of all designated States unless it is expressly made for certain designated States only. References to different deposits may be made for the purposes of different designated States.

There are two kinds of indication which may have to be given with regard to the deposit of the biological material, namely:

(A) indications specified in the PCT Regulations themselves; and

(B) additional indications by the national (or regional) Office of (or acting for) a State designated in the international application and which have been published in the *PCT Gazette*; these additional indications may relate not only to the deposit of the biological material but also to the biological material itself.

The indications in the first category are:

- (1) the name and address of the depository institution with which the deposit was made;
- (2) the date of the deposit with that institution; and
- (3) the accession number given to the deposit by that institution.

U.S. requirements include the name and address of the depository institution at the time of filing, the date of the deposit or a statement that the deposit was made on or before the priority date of the international application and, to the extent possible, a taxonomic description of the biological material. See Annex L of the PCT Applicant's Guide.

The national laws of some of the national (or regional) Offices require that, besides indications concerning the deposit of a biological material, an indication be given concerning the biological material itself, such as, for example, a short description of its characteristics, at least to the extent that this information is available to the applicant. These requirements must be met in the case of international applications for which

any such Office is a designated Office, provided that the requirements have been published in the *PCT Gazette*. Annex L of the PCT Applicant's Guide indicates, for each of the national (or regional) Offices, the requirements (if any) of this kind which have been published.

If any indication is not included in a reference to a deposited biological material contained in the international application as filed, it may be furnished to the International Bureau within 16 months after the priority date unless the International Bureau has been notified (and, at least 2 months prior to the filing of the international application, it has published in the *PCT Gazette*) that the national law requires the indication to be furnished earlier. However, if the applicant makes a request for early publication, all indications should be furnished by the time the request is made, since any designated Office may regard any indication not furnished when the request is made as not having been furnished in time.

No check is made in the international phase to determine whether a reference has been furnished within the prescribed time limit. However, the International Bureau notifies the designated Offices of the date(s) on which indications, not included in the international application as filed, were furnished to it. Those dates are also mentioned in the pamphlet containing the published international application. Failure to include a reference to a deposited biological material (or any indication required in such a reference) in the international application as filed, or failure to furnish it (or the indication) within the prescribed time limit, has no consequence if the national law does not require the reference (or indication) to be furnished in a national application. Where there is a consequence, it is the same as that which applies under the national law.

To the extent that indications relating to the deposit of a biological material are not given in the description, because they are furnished later, they may be given in the "optional sheet" provided for that purpose. If the sheet is submitted when the international application is filed, a reference to it should be made in the check list contained on the last sheet of the request form. Should >Israel,< Japan>, Korea, Mexico, or Turkey< be designated, such a sheet must, if used, be included as one of the sheets of the description at the time of filing; otherwise the indications given in it

will not be taken into account by the respective patent offices of those designated States in the national phase. If the sheet is furnished to the International Bureau later, it must be enclosed with a letter.

Each national (or regional) Office whose national law provides for deposits of biological material for the purposes of patent procedure notifies the International Bureau of the depositary institutions with which the national law permits such deposits to be made. Information on the institutions notified by each of those Offices is published by the International Bureau in the *PCT Gazette*.

A reference to a deposit cannot be disregarded by a designated Office for reasons pertaining to the institution with which the biological material was deposited if the deposit referred to is one made with a depositary institution notified by that Office. Thus, by consulting the *PCT Gazette* or Annex L of the PCT Applicant's Guide, the applicant can be sure that he has deposited the biological material with an institution which will be accepted by the designated Office.

International Searching Authorities and International Preliminary Examining Authorities are not expected to request access to deposited biological material. However, in order to retain the possibility of access to a deposited biological material referred to in an international application which is being searched or examined by such an Authority, the PCT provides that the Authorities may, if they fulfill certain conditions, ask for samples. Thus, an Authority may only ask for samples if it has notified the International Bureau (in a general notification) that it may require samples and the International Bureau has published the notification in the *PCT Gazette*. The only Authority which has made such a notification (and thus the only Authority which may request samples) is the Japan Patent Office. If a sample is asked for, the request is directed to the applicant, who then becomes responsible for making the necessary arrangements for the sample to be provided.

The furnishing of samples of a deposit of a biological material to third persons is governed by the national laws applicable in the designated Offices. PCT Rule 13<sup>bis</sup>.6(b), however, provides for the delay-

ing of any furnishing of samples under the national law applicable in each of the designated (or elected) Offices until the start of the national phase, subject to the ending of this "delaying effect" brought about by the occurrence of either of the following two events:

(A) the applicant has, after international publication of the international application, taken the steps necessary to enter the national phase before the designated Office.

(B) international publication of the international application has been effected, and that publication has the same effects, under the national law applicable in the designated Office, as the compulsory national publication of an unexamined national application (in other words, the international application has qualified for the grant of "provisional protection").

## 1823.02 Nucleotide and/or Amino Acid Sequence Listings, and Tables Related to Sequence Listings [R-2]

*PCT Rule 5.*

*The Description*

\*\*\*\*\*

### 5.2. Nucleotide and/or Amino Acid Sequence Disclosure

(a) Where the international application contains disclosure of one or more nucleotide and/or amino acid sequences, the description shall contain a sequence listing complying with the standard prescribed by the Administrative Instructions and presented as a separate part of the description in accordance with that standard.

(b) Where the sequence listing part of the description contains any free text as defined in the standard provided for in the Administrative Instructions, that free text shall also appear in the main part of the description in the language thereof.

*PCT Rule 13<sup>ter</sup>.*

*Nucleotide and/or Amino Acid Sequence Listings*

### 13<sup>ter</sup>.1. Sequence Listing for International Authorities

(a) Where the International Searching Authority finds that the international application contains disclosure of one or more nucleotide and/or amino acid sequences but:

(i) the international application does not contain a sequence listing complying with the standard provided for in the Administrative Instructions, that Authority may invite the applicant to furnish to it, within a time limit fixed in the invitation, a sequence listing complying with that standard;

(ii) the applicant has not already furnished a sequence listing in computer readable form complying with the standard provided for in the Administrative Instructions, that Authority may invite the applicant to furnish to it, within a time limit fixed in the invitation, a sequence listing in such a form complying with that standard.

(b) *[Deleted]*

(c) If the applicant does not comply with an invitation under paragraph (a) within the time limit fixed in the invitation, the International Searching Authority shall not be required to search the international application to the extent that such noncompliance has the result that a meaningful search cannot be carried out.

(d) Where the International Searching Authority finds that the description does not comply with Rule 5.2(b), it shall invite the applicant to file the required correction. Rule 26.4 shall apply *mutatis mutandis* to any correction offered by the applicant. The International Searching Authority shall transmit the correction to the receiving Office and to the International Bureau.

(e) Paragraphs (a) and (c) shall apply *mutatis mutandis* to the procedure before the International Preliminary Examining Authority.

(f) Any sequence listing not contained in the international application as filed shall not, subject to Article 34, form part of the international application.

### *13<sup>ter</sup>.2.Sequence Listing for Designated Office*

Once the processing of the international application has started before a designated Office, Rule 13<sup>ter</sup>.1(a) shall apply *mutatis mutandis* to the procedure before that Office. No designated Office shall require the applicant to furnish to it a sequence listing other than a sequence listing complying with the standard provided for in the Administrative Instructions.

#### *PCT Administrative Instruction Section 208.*

##### *Sequence Listings*

Any nucleotide and/or amino acid sequence listing ("sequence listing") filed as part of the international application, or furnished together with the international application or subsequently (whether in printed form or computer readable form), shall comply with Annex C.

## **I. REQUIREMENTS FOR SEQUENCE LISTINGS**

Where an international application discloses one or more nucleotide and/or amino acid sequences, the description must contain a sequence listing complying with the standard specified in the Administrative

Instructions. The standard is set forth in detail in Annex C - Standard for the Presentation of Nucleotide and Amino Acid Sequence Listings in International Patent Applications Under the PCT. The standard allows the applicant to draw up a single sequence listing which is acceptable to all receiving Offices, International Searching and Preliminary Examining Authorities for the purposes of the international phase, and to all designated and elected Offices for the purposes of the national phase. The International Searching Authority and the International Preliminary Examining Authority may, in some cases, invite the applicant to furnish a listing complying with that standard. The applicant may also be invited to furnish a listing in a computer readable form provided for in the PCT Administrative Instructions. It is advisable for the applicant to submit a listing of the sequence in computer readable form, if such a listing is required by the competent International Searching Authority or International Preliminary Examining Authority, together with the international application rather than to wait for an invitation by the International Searching Authority or International Preliminary Examining Authority.

The computer readable form is not mandatory in international applications to be searched by the United States International Searching Authority or examined by the United States International Preliminary Examining Authority. However, if a computer readable form of a sequence listing is not provided, a search or examination will be performed only to the extent possible in the absence of the computer readable form. The U.S. sequence rules (37 CFR 1.821 - 1.825) and the PCT sequence requirements are substantively consistent. In this regard, full compliance with the requirements of the U.S. rules will ensure compliance with the applicable PCT requirements. For a detailed discussion of the U.S. sequence rules, see MPEP § 2420 - § 2421.04. Note that the European Patent Office (EPO) is not a competent International Searching Authority (ISA) or International Preliminary Examining Authority (IPEA) for many international applications directed to the field of biotechnology and filed by residents or nationals of the United States. See MPEP §§ 1840.01 and 1865.01.

## II. QUALIFYING FOR POTENTIALLY REDUCED BASIC FEE BY FILING SEQUENCE LISTING AND/OR TABLES ON COMPACT DISC RATHER THAN ON PAPER

*PCT Administrative Instruction Section 801.*

*Filing of International Applications Containing Sequence Listings and/or Tables*

(a) Pursuant to Rules 89<sup>bis</sup> and 89<sup>ter</sup>, where an international application contains disclosure of one or more nucleotide and/or amino acid sequence listings ("sequence listings"), the receiving Office may, if it is prepared to do so, accept that the sequence listing part of the description, as referred to in Rule 5.2(a) and/or any table related to the sequence listing(s) ("sequence listings and/or tables"), be filed, at the option of the applicant:

(i) only on an electronic medium in the computer readable form referred to in Section 802; or

(ii) both on an electronic medium in that computer readable form and on paper in the written form referred to in Section 802;

provided that the other elements of the international application are filed as otherwise provided for under the Regulations and these Instructions.

(b) Any receiving Office which is prepared to accept the filing in computer readable form of the sequence listings and/or tables under paragraph (a) shall notify the International Bureau accordingly. The notification shall specify the electronic media on which the receiving Office will accept such filings. The International Bureau shall promptly publish any such information in the Gazette.

(c) A receiving Office which has not made a notification under paragraph (b) may nevertheless decide in a particular case to accept an international application the sequence listings and/or tables of which are filed with it under paragraph (a).

(d) Where the sequence listings and/or tables are filed in computer readable form under paragraph (a) but not on an electronic medium specified by the receiving Office under paragraph (b), that Office shall, under Article 14(1)(a)(v), invite the applicant to furnish to it replacement sequence listings and/or tables on an electronic medium specified under paragraph (b).

(e) Where an international application containing sequence listings and/or tables in computer readable form is filed under paragraph (a) with a receiving Office which is not prepared, under paragraph (b) or (c), to accept such filings, Section 333(b) and (c) shall apply.

Part 8 of the Administrative Instructions became effective January 11, 2001. Under Administrative Instructions Section 801(a), applicants may file the nucleotide and/or amino acid sequence listing part of the description of an international application on an electronic medium in computer readable form with certain receiving Offices. As of September 6, 2002,

Part 8 of the Administrative Instructions was expanded to include tables related to sequence listings. At the present time, the United States Receiving Office (RO/US) has not notified the International Bureau (IB) under Administrative Instructions Section 801(b) that it will be generally accepting the filing of international applications under Administrative Instructions Section 801(a). The RO/US will, however, accept such applications in a particular case pursuant to Administrative Instructions Section 801(c), provided that applicant follows the Guidelines set forth below in subsection II. A.

*PCT Administrative Instruction Section 803.*

*\*\*>Calculation of International Filing Fee for International Applications Containing Sequence Listings and/or Tables*

Where sequence listings and/or tables are filed in electronic form under Section 801(a), the international filing fee payable in respect of that application shall include the following two components:

(i) a basic component calculated as provided in the Schedule of Fees in respect of all pages filed on paper (that is, all pages of the request, description (excluding sequence listings and/or tables if also filed on paper), claims, abstract and drawings), and

(ii) an additional component, in respect of the sequence listings and/or tables, equal to 400 times the fee per sheet as referred to in item 1 of the Schedule of Fees, regardless of the actual length of the sequence listings and/or tables filed in computer readable form and regardless of the fact that sequence listings and/or tables may have been filed both in written form and in computer readable form.<

Applicants will usually achieve a significant fee savings by filing international applications under Administrative Instructions Section 801(a) in situations where the sequence listings and/or tables consume over four hundred (400) combined pages. The potentially reduced *>*international filing< fee described in Administrative Instructions Section 803 is available to applications filed pursuant to the Guidelines below. Applicants who do not wish to file under Administrative Instructions Section 801(a) may submit the sequence listing part and any related tables under conventional filing procedures but will not be eligible for the potentially reduced *>*international filing< fee described in Administrative Instructions Section 803.

When filing an international application under Administrative Instructions Section 801(a) in the RO/US, applicant should not submit a paper copy of the

Sequence Listing part and/or tables. If both a sequence listing part and a tables part are filed under Administrative Instructions Section 801(a), the sequence listing part and the tables part must not be filed on the same electronic medium. With specific regard to tables, only tables which are related to sequence listings, as referred to in PCT Rule 5.2(a), are covered under Part 8 of the Administrative Instructions. Currently, other types of table data may not be filed on electronic media.

**A. Guidelines on Qualifying for Potentially Reduced \*>International Filing< Fee Under PCT Administrative Instructions Section 803**

**1. What To Submit**

The applicant is required to submit a complete copy of the international application, wherein the sequence listing part and/or tables part of the application is submitted on electronic media rather than on paper. The application is to be accompanied by a transmittal letter entitled "Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To the United States Receiving Office Under PCT Administrative Instructions - Part 8."

**(a) Complete International Application With Sequence Listing Part and/or Tables Part on Electronic Media**

Applicant shall submit a paper copy of the complete international application, with the exception that the sequence listing part and/or tables part is provided on electronic media rather than on paper. Four (4) copies of the sequence listing part and/or three (3) copies of the tables part are to be included with the application, each copy on an electronic medium or set of electronic media if additional capacity is needed. One copy of the sequence listing part, called the "computer readable form" (CRF) copy required by the Administrative Instructions (see Annex C of the Administrative Instructions, paragraphs 39-46), may be submitted on any acceptable medium under 37 CFR 1.824(c), although compact disc (CD) media is preferred. All other copies must be submitted only on CD media as specified below:

(1) CD-R

Type: 120mm Compact Disc Recordable

Specification: ISO 9660, 650MB; or

(2) CD-ROM

Type: ISO/IEC 10149:1995, 120mm Compact Disc Read Only Memory

Specification: ISO 9660, 650MB

Each electronic medium shall be enclosed in a hard protective case within a padded envelope. If a sequence listing file is included, the four (4) sequence listing part copies shall be labeled as follows:

- (1) "COPY 1 – SEQUENCE LISTING PART"
- (2) "COPY 2 – SEQUENCE LISTING PART"
- (3) "COPY 3 – SEQUENCE LISTING PART"
- (4) "CRF"

If tables file(s) are included, the three (3) tables part copies shall be labeled as follows:

- (1) "COPY 1 – TABLES PART"
- (2) "COPY 2 – TABLES PART"
- (3) "COPY 3 – TABLES PART"

Additionally, the labeling shall contain the following information:

- (1) Name of Applicant
- (2) Title of Invention
- (3) Applicant's or Agent's File Reference Number
- (4) Date of Recording
- (5) Computer Operating System Used
- (6) Name of the Competent Authority (i.e. the RO/US)
- (7) Indication that the sequence listing part and/or tables part is being filed under Administrative Instructions Section 801(a)
- (8) If the sequence listing file and/or tables file(s) consumes more than one CD, an indication such as "DISK 1/3", "DISK 2/3", and "DISK 3/3"
- (9) For a CD containing tables, an indication such as "TABLES 1 to 450"

Examples of properly labeled electronic media appear below.

**Important Notes:**

The electronic medium itself must be neatly labeled with the required information. Labeling of the protective case is recommended, but not required. Sequence listings or tables submitted for correction, rectification, or amendment must satisfy the additional labeling requirements of Administrative Instructions Section 802(d).

Each CD shall contain either: (1) only a sequence listing part or (2) only a tables part. A sequence listing part and a tables part must not reside together on the same CD. Furthermore, each file in the tables part

must have a file name which indicates the name of the table contained therein, e.g., “table-1.txt”, “table-2.txt”, etc. In addition, no programs or any explanatory files shall appear on any CD.

The sequence listing file and/or tables file(s) must be in compliance with the American Standard Code for Information Interchange (ASCII) and formatted in accordance with Administrative Instructions Annex C, paragraph 41 and Administrative Instructions Annex C-<sup>bis</sup>. No copy protection or encryption techniques are permitted. File compression is acceptable for the sequence listing part, so long as the compressed file is in a self-extracting format and uses the compression method described in Administrative Instructions Part 7, Annex F, Section 4.1.1. File Compression is not permitted for the tables part.

**(b) Compact Disc Transmittal Sheet for Submission of Sequence Listing and/or Tables to the United States Receiving Office Under PCT Administrative Instructions - Part 8.**

If applicant desires for an application to be accepted pursuant to Administrative Instructions Section 801(c), the application must be submitted with a document entitled “Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8.” This document is available as a PDF sheet that may be downloaded from <http://www.uspto.gov/web/offices/pac/dapps/pct/part8translett.pdf>. The PDF sheet includes the following information:

- (1) Name of Applicant
- (2) Applicant’s or Agent’s File Reference Number
- (3) Title of Invention
- (4) Name of Sequence Listing File and/or Tables File(s) (as per CD directory)
- (5) Size of Sequence Listing File and/or Tables File(s) (in bytes or kilobytes as per CD directory)
- (6) Date of Sequence Listing File and/or Tables File(s) (as per CD directory)
- (7) Statement that the four (4) submitted copies of the Sequence Listing Part and/or three (3) submitted copies of the Tables Part are identical
- (8) Contact information

- (a) Name of Contact
- (b) Telephone Number
- (c) Facsimile Number
- (9) Signature of Applicant, Agent, or Common Representative

Important Note: The “Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8” is separate

and apart from any other transmittal letter. The Transmittal Sheet requirement cannot be satisfied by incorporating the above information into any other document. A sample copy of a “Compact Disc Transmittal Sheet for Submission of Sequence Listing To the United States Receiving Office Under PCT Administrative Instructions - Part 8” is reproduced on the following page.

Name of File(s) (as per CD directory): _____
Size of File(s) (in bytes or kilobytes): _____
Date of File(s) (as per CD directory): _____

<b>STATEMENT</b>
I hereby certify that the four copies of the sequence listing part and/or the three copies of the tables part submitted herewith are identical.
Name of Person Signing: _____
Signature of Applicant, Agent, or Common Representative: _____

<b>CONTINUATION OF TABLES FILE(S) (attach additional sheets if necessary)</b>

This sheet offers a sample or suggested format for a Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8. This sample sheet is not an OMB officially approved form.

**2. Where To Submit****(a) United States Postal Service (Express Mail, Priority Mail, First Class Mail, etc.)**

If deposited with the United States Postal Service, the entire international application, including all applicable items set forth in MPEP § 1823.02 paragraph \*>II.A.1.< above, should be addressed to:

\*\*>Mail Stop PCT

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450<

**(b) Federal Express, United Parcel Service, or Other Delivery Service**

If deposited with a private delivery service, the entire international application, including all applicable items set forth in MPEP § 1823.02 paragraph I.A.1. above, should be addressed to:

U.S. Patent and Trademark Office

2011 South Clark Place

Customer Window, Box PCT

Crystal Plaza Two, Lobby, Room 1B03

Arlington, VA 22202

**(c) Hand-Carried**

If hand-carried directly to the USPTO, the entire international application, including all applicable items set forth in MPEP § 1823.02 paragraph \*>II.A.1.< above, should be delivered to either location specified below:

Customer Window, \*>Mail Stop< PCT

2011 South Clark Place

Crystal Plaza Two, Lobby, Room 1B03

Arlington, VA 22202

OR

PCT Operations Receptionist

2011 South Clark Place

Crystal Plaza Two - 8<sup>th</sup> Floor

Arlington, VA 22202

**1824 The Claims [R-1]**

*PCT Article 6.*

*The Claims*

The claim or claims shall define the matter for which protection is sought. Claims shall be clear and concise. They shall be fully supported by the description.

*PCT Rule 6.*

*The Claims*

**6.1. Number and Numbering of Claims**

(a) The number of the claims shall be reasonable in consideration of the nature of the invention claimed.

(b) If there are several claims, they shall be numbered consecutively in Arabic numerals.

(c) The method of numbering in the case of the amendment of claims shall be governed by the Administrative Instructions.

**6.2. References to Other Parts of the International Application**

(a) Claims shall not, except where absolutely necessary, rely, in respect of the technical features of the invention, on references to the description or drawings. In particular, they shall not rely on such references as: "as described in part ... of the description," or "as illustrated in figure ... of the drawings."

(b) Where the international application contains drawings, the technical features mentioned in the claims shall preferably be followed by the reference signs relating to such features. When used, the reference signs shall preferably be placed between parentheses. If inclusion of reference signs does not particularly facilitate quicker understanding of a claim, it should not be made. Reference signs may be removed by a designated Office for the purposes of publication by such Office.

**6.3. Manner of Claiming**

(a) The definition of the matter for which protection is sought shall be in terms of the technical features of the invention.

(b) Whenever appropriate, claims shall contain:

(i) a statement indicating those technical features of the invention which are necessary for the definition of the claimed subject matter but which, in combination, are part of the prior art,

(ii) a characterizing portion - preceded by the words "characterized in that," "characterized by," "wherein the improvement comprises," or any other words to the same effect - stating concisely the technical features which, in combination with the features stated under (i), it is desired to protect.

(c) Where the national law of the designated State does not require the manner of claiming provided for in paragraph (b), failure to use that manner of claiming shall have no effect in that State provided the manner of claiming actually used satisfies the national law of that State.

#### 6.4. *Dependent Claims*

(a) Any claim which includes all the features of one or more other claims (claim in dependent form, hereinafter referred to as “dependent claim”) shall do so by a reference, if possible at the beginning, to the other claim or claims and shall then state the additional features claimed. Any dependent claim which refers to more than one other claim (“multiple dependent claim”) shall refer to such claims in the alternative only. Multiple dependent claims shall not serve as a basis for any other multiple dependent claim. Where the national law of the national Office acting as International Searching Authority does not allow multiple dependent claims to be drafted in a manner different from that provided for in the preceding two sentences, failure to use that manner of claiming may result in an indication under Article 17(2)(b) in the international search report. Failure to use the said manner of claiming shall have no effect in a designated State if the manner of claiming actually used satisfies the national law of that State.

(b) Any dependent claim shall be construed as including all the limitations contained in the claim to which it refers or, if the dependent claim is a multiple dependent claim, all the limitations contained in the particular claim in relation to which it is considered.

(c) All dependent claims referring back to a single previous claim, and all dependent claims referring back to several previous claims, shall be grouped together to the extent and in the most practical way possible.

#### 6.5. *Utility Models*

Any designated State in which the grant of a utility model is sought on the basis of an international application may, instead of Rules 6.1 to 6.4, apply in respect of the matters regulated in those Rules the provisions of its national law concerning utility models once the processing of the international application has started in that State, provided that the applicant shall be allowed at least two months from the expiration of the time limit applicable under Article 22 to adapt his application to the requirements of the said provisions of the national law.

#### *PCT Administrative Instruction Section 205.*

##### *Numbering and Identification of Claims Upon Amendment*

(a) Amendments to the claims under Article 19 or Article 34(2)(b) may be made either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed. All the claims appearing on a replacement sheet shall be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims shall be required. In all cases where claims are renumbered, they shall be renumbered consecutively.

(b) The applicant shall, in the letter referred to in the second and third sentences of Rule 46.5(a) or in the second and fourth sentences of Rule 66.8(a), indicate the differences between the claims as filed and the claims as amended. He shall, in particular, indicate in the said letter, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether:

- (i) the claim is unchanged;
- (ii) the claim is cancelled;
- (iii) the claim is new;
- (iv) the claim replaces one or more claims as filed;
- (v) the claim is the result of the division of a claim as filed.

filed.

#### *37 CFR 1.436. The claims.*

The requirements as to the content and format of claims are set forth in PCT Art. 6 and PCT Rules 6, 9, 10 and 11 and shall be adhered to. The number of the claims shall be reasonable, considering the nature of the invention claimed.

The claim or claims must “define the matter for which protection is sought.” Claims must be clear and concise. They must be fully supported by the description. PCT Rule 6 contains detailed requirements as to the number and numbering of claims, the extent to which any claim may refer to other parts of the international application, the manner of claiming, and dependent claims. As to the manner of claiming, the claims must, whenever appropriate, be in two distinct parts; namely, the statement of the prior art and the statement of the features for which protection is sought (“the characterizing portion”).

The physical requirements for the claims are the same as those for the description. Note that the claims must commence on a new sheet.

The procedure for rectification of obvious errors is explained in MPEP § 1836. The omission of an entire sheet of the claims cannot be rectified without affecting the international filing date. It is recommended that a request for rectification of obvious errors in the claims be made only if the error is liable to affect the international search; otherwise, the rectification should be made by amending the claims.

The claims can be amended during the international phase under PCT Article 19 on receipt of the international search report, during international preliminary examination if the applicant has filed a Demand, and during the national phase.

Multiple dependent claims are permitted in international applications before the United States Patent and Trademark Office as an International Searching and International Preliminary Examining Authority or as a Designated or Elected Office, if they are in the alternative only and do not serve as a basis for any other multiple dependent claim (PCT Rule 6.4(a), 35 U.S.C. 112). The claims, being an element of the application, should start on a new page (PCT Rule 11.4). Page numbers \*\* must not be placed in the margins (PCT

Rule 11.7(b)). Line numbers should appear in the right half of the left margin (PCT Rule 11.8(b)). Paragraph numbers (e.g., paragraph numbers complying with 37 CFR 1.52(b)(6)) are acceptable provided they are not placed in the margins. See PCT Rule 11.6(e).

The number of claims shall be reasonable, considering the nature of the invention claimed (37 CFR 1.436).

## 1825 The Drawings

### *PCT Article 7.*

#### *The Drawings*

(1) Subject to the provisions of paragraph (2)(ii), drawings shall be required when they are necessary for the understanding of the invention.

(2) Where, without being necessary for the understanding of the invention, the nature of the invention admits of illustration by drawings:

(i) the applicant may include such drawings in the international application when filed.

(ii) any designated Office may require that the applicant file such drawings with it within the prescribed time limit.

### *PCT Rule 7.*

#### *The Drawings*

##### *7.1. Flow Sheets and Diagrams*

Flow sheets and diagrams are considered drawings.

##### *7.2. Time Limit*

The time limit referred to in Article 7(2)(ii) shall be reasonable under the circumstances of the case and shall, in no case, be shorter than two months from the date of the written invitation requiring the filing of drawings or additional drawings under the said provision.

### *PCT Rule 11.*

#### *Physical Requirements of the International Application*

\*\*\*\*\*

##### *11.5. Size of Sheets*

The size of the sheets shall be A4 (29.7 cm x 21 cm). However, any receiving Office may accept international applications on sheets of other sizes provided that the record copy, as transmitted to the International Bureau, and, if the competent International Searching Authority so desires, the search copy, shall be of A4 size.

##### *11.6. Margins*

\*\*\*\*\*

(c) On sheets containing drawings, the surface usable shall not exceed 26.2 cm x 17.0 cm. The sheets shall not contain frames around the usable or used surface. The minimum margins shall be as follows:

- top: 2.5 cm
- left side: 2.5 cm
- right side: 1.5 cm
- bottom: 1.0 cm

\*\*\*\*\*

##### *11.11. Words in Drawings*

(a) The drawings shall not contain text matter, except a single word or words, when absolutely indispensable, such as "water," "steam," "open," "closed," "section on AB," and, in the case of electric circuits and block schematic or flow sheet diagrams, a few short catchwords indispensable for understanding.

(b) Any words used shall be so placed that, if translated, they may be pasted over without interfering with any lines of the drawings.

\*\*\*\*\*

##### *11.13. Special Requirements for Drawings*

(a) Drawings shall be executed in durable, black, sufficiently dense and dark, uniformly thick and well-defined, lines and strokes without colorings.

(b) Cross-sections shall be indicated by oblique hatching which should not impede the clear reading of the reference signs and leading lines.

(c) The scale of the drawings and the distinctness of their graphical execution shall be such that a photographic reproduction with a linear reduction in size to two-thirds would enable all details to be distinguished without difficulty.

(d) When, in exceptional cases, the scale is given on a drawing, it shall be represented graphically.

(e) All numbers, letters and reference lines, appearing on the drawings, shall be simple and clear. Brackets, circles or inverted commas shall not be used in association with numbers and letters.

(f) All lines in the drawings shall, ordinarily, be drawn with the aid of drafting instruments.

(g) Each element of each figure shall be in proper proportion to each of the other elements in the figure, except where the use of a different proportion is indispensable for the clarity of the figure.

(h) The height of the numbers and letters shall not be less than 0.32 cm. For the lettering of drawings, the Latin and, where customary, the Greek alphabets shall be used.

(i) The same sheet of drawings may contain several figures. Where figures on two or more sheets form in effect a single complete figure, the figures on the several sheets shall be so arranged that the complete figure can be assembled without concealing any part of any of the figures appearing on the various sheets.

(j) The different figures shall be arranged on a sheet or sheets without wasting space, preferably in an upright position, clearly separated from one another. Where the figures are not

arranged in an upright position, they shall be presented sideways with the top of the figures at the left side of the sheet.

(k) The different figures shall be numbered in Arabic numerals consecutively and independently of the numbering of the sheets.

(l) Reference signs not mentioned in the description shall not appear in the drawings, and vice versa.

(m) The same features, when denoted by reference signs, shall, throughout the international application, be denoted by the same signs.

(n) If the drawings contain a large number of reference signs, it is strongly recommended to attach a separate sheet listing all reference signs and the features denoted by them.

\*\*\*\*\*

### 37 CFR 1.437. *The drawings.*

(a) Subject to paragraph (b) of this section, when drawings are necessary for the understanding of the invention, or are mentioned in the description, they must be part of an international application as originally filed in the United States Receiving Office in order to maintain the international filing date during the national stage (PCT Art. 7).

(b) Drawings missing from the application upon filing will be accepted if such drawings are received within 30 days of the date of first receipt of the incomplete papers. If the missing drawings are received within the 30-day period, the international filing date shall be the date on which such drawings are received. If such drawings are not timely received, all references to drawings in the international application shall be considered non-existent (PCT Art. 14(2), Administrative Instruction 310).

(c) The physical requirements for drawings are set forth in PCT Rule 11 and shall be adhered to.

The international application must contain drawings when they are necessary for the understanding of the invention. Moreover where, without drawings being actually necessary for the understanding of the invention, its nature admits of illustration by drawings, the applicant may include such drawings and any designated Office may require the applicant to file such drawings during the national phase. Flow sheets and diagrams are considered drawings. "Guidelines for Drawings Under the Patent Cooperation Treaty," published in the *PCT Gazette* (No. 7/1978), may be obtained, in English and French, from the International Bureau.

Drawings must be presented on one or more separate sheets. They may not be included in the description, the claims or the abstract. They may not contain text matter, except a single word or words when absolutely indispensable. Note that if the drawings contain text matter not in English but in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office, the international application

will be transmitted to the International Bureau for processing in its capacity as a Receiving Office. See 37 CFR 1.412(c)(6)(ii). If the drawings contain text matter not in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office, the application will be denied an international filing date.

All lines in the drawings must, ordinarily, be drawn with the aid of a drafting instrument and must be executed in black, uniformly thick and well-defined lines. PCT Rules 11.10 to 11.13 contain detailed requirements as to further physical requirements of drawings. Drawings newly executed according to national standards may not be required during the national phase if the drawings filed with the international application comply with PCT Rule 11. The examiner may require new drawings where the drawings which were accepted during the international phase did not comply with PCT Rule 11. A file reference may be indicated in the upper left corner on each sheet of the drawings as for the description.

All of the figures constituting the drawings must be grouped together on a sheet or sheets without waste of space, preferably in an upright position and clearly separated from each other. Where the drawings or tables cannot be presented satisfactorily in an upright position, they may be placed sideways, with the tops of the drawings or tables on the left-hand side of the sheet.

The usable surface of sheets (which must be of A4 size) must not exceed 26.2 cm x 17.0 cm. The sheets must not contain frames around the usable surface. The minimum margins which must be observed are: top and left side: 2.5 cm; right side: 1.5 cm; bottom: 1.0 cm.

All sheets of drawings must be numbered in the center of either the top or the bottom of each sheet but not in the margin in numbers larger than those used as reference signs in order to avoid confusion with the latter. For drawings, a separate series of page numbers is to be used. The number of each sheet of the drawings must consist of two Arabic numerals separated by an oblique stroke, the first being the sheet number and the second being the total number of sheets of drawings. For example, "2/5" would be used for the second sheet of drawings where there are five in all.

Different figures on the sheets of drawings must be numbered in Arabic numerals consecutively and inde-

pendently of the numbering of the sheets and, if possible, in the order in which they appear. This numbering should be preceded by the expression "Fig."

The PCT makes no provision for photographs. Nevertheless, they are allowed by the International Bureau where it is impossible to present in a drawing what is to be shown (for instance, crystalline structures). Where, exceptionally, photographs are submitted, they must be on sheets of A4 size, they must be black and white, and they must respect the minimum margins and admit of direct reproduction. Color photographs are not accepted.

The procedure for rectification of obvious errors in the drawings is explained in MPEP § 1836. The omission of an entire sheet of drawings cannot be rectified without affecting the international filing date. Changes other than the rectification of obvious errors are considered amendments.

The drawings can be amended during the international phase only if the applicant files a Demand for international preliminary examination. The drawings can also be amended during the national phase.

If drawings are referred to in an international application and are not found in the search copy file, the examiner should refer the application to a Special Program Examiner in his or her Technology Center. See Administrative Instructions Section 310.

## 1826 The Abstract

### *PCT Rule 8.*

#### *The Abstract*

##### *8.1. Contents and Form of the Abstract*

(a) The abstract shall consist of the following:

(i) a summary of the disclosure as contained in the description, the claims, and any drawings; the summary shall indicate the technical field to which the invention pertains and shall be drafted in a way which allows the clear understanding of the technical problem, the gist of the solution of that problem through the invention, and the principal use or uses of the invention;

(ii) where applicable, the chemical formula which, among all the formulae contained in the international application, best characterizes the invention.

(b) The abstract shall be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English).

(c) The abstract shall not contain statements on the alleged merits or value of the claimed invention or on its speculative application.

(d) Each main technical feature mentioned in the abstract and illustrated by a drawing in the international application shall be followed by a reference sign, placed between parentheses.

##### *8.2. Figure*

(a) If the applicant fails to make the indication referred to in Rule 3.3(a)(iii), or if the International Searching Authority finds that a figure or figures other than that figure or those figures suggested by the applicant would, among all the figures of all the drawings, better characterize the invention, it shall, subject to paragraph (b), indicate the figure or figures which should accompany the abstract when the latter is published by the International Bureau. In such case, the abstract shall be accompanied by the figure or figures so indicated by the International Searching Authority. Otherwise, the abstract shall, subject to paragraph (b), be accompanied by the figure or figures suggested by the applicant.

(b) If the International Searching Authority finds that none of the figures of the drawings is useful for the understanding of the abstract, it shall notify the International Bureau accordingly. In such case, the abstract, when published by the International Bureau, shall not be accompanied by any figure of the drawings even where the applicant has made a suggestion under Rule 3.3(a)(iii).

##### *8.3. Guiding Principles in Drafting*

The abstract shall be so drafted that it can efficiently serve as a scanning tool for purposes of searching in the particular art, especially by assisting the scientist, engineer or researcher in formulating an opinion on whether there is a need for consulting the international application itself.

##### *37 CFR 1.438. The abstract.*

(a) Requirements as to the content and form of the abstract are set forth in PCT Rule 8, and shall be adhered to.

(b) Lack of an abstract upon filing of an international application will not affect the granting of a filing date. However, failure to furnish an abstract within one month from the date of the notification by the Receiving Office will result in the international application being declared withdrawn.

The abstract must consist of a summary of the disclosure as contained in the description, the claims and any drawings. Where applicable, it must also contain the most characteristic chemical formula. The abstract must be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English). National practice (see MPEP § 608.01(b)) also provides a maximum of 150 words for the abstract. See 37 CFR 1.72(b). The PCT range of 50 - 150 words is not absolute but publication problems could result when the PCT limit is increased beyond the 150 word limit. Maintaining the PCT upper limit is encouraged. As a rule of thumb, it can be said that the volume of the text of the abstract, including one of the figures from the drawings (if

any), should not exceed what can be accommodated on an A4 sheet of typewritten matter, 1 1/2 spaced. The abstract of the international application as filed must begin on a new sheet following the claims (Administrative Instructions Section 207). The other physical requirements must correspond to those for the description. The abstract must be so drafted that it can efficiently serve as a scanning tool for the purposes of searching in the particular art. These and other requirements concerning the abstract are spelled out in detail in PCT Rule 8. Useful guidance can be obtained from the “Guidelines for the Preparation of Abstracts Under the Patent Cooperation Treaty,” published in the *PCT Gazette* (No. 5/1978). Those Guidelines may be obtained, in English and French, from the International Bureau.

The abstract should be primarily related to what is new in the art to which the invention pertains. Phrases should not be used which are implicit, (for instance, “the invention relates to...”), and statements on the alleged merits or value of the invention are not allowed.

Where the receiving Office finds that the abstract is missing, it invites the applicant to furnish it within a time limit fixed in the invitation. The international application is considered withdrawn if no abstract is furnished to the receiving Office within the time limit fixed. Where the receiving Office has not invited the applicant to furnish an abstract, the International Searching Authority establishes one. The same applies where the abstract does not comply with the requirements outlined in the preceding paragraphs. Where the abstract is established by the International Searching Authority, the applicant may submit comments on it within 1 month from the date of mailing of the international search report, (PCT Rule 38.2(b)).

## SUMMARY OF ABSTRACT REQUIREMENTS

Preferably 50-150 words. Should contain:

- (A) Indication of field of invention.
- (B) Clear indication of the technical problem.
- (C) Gist of invention’s solution of the problem.
- (D) Principal use or uses of the invention.
- (E) Reference numbers of the main technical features placed between parentheses.

(F) Where applicable, chemical formula which best characterizes the invention.

Should not contain:

- (A) Superfluous language.
- (B) Legal phraseology such as “said” and “means.”
- (C) Statements of alleged merit or speculative application.
- (D) Prohibited items as defined in PCT Rule 9.

## 1827 Fees [R-2]

A complete list of Patent Cooperation Treaty fee amounts which are to be paid to the United States Patent and Trademark Office, for both the national and international stages, can be found at the beginning of each weekly issue of the *Official Gazette* of the United States Patent and Trademark Office and on the >Office of< PCT Legal \*>Administration< page of the USPTO web site (see MPEP § 1730). Applicants are urged to refer to this list before submitting any fees to the USPTO.

Pursuant to PCT Rules 14.1(c), \*>15.4<, and 16.1(f), the \*>international filing<, transmittal, and search fee payable is the \*>international filing<, transmittal, and search fee in effect on the \*>receipt< date of the international application. See 37 CFR 1.431(c).

## 1828 Priority Claim and Document [R-2]

An applicant who claims the priority of one or more earlier national>, regional< or international applications for the same invention must indicate on the Request, at the time of filing, the country in or for which it was filed, the date of filing, and the application number. See PCT Article 8 and PCT Rule 4.10 for priority claim particulars and PCT Rule 90<sup>bis</sup>.3 for withdrawal of priority claims. Note that under PCT Rule 4.10, an applicant may claim the priority of an application filed in or for a State which is a Member of the World Trade Organization (WTO), even if that State is not party to the Paris Convention for the Protection of Industrial Property (Paris Convention). However, a PCT Contracting State that is not a Member of the WTO would not be obliged to recognize the effects of such a priority claim.

Effective July 1, 1998, applicant may correct or add a priority claim by a notice submitted to the Receiving Office or the International Bureau within 16 months from the priority date, or where the priority date is changed, within 16 months from the priority date so changed, whichever period expires first, provided that a notice correcting or adding a priority claim may in any event be submitted until the expiration of 4 months from the international filing date. PCT Rule 26<sup>bis</sup>.1 and 37 CFR 1.451 and 1.465.

Under the PCT procedure, the applicant may file the certified copy of the earlier filed national application together with the international application in the receiving Office for transmittal with the record copy, or alternatively the certified copy may be submitted by the applicant to the International Bureau or the receiving Office not later than 16 months from the priority date or, if the applicant has requested early processing in any designated Office, not later than the time such processing or examination is requested. The International Bureau will normally furnish copies of the certified copy to the various designated Offices so that the applicant will not normally be required to submit certified copies to each designated Office.

For use of the priority document in a U.S. national application which entered the national stage from an international application after compliance with 35 U.S.C. 371, see MPEP §1893.03(c).

### **1830 International Application Transmittal Letter [R-2]**

A PCT international application transmittal letter, Form PTO-1382, is available free of charge for applicants to use when filing PCT international applications >and related documents< with the United States Receiving Office. The form is intended to simplify the filing of PCT international applications >and related documents< by providing a one-page letter which covers the most common \*\*>submissions< of applicants. Specifically covered are:

\*\*>

- (A) A new international application;
- (B) A response to an invitation from the United States Receiving Office;
- (C) A request for rectification under PCT Rule 91;

- (D) A petition; and
- (E) A sequence listing diskette.<

### **1832 License Request for Foreign Filing Under the PCT**

A license for foreign filing is not required to file an international application in the United States Receiving Office but may be required before the applicant or the U.S. Receiving Office can forward a copy of the international application to a foreign patent office, the International Bureau or other foreign authority (35 U.S.C. 368, 37 CFR 5.1 and 5.11). A foreign filing license to permit transmittal to a foreign office or international authority is not required if the international application does not disclose subject matter in addition to that disclosed in a prior U.S. national application filed more than 6 months prior to the filing of the international application (37 CFR 5.11(a)). In all other instances (direct foreign filings outside the PCT or filings in a foreign receiving Office), the applicant should petition for a license for foreign filing (37 CFR 5.12) and if appropriate, identify any additional subject matter in the international application which was not in the earlier U.S. national application (37 CFR 5.14 (c)). This request and disclosure information may be supplied on the PCT international application transmittal letter, Form PTO-1382.

If no petition or request for a foreign filing license is included in the international application, and it is clear that a license is required because of the designation of foreign countries and the time at which the Record Copy must be transmitted, it is current Office practice to construe the filing of such an international application to include a request for a foreign filing license. If the license can be granted, it will be issued without further correspondence. If no license can be issued, or further information is required, applicant will be contacted. The automatic request for a foreign filing license does not apply to the filing of a foreign application outside the PCT.

### **EFFECT OF SECRECY ORDER**

If a secrecy order is applied to an international application, the application will not be forwarded to the International Bureau as long as the secrecy order remains in effect (PCT Article 27(8) and 35 U.S.C. 368). If the secrecy order remains in effect, the international application will be declared with-

drawn (abandoned) because the Record Copy of the international application was not received in time by the International Bureau (37 CFR 5.3(d), PCT Article 12(3), and PCT Rule 22.3). It is, however, possible to prevent abandonment as to the United States of America if it has been designated, by fulfilling the requirements of 35 U.S.C. 371(c).

## 1834 Correspondence [R-2]

### *PCT Rule 92. Correspondence*

#### *92.1. Need for Letter and for Signature*

(a) Any paper submitted by the applicant in the course of the international procedure provided for in the Treaty and these Regulations, other than the international application itself, shall, if not itself in the form of a letter, be accompanied by a letter identifying the international application to which it relates. The letter shall be signed by the applicant.

(b) If the requirements provided for in paragraph (a) are not complied with, the applicant shall be informed as to the non-compliance and invited to remedy the omission within a time limit fixed in the invitation. The time limit so fixed shall be reasonable in the circumstances; even where the time limit so fixed expires later than the time limit applying to the furnishing of the paper (or even if the latter time limit has already expired), it shall not be less than 10 days and not more than one month from the mailing of the invitation. If the omission is remedied within the time limit fixed in the invitation, the omission shall be disregarded; otherwise, the applicant shall be informed that the paper has been disregarded.

(c) Where non-compliance with the requirements provided for in paragraph (a) has been overlooked and the paper taken into account in the international procedure, the non-compliance shall be disregarded.

#### *92.2. Languages*

(a) Subject to Rules 55.1 and 66.9 and to paragraph (b) of this Rule, any letter or document submitted by the applicant to the International Searching Authority or the International Preliminary Examining Authority shall be in the same language as the international application to which it relates. However, where a translation of the international application has been transmitted under Rule 23.1(b) or furnished under Rule 55.2, the language of such translation shall be used.

(b) Any letter from the applicant to the International Searching Authority or the International Preliminary Examining Authority may be in a language other than that of the international application, provided the said Authority authorizes the use of such language.

(c) *[Deleted]*

(d) Any letter from the applicant to the International Bureau shall be in English or French.

(e) Any letter or notification from the International Bureau to the applicant or to any national Office shall be in English or French.

\*\*\*\*\*

### *PCT Administrative Instruction Section 105. Identification of International Application With Two or More Applicants*

Where any international application indicates two or more applicants, it shall be sufficient, for the purpose of identifying that application, to indicate, in any Form or correspondence relating to such application, the name of the applicant first named in the request. The provisions of the first sentence of this Section do not apply to the demand or to a notice effecting later elections.

## **NOTIFICATION UNDER PCT RULE 92.1(b) OF DEFECTS WITH REGARD TO CORRESPONDENCE**

If the Office finds that papers, other than the international application itself, are not accompanied by a letter identifying the international application to which they relate, or are accompanied by an unsigned letter, or are furnished in the form of an unsigned letter, it notifies the applicant and invites him or her to remedy the omission. The Office disregards the said papers or letter if the omission is not remedied within the time limit fixed in the invitation (PCT Rule 92.1(b)). If the omission has been overlooked and the paper taken into account, the omission is disregarded.

## **CORRESPONDENCE ADDRESS**

Where there is a sole applicant without an agent in an international application, correspondence will be sent to the applicant at his or her indicated address; or, if he or she has appointed one or more agents, to that agent or the first-mentioned of those agents; or, if he or she has not appointed an agent but has indicated a special address for notifications, at that special address.

Where there are two or more applicants who have appointed one or more common agents, correspondence will be addressed to that agent or the first-mentioned of those agents. Where no common agent has been appointed, correspondence will be addressed to the common representative (either the appointed common representative or the applicant who is considered to be the common representative (PCT Rule 90.2) at the indicated address; or, if the common representative has appointed one or more agents, to that agent or the first-mentioned of those agents; or, if the common representative has not appointed an agent but has indi-

cated a special address for notifications, at that address.

### FILING OF CORRESPONDENCE BY MAIL

The “Express Mail” procedure set forth at 37 CFR 1.10 applies to papers filed with the U.S. Patent and Trademark Office (USPTO) in international applications. Accordingly, papers filed with the USPTO in international applications will be accorded by the USPTO the date of deposit with the United States Postal Service as shown on the “date-in” on the “Express Mail” mailing label as the date of filing in the USPTO if the provisions of 37 CFR 1.10 are complied with. See MPEP § 513.

If there is a question regarding the date of deposit, the Express Mail provisions of 37 CFR 1.10(c)-(e) require, in addition to using the “Express Mail Post Office to Addressee” service, an indication of the “Express Mail” mailing label number on each paper or fee. In situations wherein the correspondence includes several papers directed to the same application (for example, Request, description, claims, abstract, drawings, and other papers) the correspondence may be submitted with a cover or transmittal letter, which should itemize the papers. The cover or transmittal letter must have the “Express Mail” mailing label number thereon.

The certificate of mailing by first class mail procedure set forth at 37 CFR 1.8 differs from the 37 CFR 1.10 Express Mail procedure. See 37 CFR 1.8(a)(2)(i)(D) and (E). It is important to understand that the 37 CFR 1.8 certificate of mailing procedure CANNOT be used for filing any papers during the international stage if the date of deposit is desired. If the 37 CFR 1.8 certificate of mailing procedure is used, the paper and/or fee will be accorded the date of receipt in the USPTO unless the receipt date falls on a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6(a)(1)). Accordingly, the certificate of mailing procedures of 37 CFR 1.8 are not available to have a submission during the international stage considered as timely filed if the submission is not physically received at the USPTO on or before the due date.

### 1834.01 Use of Telegraph, Teleprinter, Facsimile Machine [R-1]

PCT Rule 92.4 provides that a national Office may receive documents by telegraph, teleprinter, or facsimile machine. However, the United States Patent and Trademark Office has not informed the International Bureau that it accepts such submissions other than facsimile transmissions. Accordingly, applicants may not currently file papers in international applications with the United States Patent and Trademark Office via telegraph or teleprinter.

Generally, any paper may be filed by facsimile transmission with certain exceptions which are identified in 37 CFR 1.6(d). It should be noted that a facsimile transmission of a document is not permitted and, if submitted, will not be accorded a date of receipt if the document is:

- (A) Required by statute to be certified;
- (B) A drawing submitted under 37 CFR 1.437;
- (C) An international application for patent; or
- (D) A copy of the international application and the basic national fee necessary to enter the national stage, as specified in 37 CFR 1.495(b).

Facsimile transmission may be used to submit substitute sheets (other than drawings), extensions of time, power of attorney, fee authorizations (other than the basic national fee), confirmation of precautionary designations, Demands, response to written opinions, oaths or declarations, petitions, and translations in international applications.

A Certificate of Transmission may be used as provided in 37 CFR 1.8(a)(1) except in the instances specifically excluded in 37 CFR 1.8(a)(2). Note particularly that the Certificate of Transmission cannot be used for the filing of an international application for patent or correspondence in an international application before the U.S. Receiving Office, the U.S. International Searching Authority, or the U.S. International Preliminary Examining Authority. Guidelines for facsimile transmission are clearly set forth in 37 CFR 1.6(d) and should be read before transmitting by facsimile machine.

A signature on a document received via facsimile in a permitted situation is acceptable as a proper signature. See PCT Rule 92.4(b) and 37 CFR 1.4(d)(1)(ii).

The receipt date of a document transmitted via facsimile is the date in the USPTO on which the transmission is completed, unless the receipt date is a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6(a)(3)). See 37 CFR 1.6(d). Where a document is illegible or part of the document is not received, the document will be treated as not received to the extent that it is illegible or the transmission failed. See PCT Rule 92.4(c).

## 1834.02 Irregularities in the Mail Service

### *PCT Rule 82.*

#### *Irregularities in the Mail Service*

##### *82.1. Delay or Loss in Mail*

(a) Any interested party may offer evidence that he has mailed the document or letter five days prior to the expiration of the time limit. Except in cases where surface mail normally arrives at its destination within two days of mailing, or where no airmail service is available, such evidence may be offered only if the mailing was by airmail. In any case, evidence may be offered only if the mailing was by mail registered by the postal authorities.

(b) If the mailing, in accordance with paragraph (a), of a document or letter is proven to the satisfaction of the national Office or intergovernmental organization which is the addressee, delay in arrival shall be excused, or, if the document or letter is lost in the mail, substitution for it of a new copy shall be permitted, provided that the interested party proves to the satisfaction of the said Office or organization that the document or letter offered in substitution is identical with the document or letter lost.

(c) In the cases provided for in paragraph (b), evidence of mailing within the prescribed time limit, and, where the document or letter was lost, the substitute document or letter as well as the evidence concerning its identity with the document or letter lost shall be submitted within one month after the date on which the interested party noticed or with due diligence should have noticed the delay or the loss, and in no case later than six months after the expiration of the time limit applicable in the given case.

(d) Any national Office or intergovernmental organization which has notified the International Bureau that it will do so shall, where a delivery service other than the postal authorities is used to mail a document or letter, apply the provisions of paragraphs (a) to (c) as if the delivery service was a postal authority. In such a case, the last sentence of paragraph (a) shall not apply but evidence may be offered only if details of the mailing were recorded by the delivery service at the time of mailing. The notification may contain an indication that it applies only to mailings using specified delivery services or delivery services which satisfy spec-

ified criteria. The International Bureau shall publish the information so notified in the Gazette.

(e) Any national Office or intergovernmental organization may proceed under paragraph (d):

(i) even if, where applicable, the delivery service used was not one of those specified, or did not satisfy the criteria specified, in the relevant notification under paragraph (d), or

(ii) even if that Office or organization has not sent to the International Bureau a notification under paragraph (d).

##### *82.2. Interruption in the Mail Service*

(a) Any interested party may offer evidence that on any of the 10 days preceding the day of expiration of the time limit the postal service was interrupted on account of war, revolution, civil disorder, strike, natural calamity, or other like reason, in the locality where the interested party resides or has his place of business or is staying.

(b) If such circumstances are proven to the satisfaction of the national Office or intergovernmental organization which is the addressee, delay in arrival shall be excused, provided that the interested party proves to the satisfaction of the said Office or organization that he effected the mailing within five days after the mail service was resumed. The provisions of Rule 82.1(c) shall apply *mutatis mutandis*.

## **DELAY OR LOSS IN MAIL**

Delay or loss in the mail shall be excused when it is proven to the satisfaction of the receiving Office that the concerned letter or document was mailed at least five days before the expiration of the time limit. The mailing must have been by registered air mail or, where surface mail would normally arrive at the destination concerned within two days of mailing, by registered surface mail (PCT Rule 82.1(a) to (c)). PCT Rule 82 contains detailed provisions governing the situation where a letter arrives late or gets lost due to irregularities in the mail service, for example, because the mail service was interrupted due to a strike. The provisions operate to excuse failure to meet a time limit for filing a document for up to six months after the expiration of the time limit concerned, provided that the document was mailed at least five days before the expiration of the time limit. In order to take advantage of these provisions, the mailing must have been by registered airmail or, where surface mail would normally arrive at the destination concerned within two days of mailing, by registered surface mail. Evidence is required to satisfy the Office, and a substitute document must be filed promptly—see PCT Rule 82.1(b) and (c) for details.

## INTERRUPTION IN MAIL SERVICE

The provisions of PCT Rule 82.1(c) apply *mutatis mutandis* for interruptions in the mail service caused by war, revolution, civil disorder, strike, natural calamity or other like reasons (PCT Rule 82.2).

Special provisions also apply to mail interruptions caused by war, revolution, civil disorder, strike, natural calamity or other like reasons—see PCT Rule 82.2 for details.

See PCT Rule 80.5 for guidance on periods which expire on a non-working day.

## 1836 Rectification of Obvious Errors [R-2]

*PCT Rule 91.*

*Obvious Errors in Documents*

### 91.1. Rectification

(a) Subject to paragraphs (b) to (g<sup>quater</sup>), obvious errors in the international application or other papers submitted by the applicant may be rectified.

(b) Errors which are due to the fact that something other than what was obviously intended was written in the international application or other paper shall be regarded as obvious errors. The rectification itself shall be obvious in the sense that anyone would immediately realize that nothing else could have been intended than what is offered as rectification.

(c) Omissions of entire elements or sheets of the international application, even if clearly resulting from inattention, at the stage, for example, of copying or assembling sheets, shall not be rectifiable.

(d) Rectification may be made on the request of the applicant. The authority having discovered what appears to be an obvious error may invite the applicant to present a request for rectification as provided in paragraphs (e) to (g<sup>quater</sup>). Rule 26.4 shall apply *mutatis mutandis* to the manner in which rectifications shall be requested.

(e) No rectification shall be made except with the express authorization:

- (i) of the receiving Office if the error is in the request,
- (ii) of the International Searching Authority if the error is in any part of the international application other than the request or in any paper submitted to that Authority,
- (iii) of the International Preliminary Examining Authority if the error is in any part of the international application other than the request or in any paper submitted to that Authority, and
- (iv) of the International Bureau if the error is in any paper, other than the international application or amendments or corrections to that application, submitted to the International Bureau.

(f) Any authority which authorizes or refuses any rectification shall promptly notify the applicant of the authorization or refusal and, in the case of refusal, of the reasons therefor. The

authority which authorizes a rectification shall promptly notify the International Bureau accordingly. Where the authorization of the rectification was refused, the International Bureau shall, upon request made by the applicant prior to the time relevant under paragraph (g<sup>bis</sup>), (g<sup>ter</sup>), or (g<sup>quater</sup>) and subject to the payment of a special fee whose amount shall be fixed in the Administrative Instructions, publish the request for rectification together with the international application. A copy of the request for rectification shall be included in the communication under Article 20 where a copy of the pamphlet is not used for that communication or where the international application is not published by virtue of Article 64(3).

(g) The authorization for rectification referred to in paragraph (e) shall, subject to paragraphs (g<sup>bis</sup>), (g<sup>ter</sup>), and (g<sup>quater</sup>), be effective:

(i) where it is given by the receiving Office or by the International Searching Authority, if its notification to the International Bureau reaches that Bureau before the expiration of 17 months from the priority date;

(ii) where it is given by the International Preliminary Examining Authority, if it is given before the establishment of the international preliminary examination report;

(iii) where it is given by the International Bureau, if it is given before the expiration of 17 months from the priority date.

(g<sup>bis</sup>) If the notification made under paragraph (g)(i) reaches the International Bureau, or if the rectification made under paragraph (g)(iii) is authorized by the International Bureau, after the expiration of 17 months from the priority date but before the technical preparations for international publication have been completed, the authorization shall be effective and the rectification shall be incorporated in the said publication.

(g<sup>ter</sup>) Where the applicant has asked the International Bureau to publish his international application before the expiration of 18 months from the priority date, any notification made under paragraph (g)(i) must reach, and any rectification made under paragraph (g)(iii) must be authorized by, the International Bureau, in order for the authorization to be effective, not later than at the time of the completion of the technical preparations for international publication.

(g<sup>quater</sup>) Where the international application is not published by virtue of Article 64(3), any notification made under paragraph (g)(i) must reach, and any rectification made under paragraph (g)(iii) must be authorized by, the International Bureau, in order for the authorization to be effective, not later than at the time of the communication of the international application under Article 20.

Obvious errors in the international application or other papers submitted by the applicant may generally be rectified under PCT Rule 91, if the rectification is authorized, as required, within the applicable time limit. Any such rectification is free of charge. The omission of entire sheets of the description cannot be rectified, even if resulting from inattention at the stage of copying or assembling sheets.

Applicants often attempt to rely upon the priority application to establish a basis for obvious error. The priority document (application) cannot be used to support obvious error corrections. The rectification is obvious only in the sense that anyone would immediately realize that nothing else could have been intended than what is offered as rectification. \*\*>Examples of obvious errors that are rectifiable include linguistic errors, spelling errors and grammatical errors so long as the meaning of the disclosure does not change upon entry of the rectification. Changes to chemical or mathematical formulas would not generally be rectifiable unless they would be common knowledge to anyone.< A missing chemical formula or missing line of text would not be considered >to be an< obvious error subject to rectification. \*\*

Rectifications must be authorized:

\*\*>

(A) by the Receiving Office if the error is in the request;

(B) by the International Searching Authority if the error is in any part of the international application other than the request or in any paper submitted to that Authority;

(C) by the International Preliminary Examining Authority if the error is in any part of the international application other than the request or in any paper submitted to that Authority and if a demand for Chapter II examination has been filed in the application;

(D) by the International Bureau if the error is in any paper submitted to it other than the international application or amendments or corrections to the application.<

The request for rectification must be addressed to the authority competent to authorize the rectification. It must be filed in time for the rectification to be authorized and for notification of the authorization to reach the International Bureau before the expiration of the applicable time limit, namely:

(A) Where the authorization is given by the Receiving Office or the International Searching Authority its notification must reach the International Bureau before the expiration of 17 months from the priority date (or later, before the technical preparations for international publication have been completed);

(B) Where the authorization is given by the International Preliminary Examining Authority it must be given before the establishment of the international preliminary examination report;

(C) Where the authorization is given by the International Bureau it must be given before the expiration of 17 months from the priority date (or later, >but< before the technical preparations for international publication have been completed)

\*\* The International Searching Authority informs the applicant of the decision by use of Form PCT/ISA/217, while the International Preliminary Examining Authority informs the applicant of the decision >regarding the authorization or refusal to authorize the rectification of obvious errors< by use of Form PCT/IPEA/412.

\*\*

## 1840 The International Searching Authority [R-2]

35 U.S.C. 362. *International Searching Authority and International Preliminary Examining Authority.*

(a) The Patent and Trademark Office may act as an International Searching Authority and International Preliminary Examining Authority with respect to international applications in accordance with the terms and conditions of an agreement which may be concluded with the International Bureau, and may discharge all duties required of such Authorities, including the collection of handling fees and their transmittal to the International Bureau.

(b) The handling fee, preliminary examination fee, and any additional fees due for international preliminary examination shall be paid within such time as may be fixed by the Director.

37 CFR 1.413. *The United States International Searching Authority.*

\*\*>

(a) Pursuant to appointment by the Assembly, the United States Patent and Trademark Office will act as an International Searching Authority for international applications filed in the United States Receiving Office and in other Receiving Offices as may be agreed upon by the Director, in accordance with the agreement between the Patent and Trademark Office and the International Bureau (PCT Art. 16(3)(b)).<

(b) The Patent and Trademark Office, when acting as an International Searching Authority, will be identified by the full title "United States International Searching Authority" or by the abbreviation "ISA/US."

(c) The major functions of the International Searching Authority include:

- (1) Approving or establishing the title and abstract;
- (2) Considering the matter of unity of invention;

\*\*>

(3) Conducting international and international-type searches and preparing international and international-type search reports (PCT Art. 15, 17 and 18, and PCT Rules 25, 33 to 45 and 47), and issuing declarations that no international search report will be established (PCT Article 17(2)(a));

(4) Preparing written opinions of the International Searching Authority in accordance with PCT Rule 43<sup>bis</sup> (when necessary); and

(5) Transmitting the international search report and the written opinion of the International Searching Authority to the applicant and the International Bureau.<

The United States Patent and Trademark Office >(USPTO)< agreed to and was appointed by the PCT Assembly, to act as an International Searching Authority. As such an Authority, \*\*>the primary functions are to establish (1) international search reports and (2) for international applications having an international filing date on or after January 1, 2004, written opinions. See PCT Article 16 and PCT Rule 43<sup>bis</sup><.

Pursuant to an agreement concluded with the International Bureau, the USPTO, as an International Searching Authority, agreed to conduct international searches and prepare international search reports >and written opinions of the International Searching Authority<, for, in addition to the United States of America, Barbados, Brazil, India, Israel, Mexico, New Zealand, the Philippines, Saint Lucia, South Africa, and Trinidad and Tobago. The agreement stipulated the English language and specified that the subject matter to be searched is that which is searched or examined in United States national applications.

#### **TRANSMITTAL OF THE SEARCH COPY TO THE INTERNATIONAL SEARCHING AUTHORITY**

The “search copy” is transmitted by the Receiving Office to the International Searching Authority (PCT Article 12(1)), the details of the transmittal are provided in PCT Rule 23.

#### **THE MAIN PROCEDURAL STEPS IN THE INTERNATIONAL SEARCHING AUTHORITY**

The main procedural steps that any international application goes through in the International Searching Authority are (1) the making of the international search (PCT Article 15), \* (2) the preparing of the international search report (PCT Article 18 and PCT

Rule 43) >and (3) for international applications having an international filing date on or after January 1, 2004, the preparing of a written opinion of the International Searching Authority (PCT Rule 43<sup>bis</sup>)<.

#### **COMPETENT INTERNATIONAL SEARCHING AUTHORITY**

In respect of international applications filed with the U.S. Receiving Office, the United States International Searching Authority, which is the Examining Corps of the \*\*>USPTO<, is competent to carry out the international search (PCT Article 16, PCT Rules 35 and 36, 35 U.S.C. 362 and 37 CFR 1.413).

The European Patent Office \*\*>may also be< competent to carry out the international search (PCT Article 16, PCT Rules 35 and 36) for international applications filed with the U.S. Receiving Office\*\*. See MPEP § 1840.01 >for specific limitations regarding the competency of the EPO as an International Searching Authority for applications filed by U.S. nationals or residents in the USPTO or in the International Bureau (IB) as receiving Office<.

#### **MATTERS TO BE CONSIDERED WHEN CHOOSING AN INTERNATIONAL SEARCHING AUTHORITY**

Choosing The European Patent Office (EPO) as an International Searching Authority could be advantageous to United States applicants who designate countries for European Regional patent protection in PCT International applications for the following reasons:

(A) Claims may be amended according to EPO search results before entering the European \*\*>regional phase<.

(B) The EPO search fee need not be paid upon entering the European \*\*>regional phase<.

(C) The EPO search results may be available for use in a >corresponding< U.S. \* >nonprovisional< application.

(D) The EPO international search may be obtained without the need for a European professional representative.

(E) The \*\*>EPO< search could provide the U.S. applicant with the benefit of a European art search (which may be different from applicant’s own or the USPTO’s search) before it is necessary to enter the \*\*>EPO< or other designated Offices.

Some disadvantages of choosing the European Patent Office to conduct the international search are the following:

(A) The EPO may not be competent to perform the international search if the application was filed by a national or resident of the U.S. and contains one or more claims relating to the fields of biotechnology or business methods. See MPEP § 1840.01.

(B) The EPO will not search any application to the extent that it considers that the international application relates to subject matter set forth in PCT Rule 39.1. See MPEP § 1840.01 and § 1843.02.

(C) Additional mailing time to and from the EPO Searching Authority may shorten the time for applicants to respond to various invitations from the EPO such as for comments on abstracts and payments of additional search fees as well as for PCT Article 19 amendments to the claims after issuance of the international search report and, for international applications filed on or after January 1, 2004, the written opinion established by the International Searching Authority.

(D) There may be more difficulty in solving any procedural problems between the applicant and the EPO than with the USPTO due to physical distance and time differences.

The PCT Applicant's Guide provides helpful information for communications with the European Patent Office.

### **1840.01 The European Patent Office as an International Searching Authority [R-2]**

Since October 1, 1982, the European Patent Office (EPO) has been available as an International Searching Authority for PCT applications filed by U.S. nationals or residents in the U.S. Patent and Trademark Office (USPTO) as receiving Office or in the International Bureau (IB) as receiving Office. The choice of International Searching Authority, either the EPO or the USPTO, must be made by the applicant on filing the international application. The EPO has expressed the following limitations concerning its competency to act as an International Searching Authority. For updates or possible changes to these limitations, applicants should consult the PCT News-

letter which is available in electronic form from the web site of the World Intellectual Property Organization ([www.wipo.int/pct/en/newslett/index.htm](http://www.wipo.int/pct/en/newslett/index.htm)).

## **I. SUBJECT MATTER THAT WILL NOT BE SEARCHED BY THE EPO**

\*\*>

### **A. Field of Biotechnology**

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b), and will not carry out an international search in respect of any international application filed on or after March 1, 2002 and before January 1, 2004 if the application: (A) was filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) was filed with the IB as receiving Office by a national or resident of the U.S. (provided the application did not also identify as an applicant at its time of filing a national or resident of a European Patent Convention (EPC) Contracting State), where such application contains one or more claims relating to the field of biotechnology as defined by the following units of the International Patent Classification:<

C 12 M	Apparatus for enzymology or microbiology
C 12 N	Micro-organisms or enzymes; compositions thereof
C 12 P	Fermentation or enzyme-using processes to synthesise a desired chemical compound or composition or to separate optical isomers from a racemic mixture
C 12 Q	Measuring or testing processes involving enzymes or micro-organisms; compositions or test papers therefor; processes of preparing such compositions; condition-responsive control in microbiological or enzymological processes
C 07 K	Peptides

- G 01 N 33/50 (including subdivisions) Chemical analysis of biological material, e.g. blood, urine; testing involving biospecific ligand binding methods; immunological testing
- A 61 K 39 Medicinal preparations containing antigens or antibodies
- A 61 K 48 Medicinal preparations containing genetic material which is inserted into cells of the living body to treat genetic diseases; Gene therapy
- A 01 H New plants or processes for obtaining them; plant reproduction by tissue culture techniques

For information, U.S. classes covering the corresponding subject matter are listed below:

- 424 Drug, bio-affecting and body treating compositions
- 435 Chemistry: molecular biology and microbiology
- 436 Chemistry: analytical and immunological testing
- 514 Drug, bio-affecting and body treating compositions
- 530 Chemistry: natural resins or derivatives; peptides or proteins; lignins or reaction products thereof
- 536 Organic compounds—part of the class 532-570 series
- 800 Multicellular living organisms and unmodified parts thereof

930 Peptide or protein sequence

\*\*>

**B. Field of Business Methods**

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b) and will not carry out an international search in respect of any international application filed on or after March 1, 2002 if the application: (A) is filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) is filed with the IB as receiving Office by a national or resident of the U.S. (provided the application does not also identify as an applicant at its time of filing a national or resident of an EPC Contracting State), where such application contains one or more claims relating to the field of business methods as defined by the following units of the International Patent Classification:<

- G 06 F 17/60 Digital computing or data processing equipment or methods, specially adapted for specific functions: administrative, commercial, managerial, supervisory or forecasting purposes. To the extent that the application falls under above mentioned subgroup but does not relate to business methods the EPO' s competence is not affected.

For information, the U.S. class covering the corresponding subject matter is listed below:

- 705 Data processing: financial, business practice, management, or cost/price determination

The U.S. Receiving Office will forward all international applications to the EPO as ISA if so indicated by the applicant and the EPO will perform a competence check on the search copy. Where the EPO finds that it was indicated as the ISA but the application falls under the limitations indicated above, the EPO will *ex officio* change the ISA from EPO to the USPTO and will inform the applicant, the International Bureau and the USPTO accordingly. The EPO will transfer moneys received as the search fee as well as the search copy to the USPTO.

\*>

**C. < Declaration Under PCT Article 17(2)(a)(i)**

It should be noted that even when the European Patent Office is a competent International Searching Authority (for example, if one or more applicants is a resident or national of an EPC contracting state and the application was filed with the International Bureau as receiving Office), the EPO nonetheless will not search, by virtue of PCT Article 17(2)(a)(i), any international application to the extent that it considers

that the international application relates to subject matter set forth in PCT Rule 39.1. \*\*

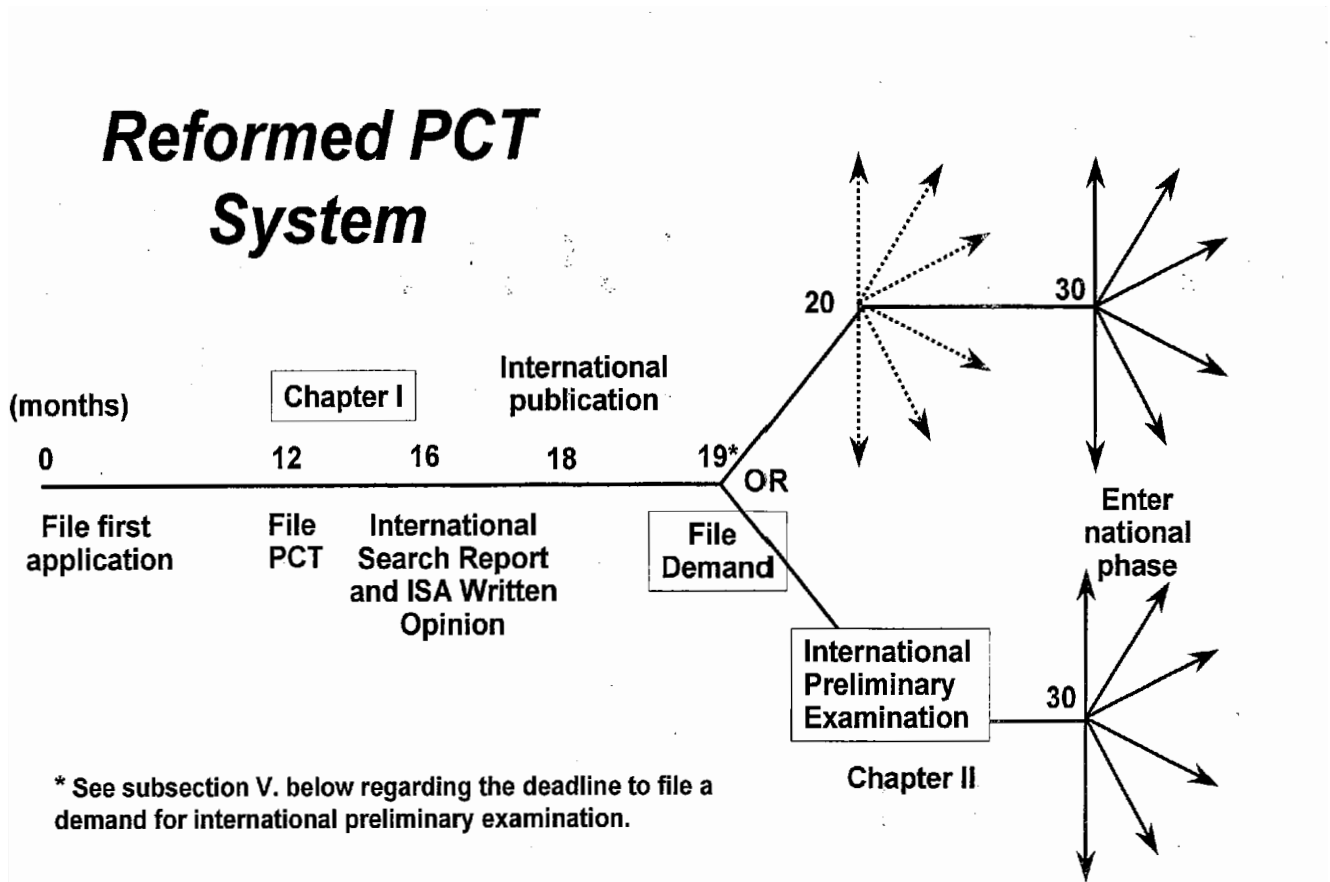

**II. FEES FOR SERVICES OF THE ISA/EP**

The international search fee for the European Patent Office must be paid to the \*\*>USPTO< as a Receiving Office \*>within< one month from the time of filing the international application. The search fee for the European Patent Office is announced weekly in the *Official Gazette* in United States dollars. The search fee will change as costs and exchange rates require. If exchange rates fluctuate significantly, the fee may change frequently. Notice of changes will be published in the *Official Gazette* shortly before the effective date of any change.

If the European Patent Office as the International Searching Authority considers that the international application does not comply with the requirement of unity of invention as set forth in PCT Rule 13, the European Patent Office will invite applicants to timely pay directly to it an additional search fee in Euros for each additional invention.

1842 Basic Flow Under the PCT [R-2]

\*>

<

## I. MEASURING TIME LIMITS UNDER THE PCT

Time limits under the PCT are measured from the “priority date” of the application. The priority date for the purposes of computing time limits is defined in PCT Article 2(xi). Where an international application does not contain any priority claim under PCT Article 8, the international filing date is considered to be the priority date.

## II. INTERNATIONAL FILING DATE

An international application under the Patent Cooperation Treaty is generally filed within 12 months after the filing of the first application directed to the same subject matter, so that priority may be claimed under PCT Article 8 and Article 4 of the Stockholm Act of the Paris Convention for the Protection of Industrial Property. PCT Article 11 specifies the elements required for an international application to be accorded an international filing date.

## III. ESTABLISHMENT OF THE INTERNATIONAL SEARCH REPORT >AND WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY<

As provided in PCT Rule 42 >and PCT Rule 43<sup>bis</sup><, the time limit for establishing the international search report (or a declaration that no international search report will be established) >and, for international applications having an international filing date on or after January 1, 2004, the written opinion,< is three months from the receipt of the search copy by the International Searching Authority, or nine months from the priority date, whichever time limit expires later.

## IV. INTERNATIONAL PUBLICATION

Under PCT Article 21, the international publication of the international application by the International Bureau shall be effected promptly after the expiration of 18 months from the priority date of that application.

## V. DEADLINE FOR FILING THE DEMAND

>

### A. *International Applications Having a Filing Date On or After January 1, 2004*

International preliminary examination is optional, but if a demand for international preliminary examination is filed in an international application having an international filing date on or after January 1, 2004, it must be filed prior to the expiration of whichever of the following periods expires later: (A) three months from the date of transmittal to the applicant of the international search report and the written opinion; or (B) 22 months from the priority date. Otherwise the demand shall be considered as if it had not been submitted and the International Preliminary Examining Authority shall so declare. See PCT Rule 54. In order to take advantage of a national phase entry time limit of at least 30 months from the priority date in relation to all States designated in the international application, it may be necessary to file a demand before the expiration of 19 months from the priority date. See subsection VI.A., below.

### B. *International Applications Having a Filing Date Before January 1, 2004*<

International Preliminary Examination is optional, and a Demand for International Preliminary Examination may be filed at any time. However, in order to take advantage of a national phase entry time limit of at least 30 months from the priority date in relation to all States designated in the international application, it may be necessary to file a demand before the expiration of 19 months from the priority date. >See subsection VI.A., below.<

## VI. DEADLINE FOR FILING COPY, TRANSLATION, AND FEE IN NATIONAL STAGE OFFICES

A listing of all national and regional offices, and the corresponding time limits for entering the national stage following PCT Chapter I and PCT Chapter II, may be found on WIPO’s web site at: <http://www.wipo.int/pct/en/index.html>.

### A. *National Stage Entry Following PCT Chapter I*

PCT Article 22(1) was amended, effective April 1, 2002, to specify that the national stage requirements are due not later than at the expiration of 30 months from the priority date if no demand has been filed. Prior to April 1, 2002, PCT Article 22(1) specified that these requirements were due not later than at the expiration of 20 months from the priority date. See <http://www.wipo.int/pct/en/index.html> for a list of the Contracting States that have not yet changed their national laws to adopt the 30 month period now set forth in PCT Article 22(1).

### B. *National Stage Entry Following PCT Chapter II*

If the election of a Contracting State has been effected by filing a demand prior to the expiration of the 19th month from the priority date, the provisions of Article 39 apply rather than the provisions of Article 22. The deadline for filing the national stage requirements under PCT Article 39(a) is 30 months from the priority date, but any national law may fix time limits which expire later than the time limit provided in PCT Article 39(a). See PCT Article 39(b) and the list of time limits found on WIPO's web site at <http://www.wipo.int/pct/en/index.html>.

## 1843 The International Search [R-2]

### *PCT Article 17.*

#### *Procedure before the International Searching Authority*

(1) Procedure before the International Searching Authority shall be governed by the provisions of this Treaty, the Regulations, and the agreement which the International Bureau shall conclude, subject to this Treaty and the Regulations, with the said Authority.

(2)(a) If the International Searching Authority considers:

(i) that the international application relates to a subject matter which the International Searching Authority is not required, under the Regulations, to search, and in the particular case decides not to search, or

(ii) that the description, the claims, or the drawings, fail to comply with the prescribed requirements to such an extent that a meaningful search could not be carried out, the said Authority shall so declare and shall notify the applicant and the International Bureau that no international search report will be established.

(b) If any of the situations referred to in subparagraph (a) is found to exist in connection with certain claims only, the international search report shall so indicate in respect of such claims,

whereas, for the other claims, the said report shall be established as provided in Article 18.

(3)(a) If the International Searching Authority considers that the international application does not comply with the requirement of unity of invention as set forth in the Regulations, it shall invite the applicant to pay additional fees. The International Searching Authority shall establish the international search report on those parts of the international application which relate to the invention first mentioned in the claims (main invention) and, provided the required additional fees have been paid within the prescribed time limit, on those parts of the international application which relate to inventions in respect of which the said fees were paid.

(b) The national law of any designated State may provide that, where the national Office of the State finds the invitation, referred to in subparagraph (a), of the International Searching Authority justified and where the applicant has not paid all additional fees, those parts of the international application which consequently have not been searched shall, as far as effects in the State are concerned, be considered withdrawn unless a special fee is paid by the applicant to the national Office of that State.

\*\*>

### *PCT Rule 43<sup>bis</sup>.*

#### *Written Opinion of the International Searching Authority*

#### *43<sup>bis</sup>.1. Written Opinion*

(a) Subject to Rule 69.1(b<sup>bis</sup>), the International Searching Authority shall, at the same time as it establishes the international search report, establish a written opinion as to:

(i) whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable;

(ii) whether the international application complies with the requirements of the Treaty and these Regulations in so far as checked by the International Searching Authority.

The written opinion shall also be accompanied by such other observations as these Regulations provide for.

(b) For the purposes of establishing the written opinion, Articles 33(2) to (6), 35(2) and 35(3) and Rules 43.4, 64, 65, 66.1(e), 66.7, 67, 70.2(b) and (d), 70.3, 70.4(ii), 70.5(a), 70.6 to 70.10, 70.12, 70.14 and 70.15(a) shall apply *mutatis mutandis*.

(c) The written opinion shall contain a notification informing the applicant that, if a demand for international preliminary examination is made, the written opinion shall, under Rule 66.1<sup>bis</sup>(a) but subject to Rule 66.1<sup>bis</sup>(b), be considered to be a written opinion of the International Preliminary Examining Authority for the purposes of Rule 66.2(a), in which case the applicant is invited to submit to that Authority, before the expiration of the time limit under Rule 54<sup>bis</sup>.1(a), a written reply together, where appropriate, with amendments.

The international search is a thorough, high quality search of the most relevant resources. Upon completion of the international search an international search

report is established. The report provides information on the relevant prior art to the applicant, the public, the designated Offices, and the International Preliminary Examining Authority.<

PCT Article 15 describes the objective of the international search, i.e., to uncover relevant prior art, and also describes the international-type search. It should be noted generally that an international-type search is performed on all U.S. national applications filed after June 1, 1978.

\*\*>Some major amendments to the PCT Rules became effective January 1, 2004. One of the consequences of these amendments is that for all international applications having an international filing date on or after January 1, 2004, and subject to PCT Rule 69.1(b-bis), the International Searching Authority establishes a written opinion of the International Searching Authority at the same time it establishes either the international search report or the declaration of non-establishment of the international search report under PCT Article 17(2)(a). (For applications having an international filing date prior to January 1, 2004, the International Searching Authority establishes an international search report but does not establish a written opinion.) The written opinion indicates whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable. The written opinion also indicates any defects in the form or content of the international application under the PCT Articles or Regulations. In addition, the written opinion includes any observations that the International Searching Authority wishes to make on the clarity of the claims, the description, and the drawings, or on the question of whether the claims are fully supported by the description.<

>

## **1843.01 Prior Art for Chapter I Processing [R-2]**

### *PCT Rule 33.*

#### *Relevant Prior Art for the International Search*

##### *33.1.Relevant Prior Art for the International Search*

(a) For the purposes of Article 15(2), relevant prior art shall consist of everything which has been made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations) and which is capable of being of assistance in determining that the claimed invention is or is not

new and that it does or does not involve an inventive step (i.e., that it is or is not obvious), provided that the making available to the public occurred prior to the international filing date.

(b) When any written disclosure refers to an oral disclosure, use, exhibition, or other means whereby the contents of the written disclosure were made available to the public, and such making available to the public occurred on a date prior to the international filing date, the international search report shall separately mention that fact and the date on which it occurred if the making available to the public of the written disclosure occurred on a date which is the same as, or later than, the international filing date.

(c) Any published application or any patent whose publication date is the same as, or later than, but whose filing date, or, where applicable, claimed priority date, is earlier than the international filing date of the international application searched, and which would constitute relevant prior art for the purposes of Article 15(2) had it been published prior to the international filing date, shall be specially mentioned in the international search report.

##### *33.2.Fields to Be Covered by the International Search*

(a) The international search shall cover all those technical fields, and shall be carried out on the basis of all those search files, which may contain material pertinent to the invention.

(b) Consequently, not only shall the art in which the invention is classifiable be searched but also analogous arts regardless of where classified.

(c) The question what arts are, in any given case, to be regarded as analogous shall be considered in the light of what appears to be the necessary essential function or use of the invention and not only the specific functions expressly indicated in the international application.

(d) The international search shall embrace all subject matter that is generally recognized as equivalent to the subject matter of the claimed invention for all or certain of its features, even though, in its specifics, the invention as described in the international application is different.

##### *33.3.Orientation of the International Search*

(a) International search shall be made on the basis of the claims, with due regard to the description and the drawings (if any) and with particular emphasis on the inventive concept towards which the claims are directed.

(b) In so far as possible and reasonable, the international search shall cover the entire subject matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended.

### *PCT Rule 64.*

#### *Prior Art for International Preliminary Examination*

##### *64.1.Prior Art*

(a) For the purposes of Article 33(2) and (3), everything made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations)

shall be considered prior art provided that such making available occurred prior to the relevant date.

(b) For the purposes of paragraph (a), the relevant date will be:

(i) subject to item (ii), the international filing date of the international application under international preliminary examination;

(ii) where the international application under international preliminary examination validly claims the priority of an earlier application, the filing date of such earlier application.

#### 64.2. Non-Written Disclosures

In cases where the making available to the public occurred by means of an oral disclosure, use, exhibition or other non-written means (“non-written disclosure”) before the relevant date as defined in Rule 64.1(b) and the date of such non-written disclosure is indicated in a written disclosure which has been made available to the public on a date which is the same as, or later than, the relevant date, the non-written disclosure shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such non-written disclosure in the manner provided for in Rule 70.9.

#### 64.3. Certain Published Documents

In cases where any application or any patent which would constitute prior art for the purposes of Article 33(2) and (3) had been published prior to the relevant date referred to in Rule 64.1 was published on a date which is the same as, or later than, the relevant date but was filed earlier than the relevant date or claimed the priority of an earlier application which had been filed prior to the relevant date, such published application or patent shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such application or patent in the manner provided for in Rule 70.10.

The objective of the international search is to discover relevant prior art (PCT Article 15(2)). “Prior art” consists of everything which has been made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations); it is relevant in respect of the international application if it is capable of being of assistance in determining that the claimed invention is or is not new and that the claimed invention does or does not involve an inventive step (i.e., that it is or is not obvious), and if the making available to the public occurred prior to the international filing date for the purposes of the international search report and prior to the earliest validly claimed priority date for the purposes of the written opinion of the International Searching Authority. For further details, see PCT Rules 33, 43<sup>bis</sup>.1(b) and 64.

A written disclosure, that is, a document, is regarded as made available to the public if, at the relevant date, it was possible for members of the public to gain access to the content of the document and to acquire possession of the content of the document, and there was no bar of confidentiality restricting the use or dissemination of knowledge gained thereby. Where the document only provides the month or the year, but not the specific date, which the document was made available to the public, the content of the document is presumed to have been made available to the public on the last day of that month or that year, respectively, unless evidence is provided to prove otherwise.

Prior art disclosure on the Internet or on an on-line database is considered in the same manner as other forms of written disclosure. Information disclosed on the Internet or an on-line database is considered to be publicly available as of the date the disclosure was publicly posted. Where the examiner obtains an electronic document that establishes the publication date for the Internet disclosure, he/she should make a printout of this document, which must mention both the URL of the relevant Internet disclosure and the date of publication of that relevant Internet disclosure. The examiner must then cite this printout in the international search report as an “L” document and cite the relevant Internet disclosure according to the relevance of its content (“X”, “Y”, “A”) and according to the date as established (“X”, “Y”, “A”, “P,X”, “P,Y”, “P,A”, “E”, etc.). See MPEP § 1844.01 under the heading “DOCUMENTS CONSIDERED TO BE RELEVANT.” Where the examiner is unable to establish the publication date of the relevant Internet disclosure and it is relevant to the inventive step and/or novelty of the claimed invention, he/she should cite it in the international search report as a category “L” document for those claims which it would have affected if it were published in time, giving the date the document was printed out as its publication date.

Examiners are also encouraged to cite prior art that might be of assistance in determining whether other requirements are fulfilled, such as sufficient support of the claims by the description and industrial applicability. The examiner should also note any documents that may be of importance for other reasons, such as documents putting doubt upon the validity of any priority claimed, documents contributing to a better or

more correct understanding of the claimed invention, and documents illustrating the technological background, but the examiner should not spend time in searching for these documents, nor the consideration of such matters unless there is a special reason for doing so in a particular case. Documents which do not qualify as prior art because they post-date the claimed invention may nevertheless be cited to show a universal fact, such as characteristics or properties of a material, or a specific scientific fact, or to show the level of ordinary skill in the art. Furthermore, examiners must recognize that different designated Offices may have different definitions of what is the effective date of prior art. Accordingly, when performing the search, examiners should be mindful to pick out and select for citation, where appropriate, prior art which may be relevant in offices other than the one in which they are situated. However, the examiner need not expand the search beyond the standard search parameters to discover such art. Where the search has been performed and such potentially relevant prior art has been identified, examiners are encouraged to, for example, cite all relevant art published prior to the international filing date even if that art and the international application under consideration have common applicants and/or inventors. As such, if the examiner is basing the international search on a prior search performed in a prior related U.S. national application, it may be necessary for the examiner to review the prior art published within the time period of the one year preceding the filing date of the prior U.S. application for any written disclosures based on the applicant's own work that may have been published within that time period. Any such documents are considered prior art in an international application and are cited on the international search report even though they do not meet the definition of prior art in the prior U.S. national application. A further objective of the international search is to avoid, or at least minimize, additional searching at the national stage.

The international search is made on the basis of the claims, with due regard to the description and the drawings (if any) contained in the international application (PCT Article 15(3)) and should cover the entire subject matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended (PCT Rule 33.3(b)).

The relevant date for the purpose of considering prior art for the purposes of establishment of the written opinion of the International Searching Authority is defined in PCT Rule 64.1(b) as the international filing date or, where the international application contains a valid claim for priority, that date of priority.

In establishment of the written opinion, when determining whether there is inventive step, account should be taken of what the applicant acknowledges in his/her description as known. Such admissions should be regarded as correct and used when considering whether the claimed invention lacks novelty and/or inventive step where appropriate.

A nonwritten disclosure such as an oral disclosure, use, exhibition or other means of disclosure is not relevant prior art for the purposes of the international search unless it is substantiated by a written disclosure made available to the public prior to the international filing date and it is the written disclosure which constitutes the prior art. However, if the date on which the written disclosure was made available to the public was on or after the filing date of the international application under consideration, the search report should separately mention that fact and the date on which the written disclosure was available, even though such a written disclosure does not meet the definition of relevant prior art in the international phase, so long as the non-written disclosure was made available to the public on a date prior to the international filing date since such a non-written disclosure may be considered to be prior art under national law in the national phase. See PCT Rules 33.1(b), 64.2 and 70.9.<

#### **DOCUMENTS >AND DATABASES< SEARCHED BY THE INTERNATIONAL SEARCHING AUTHORITY**

The International Searching Authority must endeavor to discover as much of the relevant prior art as its facilities permit (PCT Article 15(4)), and, in any case, must consult the so-called "minimum documentation" (PCT Rule 34).

\*\*>Even though completeness should be the ultimate goal of the international search, this goal may at times be difficult to obtain, because of such factors as text search limitations and the inevitable imperfections of any classification system and its implementation. The examiner therefore consults the appropriate

minimum documentation and the most relevant search resources for the technology, including databases listed in the U.S. Search Guidance index (available through the USPTO Intranet web site), and organizes the search effort and utilizes the search time in such a manner as to reduce to a minimum the possibility of failing to discover existing highly relevant prior art, such as art that fully anticipates any claims.

When conducting the search, it may be necessary to make use of the Internet as a search tool. Where the international application has not yet been published at the time of the search, there exists the danger that search terms used in the search on non-secure Internet search engines or in databases available on the Internet may be observed by third parties. Accordingly, all web sites must be treated as non-secure unless the Office has a commercial arrangement with a service provider in order to maintain confidentiality and a secure connection to that web site. Consequently, extreme caution must be exercised when using the Internet as a search tool where (as in most cases) the international application has not yet been published. Where a relevant database is accessible via the Internet, but an alternative secure connection to the same database is accessible, the secure connection must be used. Where no secure connection to a database on the Internet is available, the search may be conducted on the Internet using generalized search terms representing combinations of features that relate to the claimed invention, which have already been shown to exist in the state of the art.

## 1843.02 < Certain Subject Matter Need Not Be Searched [R-2]

>

*PCT Rule 39.*

*Subject Matter under Article 17(2)(a)(i)*

### 39.1. Definition

No International Searching Authority shall be required to search an international application if, and to the extent to which, its subject matter is any of the following:

- (i) scientific and mathematical theories,
- (ii) plant or animal varieties or essentially biological processes for the production of plants and animals, other than micro-biological processes and the products of such processes,

- (iii) schemes, rules or methods of doing business, performing purely mental acts or playing games,
- (iv) methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods,
- (v) mere presentations of information,
- (vi) computer programs to the extent that the International Searching Authority is not equipped to search prior art concerning such programs.

*PCT Rule 66.*

*Procedure Before the International Preliminary Examining Authority*

### 66.1. Basis of the International Preliminary Examination

\*\*\*\*\*

- (e) Claims relating to inventions in respect of which no international search report has been established need not be the subject of international preliminary examination.

*PCT Rule 67.*

*Subject Matter Under Article 34(4)(a)(i)*

### 67.1. Definition

No International Preliminary Examining Authority shall be required to carry out an international preliminary examination on an international application if, and to the extent to which, its subject matter is any of the following:

- (i) scientific and mathematical theories,
- (ii) plant or animal varieties or essentially biological processes for the production of plants and animals, other than micro-biological processes and the products of such processes,
- (iii) schemes, rules, or methods of doing business, performing purely mental acts, or playing games,
- (iv) methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods,
- (v) mere presentations of information,
- (vi) computer programs to the extent that the International Preliminary Examining Authority is not equipped to carry out an international preliminary examination concerning such programs.<

The USPTO has declared that it will search and examine, in international applications, all subject matter searched and examined in U.S. national applications. However under PCT \*>Rules< 39, >43<sup>bis</sup>.1(b), 66.1(e) and 67.1,< no International Searching Authority is required to perform an international search >or to establish a written opinion concerning novelty, inventive step and industrial applicability< where the international application relates to any of the following subject matters:

- (A) Scientific and mathematical theories;

(B) Plant or animal varieties or essentially biological processes for the production of plants and animals, other than microbiological processes and the products of such processes;

(C) Schemes, rules or methods of doing business, performing purely mental acts or playing games;

(D) Methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods;

(E) Mere presentation of information; and

(F) Computer programs to the extent \*\* the said Authority is not equipped to search prior art \*\*>concerning such programs<.

>See PCT Rule 39. In addition, the examiner is not required to search the international application, to the extent that a meaningful search cannot be carried out, in certain cases where a nucleotide and/or amino acid sequence listing is not furnished in accordance with the prescribed standard or in a computer readable form. See Administrative Instructions Section 513(c). However, the U.S. Patent and Trademark Office has declared that it will search and examine all subject matter searched and examined in U.S. national applications.<

The applicant considering the filing of an international application may be well advised not to file one if the subject matter of the application falls into one of the above mentioned areas. If he or she still does file, the International Searching Authority may declare that it will not establish an international search report. Accordingly, applicant should take into consideration which International Searching Authority (e.g., European Patent Office) he or she selects to conduct the international search. It is to be noted, nevertheless, that the lack of the international search report in such case will not have, in itself, any influence on the validity of the international application and the latter's processing will continue, including its communication to the designated Offices.

>

### **1843.03 < No Search Required if Claims Are Unclear [R-2]**

If the International Searching Authority considers that the description, the claims, or the drawings fail to comply with the prescribed requirements to such an extent that a meaningful search could not be carried

out, it may declare that it will not establish a search report (PCT Article 17(2)(a)(ii)). \*\*>Further, for applications having an international filing date on or after January 1, 2004, if the International Searching Authority considers that the description, claims, or drawings are so unclear, or the claims are so inadequately supported by the description that no meaningful opinion can be formed on the novelty, inventive step (non-obviousness), or industrial applicability of the claimed invention, the Authority shall not go into these issues in its written opinion with regard to the claims so affected (PCT Rules 43<sup>bis</sup>.1(b) and 67). For example, the examiner may determine that a meaningful search cannot be carried out or that no meaningful opinion can be formed in certain cases where a nucleotide and/or amino acid sequence listing is not furnished in accordance with the prescribed standard or in a computer readable form. See Administrative Instructions Section 513(c) and MPEP § 1848. Further, the examiner may determine that a meaningful search cannot be carried out or that no meaningful opinion can be formed for improper multiple dependent claims (see PCT Rule 6.4(a)).<

>

### **1843.04 Procedure for Claims Not Required To Be Searched and for Claims That Are Unclear [R-2]**

The International Searching Authority (ISA) may declare that a meaningful search cannot be carried out with respect to some of the claims only and/or that only certain claims relate to subject matter which the ISA is not required to and has decided not to search. Where only some of the claims will not be searched, the ISA searches the remaining claims of the international application. Any unsearched claims and the reasons why those claims have not been searched are indicated in Box II of the international search report (Form PCT/ISA/210).

If the examiner determines that none of the claims will be searched, the examiner declares that no search report will be established using form PCT/ISA/203. The lack of the international search report will not, in itself, have any influence on the validity of the international application and the latter's processing will continue, including its communication to the designated Offices.

If the international application cites a document that is not published or otherwise not accessible to the ISA and the document appears essential to a correct understanding of the invention to the extent that a meaningful international search would not be possible without knowledge of the content of that document, the ISA may postpone the search and request that the applicant first provide first a copy of the document, if possible to do so within the time limits for the preparation of the international search report of the ISA under the PCT. If no copy of the document is received, the ISA should first attempt to carry out the international search and then, if necessary, indicate that no meaningful search could be carried out in total or that the search needed to be restricted.

For international applications having an international filing date on or after January 1, 2004, and subject to PCT Rule 69.1(b-*bis*), the ISA establishes the written opinion of the International Searching Authority (Form PCT/ISA/237) at the same time it establishes either the international search report (Form PCT/ISA/210) or the declaration of non-establishment of the international search report (Form PCT/ISA/203). However, if the ISA determines that for any or all claims (A) the international application relates to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, (B) the description, claims, or drawings, are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the novelty, inventive step, or industrial applicability, of the claimed invention, or (C) the subject matter of the claims relates to inventions for which no international search report will be established, the ISA indicates, in Box III of the written opinion of the International Searching Authority (Form PCT/ISA/237), that no opinion with regard to novelty, inventive step or industrial applicability will be established with regard to those claims. In most instances it will be sufficient for the examiner to (A) indicate that no international search report has been established for the relevant claims as the reason for not establishing an opinion on novelty, inventive step, and industrial applicability and (B) refer to the international search report or declaration of non-establishment of the international search report for further details.<

&gt;

### **1843.05 Time Limit for Establishing the International Search Report and the Written Opinion of the International Searching Authority [R-2]**

Publication of the international application occurs at 18 months from the earliest priority date or, where there is no priority date, 18 months from the international filing date. The international search report is subject to international publication. The written opinion is not published but is made available to the public after the expiration of 30 months from the priority date. See PCT Rule 44<sup>ter</sup>. The Office goal is to have the search report and, if the application has an international filing date on or after January 1, 2004, the written opinion, mailed in sufficient time to reach the International Bureau by the end of 16 months from the priority date or 9 months from the filing date if no priority claim is made. This is necessary since the technical preparations for publication are completed by 17.5 months from the earliest priority date. In view of the treaty mandated publication and the time needed for technical preparation, the Office sets time periods for completion of the search report and the written opinion which will ensure sufficient time to complete internal processing and review and achieve receipt of the search report and the written opinion at the International Bureau by the 16th month from the priority date. See PCT Rule 42.1 and 43<sup>bis</sup>.1(a).

Thus, as a matter of practice, each Technology Center tends to set its internal time period for completion of the search report and the written opinion to meet the time limits set by the International Application Processing Division. The International Application Processing Division sets its time for completion to ensure adequate time for review, corrections (where necessary) and mailing.

The date of transmittal of the search report becomes critical for applicants since it starts the 2 month period for submission of amendments to the claims under PCT Article 19. See PCT Rule 46.1.

The Patent Cooperation Treaty is extremely date sensitive and for that reason, examiners are encouraged to complete the international search and prepare the search report, and in applications having an inter-

national filing date filed on or after January 1, 2004, the written opinion, promptly after receipt. Monitoring and tracking procedures have been devised to minimize the risk of late search reports and written opinions and/or date of transmission thereof.<

## 1844 The International Search Report [R-2]

*PCT Article 18.*

*The International Search Report*

(1) The international search report shall be established within the prescribed time limit and in the prescribed form.

(2) The international search report shall, as soon as it has been established, be transmitted by the International Searching Authority to the applicant and the International Bureau.

(3) The international search report or the declaration referred to in Article 17(2)(a) shall be translated as provided in the Regulations. The translations shall be prepared by or under the responsibility of the International Bureau.

The results of the international search **\*\*>are<** recorded in the international search report (Form PCT/ISA/210), which>, together with the written opinion of the International Searching Authority (Form PCT/ISA/237) for applications having an international filing date on or after January 1, 2004,< is transmitted with Form PCT/ISA/220**\*\***. The search report will be published by the International Bureau and>, together with the written opinion of the International Searching Authority,< will serve as a basis for examination of the international application by the designated Offices and the International Preliminary **>Examining<** Authority.

**\*\***

The search report >is only for the purpose of identifying prior art and< should not contain any expressions of opinion, reasoning, argument or explanation as to any cited prior art. **\*\*>**However, in applications having an international filing date on or after January 1, 2004, such comments should be included in the written opinion of the International Searching Authority.<

The printed international search report form (Form PCT/ISA/210) to be transmitted to the applicant and to the International Bureau contains two main sheets (“first sheet” and “second sheet”) to be used for all searches. These two main sheets are intended for recording the important features of the search such as the fields searched and for citing documents revealed

by the search. The printed international search report form also contains **>five<** optional continuation sheets for use where necessary. **\*\*>**They are the: “continuation of first sheet (1),” “continuation of first sheet (2),” “continuation of first sheet (3),” “continuation of second sheet” and “patent family annex,” respectively.< The patent family annex sheet is not currently used by the United States International Searching Authority since patent family information is not readily available to the examiner. The “continuation of first sheet (1)” is to be used only >when the international application includes a nucleotide and/or amino acid sequence and indicates the basis on which the international search was carried out, since the relevant listings or related tables may be filed or furnished at different times and in different forms. The “continuation of first sheet (2)” is used where< an indication is made on the first sheet that claims were found unsearchable (item **>2<**) and/or unity of invention is lacking (item **>3<**). The relevant indications must then be made on that continuation sheet. The “continuation of first sheet (**>3<**)” is to contain the text of the abstract where an abstract or an amended abstract has been established by the International Searching Authority (item 5) and an indication to that effect is made on the first sheet. The “continuation of second sheet” is to be used where the space on the second sheet is insufficient for the citation of documents. **\*\*>**The form also includes an< “extra sheet” >which< may be used whenever additional space is required to complete information from the other sheets.

It is to be noted that only the “second sheet”, the “continuation of second sheet” (if any)**\*\*>**, the “continuation of first sheet (2)” (if any), and the “extra sheet” (if any), as well as any separate sheet with information on members of patent families, will be the subject of international publication, as the “first sheet,” “continuation of first sheet (1)” (if any), and the “continuation of first sheet (3)” (if any)< contain only information which will already appear on the front page of the pamphlet >(PCT Rule 48.2(v))<.

**\*\***

## CONTENTS OF THE INTERNATIONAL SEARCH REPORT

The international search report (PCT Rule 43) contains, among other things, the citations of the docu-

ments considered to be relevant (PCT Rule 43.5 and Administrative Instructions Section 503), the classification of the subject matter of the invention (PCT Rule 43.3 and Administrative Instructions Section 504) and an indication of the fields searched (PCT Rule 43.6). Citations of particular relevance must be specially indicated (Administrative Instructions Section 505); citations of certain specific categories of documents are also indicated (Administrative Instructions Section 507); citations which are not relevant to all the claims must be cited in relation to the claim or claims to which they are relevant (Administrative Instructions Section 508); if only certain passages of the cited document are particularly relevant, they must be identified, for example, by indicating the page, the column or the lines, where the passage appears.

### **1844.01 \*\*>Preparing < the International Search Report >(Form PCT/ISA/210)< [R-2]**

#### **>TOTAL NUMBER OF SHEETS**

The first sheet of the international search report indicates the total number of sheets in the report. The correct number is entered, not including sheets that have not been filled-in (blank sheets). The number of sheets only includes the number of sheets from Form PCT/ISA/210.

#### **NUCLEOTIDE AND/OR AMINO ACID SEQUENCE LISTINGS AND RELATED TABLES**

Where the application discloses any nucleotide and/or amino acid sequence, box 1.b of the first sheet is checked and Box No. I (appearing on “continuation of first sheet (1)”) indicates the format (that is, whether in paper copy or computer readable form) and status (that is whether filed with the international application or later, for purposes of search) of the sequence listing, and any related tables.

#### **RESTRICTION OF THE SUBJECT OF THE INTERNATIONAL SEARCH**

The report indicates whether the search was restricted or not for any of the reasons indicated

below. If any such restrictions are applied, the claims in respect of which a search has not been carried out are identified and the reasons for this are indicated. The four categories where such restrictions may arise are:

(A) claims drawn to subject matter not required to be searched by the International Searching Authority (see MPEP § 1843.02);

(B) claims in respect of which a meaningful search cannot be carried out (see MPEP § 1843.03);

(C) multiple dependent claims which do not comply with PCT Rule 6.4(a) (see MPEP § 1843.03);

(D) lack of unity of invention (see MPEP § 1850).

Where claims are not searched for any of the reasons identified in (A)-(C) above, box 2 of the first sheet of the international search report is checked. In addition, Box No. II of the international search report (on “continuation of first sheet (2)”) is completed, giving the details.

Where lack of unity has been found (see MPEP § 1850), box 3 of the first sheet of the international search report is checked. In addition, Box No. III of the international search report (on “continuation of first sheet (2)”) is completed, irrespective of whether an invitation to pay additional search fees has issued. The search report indicates the separate inventions claimed in the application, whether additional search fees were requested and paid, and which claims were searched. It also indicates whether any additional search fees were accompanied by a protest.

#### **TITLE, ABSTRACT, AND FIGURE FOR PUBLICATION**

The international application must contain an abstract and a title. The examiner considers the abstract (together with the title of the invention and the figure of the drawings to be published with the abstract) in relation to the requirements of the Regulations under the PCT. The examiner indicates approval or amendment of the text of the abstract, the title of the invention, and the selection of the figure that is to accompany the abstract in items 4 to 6 of the first sheet of the international search report.

**A. Title***PCT Rule 4.  
The Request (Contents)*

\*\*\*\*\*

**4.3. Title of the Invention**

The title of the invention shall be short (preferably from two to seven words when in English or translated into English) and precise.

\*\*\*\*\*

*PCT Rule 37.  
Missing or Defective Title***37.1. Lack of Title**

If the international application does not contain a title and the receiving Office has notified the International Searching Authority that it has invited the applicant to correct such defect, the International Searching Authority shall proceed with the international search unless and until it receives notification that the said application is considered withdrawn.

**37.2. Establishment of Title**

If the international application does not contain a title and the International Searching Authority has not received a notification from the receiving Office to the effect that the applicant has been invited to furnish a title, or if the said Authority finds that the title does not comply with Rule 4.3, it shall itself establish a title. Such title shall be established in the language in which the international application is to be published or, if a translation into another language was transmitted under Rule 23.1(b) and the International Searching Authority so wishes, in the language of that translation.

The title must be short and precise (preferably from two to seven words in English or when translated into English). Furthermore, the title should clearly and concisely state the technical designation of the invention. In this regard the following should be taken into account:

(A) personal names or trade names or similar terms of non-technical nature which do not serve to identify the invention should not be used;

(B) the abbreviation “etc.,” being vague, should not be used and should be replaced by an indication of what it is intended to cover;

(C) titles such as “Method,” “Apparatus,” “Chemical Compounds” alone or similar vague titles do not clearly state the technical designation of the invention and should not be used.

In general, the examiner is required to draft a new title if the applicant failed to provide a title or if the title is deficient because it does not comply with the requirements of PCT Rule 4.3. The examiner is not required to gain the applicant’s approval of the new title established by the examiner.

**B. Abstract and Figure for Publication***PCT Rule 8.  
The Abstract***8.1. Contents and Form of the Abstract**

(a) The abstract shall consist of the following:

(i) a summary of the disclosure as contained in the description, the claims, and any drawings; the summary shall indicate the technical field to which the invention pertains and shall be drafted in a way which allows the clear understanding of the technical problem, the gist of the solution of that problem through the invention, and the principal use or uses of the invention;

(ii) where applicable, the chemical formula which, among all the formulae contained in the international application, best characterizes the invention.

(b) The abstract shall be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English).

(c) The abstract shall not contain statements on the alleged merits or value of the claimed invention or on its speculative application.

(d) Each main technical feature mentioned in the abstract and illustrated by a drawing in the international application shall be followed by a reference sign, placed between parentheses.

**8.2. Figure**

(a) If the applicant fails to make the indication referred to in Rule 3.3(a)(iii), or if the International Searching Authority finds that a figure or figures other than that figure or those figures suggested by the applicant would, among all the figures of all the drawings, better characterize the invention, it shall, subject to paragraph (b), indicate the figure or figures which should accompany the abstract when the latter is published by the International Bureau. In such case, the abstract shall be accompanied by the figure or figures so indicated by the International Searching Authority. Otherwise, the abstract shall, subject to paragraph (b), be accompanied by the figure or figures suggested by the applicant.

(b) If the International Searching Authority finds that none of the figures of the drawings is useful for the understanding of the abstract, it shall notify the International Bureau accordingly. In such case, the abstract, when published by the International Bureau, shall not be accompanied by any figure of the drawings even where the applicant has made a suggestion under Rule 3.3(a)(iii).

*PCT Rule 38.**Missing or Defective Abstract**38.1.Lack of Abstract*

If the international application does not contain an abstract and the receiving Office has notified the International Searching Authority that it has invited the applicant to correct such defect, the International Searching Authority shall proceed with the international search unless and until it receives notification that the said application is considered withdrawn.

*38.2.Establishment of Abstract*

(a) If the international application does not contain an abstract and the International Searching Authority has not received a notification from the receiving Office to the effect that the applicant has been invited to furnish an abstract, or if the said Authority finds that the abstract does not comply with Rule 8, it shall itself establish an abstract. Such abstract shall be established in the language in which the international application is to be published or, if a translation into another language was transmitted under Rule 23.1(b) and the International Searching Authority so wishes, in the language of that translation.

(b) The applicant may, within one month from the date of mailing of the international search report, submit comments on the abstract established by the International Searching Authority. Where that Authority amends the abstract established by it, it shall notify the amendment to the International Bureau.

In general, the examiner will have to establish a new abstract if the applicant did not provide an abstract or if the abstract does not comply with PCT Rule 8. In determining the definitive contents of the abstract, or establishing the text of the abstract anew where it is missing, the examiner should take into consideration the fact that the abstract is merely for use as technical information and, in particular, must not be used for the purpose of interpreting the scope of the protection sought. The abstract constitutes an efficient instrument for the purpose of assisting the scientist, engineer, or researcher in searching in the particular technical field and should in particular make it possible to assess whether there is need for consulting the international application itself. WIPO guidelines for the preparation of abstracts are found in WIPO Standard ST.12/A, which is available from WIPO's web site ([www.wipo.int/scit/en/standards/standards.htm](http://www.wipo.int/scit/en/standards/standards.htm)).

In considering the adequacy of the applicant's abstract and figure, because of practical difficulties experienced by the International Bureau with publica-

tion, examiners should have particular regard to the following:

(A) It is important that the abstract be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English). Within this constraint the abstract must provide a summary of the technical information about the disclosure as contained in the description, claims, and drawings. It should be drafted so as to serve as an efficient scanning tool for searching purposes in the art.

(B) Phrases should not be used which can be implied, such as "This disclosure concerns," "The invention defined by this disclosure," and "This invention relates to."

(C) Only one figure should normally be selected unless this would lead to inadequate disclosure. The inclusion of more than two figures should not be considered except in extreme circumstances where necessary information cannot be otherwise conveyed. Where none of the figures is considered useful for the understanding of the invention (even where the applicant has suggested a figure), no figure should be selected.

(D) Abstracts may be incomprehensible if the numerals of the selected figure(s) do not correspond with those in the abstract. Thus, this should be avoided.

(E) An absence of reference numbers on the figures must be accepted as the examiner has no mechanism to initiate their addition.

(F) Each main technical feature mentioned in the abstract and illustrated by a drawing should be followed by a reference sign, placed between parentheses.

If the examiner establishes a new abstract, the applicant can only comment on the new abstract after it has been established in the international search report. The applicant is allowed one month from the date of mailing of the international search report to respond to the examiner's abstract in the report. If the applicant does comment, the examiner takes the applicant's comments into consideration. It is not necessary for the examiner to reply to the applicant's comments even if adverse. If the examiner decides to amend the abstract established in the international search report, the International Bureau and the applicant are notified using Form PCT/ISA/205. See PCT

Rule 38.2(b) and Administrative Instructions Section 515.

When indicating the figure to be published, the applicant's suggestion is found in Box IX of the request Form (PCT/RO/101). Where none of the figures is considered useful for the understanding of the abstract, this is indicated at the appropriate box (item 6 of the first sheet of Form PCT/ISA/210). When no drawings accompany the application, none of the boxes are checked. It is not recommended to select more than one figure; however, if it is necessary to do so then the wording of the form should be changed to reflect the change from single case to plural case. For example, "figure" is changed to "figures", "is" to "are" and No. "to Nos.".

### CLASSIFICATION OF SUBJECT MATTER

The International Searching Authority assigns obligatory International Patent Classification (IPC) symbols in accordance with the rules as set forth in the Guide to the IPC and in the IPC itself (using the edition of the IPC in force at the time), whereby the technical subject of the invention of the application is identified. The International Searching Authority then records the International Patent Classification in Box A of the second sheet of the international search report. The IPC Guide can be accessed via the Patent Examiner's Toolkit under Classification Tools or via WIPO's web site ([www.wipo.int](http://www.wipo.int)).

### RECORDING THE SEARCH

The examiner records the search history in Box B of the second sheet of the international search report. In recording the search history of the international search, the examiner lists the classification identification of the fields searched. Examiners are also encouraged to record the search history in sufficient detail to allow examiners of national stage applications to fully interpret and rely upon the international search. This includes recording the details of any patent and non-patent literature searches as well as searches conducted on the Internet.

Where the international search report is entirely or partly based on a previous search made for an application relating to a similar subject, the previous application number and the relevant search history consulted for this previous search is, where appropriate, identified as having been consulted for the international

application in question, except in those instances where the details of an earlier search cannot be ascertained, or whenever it is impractical to record the full details of the earlier search. In the later case, a summary of the earlier search should be included. Where the previous application has been published, this information is recorded in the international search report.

### DOCUMENTS CONSIDERED TO BE RELEVANT

The completion of Box C of the second sheet of the international search report can be considered as having three components. These are: (A) the citation category; (B) the citation of the document together with identification of the relevant passages where appropriate; and (C) the identification of relevant claim numbers. The citation of multiple documents showing the same inventive elements should be kept to a minimum. Further, when citing a document, the examiner should clearly indicate which portions of the document are most relevant.

#### A. *Citation Category*

Documents which are cited are given a category indication by way of an alphabetic character, details of which are given in Administrative Instructions Sections 505 and 507 and below. The categories for citations are also explained under the "documents considered to be relevant" section of the report. A category should always be indicated for each document cited. Where needed, combinations of different categories are possible.

#### 1. **Particularly Relevant Documents**

Where a document cited in the international search report is particularly relevant, it is indicated by the letters "X" or "Y". Category "X" is applicable where a document is such that when taken alone, a claimed invention cannot be considered novel or where a document is such that when considered in light of common general knowledge, a claimed invention cannot be considered to involve an inventive step. Category "Y" is applicable where a document is such that a claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other documents of the same category,

such combination being obvious to a person skilled in the art.

## 2. Documents Defining the State of the Art and Not Prejudicing Novelty or Inventive Step

Where a document cited in the international search report represents state of the art and is not prejudicial to the novelty or inventive step of the claimed invention, it is indicated by the letter “A”.

## 3. Documents Which Refer to a Non-Written Disclosure

Where a document cited in the international search report refers to a non-written disclosure referred to in PCT Rule 33.1(b), the letter “O” is entered. Examples of such disclosures include conference proceedings. The document category “O” is always accompanied by a symbol indicating the relevance of the document, for example: “O,X”, “O,Y”, or “O,A”.

## 4. Intermediate Documents

Documents published on dates falling between the date of filing of the application being searched and the date of priority claimed, or the earliest priority if there is more than one (see PCT Article 2(xi)(b)), are denoted by the letter “P”. The letter “P” is also given to a document published on the very day of the earliest date of priority of the patent application under consideration. The document category “P” is always accompanied by a symbol indicating the relevance of the document, for example: “P,X”, “P,Y”, or “P,A”.

## 5. Documents Relating to the Theory or Principle Underlying the Invention

Where any document cited in the search report is a document that may be useful for a better understanding of the principle or theory underlying the invention, or is cited to show that the reasoning or the facts underlying the invention are incorrect, it is indicated by the letter “T”.

## 6. Potentially Conflicting Patent Documents

Any patent document bearing a filing or priority date earlier than the filing date of the application searched (not the priority date) but published on or later than that date and the content of which would constitute prior art relevant to novelty (PCT Article

33(2)) is indicated by the letter “E” (see Administrative Instructions Section 507(b) and PCT Rule 33.1(c)).

## 7. Documents Cited in the Application

When the search report cites documents already mentioned in the description of the patent application for which the search is carried out, such documents may be identified on the search report by the wording “cited in the application” under the cited document.

## 8. Documents Cited for Other Reasons

Where in the search report any document is cited for reasons other than those referred to in the foregoing paragraphs (in particular as evidence), for example:

(A) a document which may throw doubt on a priority claim (Article 4(C)(4) of the Paris Convention), or

(B) a document cited to establish the publication date of another citation,

the document is indicated by the letter “L”. Brief reasons for citing the document should be given. Documents of this type need not be indicated as relevant to any particular claims. However, where the evidence that they provide relates only to certain claims (for example the “L” document cited in the search report may invalidate the priority in respect of certain claims and not others), then the citation of the document should refer to those claims.

### B. Relationship Between Documents and Claims

Each citation should include a reference to the claims to which it relates (see Administrative Instructions Section 508). If necessary, various relevant parts of the document cited should each be related to the claims in like manner (with the exception of “L” documents and “A” documents). It is also possible for the same document to represent a different category with respect to different claims. For example:

WO1990/001867 A (WIDEGREN LARS (SE)) 8  
March 1990 (08-03-1990), figures 1 and 2

X 1  
Y 2-5  
A 6-10

The above example means that Figures 1 and 2 of the cited document disclose subject matter which

prejudices the novelty or inventive step of claim 1, which prejudices the inventive step of claims 2-5 when combined with another document cited in the search report, and which represents non-prejudicial state of the art for the subject matter of claims 6-10.

### **C. Citation of the Documents**

Identification of any document should be made according to WIPO Standard ST.14 (see Administrative Instructions Section 503). For “A” citations it is not necessary to indicate the relevant claims unless there is good reason to do so; for example where there is a clear lack of unity *a priori* (see MPEP § 1850) and the citation is relevant only to a particular claim or group of claims or when the claims meet the criteria of novelty, inventive step, and industrial applicability under PCT Article 33(2) to (4) and the “A” category citations represent the most relevant prior art. The box on the second sheet of Form PCT/ISA/210 entitled “Further documents listed are in the continuation of Box C” is checked if a continuation sheet is used to list additional documents that will not fit in the space provided in Box C.

### **FINALIZATION OF THE SEARCH REPORT**

The identification of the International Searching Authority which established the international search report and the date of actual completion, that is, the

date on which the report was drawn up are indicated at the bottom of the second sheet of the international search report. This information is generated automatically by the OACS software when preparing the international search report. The international search report will be accompanied by a transmittal letter (Form PCT/ISA/220) indicating the date the search report was mailed to the applicant. The mailing date is important for the computation of the time limit for filing amendments to the claims under PCT Article 19. See MPEP § 1853.

Pursuant to PCT Rule 43.8, the international search report must indicate the name of the officer of the International Searching Authority responsible for the report, i.e., the “authorized officer.” An “authorized officer” is the person who actually performed the search work and prepared the search report, or another person who was responsible for supervising the search. See Administrative Instructions Section 514. Thus, an examiner need not have signatory authority in order to be named as an authorized officer on the search report. However, the “file copy” of the search report must be signed by an examiner having at least partial signatory authority.

The international search report should be mailed within 3 months of receipt of the search copy or within 9 months from the priority date, whichever is later.

\*\*

PATENT COOPERATION TREATY

**PCT**

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference CMC-123-PCT	<b>FOR FURTHER ACTION</b>	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US04/00150	International filing date (day/month/year) 05 January 2004 (05.01.2004)	(Earliest) Priority Date (day/month/year) 06 January 2003 (06.01.2003)
Applicant ACME FASTENER CORPORATION		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 4 sheets.

It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**

a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

The international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b.  With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2.  **Certain claims were found unsearchable** (see Box No. II)

3.  **Unity of invention is lacking** (see Box No. III)

4. With regard to the **title**,

the text is approved as submitted by the applicant.

the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

the text is approved as submitted by the applicant.

the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,

a. the figure of the **drawings** to be published with the abstract is Figure No. 3

as suggested by the applicant.

as selected by this Authority, because the applicant failed to suggest a figure.

as selected by this Authority, because this figure better characterizes the invention.

b.  none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (January 2004)

<b>INTERNATIONAL SEARCH REPORT</b>		International application No. PCT/US04/00150
<b>Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)</b>		
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:		
1. <input type="checkbox"/>	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:	
2. <input type="checkbox"/>	Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:	
3. <input type="checkbox"/>	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).	
<b>Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)</b>		
This International Searching Authority found multiple inventions in this international application, as follows: See Extra Sheet		
1. <input checked="" type="checkbox"/>	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.	
2. <input type="checkbox"/>	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.	
3. <input type="checkbox"/>	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:	
4. <input type="checkbox"/>	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:	
<b>Remark on Protest</b>	<input type="checkbox"/>	The additional search fees were accompanied by the applicant's protest.
	<input checked="" type="checkbox"/>	No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (2)) (January 2004)

Form PCT/ISA/210 (second sheet) (January 2004)

## INTERNATIONAL SEARCH REPORT

International application No. PCT/US04/00150
---

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional search fees must be paid.

Group I, claim(s) 1 - 2, drawn to an electromagnetic fastener driver with a safety interlock to prevent firing of the tool without the fastener output channel being pressed against a work piece.

Group II, claim(s) 3 and 5, drawn to an electromagnetic fastener driver with means to prevent the feeding of a fastener while the tool is being actuated.

Group III, claim(s) 6 - 10, drawn to an electromagnetic fastener driver with a control means to provide for multiple driving strokes to be delivered to the same fastener with a single actuation of the tool.

Group IV, claim(s) 11 - 15, drawn to an electromagnetic fastener driver with a fastener jam clearance feature.

Group V, claim(s) 4 and 16 - 20, drawn to an electromagnetic fastener driver with means to hold the fastener magazine in a predetermined position.

The inventions listed as Groups I - V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the Group I invention is the safety interlock to prevent firing of the tool without the fastener output channel being pressed against a work piece. The special technical feature of the Group II invention is the means to prevent the feeding of a fastener while the tool is being actuated. The special technical feature of the Group III invention is the control means to provide for multiple driving strokes to be delivered to the same fastener with a single actuation of the tool. The special technical feature of the Group IV invention is the fastener jam clearance feature. The special technical feature of the Group V invention is the means to hold the fastener magazine in a predetermined position. None of these special technical features are common to the other groups, nor do they correspond to a special technical feature in the other groups. Therefore, unity of invention is lacking.

&gt;

## 1845 Written Opinion of the International Searching Authority [R-2]

*PCT Rule 43<sup>bis</sup>.*

*Written Opinion of the International Searching Authority*

### *43<sup>bis</sup>.1. Written Opinion*

(a) Subject to Rule 69.1(b<sup>bis</sup>), the International Searching Authority shall, at the same time as it establishes the international search report, establish a written opinion as to:

(i) whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable;

(ii) whether the international application complies with the requirements of the Treaty and these Regulations in so far as checked by the International Searching Authority.

The written opinion shall also be accompanied by such other observations as these Regulations provide for.

(b) For the purposes of establishing the written opinion, Articles 33(2) to (6), 35(2) and 35(3) and Rules 43.4, 64, 65, 66.1(e), 66.7, 67, 70.2(b) and (d), 70.3, 70.4(ii), 70.5(a), 70.6 to 70.10, 70.12, 70.14 and 70.15(a) shall apply *mutatis mutandis*.

(c) The written opinion shall contain a notification informing the applicant that, if a demand for international preliminary examination is made, the written opinion shall, under Rule 66.1<sup>bis</sup>(a) but subject to Rule 66.1<sup>bis</sup>(b), be considered to be a written opinion of the International Preliminary Examining Authority for the purposes of Rule 66.2(a), in which case the applicant is invited to submit to that Authority, before the expiration of the time limit under Rule 54<sup>bis</sup>.1(a), a written reply together, where appropriate, with amendments.

For international applications having an international filing date on or after January 1, 2004, the examiner is required, in most instances, to establish a written opinion on novelty, inventive step, and industrial applicability of the claimed invention at the same time he/she establishes the international search report. The international search report and written opinion together serve to inform the International Preliminary Examining Authority of the documents and arguments necessary to complete the relevant assessments if international preliminary examination is demanded, and to inform the designated Offices of information that may be relevant to examination in the national phase. (The written opinion is transmitted to the designated offices in the form of an international preliminary report on patentability if no international preliminary examination report is established under Chapter II of the PCT). A written opinion of the Inter-

national Searching Authority is not required in the limited instance where a demand for international preliminary examination and required fees (PCT Rule 69.1(a)) have been filed with the United States International Preliminary Examining Authority and the examiner considers all the conditions of PCT Article 34(2)(c)(i) to (iii) to be fulfilled. In this limited instance, a positive international preliminary examination report may be issued. See PCT Rule 69.1(b<sup>bis</sup>)).

The applicant must be notified in the written opinion of the defects found in the application. The examiner is further required to fully state the reasons for his/her opinion (PCT Rule 66.2(b)) and invite a written reply, with amendments where appropriate (PCT Rule 66.2(c)).<

&gt;

## 1845.01 Preparing the Written Opinion of the International Searching Authority (Form PCT/ISA/237) [R-2]

### BOX NO. I. — BASIS OF OPINION

When completing Box I, item 1, of Form PCT/ISA/237, the examiner must indicate whether or not the opinion has been established on the basis of the international application in the language in which it was filed. If a translation was furnished for the purpose of the search, this must be indicated. With respect to Box I, item 2 of Form PCT/ISA/237, if the opinion has been based on a nucleotide and/or amino acid sequence disclosed and necessary to the claimed invention, the examiner must indicate the type of material (e.g., a sequence listing and/or tables related thereto), the format of the material (e.g., in written format and/or in computer readable form) and the time of filing/furnishing (e.g., contained in the international application as filed, filed together with the international application in computer readable form and/or furnished subsequently to this Authority for the purposes of the search). If more than one version or copy of the sequence listing and/or table relating thereto is filed, the examiner must indicate whether the applicant has provided the required statement indicating that the information in the subsequent or additional copies are identical to that in the applica-

tion as filed or does not go beyond the application as filed.

### **BOX NO. II. — PRIORITY**

Box II of Form PCT/ISA/237 is to inform applicant of the status of a request for priority. Where one or more citations of the international search report were published after the earliest priority date, the validity of that earliest priority date requires checking. Where the priority document is one which is in the records of the ISA, it should be obtained from those records. If a copy of the priority document is not available before preparation of the written opinion of the ISA because it has not yet been provided by the applicant, and if that earlier application was not filed with that Authority in its capacity as a national Office or the priority document is not available to that Authority from a digital library in accordance with the Administrative Instructions, the written opinion of the ISA may be established as if the priority had been validly claimed.

If the examiner needs a copy of a foreign priority document, the copy will be supplied on request to the International Bureau (IB) unless the IB has not yet received the priority document, in which case the examiner may invite the applicant to furnish such a copy. See PCT Rule 66.7(a). The examiner may consult with his or her SPRE regarding requesting a copy of the priority document from the IB. If the priority document is not in English, the examiner may invite the applicant to furnish a translation of the priority document within two months of the invitation. See PCT Rule 66.7(b). Box II, item 3, “Additional Observations” may be used to invite applicant to supply a copy of the priority document and/or translation. Preparation of the written opinion by the International Searching Authority should not be delayed to await a response to the invitation. The written opinion of the ISA will ordinarily be established as if the priority claim had been validly claimed even though the copy and/or translation has not been furnished. However, failure to timely furnish a copy of the priority document and/or translation may result in any further written opinion or international preliminary examination report of the International Preliminary Examining Authority being established as if the priority had not been claimed.

If applicant fails to furnish a copy or translation of the earlier application, whose priority has been claimed, check item No. 1 and then check the first box of the subsection if applicant failed to furnish a copy of the earlier application whose priority has been claimed, and check the second box of the subsection if applicant failed to furnish a translation of the earlier application whose priority has been claimed.

When the claim for priority has been found invalid (e.g., the claimed priority date is more than one year prior to the international filing date and the notification under PCT Rule 26<sup>bis</sup>.2(b) has been provided or all claims are directed to inventions which were not described and enabled by the earlier application), check item No. 2 in Box II and indicate why the claim for priority has been found invalid following item No. 3 “Additional observations”.

### **BOX NO. III. — NON-ESTABLISHMENT OF OPINION ON NOVELTY, INVENTIVE STEP AND INDUSTRIAL APPLICABILITY**

Box III of Form PCT/ISA/237 is intended to cover situations where some or all claims of an application are so unclear or inadequately supported by the description that the question of novelty, inventive step (nonobviousness), and industrial applicability cannot be considered, or where the international application or claims thereof relate to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, or where no international search report has been established for the claims.

If some or all of the claims of an application relate to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, check the appropriate box, indicate which claims relate to that subject matter and specify the reasons.

If some or all of the claims of an application are so unclear that no meaningful opinion could be formed, check the appropriate box, indicate which claims are unclear and specify the reasons.

If some or all of the claims are so inadequately supported by the description that no meaningful opinion could be formed, check the appropriate box.

If no international search report has been established for certain claims, check the appropriate box and indicate the claim numbers.

If the nucleotide and/or amino acid sequence listing does not comply with Annex C of the Administrative Instructions, the examiner must indicate whether the written form and/or the computer readable form is not in compliance and the reason for the non-compliance. Further, if tables related to the sequence listing are included as part of the international application, and these tables fail to comply with the technical requirements of Annex C of the Administrative Instructions, the examiner must indicate this in Box III.

#### **BOX NO. IV. — LACK OF UNITY OF INVENTION**

Box IV of Form PCT/ISA/237 should be used by the examiner to notify applicant that lack of unity has been found.

If, in response to a lack of unity of invention, applicant paid additional fees for additional inventions, the examiner should check the first box under subsection 1.

If the additional fees were paid under protest, the examiner should check the second box under subsection 1.

If applicant neither restricted nor paid additional fees in reply to the lack of unity of invention, the examiner should check the third box under subsection 1.

Subsection 2 of Box IV is to be completed if the examiner determines that unity of invention is lacking but chooses not to invite the applicant to restrict or pay additional fees.

If a lack of unity exists, the examiner would mark the second box under subsection 3. However, since the reasons for the lack of unity have already been set forth on the simultaneously issued international search report, the examiner can simply state that the reason the requirement of unity of invention is not complied with is set forth in the international search report. The first box under subsection 3 would never be marked.

Subsection 4 is used by the examiner to indicate which parts of the application form the basis of the opinion after the lack of unity of invention has been explained.

#### **BOX NO. V. — REASONED STATEMENT WITH REGARD TO NOVELTY, INVENTIVE STEP, AND INDUSTRIAL APPLICABILITY OF CLAIMS**

In Box V of Form PCT/ISA/237, the examiner must list in summary form all claims with regard to the criteria of novelty (N), inventive step (IS), and industrial applicability (IA). For definitions of novelty, inventive step, and industrial applicability see MPEP §§ 1878.01(a)(1), 1878.01(a)(2), and 1878.01(a)(3), respectively.

Box V is the main purpose of the written opinion. All claims without fatal defects are treated on the merits in Box V as to novelty, inventive step (nonobviousness) and industrial applicability.

The treatment of claims in Box V is similar in format to an Office action in a U.S. national patent application except that the words “rejection” and “patentability” are never used in a written opinion. On the international level, all written opinions are non-binding and a patent does not issue; what does issue is an international preliminary examination report (IPER), which is nonbinding on the elected States.

Examiner statements in Box V can be positive or negative. If the claims define over the prior art and meet the test of novelty, inventive step (nonobviousness) and industrial applicability, a statement equivalent to detailed reasons for allowance in a corresponding U.S. national application should be provided, indicating how the claims meet the tests of novelty, inventive step and industrial applicability. Form paragraphs 18.04 and 18.04.01 may be used for this purpose.

##### *¶ 18.04 Meets Novelty and Inventive Step*

Claim [1] the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest [2].

##### **Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and insert the verb --meet-- or --meets--, as appropriate.
2. In bracket 2, insert the details of the claimed subject matter that render it unobvious over the prior art.
3. If the claims also meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.04.01.
4. If the claims do not meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.03.

*¶ 18.04.01 Meets Industrial Applicability*

Claim [1] the criteria set out in PCT Article 33(4), and thus [2] industrial applicability because the subject matter claimed can be made or used in industry.

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --meet-- or -- meets--, as appropriate.
2. In bracket 2, insert --have-- or --has--, as appropriate.
3. If the claims meet all of the requirements of PCT Article 33(2)-(4), use form paragraph 18.04 before this form paragraph to provide positive statements for novelty and inventive step under PCT Article 33(2)-(3).
4. If the claims have industrial applicability but lack novelty and inventive step, use this form paragraph and additionally use form paragraph 18.01.
5. If the claims have industrial applicability and novelty but lack inventive step, use this form paragraph and additionally use one or more of form paragraphs 18.02, 18.02.01 and 18.02.02, as appropriate.
6. If the claims do not have industrial applicability, use form paragraph 18.03 instead of this form paragraph.

If, on the other hand, it is the opinion of the examiner that some or all claims lack novelty, inventive step, or industrial applicability, specific reasons must be given similar to those used in U.S. national applications. If the claims lack inventive step over a combination of references, the reasons must explain why one of ordinary skill in the art would have been motivated to combine the teachings of the applied references.

Form paragraphs 18.01, 18.02, 18.02.01, 18.02.02, and 18.03 may be used, as appropriate, to explain the negative statements listed in Box V.

*¶ 18.01 Lacks Novelty*

Claim [1] novelty under PCT Article 33(2) as being anticipated by [2].

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.

*¶ 18.02 Lacks Inventive Step - One Reference*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over [2]. [3]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.
3. In bracket 3, add reasoning.

*¶ 18.02.01 Lacks Inventive Step - Two References*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over [2] in view of [3]. [4]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of PRIMARY prior art relied upon.
3. In bracket 3, insert name of SECONDARY prior art relied upon.
4. In bracket 4, add reasoning.

*¶ 18.02.02 Lacks Inventive Step - Additional Reference*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over the prior art as applied in the immediately preceding paragraph and further in view of [2]. [3]

**Examiner Note:**

1. This form paragraph may follow either 18.02 or 18.02.01.
2. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
3. In bracket 2, insert name of additional prior art relied upon.
4. In bracket 3, add reasoning.

*¶ 18.03 Lacks Industrial Applicability*

Claim [1] industrial applicability as defined by PCT Article 33(4). [2]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, add reasoning.

Examiners are encouraged to indicate any amendments which applicant could present which would avoid a negative statement in the international preliminary examination report in the event that applicant chooses to file a demand.

**BOX NO. VI. — CERTAIN DOCUMENTS CITED**

Since all documents cited at the time of establishment of the written opinion will be listed on the simultaneously established search report, there is no need to also list them on the written opinion, and as such this item should be left blank.

**BOX NO. VII. — CERTAIN DEFECTS IN THE INTERNATIONAL APPLICATION**

In Box VII of Form PCT/ISA/237, defects in the form and content of the international application are identified.

Examples of defects that would be listed in Box VII are:

(A) Informalities such as misplaced and/or omitted drawing numerals, misspelled words, grammatical errors, etc.

(B) Improper multiple-dependent claims (PCT Rule 6.4) if not indicated under Box III.

The following form paragraphs are used in Box VII of PCT/ISA/237, "Certain defects in the international application," for noting technical defects.

*¶ 18.08 Drawing Objections - Defects*

The drawings are objected to under PCT Rule 66.2(a)(iii) as containing the following defect(s) in the form or content thereof: [1]

**Examiner Note:**

In bracket 1, insert identification of defects in drawings.

*¶ 18.08.01 Drawing Is Required*

The subject matter of this application admits of illustration by drawing to facilitate understanding of the invention. Applicant is required under PCT Article 7(1) to furnish a drawing.

*¶ 18.09 Description Defective*

The description is objected to as containing the following defect(s) under PCT Rule 66.2(a)(iii) in the form or contents thereof: [1]

**Examiner Note:**

In bracket 1, insert the technical problem, e.g., misspelled word.

*¶ 18.10 Claims Defective*

Claim [1] objected to under PCT Rule 66.2(a)(iii) as containing the following defect(s) in the form or contents thereof: [2]

**Examiner Note:**

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, identify the technical deficiency.

**BOX NO. VIII. — CERTAIN OBSERVATIONS ON THE INTERNATIONAL APPLICATION**

In Box VIII, the examiner notifies the applicant of observations made as to the clarity of the claims, the description, the drawings, or on the question whether the claims are fully supported by the description.

If the claims, the description, or the drawings are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the question of novelty, inventive step (nonobviousness) or industrial applicability, the appli-

cant is so informed in Box III. See PCT Article 34(4)(a)(ii). Reasons for the examiner's opinion that the claims, description and drawings, etc., lack clarity must also be provided.

If the above situation is found to exist in certain claims only, the provisions of PCT Article 34(4)(a)(ii) shall apply to those claims only.

If the lack of clarity of the claims, the description, or the drawings is of such a nature that it is possible to form a meaningful opinion on the claimed subject matter, then it is required that the examiner consider the claims and render a written opinion on novelty, inventive step, and industrial applicability in Box V.

Since the claims of an international application are not subject to a rejection on either art or indefiniteness consistent with U.S. practice, observations by the examiner with regard to clarity of the claims, the description and the drawings will be treated in the form of an objection in the written opinion in Box VIII.

The following form paragraphs may be used in Box VIII, "Certain observations on the international application," of Form PCT/ISA/237 for noting objections which are substantive rather than merely technical in nature.

*¶ 18.11 Drawing Objections - Lack Clarity*

The drawings are objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 7 because: [1]

**Examiner Note:**

In bracket 1, insert reasons why the drawings lack clarity, e.g., inaccurate showing.

*¶ 18.12.01 Claims Objectionable - Inadequate Written Description*

Claim [1] objected to as lacking clarity under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The application, as originally filed, did not describe: [3]

**Examiner Note:**

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --is-- or --are--, as appropriate.
2. In bracket 2, pluralize "claim" if needed, and insert the verb --is-- or --are--.
3. In bracket 3, identify subject matter not described in the application as filed.

*¶ 18.13.01 Claims Objectionable - Non-Enabling Disclosure*

Claim [1] objected to as lacking clarity under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The description does not disclose the claimed inven-

tion in a manner sufficiently clear and complete for the claimed invention to be carried out by a person skilled in the art because: [3]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize “claim” if needed, insert the verb --is-- or --are--.
3. In bracket 3, identify the claimed subject matter that is not enabled and explain why it is not enabled.

¶ 18.14.01 *Claims Objectionable - Lack of Best Mode*

Claim [1] objected to under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The description fails to set forth the best mode contemplated by the applicant for carrying out the claimed invention as required by PCT Rule 5.1(a)(v) because: [3].

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize “claim” if needed, and insert the appropriate verb --is-- or --are--.
3. In bracket 3, insert the objection and reasons.

¶ 18.15 *Claims Objectionable - Indefiniteness*

Claim [1] objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claim [2] indefinite for the following reason(s): [3]

**Examiner Note:**

1. In brackets 1 and 2, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 3, insert reasons.

**TIME TO REPLY**

If, in response to the written opinion of the International Searching Authority (Form PCT/ISA/237), applicant wishes to file a demand and amendments and/or arguments, the time period for response is 3 months from the mailing of the international search report and the written opinion or before the expiration of 22 months from the priority date, whichever expires later.

**AUTHORIZED OFFICER**

Pursuant to PCT Rules 43<sup>bis</sup>.1 and 70.14, the written opinion of the International Searching Authority must indicate the name of the officer of the International Searching Authority responsible for the written opinion, i.e., the “authorized officer.” An “authorized officer” is the person who actually performed the search work and prepared the search report and the written opinion, or another person who was responsible for supervising the search and the establishment of the written opinion. See Administrative Instructions Section 514. Thus, an examiner need not have signatory authority in order to be named as an authorized officer on the written opinion. However, the “file copy” of the written opinion must be signed by an examiner having at least partial signatory authority.

1. This opinion contains indications relating to the following items:

- Box No. I Basis of the opinion
- Box No. II Priority
- Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- Box No. IV Lack of unity of invention
- Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- Box No. VI Certain documents cited
- Box No. VII Certain defects in the international application
- Box No. VIII Certain observations on the international application

2. FURTHER ACTION

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1bis(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

Name and mailing address of the ISA/ US Mail Stop PCT, Attn: ISA/US Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 Facsimile No. (703)305-3230	Authorized officer Paul A. Bell  Telephone No. 703-308-3543
---	--

Form PCT/ISA/237 (cover sheet) (January 2004)

**WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITY**

International application No.  
PCT/US04/00150

**Box No. I      Basis of this opinion**

1. With regard to the **language**, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

This opinion has been established on the basis of a translation from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of international search (under Rules 12.3 and 23.1(b)).

2. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:

a. **type of material**

- a sequence listing  
 table(s) related to the sequence listing

b. **format of material**

- in written format  
 in computer readable form

c. **time of filing/furnishing**

- contained in the international application as filed.  
 filed together with the international application in computer readable form.  
 furnished subsequently to this Authority for the purposes of search.

3.  In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

4. **Additional comments:**

Form PCT/ISA/237 (Box No. I) (January 2004)

WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITYInternational application No.  
PCT/US04/00150

## Box No. IV Lack of unity of invention

1.  In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has:
- paid additional fees
  - paid additional fees under protest
  - not paid additional fees
2.  This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is
- complied with
  - not complied with for the following reasons:  
See the lack of unity section of the International Search Report (Form PCT/ISA/210)
4. Consequently, this opinion has been established in respect of the following parts of the international application:
- all parts
  - the parts relating to claims Nos. \_\_\_\_\_

Form PCT/ISA/237 (Box No. IV) (January 2004)

**WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITY**

International application No.  
PCT/US04/00150

**Box No. V Reasoned statement under Rule 43 bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

**I. Statement**

Novelty (N)	Claims 3 - 20	YES
	Claims 1 and 2	NO
Inventive Step (IS)	Claims 4 and 16 - 20	YES
	Claims 1 - 3 and 5 - 15	NO
Industrial Applicability (IA)	Claims 1 - 20	YES
	Claims NONE	NO

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.  
Continuation of:

2. CITATIONS AND EXPLANATIONS

Claims 1 and 2 lack novelty under PCT Article 33(2) as being anticipated by Novak et al. Novak et al. teaches the claimed electromagnetic fastener tool 10 with a housing 12 having a fastener magazine assembly 18 mounted thereon with the magazine assembly having a fastener output channel. The magazine assembly 18 is pivoted between a first position wherein the tool can not be actuated and a second position wherein a fastener may be driven from the tool (note figure 3 and column 1, line 65 through column 2, line 5). The magazine assembly 18 is moved from the first position to the second position by placing the fastener output channel firmly against a work piece. As shown in figure 3 and described at column 4, lines 6 - 49, the magazine assembly 18 and the trigger button 24 are coupled by a safety mechanism 62. This safety mechanism has a sliding rod 64 with the lower end of the rod 64 being attached to the top of channel 48 of the magazine assembly such that rod 64 moves with the magazine assembly. When the magazine assembly 18 is placed on a work piece, it rotates into the second position and pushes rod 64 upward. The upper portion of rod 64 has a spring 74 which includes a cam surface 76, a curved surface 78 and a bottom edge 81. Bottom edge 81 of spring 74 is normally positioned adjacent flange 86 of trigger button 24 and blocks upward movement of the trigger button. Thus, the trigger button may not be depressed (moved upwards) to fire the tool until the bottom edge of spring 74 is moved away from flange 86. This is accomplished by the interaction of curved surface 78 of spring 74 with a corresponding curved surface 82 fixed to the housing 12. When rod 64 moves upward, spring 74 is bent away from trigger button 24 by the interaction of curved surfaces 78 and 82. Thus, placing the fastener output channel of the magazine assembly 18 against a work piece moves bottom edge 81 of spring 74 out of its blocking position adjacent flange 86 of trigger button 24 and permits the tool to be fired.

Claims 3 and 5 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. in view of Barrett et al. Novak et al. does not teach the claimed mechanical means for blocking the feeding of a fastener from the magazine while the magazine assembly is in the second position (pressed against the work piece). Barrett et al. teaches such a blocking means. Note figures 5 - 7 and column 6, lines 34 - column 7, line 7. The Barrett et al. blocking means is interconnected with the trigger switch 40 such that when the trigger is depressed to fire the tool and drive a fastener from the magazine output channel, a clamp 48 is depressed onto the top of the second fastener in the fastener stick in magazine 42. Forward movement of the second fastener into the magazine output channel is thus prevented as long as trigger switch 40 remains depressed. When the trigger switch is released, clamp 48 moves away from the fastener stick and a fastener can be fed into the magazine output channel. Since the provision of such a blocking means is known as a desirable feature for solenoid actuated fastener driving tools because they are notorious for needing multiple strokes of the driver to properly drive a fastener, it would have been obvious to one of ordinary skill in this art to provide such a blocking means in the Novak et al. solenoid actuated tool. Note the teaching in Barrett et al. from column 2, line 40 through column 5, line 10 regarding the need for multiple driving strokes.

Claims 6 - 10 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. in view of Barrett et al. Novak et al. does not teach the claimed electronic control means to provide multiple blows from the driver to a single fastener. Barrett et al. discloses a control means which provides for multiple blows by the driver 32 on the fastener for each actuation of the trigger. Barrett et al. teaches at column 1, lines 40 - 49 that it is advantageous to operate solenoid actuated fastener drivers in this manner because such tools may require two or more blows from the driver to properly drive the fastener an adequate depth into the work piece. In view of this known teaching, it would have been obvious to one of ordinary skill in this art to provide the Novak et al. tool with the claimed control means to provide a predetermined plurality of driving strokes to a single fastener.

Claims 11 - 15 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. in view of D'Haem et al. Novak et al. does not teach the provision of an anti-jam means to clear jammed fasteners from the fastener output channel. The claims call for the fastener output channel to be formed with a removable cover plate to permit clearing the tool in the event of a fastener jam. D'Haem teaches that it is well-known in this art that fastener jams are a problem and that some means is desirable to clear them. D'Haem teaches the use of a removable cover plate to allow clearing the tool as claimed (see column 4, line 76 - column 5, line 23). In view of this teaching, it would have been obvious to one of ordinary skill in this art to provide the claimed anti-jam feature in the Novak et al. tool.

Claims 4 and 16 - 20 meet the criteria set out in PCT Article 33(2) - (3) because the prior art does not teach or fairly suggest the claimed means to hold the fastener magazine in the second position as claimed in claim 4.

Claims 1 - 20 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

&gt;

**1845.02 Notification of Transmittal of the International Search Report and the Written Opinion of the International Searching Authority, or the Declaration (Form PCT/ISA/220) [R-2]**

The examiner completes the Notification of Transmittal of the International Search Report and the Written Opinion of the International Searching Authority, or Declaration (Form PCT/ISA/220) upon completion of the International Search Report (Form PCT/ISA/210) or the Declaration of Non-Establishment of the International Search Report (Form PCT/ISA/203) and, for applications filed on or after January 1, 2004, completion of the Written Opinion of the International Searching Authority (Form PCT/ISA/237). The Form PCT/ISA/220 serves as a cover letter for the PCT/ISA/210 or PCT/ISA/203 and for the PCT/ISA/237.

When processing an application having an international filing date filed prior to January 1, 2004, the examiner should make sure the Form PCT/ISA/220 being issued is the version of the form dated April 2002 and entitled "Notification of Transmittal of the International Search Report or the Declaration."

**ADDRESS FOR CORRESPONDENCE**

The address for correspondence is taken from the request (Form PCT/ISA/101). When an agent represents the applicant, the address for correspondence is listed in Box No. IV of the PCT request Form. For applicants processing their own applications, the address for correspondence may be listed in Box No. II of the request Form. However, where PALM or the correspondence on file shows any changes in the applicant or address for correspondence effected under PCT Rule 92<sup>bis</sup>, the later address is used.

**APPLICANT**

When there is more than one applicant in respect of the international application, only the first mentioned of these on the request Form is indicated in the international search report. Other applicants, if any, are indicated by the words "et al" following the first applicant's name. The first mentioned applicant is indicated in Box No. II of the request Form, a second applicant is listed in Box No. III; further applicants are listed on the continuation sheet if there are more than two applicants. Company names are written in capital letters; for personal names the family name is given first in capital letters and the given names are in mixed case. This helps to identify the family name.

PATENT COOPERATION TREATY

From the INTERNATIONAL SEARCHING AUTHORITY

PCT

NOTIFICATION OF TRANSMITTAL OF  
THE INTERNATIONAL SEARCH REPORT AND  
THE WRITTEN OPINION OF THE INTERNATIONAL  
SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

<p>To:</p> <p>John J. Smith 220 Jefferson Davis Highway Arlington, Virginia 22202-0234</p>	<p>Date of mailing (day/month/year) <b>06 APR 2004</b></p>
<p>Applicant's or agent's file reference CMC-123-PCT</p>	<p><b>FOR FURTHER ACTION</b> See paragraphs 1 and 4 below</p>
<p>International application No. PCT/US04/00150</p>	<p>International filing date (day/month/year) 05 January 2004 (05.01.2004)</p>
<p>Applicant ACME FASTENER CORPORATION</p>	

1.  The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

**Filing of amendments and statement under Article 19:**  
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

**When?** The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

**Where?** Directly to the International Bureau of WIPO, 34 chemin des Colombettes  
1211 Geneva 20, Switzerland, Facsimile No.: +41 22 740 14 35

**For more detailed instructions,** see the notes on the accompanying sheet.

2.  The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3.  **With regard to the protest against payment of (an) additional fee(s) under Rule 40.2,** the applicant is notified that:

the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.

no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**  
Shortly after the expiration of **18 months** from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90bis.1 and 90bis.3, respectively, before the completion of the technical preparations for international publication.

The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established. These comments would also be made available to the public but not before the expiration of 30 months from the priority date.

Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until **30 months** from the priority date (in some Offices even later); otherwise, the applicant must, within **20 months** from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months.

See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the *PCT Applicant's Guide*, Volume II, National Chapters and the WIPO Internet site.

<p>Name and mailing address of the ISA/ US Mail Stop PCT, Attn: ISA/US Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 Facsimile No. (703) 305-3230</p>	<p>Authorized officer Paul A. Bell Telephone No. 703-308-3543</p>
--	---

Form PCT/ISA/220 (January 2004)

(See notes on accompanying sheet)

### NOTES TO FORM PCT/ISA/220

These Notes are intended to give the basic instructions concerning the filing of amendments under Article 19. The Notes are based on the requirements of the Patent Cooperation Treaty, the Regulations and the Administrative Instructions under that Treaty. In case of discrepancy between these Notes and those requirements, the latter are applicable. For more detailed information, see also the *PCT Applicant's Guide*, a publication of WIPO.

In these Notes, "Article," "Rule" and "Section" refer to the provisions of the PCT, the PCT Regulations and the PCT Administrative Instructions, respectively.

### INSTRUCTIONS CONCERNING AMENDMENTS UNDER ARTICLE 19

The applicant has, after having received the international search report and the written opinion of the International Searching Authority, one opportunity to amend the claims of the international application. It should however be emphasized that, since all parts of the international application (claims, description and drawings) may be amended during the international preliminary examination procedure, there is usually no need to file amendments of the claims under Article 19 except where, e.g. the applicant wants the latter to be published for the purposes of provisional protection or has another reason for amending the claims before international publication. Furthermore, it should be emphasized that provisional protection is available in some States only (see *PCT Applicant's Guide*, Volume I/A, Annexes B1 and B2).

The attention of the applicant is drawn to the fact that amendments to the claims under Article 19 are not allowed where the International Searching Authority has declared, under Article 17(2), that no international search report would be established (see *PCT Applicant's Guide*, Volume I/A, paragraph 296).

#### What parts of the international application may be amended ?

Under Article 19, only the claims may be amended.

During the international phase, the claims may also be amended (or further amended) under Article 34 before the International Preliminary Examining Authority. The description and drawings may only be amended under Article 34 before the International Preliminary Examining Authority.

Upon entry into the national phase, all parts of the international application may be amended under Article 28 or, where applicable, Article 41.

**When ?** Within 2 months from the date of transmittal of the international search report or 16 months from the priority date, whichever time limit expires later. It should be noted, however, that the amendments will be considered as having been received on time if they are received by the International Bureau after the expiration of the applicable time limit but before the completion of the technical preparations for international publication (Rule 46.1).

#### Where not to file the amendments ?

The amendments may only be filed with the International Bureau and not with the receiving Office or the International Searching Authority (Rule 46.2).

Where a demand for international preliminary examination has been/is filed, see below.

**How ?** Either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed.

A replacement sheet must be submitted for each sheet of the claims which, on account of an amendment or amendments, differs from the sheet originally filed.

All the claims appearing on a replacement sheet must be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims is required. In all cases where claims are renumbered, they must be renumbered consecutively (Section 205(b)).

**The amendments must be made in the language in which the international application is to be published.**

#### What documents must/may accompany the amendments ?

##### Letter (Section 205(b)):

The amendments must be submitted with a letter.

The letter will not be published with the international application and the amended claims. It should not be confused with the "Statement under Article 19(1)" (see below, under "Statement under Article 19(1)").

**The letter must be in English or French, at the choice of the applicant. However, if the language of the international application is English, the letter must be in English; if the language of the international application is French, the letter must be in French.**

**NOTES TO FORM PCT/ISA/220 (continued)**

The letter must indicate the differences between the claims as filed and the claims as amended. It must, in particular, indicate, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether

- (i) the claim is unchanged;
- (ii) the claim is cancelled;
- (iii) the claim is new;
- (iv) the claim replaces one or more claims as filed;
- (v) the claim is the result of the division of a claim as filed.

**The following examples illustrate the manner in which amendments must be explained in the accompanying letter:**

1. [Where originally there were 48 claims and after amendment of some claims there are 51]:  
"Claims 1 to 29, 31, 32, 34, 35, 37 to 48 replaced by amended claims bearing the same numbers; claims 30, 33 and 36 unchanged; new claims 49 to 51 added."
2. [Where originally there were 15 claims and after amendment of all claims there are 11]:  
"Claims 1 to 15 replaced by amended claims 1 to 11."
3. [Where originally there were 14 claims and the amendments consist in cancelling some claims and in adding new claims]:  
"Claims 1 to 6 and 14 unchanged; claims 7 to 13 cancelled; new claims 15, 16 and 17 added." or  
"Claims 7 to 13 cancelled; new claims 15, 16 and 17 added; all other claims unchanged."
4. [Where various kinds of amendments are made]:  
"Claims 1-10 unchanged; claims 11 to 13, 18 and 19 cancelled; claims 14, 15 and 16 replaced by amended claim 14; claim 17 subdivided into amended claims 15, 16 and 17; new claims 20 and 21 added."

**"Statement under Article 19(1)" (Rule 46.4)**

The amendments may be accompanied by a statement explaining the amendments and indicating any impact that such amendments might have on the description and the drawings (which cannot be amended under Article 19(1)).

The statement will be published with the international application and the amended claims.

**It must be in the language in which the international application is to be published.**

It must be brief, not exceeding 500 words if in English or if translated into English.

It should not be confused with and does not replace the letter indicating the differences between the claims as filed and as amended. It must be filed on a separate sheet and must be identified as such by a heading, preferably by using the words "Statement under Article 19(1)."

It may not contain any disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

**Consequence if a demand for international preliminary examination has already been filed**

If, at the time of filing any amendments and any accompanying statement, under Article 19, a demand for international preliminary examination has already been submitted, the applicant must preferably, at the time of filing the amendments (and any statement) with the International Bureau, also file with the International Preliminary Examining Authority a copy of such amendments (and of any statement) and, where required, a translation of such amendments for the procedure before that Authority (see Rules 55.3(a) and 62.2, first sentence). For further information, see the Notes to the demand form (PCT/IPEA/401).

If a demand for international preliminary examination is made, the written opinion of the International Searching Authority will, except in certain cases where the International Preliminary Examining Authority did not act as International Searching Authority and where it has notified the International Bureau under Rule 66.1*bis*(b), be considered to be a written opinion of the International Preliminary Examining Authority. If a demand is made, the applicant may submit to the International Preliminary Examining Authority a reply to the written opinion together, where appropriate, with amendments before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later (Rule 43*bis*.1(c)).

**Consequence with regard to translation of the international application for entry into the national phase**

The applicant's attention is drawn to the fact that, upon entry into the national phase, a translation of the claims as amended under Article 19 may have to be furnished to the designated/elected Offices, instead of, or in addition to, the translation of the claims as filed.

For further details on the requirements of each designated/elected Office, see the *PCT Applicant's Guide*, Volume II.

## 1846 Sections of the Articles, Regulations, and Administrative Instructions Under the PCT Relevant to the International Searching Authority [R-2]

PCT Articles 15 - 20 (Appendix T);  
PCT Rules 33 - 47 (Appendix T); and  
Administrative Instructions Sections 501 - 518  
(Appendix AI).

## 1847 Refund of International Search Fee [R-2]

*37 CFR 1.446. Refund of international application filing and processing fees.*

(a) Money paid for international application fees, where paid by actual mistake or in excess, such as a payment not required by law or treaty and its regulations, may be refunded. A mere change of purpose after the payment of a fee will not entitle a party to a refund of such fee. The Office will not refund amounts of twenty-five dollars or less unless a refund is specifically requested and will not notify the payor of such amounts. If the payor or party requesting a refund does not provide the banking information necessary for making refunds by electronic funds transfer, the Office may use the banking information provided on the payment instrument to make any refund by electronic funds transfer.

(b) Any request for refund under paragraph (a) of this section must be filed within two years from the date the fee was paid. If the Office charges a deposit account by an amount other than an amount specifically indicated in an authorization under § 1.25(b), any request for refund based upon such charge must be filed within two years from the date of the deposit account statement indicating such charge and include a copy of that deposit account statement. The time periods set forth in this paragraph are not extendable.

\*\*>

(c) Refund of the supplemental search fees will be made if such refund is determined to be warranted by the Director or the Director's designee acting under PCT Rule 40.2(c).<

(d) The international and search fees will be refunded if no international filing date is accorded or if the application is withdrawn before transmittal of the record copy to the International Bureau (PCT Rules 15.6 and 16.2). The search fee will be refunded if the application is withdrawn before transmittal of the search copy to the International Searching Authority. The transmittal fee will not be refunded.

(e) The handling fee (§ 1.482(b)) will be refunded (PCT Rule 57.6) only if:

(1) The Demand is withdrawn before the Demand has been sent by the International Preliminary Examining Authority to the International Bureau, or

(2) The Demand is considered not to have been submitted (PCT Rule 54.4(a)).

Although 37 CFR 1.446(a) indicates that a "mere change of purpose after the payment of a fee will not entitle a party to a refund of such fee," 37 CFR 1.446(d) and (e) contain exceptions to this general statement.

According to 37 CFR 1.446(d), the search fee will be refunded if no international filing date is accorded or if the application is withdrawn before the search copy is transmitted to the International Searching Authority. The transmittal fee will not be refunded.

According to 37 CFR 1.446(e), the handling fee will be refunded if the Demand is withdrawn before the Demand has been sent by the International Preliminary Examining Authority to the International Bureau.

Refund of the supplemental search fee will be made if the applicant is successful in a protest (filed pursuant to 37 CFR 1.477) to a holding of lack of unity of invention. The supplemental search fee must be paid and be accompanied by (1) a protest and (2) a request for refund of the supplemental search fee.

Any request for refund of the search fee made after the search copy has been transmitted to the International Searching Authority must be directed to the International Searching Authority and not to the Receiving Office. This is clearly necessary where applicant has chosen the European Patent Office as the International Searching Authority.

## 1848 Sequence Listings and Tables Related to Sequence Listings [R-2]

*PCT Rule 13<sup>ter</sup>.*

*Nucleotide and/or Amino Acid Sequence Listings*

### *13<sup>ter</sup>.1. Sequence Listing for International Authorities*

(a) Where the International Searching Authority finds that the international application contains disclosure of one or more nucleotide and/or amino acid sequences but:

(i) the international application does not contain a sequence listing complying with the standard provided for in the Administrative Instructions, that Authority may invite the applicant to furnish to it, within a time limit fixed in the invitation, a sequence listing complying with that standard;

(ii) the applicant has not already furnished a sequence listing in computer readable form complying with the standard provided for in the Administrative Instructions, that Authority may invite the applicant to furnish to it, within a time limit fixed in the invitation, a sequence listing in such a form complying with that standard.

(b) *[Deleted]*

(c) If the applicant does not comply with an invitation under paragraph (a) within the time limit fixed in the invitation, the International Searching Authority shall not be required to search the international application to the extent that such noncompliance has the result that a meaningful search cannot be carried out.

(d) Where the International Searching Authority finds that the description does not comply with Rule 5.2(b), it shall invite the applicant to file the required correction. Rule 26.4 shall apply *mutatis mutandis* to any correction offered by the applicant. The International Searching Authority shall transmit the correction to the receiving Office and to the International Bureau.

(e) Paragraphs (a) and (c) shall apply *mutatis mutandis* to the procedure before the International Preliminary Examining Authority.

(f) Any sequence listing not contained in the international application as filed shall not, subject to Article 34, form part of the international application.

*PCT Administrative Instruction Section 513.*  
*Sequence Listings*

(a) Where the International Searching Authority receives a correction of a defect under Rule 13<sup>ter</sup>.1(d), it shall:

(i) indelibly mark, in the upper right-hand corner of each replacement sheet, the international application number and the date on which that sheet was received;

(ii) indelibly mark, in the middle of the bottom margin of each replacement sheet, the words "SUBSTITUTE SHEET (RULE 13<sup>ter</sup>.1(d))" or their equivalent in the language of publication of the international application;

(iii) indelibly mark on the letter containing the correction, or accompanying any replacement sheet, the date on which that letter was received;

(iv) keep in its files a copy of the letter containing the correction or, when the correction is contained in a replacement sheet, the replaced sheet, a copy of the letter accompanying the replacement sheet, and a copy of the replacement sheet;

(v) promptly transmit any letter and any replacement sheet to the International Bureau, and a copy thereof to the receiving Office.

(b) Where the international search report is based on a sequence listing that was not contained in the international application as filed but was furnished subsequently to the International Searching Authority, the international search report shall so indicate.

(c) Where a meaningful international search cannot be carried out because a sequence listing is not available to the International Searching Authority in the required form, that Authority shall so state in the international search report.

(d) The International Searching Authority shall indelibly mark, in the upper right-hand corner of the first sheet of any sequence listing in printed form which was not contained in the international application as filed but was furnished subsequently to that Authority, the words "SUBSEQUENTLY FURNISHED SEQUENCE LISTING" or their equivalent in the language of publication of the international application.

(e) The International Searching Authority shall keep in its files:

(i) any sequence listing in printed form which was not contained in the international application as filed but was furnished subsequently to that Authority; and

(ii) any sequence listing in computer readable form.

Where an international application contains disclosure of a nucleotide and/or amino acid sequence, the description must contain a listing of the sequence complying with the standard specified in Annex C of the Administrative Instructions. See MPEP § 1823.02. If the International Searching Authority finds that an international application contains such a disclosure but that the description does not include such a listing or that the listing included does not comply with that standard, the International Searching Authority may invite the applicant to furnish a listing complying with that standard.

If the International Searching Authority finds that a sequence listing is not in a computer readable form provided for in the Administrative Instructions, it may invite the applicant to furnish a listing to it in such a form.

An invitation from the International Searching Authority to furnish a sequence listing complying with the standard specified in the Administrative Instructions, will specify a time limit for complying with the invitation. Any sequence listing furnished by the applicant in response to the invitation must be accompanied by a statement to the effect that the listing does not include matter which goes beyond the disclosure in the international application as filed. If the applicant does not comply within that time limit, the search undertaken by the International Searching Authority may be restricted.

If the applicant wishes to include such a listing in the text of the description itself, appropriate amendments may be made later under PCT Article 34, provided that the applicant files a Demand for international preliminary examination.

The United States Receiving Office has not notified the International Bureau under Administrative Instructions Section 801(b) that it is prepared to accept the filing in computer readable form (CRF) of the sequence listing and/or any *\*>tables<* related to the sequence listing of international applications under Administrative Instructions Section 801(a). However, Administrative Instructions Section 801(c) permits a receiving Office that has not notified the IB

under Administrative Instructions Section 801(b) to decide in a particular case to accept such sequence listing filings. The RO/US will accept applications where the sequence listing and/or table is filed using CD-R or CD-ROM as the electronic medium, and where no paper copy of the sequence listing part is submitted. The application must be filed in accordance with the Guidelines set forth in MPEP § 1823.02, subsection II. A in order to be accepted. There may be a significant cost savings if such a submission is accepted. If accepted under the USPTO's Guidelines, the electronic submission counts as 400 sheets in addition to the actual number of sheets of the Request, description excluding the sequence listing part thereof, claims, abstract and drawings. Four copies of the electronic submission of the sequence listing are required. One copy goes to the IB as part of the Record copy; the second copy becomes part of the Home copy; the third copy becomes part of the Search copy; and the fourth copy goes to the Scientific and Technical Information Center (STIC) as the CRF. Three copies of the electronic submission of any table related to the sequence listing are required. One copy goes to the IB as part of the record copy; the second copy becomes part of the home copy; the third copy becomes part of the search copy. See MPEP § 1823.02.

\*\*

## **1850 Unity of Invention Before the International Searching Authority [R-2]**

>

### *PCT Rule 13. Unity of Invention*

#### *13.1. Requirement*

The international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention").

#### *13.2. Circumstances in Which the Requirement of Unity of Invention Is To Be Considered Fulfilled*

Where a group of inventions is claimed in one and the same international application, the requirement of unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

#### *13.3. Determination of Unity of Invention Not Affected Manner of Claiming*

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

#### *13.4. Dependent Claims*

Subject to Rule 13.1, it shall be permitted to include in the same international application a reasonable number of dependent claims, claiming specific forms of the invention claimed in an independent claim, even where the features of any dependent claim could be considered as constituting in themselves an invention.

#### *13.5. Utility Models*

Any designated State in which the grant of a utility model is sought on the basis of an international application may, instead of Rules 13.1 to 13.4, apply in respect of the matters regulated in those Rules the provisions of its national law concerning utility models once the processing of the international application has started in that State, provided that the applicant shall be allowed at least two months from the expiration of the time limit applicable under Article 22 to adapt his application to the requirements of the said provisions of the national law.<

### *PCT Rule 40.*

#### *Lack of Unity of Invention (International Search)*

#### *40.1. Invitation to Pay*

The invitation to pay additional fees provided for in Article 17(3)(a) shall specify the reasons for which the international application is not considered as complying with the requirement of unity of invention and shall indicate the amount to be paid.

#### *40.2. Additional Fees*

(a) The amount of the additional fee due for searching under Article 17(3)(a) shall be determined by the competent International Searching Authority.

(b) The additional fee due for searching under Article 17(3)(a) shall be payable direct to the International Searching Authority.

(c) Any applicant may pay the additional fee under protest, that is, accompanied by a reasoned statement to the effect that the international application complies with the requirement of unity of invention or that the amount of the required additional fee is excessive. Such protest shall be examined by a three-member board or other special instance of the International Searching Authority or any competent higher authority, which, to the extent that it finds the protest justified, shall order the total or partial reimbursement to the applicant of the additional fee. On the request of the applicant, the text of both the protest and the decision thereon shall be notified to the designated Offices together with the international search report. The applicant shall submit any translation thereof with the furnishing of the translation of the international application required under Article 22.

(d) The three-member board, special instance or competent higher authority, referred to in paragraph (c), shall not comprise any person who made the decision which is the subject of the protest.

(e) Where the applicant has, under paragraph (c), paid an additional fee under protest, the International Searching Authority may, after a prior review of the justification for the invitation to pay an additional fee, require that the applicant pay a fee for the examination of the protest (“protest fee”). The protest fee shall be paid within one month from the date of the notification to the applicant of the result of the review. If the protest fee is not so paid, the protest shall be considered withdrawn. The protest fee shall be refunded to the applicant where the three-member board, special instance or higher authority referred to in paragraph (c) finds that the protest was entirely justified.

#### 40.3. Time Limit

The time limit provided for in Article 17(3)(a) shall be fixed, in each case, according to the circumstances of the case, by the International Searching Authority; it shall not be shorter than 15 or 30 days, respectively, depending on whether the applicant’s address is in the same country as or in a different country from that in which the International Searching Authority is located, and it shall not be longer than 45 days, from the date of the invitation.

\*\*

#### 37 CFR 1.475. Unity of invention before the International Searching Authority, the International Preliminary Examining Authority and during the national stage.

(a) An international and a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept (“requirement of unity of invention”). Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression “special technical features” shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

(b) An international or a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

- (1) A product and a process specially adapted for the manufacture of said product; or
- (2) A product and a process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or
- (5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

(c) If an application contains claims to more or less than one of the combinations of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present.

(d) If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and § 1.476(c).

(e) The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

\*\*

#### THE REQUIREMENT FOR “UNITY OF INVENTION”

Any international application must relate to one invention only or to a group of inventions so linked as to form a single general inventive concept (PCT Article 3(4)(iii) and 17(3)(a), PCT Rule 3.1, and 37 CFR 1.475). Observance of this requirement is checked by the International Searching Authority and may be relevant in the national (or regional) phase.

The decision in *Caterpillar Tractor Co. v. Commissioner of Patents and Trademarks*, 231 USPQ 590 (E.D. Va. 1986) held that the Patent and Trademark Office interpretation of 37 CFR 1.141(b)(2) as applied to unity of invention determinations in international applications was not in accordance with the Patent Cooperation Treaty and its implementing regulations. In the Caterpillar international application, the USPTO acting as an International Searching Authority, had held lack of unity of invention between a set of claims directed to a process for forming a sprocket and a set of claims drawn to an apparatus (die) for forging a sprocket. The court stated that it was an unreasonable interpretation to say that the expression “specifically designed” as found in former PCT Rule 13.2(ii) means that the process and apparatus have unity of invention if they can only be used with each other, as was set forth in MPEP § 806.05(e).

Therefore, when the Office considers international applications as an International Searching Authority, as an International Preliminary Examining Authority, and during the national stage as a Designated or Elected Office under 35 U.S.C. 371, PCT Rule 13.1 and 13.2 will be followed when considering unity of invention of claims of different categories without regard to the practice in national applications filed under 35 U.S.C. 111. No change was made in restric-

tion practice in United States national applications filed under 35 U.S.C. 111 outside the PCT.

In applying PCT Rule 13.2 to international applications as an International Searching Authority, an International Preliminary Examining Authority and to national stage applications under 35 U.S.C. 371, examiners should consider for unity of invention all the claims to different categories of invention in the application and permit retention in the same application for searching and/or preliminary examination, claims to the categories which meet the requirements of PCT Rule 13.2.

PCT Rule 13.2, as it was modified effective July 1, 1992, no longer specifies the combinations of categories of invention which are considered to have unity of invention. Those categories, which now appear as a part of **\*\*>**Chapter 10 of the International Search and Preliminary Examination Guidelines, may be obtained from WIPO's website ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm)). The categories of invention in former PCT Rule 13.2 have been replaced< with a statement describing the method for determining whether the requirement of unity of invention is satisfied. Unity of invention exists only when there is a technical relationship among the claimed inventions involving one or more special technical features. The term "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions considered as a whole, makes over the prior art. The determination is made based on the contents of the claims as interpreted in light of the description and drawings. **\*\*>**Chapter 10 of the International Search and Preliminary Examination Guidelines< also contains examples concerning unity of invention.

**\*\*>**

## **DETERMINATION OF "UNITY OF INVENTION"**

An international application should relate to only one invention or, if there is more than one invention, the inclusion of those inventions in one international application is only permitted if all inventions are so linked as to form a single general inventive concept (PCT Rule 13.1). With respect to a group of inventions claimed in an international application, unity of invention exists only when there is a technical rela-

tionship among the claimed inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" is defined in PCT Rule 13.2 as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art. The determination is made on the contents of the claims as interpreted in light of the description and drawings (if any).

Whether or not any particular technical feature makes a "contribution" over the prior art, and therefore constitutes a "special technical feature," should be considered with respect to novelty and inventive step. For example, a document discovered in the international search shows that there is a presumption of lack of novelty or inventive step in a main claim, so that there may be no technical relationship left over the prior art among the claimed inventions involving one or more of the same or corresponding special technical features, leaving two or more dependent claims without a single general inventive concept.

Lack of unity of invention may be directly evident "*a priori*," that is, before considering the claims in relation to any prior art, or may only become apparent "*a posteriori*," that is, after taking the prior art into consideration. For example, independent claims to A + X, A + Y, X + Y can be said to lack unity *a priori* as there is no subject matter common to all claims. In the case of independent claims to A + X and A + Y, unity of invention is present *a priori* as A is common to both claims. However, if it can be established that A is known, there is lack of unity *a posteriori*, since A (be it a single feature or a group of features) is not a technical feature that defines a contribution over the prior art.

Although lack of unity of invention should certainly be raised in clear cases, it should neither be raised nor maintained on the basis of a narrow, literal or academic approach. There should be a broad, practical consideration of the degree of interdependence of the alternatives presented, in relation to the state of the art as revealed by the international search or, in accordance with PCT Article 33(6), by any additional document considered to be relevant. If the common matter of the independent claims is well known and the remaining subject matter of each claim differs from that of the others without there being any unifying novel inventive concept common to all, then

clearly there is lack of unity of invention. If, on the other hand, there is a single general inventive concept that appears novel and involves inventive step, then there is unity of invention and an objection of lack of unity does not arise. For determining the action to be taken by the examiner between these two extremes, rigid rules cannot be given and each case should be considered on its merits, the benefit of any doubt being given to the applicant.

From the preceding paragraphs it is clear that the decision with respect to unity of invention rests with the International Searching Authority or the International Preliminary Examining Authority. However, the International Searching Authority or the International Preliminary Examining Authority should not raise objection of lack of unity of invention merely because the inventions claimed are classified in separate classification groups or merely for the purpose of restricting the international search to certain classification groups.<

Unity of invention has to be considered in the first place only in relation to the independent claims in an international application and not the dependent claims. By “dependent” claim is meant a claim which contains all the features of \*->one or more other claims and contains a reference, preferably at the beginning, to the other claim or claims and then states the additional features claimed (PCT Rule 6.4). The examiner should bear in mind that a claim may also contain a reference to another claim even if it is not a dependent claim as defined in PCT Rule 6.4. One example of this is a claim referring to a claim of a different category (for example, “Apparatus for carrying out the process of Claim 1 ...,” or “Process for the manufacture of the product of Claim 1 ...”). Similarly, a claim to one part referring to another cooperating part, for example, “plug for cooperation with the socket of Claim 1 ...”) is not a dependent claim.<

If the independent claims avoid the prior art and satisfy the requirement of unity of invention, no problem of lack of unity arises in respect of any claims that depend on the independent claims. In particular, it does not matter if a dependent claim itself contains a further invention. >For example, suppose claim 1 claims a turbine rotor blade shaped in a specified manner such that it avoids the prior art, while claim 2 is for a “turbine rotor blade as claimed in claim 1” and produced from alloy Z. Then no objection under PCT

Rule 13 arises either because alloy Z was new and its composition was not obvious and thus the alloy itself already contains the essential features of an independent possibly later patentable invention, or because, although alloy Z was not new, its application in respect of turbine rotor blades was not obvious, and thus represents an independent invention in conjunction with turbine rotor blades. As another example, suppose that the main claim defines a process avoiding the prior art for the preparation of a product A starting from a product B and the second claim reads: “Process according to claim 1 characterized by producing B by a reaction using the product C.” In this case, too, no objection arises under PCT Rule 13, whether or not the process for preparation of B from C is novel and inventive, since claim 2 contains all the features of claim 1.< Equally, no problem arises in the case of a genus/species situation where the genus claim avoids the prior art>, provided the genus claim is directed only to alternatives of a similar nature and the species falls entirely within the genus. To determine if a genus claim is directed only to alternatives “of a similar nature,” see subsection “B. Markush Practice” under “ILLUSTRATIONS OF PARTICULAR SITUATIONS” below.< Moreover, no problem arises in the case of a combination/subcombination situation where the subcombination claim avoids the prior art and the combination claim includes all the features of the subcombination.

If, however, an independent claim does not avoid the prior art, then the question whether there is still an inventive link between all the claims dependent on that claim needs to be carefully considered. If there is no link remaining, an objection of lack of unity >a posteriori< (that is, arising only after assessment of the prior art) may be raised. Similar considerations apply in the case of a genus/species or combination/subcombination situation.

This method for determining whether unity of invention exists is intended to be applied even before the commencement of the international search. Where a search of the prior art is made, an initial determination of unity of invention, based on the assumption that the claims avoid the prior art, may be reconsidered on the basis of the results of the search of the prior art.

>Alternative forms of an invention may be claimed either in a plurality of independent claims, or in a sin-

gle claim. In the latter case, the presence of the independent alternatives may not be immediately apparent. In either case, however, the same criteria should be applied in deciding whether there is unity of invention. Accordingly, lack of unity of invention may exist within a single claim. Where the claim contains distinct embodiments that are not linked by a single general inventive concept, the objection as to lack of unity of invention should be raised. PCT Rule 13.3 does not prevent an Authority from objecting to alternatives being contained within a single claim on the basis of considerations such as clarity, the conciseness of claims or the claims fee system applicable in that Authority.

Objection of lack of unity of invention does not normally arise if the combination of a number of individual elements is claimed in a single claim (as opposed to distinct embodiments as discussed in the paragraph immediately above), even if these elements seem unrelated when considered individually.<

#### **\*ILLUSTRATIONS OF PARTICULAR SITUATIONS**

There are three particular situations for which the method for determining unity of invention contained in PCT Rule 13.2 is explained in greater detail:

- (A) Combinations of different categories of claims;
- (B) So-called “Markush practice”; and
- (C) Intermediate and final products.

Principles for the interpretation of the method contained in PCT Rule 13.2, in the context of each of those situations are set out below. It is understood that the principles set out below are, in all instances, interpretations of and not exceptions to the requirements of PCT Rule 13.2.

Examples to assist in understanding the interpretation on the three areas of special concern referred to in the preceding paragraph are set out \*>in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO’s web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm))<.

\*>

#### **A. < Combinations of Different Categories of Claims**

The method for determining unity of invention under PCT Rule 13 shall be construed as permitting, in particular, the inclusion of any one of the following combinations of claims of different categories in the same international application:

(A) In addition to an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said product, and an independent claim for a use of the said product; or

(B) In addition to an independent claim for a given process, an independent claim for an apparatus or means specifically designed for carrying out the said process; or

(C) In addition to an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said product and an independent claim for an apparatus or means specifically designed for carrying out the said process \*\*>.

A< process is specially adapted for the manufacture of a product if it inherently results in the product and \* an apparatus or means is specifically designed for carrying out a process if the contribution over the prior art of the apparatus or means corresponds to the contribution the process makes over the prior art.

Thus, a process shall be considered to be specially adapted for the manufacture of a product if the claimed process inherently results in the claimed product with the technical relationship being present between the claimed product and claimed process. The words “specially adapted” are not intended to imply that the product could not also be manufactured by a different process.

Also an apparatus or means shall be considered to be specifically designed for carrying out a claimed process if the contribution over the prior art of the apparatus or means corresponds to the contribution the process makes over the prior art. Consequently, it would not be sufficient that the apparatus or means is merely capable of being used in carrying out the claimed process. However, the expression \*\*>“specifically designed”< does not imply that the apparatus

or means could not be used for carrying out another process, nor that the process could not be carried out using an alternative apparatus or means.

>More extensive combinations than those set forth above should be looked at carefully to ensure that the requirements of both PCT Rule 13 (unity of invention) and PCT Article 6 (conciseness of claims) are satisfied. In particular, while a single set of independent claims according to one of (A), (B), or (C) above is always permissible, it does not require the International Authority to accept a plurality of such sets which could arise by combining the provisions of PCT Rule 13.3 (which provides that the determination of unity of invention be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim), with the provisions set out above (thus resulting in a set based on each of a number of independent claims in the same category under PCT Rule 13.3). The proliferation of claims arising from a combined effect of this kind should be accepted only exceptionally. For example, independent claims are permissible for two related articles such as a transmitter and receiver; however, it does not follow that an applicant may include also, in the one international application, four additional independent claims: two for a process for the manufacture of the transmitter and the receiver, respectively, and two for use of the transmitter and receiver, respectively.

A single general inventive concept must link the claims in the various categories and in this connection the wording above should be carefully noted. The link between product and process in (A) is that the process must be “specially adapted for the manufacture of” the product. Similarly, in (B), the apparatus or means claimed must be “specifically designed for” carrying out the process. Likewise, in (C), the process must be “specially adapted for the manufacture of” the product and the apparatus must be “specifically designed for” carrying out the process. In combinations (A) and (C), the emphasis is on, and the essence of the invention should primarily reside in, the product, whereas in combination (B) the emphasis is on, and the invention should primarily reside in, the process. (See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO’s web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm)))<

\*>

### **B. < “Markush Practice”**

The situation involving the so-called Markush practice wherein a single claim defines alternatives (chemical or non-chemical) is also governed by PCT Rule 13.2. In this special situation, the requirement of a technical interrelationship and the same or corresponding special technical features as defined in PCT Rule 13.2, shall be considered to be met when the alternatives are of a similar nature.

When the Markush grouping is for alternatives of chemical compounds, they shall be regarded as being of a similar nature where the following criteria are fulfilled:

(A) All alternatives have a common property or activity; and

(B)(1)A common structure is present, i.e., a significant structural element is shared by all of the alternatives; or

\*\*>

(B)(2)< In cases where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds in the art to which the invention pertains.

In paragraph (B)(1), above, the words “significant structural element is shared by all of the alternatives” refer to cases where the compounds share a common chemical structure which occupies a large portion of their structures, or in case the compounds have in common only a small portion of their structures, the commonly shared structure constitutes a structurally distinctive portion in view of existing prior art>, and the common structure is essential to the common property or activity<. The structural element may be a single component or a combination of individual components linked together.

In paragraph (\*>B<)(2), above, the words “recognized class of chemical compounds” mean that there is an expectation from the knowledge in the art that members of the class will behave in the same way in the context of the claimed invention. In other words, each member could be substituted one for the other, with the expectation that the same intended result would be achieved.

The fact that the alternatives of a Markush grouping can be differently classified \*>should< not, taken

alone, be considered to be justification for a finding of a lack of unity of invention.

When dealing with alternatives, if it can be shown that at least one Markush alternative is not novel over the prior art, the question of unity of invention \*>should< be reconsidered by the examiner. Reconsideration does not necessarily imply that an objection of lack of unity shall be raised. >(See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO's web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm))).<

\*>

### C. < *Intermediate and Final Products*

The situation involving intermediate and final products is also governed by PCT Rule 13.2.

The term \*>"intermediate"< is intended to mean intermediate or starting products. Such products have the ability to be used to produce final products through a physical or chemical change in which the intermediate loses its identity.

Unity of invention shall be considered to be present in the context of intermediate and final products where the following two conditions are fulfilled:

(A) The intermediate and final products have the same essential structural element, in that:

(1) The basic chemical structures of the intermediate and the final products are the same, or

(2) The chemical structures of the two products are technically closely interrelated, the intermediate incorporating an essential structural element into the final product; and

(B) The intermediate and final products are technically interrelated, this meaning that the final product is manufactured directly from the intermediate or is separated from it by a small number of intermediates all containing the same essential structural element.

Unity of invention may also be considered to be present between intermediate and final products of which the structures are not known, for example, as between an intermediate having a known structure and a final product the structure of which is not known, or as between an intermediate of unknown structure and a final product of unknown structure. In order to satisfy unity in such cases, there \*>must< be

sufficient evidence to lead one to conclude that the intermediate and final products are technically closely interrelated as, for example, when the intermediate contains the same essential element as the final product or incorporates an essential element into the final product.

It is possible to accept in a single international application different intermediate products used in different processes for the preparation of the final product, provided that they have the same essential structural element.

The intermediate and final products shall not be separated, in the process leading from one to the other, by an intermediate which is not new.

If the same international application claims different intermediates for different structural parts of the final product, unity shall not be regarded as being present between the intermediates.

If the intermediate and final products are families of compounds, each intermediate compound shall correspond to a compound claimed in the family of the final products. However, some of the final products may have no corresponding compound in the family of the intermediate products so that the two families need not be absolutely congruent.

As long as unity of invention can be recognized applying the above interpretations, the fact that, besides the ability to be used to produce final products, the intermediates also exhibit other possible effects or activities shall not affect the decision on unity of invention. >(See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO's web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm))).<

\*\*>

### **SEARCH OF ADDITIONAL INVENTIONS WITHOUT PAYMENT OF FEES**

If little or no additional search effort is required, reasons of economy *may* make it advisable for the examiner, while making the search for the main invention, to search at the same time, despite the non-payment of additional fees, one or more additional inventions in the classification units consulted for the main invention. The international search for such additional inventions will then have to be completed in any further classification units which may be rele-

vant, when the additional search fees have been paid. This situation may occur when the lack of unity of invention is found either “*a priori*” or “*a posteriori*.”

When the examiner finds lack of unity of invention, normally, the applicant is invited to pay fees for the search of additional inventions. In exceptional circumstances, however, the examiner may be able to establish both an international search (and for international applications having a filing date on or after January 1, 2004, a written opinion) covering more than one invention with negligible additional work, in particular, when the inventions are conceptually very close. In those cases, the examiner may decide to complete the international search (and where applicable, the written opinion of the International Searching Authority) for the additional invention(s) together with that for the invention first mentioned. For international applications having a filing date on or after January 1, 2004, in considering the amount of work involved, the examiner should take into account the time needed to create the written opinion as well as that needed to perform the search, since even when the additional work with regard to the search is negligible, the opposite may be the case for the written opinion of the International Searching Authority and therefore justify requesting the additional fees. If it is considered that the total additional work does not justify requesting additional fees, all results are included in the international search report without inviting the applicant to pay an additional search fee in respect of the additional inventions searched but stating the finding of lack of unity of invention.

#### **INVITATION TO PAY ADDITIONAL FEES<**

The search fee which the applicant is required to pay is intended to compensate the International Searching Authority for carrying out an international search \*\*>(and for international applications having a filing date on or after January 1, 2004, for preparing a written opinion)<, but only where the international application meets the “requirement of unity of invention”. That means that the international application must relate to only one invention or must relate to a group of inventions which are so linked as to form a single general inventive concept (PCT Articles 3(4)(iii) and 17(3)(a)>.<

If the International Searching Authority finds that the international application does not comply with the

requirement of unity of invention, the applicant will be \*\*>informed of the lack of unity of invention by a communication preceding the issuance of the international search report (and for international applications having a filing date on or after January 1, 2004, a written opinion of the International Searching Authority), which contains an invitation to pay additional search fees. (Form PCT/ISA/206 or USPTO/299 (telephone practice), see below). This invitation specifies the reasons the international application is not considered to comply with the requirement of unity of invention, identifies the separate inventions, and indicates the number of additional search fees and the amount to be paid (PCT Rules 40.1, 40.2(a) and (b)). The International Searching Authority cannot consider the application withdrawn for lack of unity of invention, nor invite the applicant to amend the claims, but informs the applicant that, if the international search report is to be drawn up in respect of those inventions present other than the first mentioned, then the additional fees must be paid within a stipulated period.< Such additional fees are payable directly to the International Searching Authority which is conducting the search, either the United States Patent and Trademark Office or European Patent Office, within the time limit fixed, which must not be shorter than 15 days, if the applicant’s address is in the same country as the International Searching Authority; or 30 days, if applicant’s address is in a country different than the country of the International Searching Authority; and not longer than 45 days from the date of the invitation (PCT Rule 40.3). The search fee amounts for the U.S. and the European Patent Office are found in each weekly edition of the *Official Gazette*.

\*\*>In the invitation to pay additional fees, the International Searching Authority should set out a logically presented, technical reasoning containing the basic considerations behind the finding of lack of unity (PCT Rule 40.1 ).

Since these payments must take place within a period to be set by the International Searching Authority so as to enable the observation of the time limit for establishing the international search report set by PCT Rule 42, the International Searching Authority should endeavor to ensure that international searches be made as early as possible after the receipt of the search copy. The International Searching

Authority finally draws up the international search report (and for international applications having a filing date on or after January 1, 2004, the written opinion of the International Searching Authority) < on those parts of international application which relate to the “main invention,” that is, the invention or the group of inventions so linked as to form a single general inventive concept first mentioned in the claims (PCT Article 17(3)(a)). Moreover, the international search report >(and for international applications having a filing date on or after January 1, 2004, the written opinion of the International Searching Authority) < will be established also on those parts of the international application which relate to any invention (or any group of inventions so linked as to form a single general inventive concept) in respect of which the applicant has paid any additional fee within the prescribed time limits.

\*\*

Where, within the prescribed time limit, the applicant does not pay any additional fees or only pays some of the additional fees indicated, certain parts of the international application will consequently not be searched. The lack of an international search report in respect of such parts of the international application will, in itself, have no influence on the validity of the international application and processing of the international application will continue, both in the international and in the national (regional) phases. The unsearched claims, upon entry into the national stage, will be considered by the examiner and may be the subject of a holding of lack of unity of invention.

\*\*>

#### **PREPARATION OF THE INVITATION TO PAY ADDITIONAL FEES**

Form PCT/ISA/206 is used to invite the applicant to pay additional search fees. In the space provided on form PCT/ISA/206, the examiner should indicate the number of inventions claimed in the international application covering which particular claims and explain why the international application is not considered to comply with the requirements of unity of invention. The examiner should then indicate the total amount of additional fees required for the search of all claimed inventions.

In the box provided at the top of the form, the time limit for response is set according to PCT Rule 40.3, which must not be shorter than 15 days, if the applicant’s address is in the same country as the International Searching Authority; or 30 days, if applicant’s address is in a country different than the country of the International Searching Authority; and not longer than 45 days from the date of the invitation. Extensions of time are not permitted.

Since the space provided on Form PCT/ISA/206 is limited, supplemental attachment sheets, supplied by the examiner, with reference back to the specific section, should be incorporated whenever necessary.<

#### **AUTHORIZED OFFICER**

Form PCT/IPEA/206 must be signed by an examiner with at least partial signatory authority.

#### **>TELEPHONIC UNITY PRACTICE**

Telephone practice may be used to allow applicants to pay additional fees if

(A) Applicant or applicant’s legal representative has a USPTO deposit account,

(B) Applicant or the legal representative orally agrees to charge the additional fees to the account, and

(C) A complete record of the telephone conversation is included with the international search report including:

- (1) Examiner’s name;
- (2) Authorizing attorney’s name;
- (3) Date of conversation;
- (4) Inventions for which additional fees paid;

and

(5) Deposit account number and amount to be charged.

When the telephone practice is used in making lack of unity requirements, it is critical that the examiner orally inform applicant that there is no right to protest the holding of lack of unity of invention for any group of invention(s) for which no additional search fee has been paid.

The examiner must further orally advise applicant that any protest to the holding of lack of unity or the amount of additional fee required must be filed in writing no later than 15 days from the mailing date of the international search report. The examiner should

fill in the information on Form USPTO/299 “Chapter I PCT Telephone Memorandum for Lack of Unity” as a record of the telephonic holding of lack of unity.

If the applicant or the legal representative or agent refuses to either restrict the claims to one invention or authorize payment of additional fees over the telephone, or if applicant does not have a deposit account, the examiner should send a written invitation using the Chapter I form, PCT/ISA/206.

If a written invitation is required, the examiner should, if possible, submit the written invitation to the TC for review and mailing within 7 days from the date the international application is charged to the examiner.

## FORM PARAGRAPHS FOR LACK OF UNITY IN INTERNATIONAL APPLICATIONS

### ¶ 18.05 Heading for Lack of Unity Action (Not Involving Species)

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

#### Examiner Note:

Begin all Lack of Unity actions with this heading.

### ¶ 18.06 Lack of Unity - Three Groups of Claims

Group [1], claim(s) [2], drawn to [3].

Group [4], claim(s) [5], drawn to [6].

Group [7], claim(s) [8], drawn to [9].

#### Examiner Note:

1. In brackets 1, 4 and 7, insert Roman numerals for each Group.
2. In brackets 2, 5 and 8, insert respective claim numbers.
3. In brackets 3, 6 and 9, insert respective names of grouped inventions.

### ¶ 18.06.01 Lack of Unity - Two (or Additional) Groups of Claims

Group [1], claim(s) [2], drawn to [3].

Group [4], claim(s) [5], drawn to [6].

#### Examiner Note:

This form paragraph may be used alone or following form paragraph 18.06.

### ¶ 18.06.02 Lack of Unity - One Additional Group of Claims

Group [1], claim [2], drawn to [3].

#### Examiner Note:

This form paragraph may be used following either form paragraph 18.06 or 18.06.01.

### ¶ 18.07 Lack of Unity - Reasons Why Inventions Lack Unity

The inventions listed as Groups [1] do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: [2]

#### Examiner Note:

1. In bracket 1, insert appropriate Roman numerals for Groups involved.
2. In bracket 2, insert reasoning.

### ¶ 18.16 Lack of Unity - Species - Heading

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In order for more than one species to be examined, the appropriate additional examination fees must be paid. The species are as follows:

[1]

#### Examiner Note:

In bracket 1, list each species by Fig. No. or embodiment.

### ¶ 18.17 Lack of Unity - Species - Correspondence of the Claims to the Species

The claims are deemed to correspond to the species listed above in the following manner:

[1]

The following claim(s) are generic: [2]

#### Examiner Note:

1. This form paragraph is to be used immediately following 18.16.
2. In bracket 1, for each species, list the claims, e.g., Fig.1 - claims 1, 3 and 6.
3. In bracket 2, identify each generic claim by number or insert the word --NONE--.

### ¶ 18.18 Lack of Unity - Species - Reasons Why Unity Is Lacking

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: [1]

#### Examiner Note:

1. This form paragraph is to be used immediately following form paragraph 18.17.
2. In bracket 1, insert reasoning.

## PROTEST PROCEDURE

*PCT Administrative Instruction Section 502.  
Transmittal of Protest Against Payment of Additional Fee  
and Decision Thereon Where International Application Is  
Considered To Lack Unity of Invention*

The International Searching Authority shall transmit to the applicant, preferably at the latest together with the international search report, any decision which it has taken under Rule 40.2(c) on the protest of the applicant against payment of an additional fee where the international application is considered to lack unity of invention. At the same time, it shall transmit to the International Bureau a copy of both the protest and the decision thereon, as well as any request by the applicant to forward the texts of both the protest and the decision thereon to the designated Offices.

*37 CFR 1.477. Protest to lack of unity of invention before the International Searching Authority.*

(a) If the applicant disagrees with the holding of lack of unity of invention by the International Searching Authority, additional fees may be paid under protest, accompanied by a request for refund and a statement setting forth reasons for disagreement or why the required additional fees are considered excessive, or both (PCT Rule 40.2(c)).

(b) Protest under paragraph (a) of this section will be examined by the Director or the Director's designee. In the event that the applicant's protest is determined to be justified, the additional fees or a portion thereof will be refunded.

(c) An applicant who desires that a copy of the protest and the decision thereon accompany the international search report when forwarded to the Designated Offices may notify the International Searching Authority to that effect any time prior to the issuance of the international search report. Thereafter, such notification should be directed to the International Bureau (PCT Rule 40.2(c)).

The applicant may protest the allegation of lack of unity of invention or that the number of required additional fees is excessive and request a refund of the additional fee(s) paid. If, and to the extent that, the International Searching Authority finds the protest justified, the fee(s) are refunded (PCT Rule 40.2(c)). (The additional search fees must be paid for any protest to be considered.)

Protest of allegation of lack of unity is in the form of a reasoned statement accompanying payment of the additional fee, explaining why the applicant believes that the requirements of unity of invention are fulfilled and fully taking into account the reasons indicated in the invitation to pay additional fees issued by the International Searching Authority. Any such protest filed with the U.S. International Searching Authority will be decided by a Technology Center Director (MPEP § 1002.02(c) item (2)). To the extent

applicant's protest is found to be justified, total or partial reimbursement of the additional fee will be made. On the request of the applicant, the text of both the protest and the decision thereon is sent to the designated Offices together with the international search report (37 CFR 1.477(c)).

## NOTIFICATION OF DECISION ON PROTEST

Form PCT/ISA/212 is used by the Technology Center (TC) to inform the applicant of the decision regarding applicant's protest on the payment of additional fees concerning unity of invention. The TC checks the appropriate box, i.e., 1 or 2. If box 2 is checked, a clear and concise explanation as to why the protest concerning the unity of invention was found to be unjustified must be given. Since the space is limited, supplemental attachment sheet(s) should be incorporated whenever necessary.

## AUTHORIZED OFFICER

Form PCT/ISA/212 must be signed by a TC Director. See MPEP § 1002.02 (c), item (2).<

## UNITY OF INVENTION - NUCLEOTIDE SEQUENCES

Under 37 CFR 1.475 and 1.499 *et seq.*, when claims do not comply with the requirement of unity of invention, i.e., when the claimed subject matter does not involve "one or more of the same or corresponding special technical features," 37 CFR 1.475(a), an additional fee is required to maintain the claims in the same application. 37 CFR 1.476 (b).

The \*>USPTO< has decided *sua sponte* to partially waive 37 CFR 1.475 and 1.499 *et seq.* to permit applicants to claim up to ten (10) nucleotide sequences that do not have the same or corresponding special technical feature without the payment of an additional fee. The PCT permits inventions that lack unity of invention to be maintained in the same international application for payment of additional fees. Thus, in international applications, for each group for which applicant has paid additional international search and/or preliminary examination fees, the USPTO has determined that up to four (4) such additional sequences per group is a reasonable number for examination. Further, claims directed to the selected sequences will be examined with claims drawn to any sequence combinations which have a common techni-

cal feature with the selected sequences. Nucleotide sequences encoding the same protein are considered to satisfy the unity of invention standard and will continue to be examined together.

See MPEP § 803.04 for examples of nucleotide sequence claims impacted by this partial waiver of 37 CFR 1.475 and 1.499 *et seq.*

>Examples concerning Unity of Invention involving biotechnological inventions may be found in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the WIPO's web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm)).<

## 1851 Identification of Patent Documents [R-2]

The examiner, in completing the international search report as well as the \*\* written opinion and \*>international preliminary examination< report, is required to cite the references in accordance with the provisions of Administrative Instructions >Sections< 503 and 611 >and WIPO Standard ST.14<. These sections of the Administrative Instructions require reference citations to include, in addition to other information which is apparent from the forms which the examiner fills out, an indication of the two-letter country code of the country or entity issuing or publishing the document and the standard code for identifying the kind of patent document. The discussion which follows is limited to the identification of patent documents (and nonpatent publications) and a listing of the two-letter country codes for countries or other entities which issue or publish industrial property information.

The standard codes for identifying different kinds of patent documents are found in the "WIPO Handbook on Industrial Property Information and Documentation" - WIPO Standard ST.16 which is published by the World Intellectual Property Organization. The listing is extensive. The Special Program Examiners in each Technology Center (TC) have a complete copy of Standard ST.16. It is also accessible on WIPO's web site (<http://www.wipo.int/scit/en/>) under the heading "WIPO Standards and Other Documentation." Provided herein is an abbreviated version representing the countries and codes commonly used by the examiner in preparing search reports.

U.S. patents published before January 2, 2001, are Code A documents generally. Beginning with patents published on January 2, 2001, U.S. patents are Code B documents. Patent Application Publications, first published on March 15, 2001, are Code A documents. Reexamination certificates published before January 2, 2001, are Code B documents. Reexamination certificates published on or after January 2, 2001, are Code C documents. Tables providing a complete list of the kind codes of patents and other documents published by the USPTO are included in MPEP § 901.04(a). All nonpatent literature documents are Code N. Numerical designations are sometimes found on published documents along with the letter code designation. These should be used by the examiner only if such numerical designation is on the document. Numerical codes along with letter codes can be found, for example, on certain published patent documents such as the German Offenlegungsschrift and published international applications. If numerical designations are not provided, the examiner should use only the letter code designation.

The most commonly cited documents are patents and published patent applications. A guideline for the citation of such documents is listed below. The listing is indicated in the order in which the elements should be listed.

In the case of a patent or published patent application:

(A) The Office that issued the document, by the two letter code (WIPO Standard ST.3);

(B) The number of the document as given to it by the Office that issued it (for Japanese patent documents the indication of the year of the reign of the Emperor must precede the serial number of the patent document);

(C) The kind of document, by the appropriate symbols as indicated on the \* document \*\*>under< WIPO Standard ST.16 >or, if not indicated on that document, as provided in that Standard, if possible<;

(D) The name of the patentee or applicant (in capital letters, where appropriate, abbreviated);

(E) The date of publication of the cited patent document \*\*>or, in case of a corrected patent document, the date of issuance of the corrected patent document as referred to under INID code (48) of WIPO Standard ST.9 and, if provided on the document, the

supplementary correction code as referred to under INID code (15);

(F) Where applicable, the pages, columns, lines or paragraph numbers where the relevant passages appear, or the relevant figures of the drawings.

The following examples illustrate the citation of a patent document as indicated above:

\*\*JP 10-105775 A (NCR INTERNATIONAL INC.) 24 April 1998 (24.04.1998) paragraphs 26 to 30.

DE 3744403 A1 (JOSEK, A.) 29 August 1991 (29-08-1991), page 1, abstract.

US 5,635,683 A (MCDERMOTT, R. M. et al.) 03 June 1997 (03/06/1997), column 7, lines 21 to 40.

**STANDARD CODE FOR THE IDENTIFICATION OF DIFFERENT KINDS OF PATENT DOCUMENTS**

The Code, WIPO Standard ST.16, is subdivided into mutually exclusive groups of letters. The groups characterize patent documents, nonpatent literature documents (N), and restricted documents (X). Groups 1-7 comprise letters enabling identification of documents pertaining to different publication levels.

<u>Group 1</u>	Use for documents resulting from a patent application and being identified as the primary or major series (excluding the utility model documents of Group 2 and the special series of patent documents of Group 3, below)
A	First publication level
B	Second publication level
C	Third publication level

<u>Group 2</u>	Use for utility model documents having a numbering series other than the documents of Group 1
U	First publication level

<u>Group 2</u>	Use for utility model documents having a numbering series other than the documents of Group 1
Y	Second publication level
Z	Third publication level

<u>Group 3</u>	Use for special series of patent document
M	Medicament patent documents (e.g., documents previously published by FR)
P	Plant patent documents (e.g., published by US)
S	Design patent documents (e.g., published by US)

<u>Group 4</u>	Use for special types of patent documents or documents derived from/relating to patent applications and not covered by Groups 1 to 3 above, as specified below:
L	Documents, not covered by letter code W, relating to patent documents and containing bibliographic information and only the text of an abstract and/or claim(s) and, where appropriate, a drawing.
R	Separately published search reports
T	Publication, for information or other purposes, of the translation of the whole or part of a patent document already published by another office or organization

<u>Group 4</u>	Use for special types of patent documents or documents derived from/relating to patent applications and not covered by Groups 1 to 3 above>, as specified below<:
W	Documents relating to utility model documents falling in Group 2 and containing bibliographic information and only the text of an abstract and/or claim(s) and, where appropriate, a drawing

<u>Group 5</u>	Use for series of patent documents not covered by Groups 1 to 4, above
E	First publication level
F	Second publication level
G	Third publication level

<u>Group 6</u>	Use for series of patent documents or documents derived from/relating to patent applications not covered by Groups 1 to 5 above, according to the special requirements of each industrial property office
H	
I	

<u>Group 7</u>	Other
N	Non-patent literature documents
X	Documents restricted to the internal use of industrial property offices

*List of Examples of Patent Documents, Previously and Currently Published, or Intended To Be Published, Divided According to Code*

**Country Codes**

The two-letter country codes listed below are set forth in WIPO Standard ST.3, which is published in the “WIPO Handbook on Industrial Property Information and Documentation” and is accessible via the internet at the WIPO website ([\\*www.wipo.int/scit/en/standards/standards.htm](http://www.wipo.int/scit/en/standards/standards.htm)). WIPO Standard ST.3 provides, in Annex A, Section 1, a listing of two-letter country codes and/or organizational codes in alphabetic sequence of their short names for the states, other entities and intergovernmental organizations issuing or publishing industrial property documents. Codes for states or organizations that existed on January 1, 1978, but that no longer exist are provided in Annex B, Section 2. Annex B, Section 1 (not reproduced below) lists States for which the Codes have changed.

**1852 International-Type Search***PCT Rule 41.**Earlier Search Other Than International Search**41.1. Obligation to Use Results; Refund of Fee*

If reference has been made in the request, in the form provided for in Rule 4.11, to an international-type search carried out under the conditions set out in Article 15(5) or to a search other than an international or international-type search, the International Searching Authority shall, to the extent possible, use the results of the said search in establishing the international search report on the international application. The International Searching Authority shall refund the search fee, to the extent and under the conditions provided for in the agreement under Article 16(3)(b) or in a communication addressed to and published in the Gazette by the International Bureau, if the international search report could wholly or partly be based on the results of the said search.

*37 CFR 1.104. Nature of examination.**(a) Examiner's action.*

\*\*\*\*\*

(3) An international-type search will be made in all national applications filed on and after June 1, 1978.

(4) Any national application may also have an international-type search report prepared thereon at the time of the national examination on the merits, upon specific written request therefor and payment of the international-type search report fee set forth in § 1.21(e). The Patent and Trademark Office does not require that a formal report of an international-type search be prepared in order to obtain a search fee refund in a later filed international application.

\*\*\*\*\*

PCT Rule 41 provides that the applicant may request in a later filed international application that the report of the results of the international-type search, i.e., a search similar to an international search, but carried out on a national application (37 CFR 1.104(a)(3) and (a)(4)), be used in establishing an international search report on such international application. An international-type search is conducted on all U.S. national nonprovisional applications filed after June 1, 1978. Upon specific request, at the time of the examination of a U.S. national nonprovisional application and provided that the payment of the appropriate international-type search report fee has been made (37 CFR 1.21(e)) an international-type search report Form PCT/ISA/201 will also be prepared.

**1853 Amendment Under PCT Article 19***PCT Article 19.**Amendment of the Claims before the International Bureau*

(1) The applicant shall, after having received the international search report, be entitled to one opportunity to amend the claims of the international application by filing amendments with the International Bureau within the prescribed time limit. He may, at the same time, file a brief statement, as provided in the Regulations, explaining the amendments and indicating any impact that such amendments might have on the description and the drawings.

(2) The amendments shall not go beyond the disclosure in the international application as filed.

(3) If the national law of any designated State permits amendments to go beyond the said disclosure, failure to comply with paragraph (2) shall have no consequence in that State.

*PCT Rule 46.**Amendment of Claims Before the International Bureau**46.1. Time Limit*

The time limit referred to in Article 19 shall be two months from the date of transmittal of the international search report to the International Bureau and to the applicant by the International Searching Authority or 16 months from the priority date, whichever time limit expires later, provided that any amendment made under Article 19 which is received by the International Bureau after the expiration of the applicable time limit shall be considered to have been received by that Bureau on the last day of that time limit if it reaches it before the technical preparations for international publication have been completed.

*46.2. Where to File*

Amendments made under Article 19 shall be filed directly with the International Bureau.

*46.3. Language of Amendments*

If the international application has been filed in a language other than the language in which it is published, any amendment made under Article 19 shall be in the language of publication.

*46.4. Statement*

(a) The statement referred to in Article 19(1) shall be in the language in which the international application is published and shall not exceed 500 words if in the English language or if translated into that language. The statement shall be identified as such by a heading, preferably by using the words "Statement under Article 19(1)" or their equivalent in the language of the statement.

(b) The statement shall contain no disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

#### 46.5. Form of Amendments

The applicant shall be required to submit a replacement sheet for every sheet of the claims which, on account of an amendment or amendments under Article 19, differs from the sheet originally filed. The letter accompanying the replacement sheets shall draw attention to the differences between the replaced sheets and the replacement sheets. To the extent that any amendment results in the cancellation of an entire sheet, that amendment shall be communicated in a letter.

#### 37 CFR 1.415. The International Bureau.

(a) The International Bureau is the World Intellectual Property Organization located at Geneva, Switzerland. It is the international intergovernmental organization which acts as the coordinating body under the Treaty and the Regulations (PCT Art. 2 (xix) and 35 U.S.C. 351(h)).

(b) The major functions of the International Bureau include:

- (1) Publishing of international applications and the International Gazette;
- (2) Transmitting copies of international applications to Designated Offices;
- (3) Storing and maintaining record copies; and
- (4) Transmitting information to authorities pertinent to the processing of specific international applications.

#### PCT Administrative Instruction Section 205.

##### Numbering and Identification of Claims Upon Amendment

(a) Amendments to the claims under Article 19 or Article 34(2)(b) may be made either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed. All the claims appearing on a replacement sheet shall be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims shall be required. In all cases where claims are renumbered, they shall be renumbered consecutively.

(b) The applicant shall, in the letter referred to in the second and third sentences of Rule 46.5(a) or in the second and fourth sentences of Rule 66.8(a), indicate the differences between the claims as filed and the claims as amended. He shall, in particular, indicate in the said letter, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether:

- (i) the claim is unchanged;
- (ii) the claim is cancelled;
- (iii) the claim is new;
- (iv) the claim replaces one or more claims as filed;
- (v) the claim is the result of the division of a claim as filed.

The applicant has one opportunity to amend the claims only of the international application after issuance of the Search Report. The amendments to the claims must be filed directly with the International Bureau, usually within 2 months of the date of mailing of the Search Report. If the amendments to the

claims are timely received by the International Bureau, such amendments will be published as part of the pamphlet directly following the claims as filed. Article 19 offers applicants the opportunity to generally amend the claims before entering the designated Offices. The national laws of some designated Offices may grant provisional protection on the invention from the date of publication of the claims. Therefore, some applicants take advantage of the opportunity under Article 19 to polish the claims anticipating provisional protection. See PCT Rule 46.5.

## 1857 International Publication [R-2]

#### PCT Article 21.

##### International Publication

(1) The International Bureau shall publish international applications.

(2)(a) Subject to the exceptions provided for in subparagraph (b) and in Article 64(3), the international publication of the international application shall be effected promptly after the expiration of 18 months from the priority date of that application.

(b) The applicant may ask the International Bureau to publish his international application any time before the expiration of the time limit referred to in subparagraph (a). The International Bureau shall proceed accordingly, as provided in the Regulations.

(3) The international search report or the declaration referred to in Article 17(2)(a) shall be published as prescribed in the Regulations.

(4) The language and form of the international publication and other details are governed by the Regulations.

(5) There shall be no international publication if the international application is withdrawn or is considered withdrawn before the technical preparations for publication have been completed.

(6) If the international application contains expressions or drawings which, in the opinion of the International Bureau, are contrary to morality or public order, or if, in its opinion, the international application contains disparaging statements as defined in the Regulations, it may omit such expressions drawings, and statements, from its publications, indicating the place and number of words or drawings omitted, and furnishing, upon request, individual copies of the passages omitted.

#### PCT Article 29.

##### Effects of the International Publication

(1) As far as the protection of any rights of the applicant in a designated State is concerned, the effects, in that State, of the international publication of an international application shall, subject to the provisions of paragraphs (2) to (4), be the same as those which the national law of the designated State provides for the compulsory national publication of unexamined national applications as such.

(2) If the language in which the international publication has been effected is different from the language in which publications under the national law are effected in the designated State, the said national law may provide that the effects provided for in paragraph (1) shall be applicable only from such time as:

(i) a translation into the latter language has been published as provided by the national law, or

(ii) a translation into the latter language has been made available to the public, by laying open for public inspection as provided by the national law, or

(iii) a translation into the latter language has been transmitted by the applicant to the actual or prospective unauthorized user of the invention claimed in the international application, or

(iv) both the acts described in (i) and (iii), or both the acts described in (ii) and (iii), have taken place.

(3) The national law of any designated State may provide that, where the international publication has been effected, on the request of the applicant, before the expiration of 18 months from the priority date, the effects provided for in paragraph (1) shall be applicable only from the expiration of 18 months from the priority date.

(4) The national law of any designated State may provide that the effects provided for in paragraph (1) shall be applicable only from the date on which a copy of the international application as published under Article 21 has been received in the national Office of or acting for such State. The said Office shall publish the date of receipt in its gazette as soon as possible.

*PCT Administrative Instruction Section 404.*  
*International Publication Number of International Application*

\*\*>The International Bureau shall assign to each published international application an international publication number which shall be different from the international application number. The international publication number shall be used on the pamphlet and in the Gazette entry. It shall consist of the two-letter code "WO" followed by a four-digit indication of the year of publication, a slant, and a serial number consisting of six digits (e.g., "WO 2004/123456").<

*35 U.S.C. 374. Publication of international application.*

The publication under the treaty defined in section 351(a) of this title, of an international application designating the United States shall be deemed a publication under section 122(b), except as provided in sections 102(e) and 154(d) of this title.

The publication of international applications currently occurs every Thursday. Under PCT Article 20 >and PCT Rules 47.1(a) and 93<sup>bis</sup>.1,< the International Bureau sends copies of published >international< applications to each of the designated Offices >that have requested to receive the published application< on the day of publication. Until October 1, 1995, as a PCT member country, the U.S. Patent and Trademark Office received copies of all published

international applications in printed form for inclusion in the examiner search files. The U.S. Patent and Trademark Office now receives the published international applications on CD-ROM disks and in other electronic formats. For information on obtaining copies of these applications, see MPEP § 901.05(c). \*\*>Published international application information is also available from< the *PCT Gazette*, which can be accessed electronically through The Intellectual Property Digital Library Web site (<http://ipdl.wipo.int/>) of the World Intellectual Property Organization. >In addition, published international applications may be obtained online from the European Patent Office web site (<http://ep.espacenet.com>).<

**PUBLICATION OF SEQUENCE LISTING AND/OR TABLES FILED IN ELECTRONIC FORM**

*PCT Administrative Instruction Section 805.*

*Publication and Communication of International Applications Containing Sequence Listings and/or Tables; Copies; Priority Documents*

(a) Notwithstanding Section 406, an international application containing sequence listings and/or tables may be published under Article 21, in whole or in part, in electronic form as determined by the Director General.

(b) Paragraph (a) shall apply *mutatis mutandis* in relation to:

(i) the communication of an international application under Article 20;

(ii) the furnishing of copies of an international application under Rules 87 and 94.1;

(iii) the furnishing under Rule 17.1, as a priority document, of a copy of an international application containing sequence listings and/or tables filed under Section 801(a);

(iv) the furnishing under Rules 17.2 and 66.7 of copies of a priority document.

As of August 2, 2001, WIPO began to publish sequence listing parts of the description on the Internet where the sequence listing was filed under PCT Administrative Instructions Section 801 as authorized by PCT Administrative Instructions Section 805(a). On September 6, 2002, the PCT Administrative Instructions were further amended to include electronic submissions of tables related to sequence listings. Sequence listing parts of the description and tables may be viewed and downloaded at <http://www.wipo.int/pct/en/sequences/index.htm>. Thus, an international application containing a sequence listing or table filed under Part 8 of the Administrative

Instructions comprises two elements published on the same day:

(A) a paper pamphlet including all parts of the application that were not filed in electronic format under Part 8 of the Administrative Instructions; and

(B) an electronic publication of the sequence listing and/or tables that were filed in electronic format under Part 8 of the Administrative Instructions.

Cross-references between the two elements are included for the sake of clarity. \*\*>The bibliographic page of a published international application filed under Administrative Instructions Section 801 includes the statement: “Published with sequence listing part of description published separately in electronic form and available upon request from the International Bureau.” Conversely, the electronic publication of the sequence listing part of the international application on WIPO’s web site ([www.wipo.int/pct/en/sequences/index.htm](http://www.wipo.int/pct/en/sequences/index.htm)) contains a link to the remainder of the published international application in the electronic *PCT Gazette*.<

### 1857.01 Prior Art Effect of the International Publication [R-2]

*35 U.S.C. 374. Publication of international application.*

The publication under the treaty defined in section 351(a) of this title, of an international application designating the United States shall be deemed a publication under section 122(b), except as provided in sections 102(e) and 154(d) of this title.

*35 U.S.C. 102. Conditions for patentability; novelty and loss of right to patent.*

A person shall be entitled to a patent unless —

\*\*\*\*\*

(e) the invention was described in — (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the international application designated the United States and was

published under Article 21(2) of such treaty in the English language; or

\*\*\*\*\*

An international >application< \*\* may be used as prior art as of its international filing date, or an earlier U.S. filing date for which \*\* benefit is properly claimed, under 35 U.S.C. 102(e) if the international application:

(A) was filed on or after November 29, 2000;

(B) designated the United States; and

(C) was published under PCT Article 21(2) in the English language.

If such an international application properly claims benefit >under 35 U.S.C. 119(e), 120, or 365(c)< to an earlier-filed U.S. >national< or international application >designating the U.S.< \*\*, the international application can be applied as prior art under 35 U.S.C. 102(e) as of the earlier filing date, assuming all the conditions of 35 U.S.C. 102(e), 119(e), 120, or 365(c) are met. Note, where the earlier application is >also< an international application, the earlier international application must satisfy the same three conditions (i.e., filed on or after November 29, 2000, designated the U.S. and had been published in English under PCT Article 21(2)) for the earlier international filing date to be a U.S. filing date for prior art purposes under 35 U.S.C. 102(e).

If any of the above conditions have not been satisfied, the publication of the international application and the U.S. application publication of the national stage after compliance with 35 U.S.C. 371 may only be used as prior art as of its publication date under 35 U.S.C. 102(a) or (b). See MPEP § 706.02(a) and § 2136.03. A later filed U.S. application that properly claimed the benefit under 35 U.S.C. 120 or 365(c) of such an international application will have its own U.S. filing date for purposes of 35 U.S.C. 102(e). In addition, international applications, which: (1) were filed prior to November 29, 2000, (2) did not designate the U.S., or (3) were not published in English under PCT Article 21(2) by WIPO, may not be used to reach back (bridge) to an earlier filing date through a \*\* benefit claim for prior art purposes under 35 U.S.C. 102(e).

For more information, see MPEP § 706.02(a) and § 706.02(f)(1).

## 1859 Withdrawal of International Application, \* Designations, or Priority Claims [R-2]

\*\*>

### *PCT Rule 90<sup>bis</sup>. Withdrawals*

#### *90<sup>bis</sup>.1. Withdrawal of the International Application*

(a) The applicant may withdraw the international application at any time prior to the expiration of 30 months from the priority date.

(b) Withdrawal shall be effective on receipt of a notice addressed by the applicant, at his option, to the International Bureau, to the receiving Office or, where Article 39(1) applies, to the International Preliminary Examining Authority.

(c) No international publication of the international application shall be effected if the notice of withdrawal sent by the applicant or transmitted by the receiving Office or the International Preliminary Examining Authority reaches the International Bureau before the technical preparations for international publication have been completed.

#### *90<sup>bis</sup>.2. Withdrawal of Designations*

(a) The applicant may withdraw the designation of any designated State at any time prior to the expiration of 30 months from the priority date. Withdrawal of the designation of a State which has been elected shall entail withdrawal of the corresponding election under Rule 90<sup>bis</sup>.4.

(b) Where a State has been designated for the purpose of obtaining both a national patent and a regional patent, withdrawal of the designation of that State shall be taken to mean withdrawal of only the designation for the purpose of obtaining a national patent, except where otherwise indicated.

(c) Withdrawal of the designations of all designated States shall be treated as withdrawal of the international application under Rule 90<sup>bis</sup>.1.

(d) Withdrawal shall be effective on receipt of a notice addressed by the applicant, at his option, to the International Bureau, to the receiving Office or, where Article 39(1) applies, to the International Preliminary Examining Authority.

(e) No international publication of the designation shall be effected if the notice of withdrawal sent by the applicant or transmitted by the receiving Office or the International Preliminary Examining Authority reaches the International Bureau before the technical preparations for international publication have been completed.

#### *90<sup>bis</sup>.3. Withdrawal of Priority Claims*

(a) The applicant may withdraw a priority claim, made in the international application under Article 8(1), at any time prior to the expiration of 30 months from the priority date.

(b) Where the international application contains more than one priority claim, the applicant may exercise the right provided for in paragraph (a) in respect of one or more or all of the priority claims.

(c) Withdrawal shall be effective on receipt of a notice addressed by the applicant, at his option, to the International Bureau, to the receiving Office or, where Article 39(1) applies, to the International Preliminary Examining Authority.

(d) Where the withdrawal of a priority claim causes a change in the priority date, any time limit which is computed from the original priority date and which has not already expired shall, subject to paragraph (e), be computed from the priority date resulting from that change.

(e) In the case of the time limit referred to in Article 21(2)(a), the International Bureau may nevertheless proceed with the international publication on the basis of the said time limit as computed from the original priority date if the notice of withdrawal sent by the applicant or transmitted by the receiving Office or the International Preliminary Examining Authority reaches the International Bureau after the completion of the technical preparations for international publication.

\*\*\*\*\*

#### *90<sup>bis</sup>.5. Signature*

(a) Any notice of withdrawal referred to in Rules 90<sup>bis</sup>.1 to 90<sup>bis</sup>.4 shall, subject to paragraph (b), be signed by the applicant or, if there are two or more applicants, by all of them. An applicant who is considered to be the common representative under Rule 90.2(b) shall, subject to paragraph (b), not be entitled to sign such a notice on behalf of the other applicants.

(b) Where two or more applicants file an international application which designates a State whose national law requires that national applications be filed by the inventor and where an applicant for that designated State who is an inventor could not be found or reached after diligent effort, a notice of withdrawal referred to in Rules 90<sup>bis</sup>.1 to 90<sup>bis</sup>.4 need not be signed by that applicant ("the applicant concerned") if it is signed by at least one applicant and.

(i) a statement is furnished explaining, to the satisfaction of the receiving Office, the International Bureau, or the International Preliminary Examining Authority, as the case may be, the lack of signature of the applicant concerned, or

(ii) in the case of a notice of withdrawal referred to in Rule 90<sup>bis</sup>.1(b), 90<sup>bis</sup>.2(d), or 90<sup>bis</sup>.3(c), the applicant concerned did not sign the request but the requirements of Rule 4.15(b) were complied with, or

(iii) in the case of a notice of withdrawal referred to in Rule 90<sup>bis</sup>.4(b), the applicant concerned did not sign the demand but the requirements of Rule 53.8(b) were complied with.

*90<sup>bis</sup>.6.Effect of Withdrawal*

(a) Withdrawal under Rule 90<sup>bis</sup> of the international application, any designation, any priority claim, the demand or any election shall have no effect in any designated or elected Office where the processing or examination of the international application has already started under Article 23(2) or Article 40(2).

(b) Where the international application is withdrawn under Rule 90<sup>bis</sup>.1, the international processing of the international application shall be discontinued.

(c) Where the demand or all elections are withdrawn under Rule 90<sup>bis</sup>.4, the processing of the international application by the International Preliminary Examining Authority shall be discontinued.

*90<sup>bis</sup>.7.Faculty Under Article 37(4)(b)*

(a) Any Contracting State whose national law provides for what is described in the second part of Article 37(4)(b) shall notify the International Bureau in writing.

(b) The notification referred to in paragraph (a) shall be promptly published by the International Bureau in the Gazette, and shall have effect in respect of international applications filed more than one month after the date of such publication.

For a discussion of the withdrawal of the demand or of elections (PCT Rule 90<sup>bis</sup>.4), see MPEP § 1880.

Form PCT/IB/372 may be used by the applicant to make a withdrawal under any of PCT Rules 90<sup>bis</sup>.1, 90<sup>bis</sup>.2, 90<sup>bis</sup>.3, and 90<sup>bis</sup>.4. The form is available from WIPO's web site ([www.wipo.int/pct/en/forms/ib/ib372.pdf](http://www.wipo.int/pct/en/forms/ib/ib372.pdf)).

The applicant may withdraw the international application, the designation of any state, or a priority claim by a notice addressed to the International Bureau or to the receiving Office and received before the expiration of 30 months from the priority date. Where Article 39(1) applies, the notice may also be addressed to the International Preliminary Examining Authority. Any such withdrawal is free of charge. A notice of withdrawal must be signed by all the applicants. The provisions for waiver of a power of attorney set forth in PCT Rules 90.4(d) and 90.5(c) do not apply in the case of withdrawals under PCT Rule 90<sup>bis</sup>. An appointed agent or appointed common representative may sign such a notice on behalf of the applicant or applicants who appointed him, but an applicant who is considered to be the common representative may not sign such a notice on behalf of the other applicants. As to the case where an applicant inventor for the United States of America \*\* cannot be found or reached see PCT Rule 90<sup>bis</sup>.5(b).

The applicant may prevent international publication by withdrawing the international application, provided that the notice of withdrawal reaches the International Bureau before the completion of technical preparations for that publication. The notice of withdrawal may state that the withdrawal is to be effective only on the condition that international publication can still be prevented. In such a case the withdrawal is not effective if the condition on which it was made cannot be met that is, if the technical preparations for international publication have already been completed. \*\*

If all designations are withdrawn, the international application will be treated as withdrawn.

\*\*

Where the withdrawal of a priority claim causes a change in the priority date of the international application, any time limit which is computed from the original priority date and which has not yet expired—for example, the time limit before which processing in the national phase cannot start—is computed from the priority date resulting from the change. (It is not possible to extend the time limit concerned if it has already expired when the priority claim is withdrawn.) Thus, international publication may be postponed by withdrawing the priority claim prior to publication. However, if the notice of withdrawal reaches the International Bureau after the completion of the technical preparations for international publication, the International Bureau may proceed with the international publication on the basis of the time limit for international publication as computed from the original priority date.

## **1860 >International Preliminary Examination Procedure for Applications Having an International Filing Date On or After January 1, 2004 [R-2]**

[Note: The regulations under the PCT were changed effective January 1, 2004. A corresponding change was made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure*, 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). All international applications having an international filing date before January 1, 2004,

**will continue to be processed under the procedures in effect on the international filing date. For the international preliminary examination procedure applicable to international applications having an international filing date before January 1 2004, see MPEP § 1860.01 for the information that previously appeared in this section].**

## **EXAMINATION PROCEDURE**

The international preliminary examination is to be carried out in accordance with PCT Article 34 and PCT Rule 66. After the demand is checked for compliance with PCT Rules 53-55, 57 and 58, the first step of the examiner is to study the description, the drawings (if any), the claims of the international application, the documents describing the prior art as cited in the international search report, and the written opinion established by the International Searching Authority.

A further written opinion is usually not mandatory where the written opinion of the International Searching Authority is treated as the first written opinion of the International Preliminary Examining Authority. The United States International Preliminary Examining Authority will treat any written opinion established by the United States International Searching Authority or the European Patent Office International Searching Authority as the first written opinion of the International Preliminary Examining Authority.

Assuming the written opinion of the International Searching Authority is treated as the first written opinion of the International Preliminary Examining Authority, as noted above, no further written opinion need be issued before the international preliminary examination report, even if there are objections outstanding. The examiner takes into consideration any comments or amendments made by the applicant when establishing the international preliminary examination report.

## **FURTHER WRITTEN OPINION SHOULD BE ISSUED**

A further written opinion should be prepared by the examiner if applicant files a response which includes a persuasive argument that the written opinion issued by the International Searching Authority was improper because of a negative opinion with respect to a lack of novelty, inventive step (non-obviousness)

or industrial applicability as described in PCT Article 33(2)-(4); and which results in the examiner considering any of the claims to lack novelty, inventive step (non-obviousness) or industrial applicability as described in PCT Article 33(2)-(4) based on new art not necessitated by any amendment.

Any further written opinion established by the International Preliminary Examining Authority should set forth, as applicable:

(A) Any defects in the international application as described in PCT Article 34(4) concerning subject matter which is not required to be examined or which is unclear or inadequately supported;

(B) Any negative findings with respect to any of the claims because of a lack of novelty, inventive step (non-obviousness) or industrial applicability as described in PCT Article 33(2)-(4);

(C) Any defects in the form or contents of the international application;

(D) Any finding by the examiner that an amendment goes beyond the disclosure in the international application as originally filed;

(E) Any observation which the examiner wishes to make on the clarity of the claims, the description, the drawings or to the question whether the claims are fully supported by the description (PCT Rule 66.2);

(F) Any decision by the examiner not to carry out the international preliminary examination on a claim for which no international search report was issued; or

(G) If the examiner considers that no acceptable nucleotide and/or amino acid sequence listing is available in a form that would allow a meaningful international preliminary examination to be carried out.

The further written opinion is prepared on Form PCT/IPEA/408 to notify applicant of the defects found in the international application. The examiner is further required to fully state the reasons for his/her opinion (PCT Rule 66.2(b)) and invite a written reply, with amendments where appropriate (PCT Rule 66.2(c)), normally setting a 2 month time limit for the reply.

The applicant may reply to the invitation by making amendments or, if applicant disagrees with the opinion of the examiner, by submitting arguments, as the case may be, or both.

The U.S. Rules of Practice pertaining to international preliminary examination of international appli-

cations permit a second written opinion in those cases where sufficient time is available. Normally only one written opinion will be issued. Any reply received after the expiration of the set time limit will not normally be considered in preparing the international preliminary examination report. In situations, however, where the examiner has requested an amendment or where a later amendment places the application in better condition for examination, the amendment may be considered by the examiner.

If the applicant does not reply to any further written opinion established by the International Preliminary Examining Authority within the set time period, the international preliminary examination report will be prepared after expiration of the time limit plus sufficient time to have any reply clear the Mail Center.

### **1860.01 < International Preliminary Examination >Procedure for Applications Having an International Filing Date Before January 1, 2004< [R-2]**

>[Note: For the international preliminary examination procedure applicable to international applications having an international filing date on or after January 1, 2004, see MPEP § 1860.]<

#### **EXAMINATION PROCEDURE**

The International Preliminary Examination is to be carried out in accordance with PCT Article 34 and PCT Rule 66. After the Demand is checked for compliance with PCT Rules 53 - 55, 57 and 58, the first step of the examiner is to study the description, the drawings (if any), and the claims of the international application and the documents describing the prior art as cited in the international search report.

A written opinion must be prepared if the examiner:

(A) Considers that the international application has any of the defects described in PCT Article 34(4) concerning subject matter which is not required to be examined or which is unclear or inadequately supported;

(B) Considers that the report should be negative with respect to any of the claims because of a lack of novelty, inventive step (non-obviousness) or indus-

trial applicability as described in PCT Article 33(2) - (4);

(C) Notices any defects in the form or contents of the international application;

(D) Considers that any amendment goes beyond the disclosure in the international application as originally filed;

(E) Wishes to make an observation on the clarity of the claims, the description, the drawings or to the question whether the claims are fully supported by the description (PCT Rule 66.2);

(F) Decides not to carry out the international preliminary examination on a claim for which no international search report was issued; or

(G) Considers that no acceptable amino acid sequence listing is available in a form that would allow a meaningful international preliminary examination to be carried out.

The written opinion is prepared on form PCT/IPEA/408 to notify applicant of the defects found in the international application. The examiner is further required to fully state the reasons for his/her opinion (PCT Rule 66.2(b)) and invite a written reply, with amendments where appropriate (PCT Rule 66.2(c)), normally setting a 2 month time limit for the reply.

The applicant may reply to the invitation by making amendments or, if applicant disagrees with the opinion of the examiner, by submitting arguments, as the case may be, or both.

The U.S. Rules of Practice pertaining to international preliminary examination of international applications permit a second written opinion in those cases where sufficient time is available. Normally only one written opinion will be issued. Any reply received after the expiration of the set time limit will not normally be considered in preparing the international preliminary examination report. In situations, however, where the examiner has requested an amendment or where a later amendment places the application in better condition for examination, the amendment may be considered by the examiner.

If the applicant does not reply to the written opinion within the set time period, the international preliminary examination report will be prepared after expiration of the time limit plus sufficient time to have any reply clear the Mail Center.

If, after initial examination of the international application, there is no negative statement or com-

ment to be made, then only the international preliminary examination report will issue without a written opinion having been issued.

\*\*

## 1862 Agreement With the International Bureau To Serve as an International Preliminary \*>Examining< Authority [R-2]

*PCT Article 32.*

### *The International Preliminary Examining Authority*

(1) International preliminary examination shall be carried out by the International Preliminary Examining Authority

(2) In the case of demands referred to in Article 31(2)(a), the receiving Office, and, in the case of demands referred to in Article 31(2)(b), the Assembly, shall, in accordance with the applicable agreement between the interested International Preliminary Examining Authority or Authorities and the International Bureau, specify the International Preliminary Examining Authority or Authorities competent for the preliminary examination.

(3) The provisions of Article 16(3) shall apply, *mutatis mutandis*, in respect of the International Preliminary Examining Authorities.

*PCT Article 34.*

### *Procedure before the International Preliminary Examining Authority*

(1) Procedure before the International Preliminary Examining Authority shall be governed by the provisions of this Treaty, the Regulations, and the agreement which the International Bureau shall conclude, subject to this Treaty and the Regulations, with the said Authority.

\*\*\*\*\*

### *37 CFR 1.416. The United States International Preliminary Examining Authority.*

\*\*>

(a) Pursuant to appointment by the Assembly, the United States Patent and Trademark Office will act as an International Preliminary Examining Authority for international applications filed in the United States Receiving Office and in other Receiving Offices as may be agreed upon by the Director, in accordance with agreement between the Patent and Trademark Office and the International Bureau.<

(b) The United States Patent and Trademark Office, when acting as an International Preliminary Examining Authority, will be identified by the full title "United States International Preliminary Examining Authority" or by the abbreviation "IPEA/US."

(c) The major functions of the International Preliminary Examining Authority include:

(1) Receiving and checking for defects in the Demand;

(2) Forwarding Demands in accordance with PCT Rule 59.3;

(3) Collecting the handling fee for the International Bureau and the preliminary examination fee for the United States International Preliminary Examining Authority;

(4) Informing applicant of receipt of the Demand;

(5) Considering the matter of unity of invention;

(6) Providing an international preliminary examination report which is a nonbinding opinion on the questions whether the claimed invention appears to be novel, to involve inventive step (to be nonobvious), and to be industrially applicable; and

(7) Transmitting the international preliminary examination report to applicant and the International Bureau.

An agreement was concluded between the United States Patent and Trademark Office (USPTO) and the International Bureau under which the USPTO agreed to serve as an International Preliminary Examining Authority for those applications filed in the USPTO as a Receiving Office and for those international applications filed in other receiving Offices for which the USPTO has served as an International Searching Authority.

The agreement is provided for in PCT Articles 32(2) & (3) and 34(1), and in PCT Rules 59.1, 63.1, 72.1, and 77.1(a). Authority is given in 35 U.S.C. 361(c), 362(a) & (b) and in 364(a). 37 CFR 1.416(a) and PCT Administrative Instructions Section 103(c) are also relevant.

## 1864 The Demand and Preparation for Filing of Demand [R-2]

*37 CFR 1.480. Demand for international preliminary examination.*

\*\*>

(a) On the filing of a proper Demand in an application for which the United States International Preliminary Examining Authority is competent and for which the fees have been paid, the international application shall be the subject of an international preliminary examination. The preliminary examination fee (§ 1.482(a)(1)) and the handling fee (§ 1.482(b)) shall be due within the applicable time limit set forth in PCT Rule 57.3.

(b) The Demand shall be made on a standardized form (PCT Rule 53). Copies of the printed Demand forms are available from the United States Patent and Trademark Office. Letters requesting printed Demand forms should be marked "Mail Stop PCT."

(c) Withdrawal of a proper Demand prior to the start of the international preliminary examination will entitle applicant to a refund of the preliminary examination fee minus the amount of the transmittal fee set forth in § 1.445(a)(1).

(d) The filing of a Demand shall constitute the election of all Contracting States which are designated and are bound by Chapter II of the Treaty on the international filing date (PCT Rule 53.7).

(e) Any Demand filed after the expiration of the applicable time limit set forth in PCT Rule 54<sup>bis</sup>.1(a) shall be considered as if it had not been submitted (PCT Rule 54<sup>bis</sup>.1(b)).<

Once applicant has **>**filed< an international application under Chapter I **>**of the PCT<, applicant has the right to file a demand for preliminary examination >under Chapter II of the Treaty<. The use of the term “Demand” distinguishes Chapter II from the “Request” under Chapter I. **>**It is not possible to file a demand unless a proper Chapter I “Request” for an international application has been filed. >Chapter I affords applicant the benefit of an international search, which includes an international search report and for international applications having an international filing date on or after January 1, 2004, a written opinion established by the International Searching Authority. The filing of a demand affords applicant examination of the application and allows applicant to file amendments to the description, claims and drawings to correct any defects, respond to any observations, or address negative findings with respect to any of the claims because of a lack of novelty, inventive step (non-obviousness) or industrial applicability as described in PCT Article 33(2)-(4) mentioned in the written opinion (Form PCT/ISA/237) established by the International Searching Authority. Thus, examination enables applicant to attempt to obtain a positive international preliminary examination report, which in some elected Offices is used as a basis for the issuance of a patent.<

The demand should be filed on \* Form PCT/IPEA/401 along with the fee **>**calculation< sheet. For information on obtaining these forms free of charge, see MPEP § 1730.

## 1864.01 Amendments Filed >Under PCT Article 34< **>** [R-2]

>

### *PCT Article 34.*

#### *Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

(2)(b)The applicant shall have a right to amend the claims, the description, and the drawings, in the prescribed manner and within the prescribed time limit, before the international prelimi-

nary examination report is established. The amendment shall not go beyond the disclosure in the international application as filed.

\*\*\*\*\*

<

### *PCT Rule 66.*

#### *Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

#### *66.8. Form of Amendments*

(a) Subject to paragraph (b), the applicant shall be required to submit a replacement sheet for every sheet of the international application which, on account of an amendment, differs from the sheet previously filed. The letter accompanying the replacement sheets shall draw attention to the differences between the replaced sheets and the replacement sheets and shall preferably also explain the reasons for the amendment.

(b) Where the amendment consists in the deletion of passages or in minor alterations or additions, the replacement sheet referred to in paragraph (a) may be a copy of the relevant sheet of the international application containing the alterations or additions, provided that the clarity and direct reproducibility of that sheet are not adversely affected. To the extent that any amendment results in the cancellation of an entire sheet, that amendment shall be communicated in a letter which shall preferably also explain the reasons for the amendment.

\*\*\*\*\*

#### *37 CFR 1.485. Amendments by applicant during international preliminary examination.*

(a) The applicant may make amendments at the time of filing the Demand. The applicant may also make amendments within the time limit set by the International Preliminary Examining Authority for reply to any notification under § 1.484(b) or to any written opinion. Any such amendments must:

(1) Be made by submitting a replacement sheet in compliance with PCT Rules 10 and 11.1 to 11.13 for every sheet of the application which differs from the sheet it replaces unless an entire sheet is cancelled; and

(2) Include a description of how the replacement sheet differs from the replaced sheet. Amendments that do not comply with PCT Rules 10 and 11.1 to 11.13 may not be entered.

(b) If an amendment cancels an entire sheet of the international application, that amendment shall be communicated in a letter

**>**Under PCT Article 34(2)(b), the applicant has a right to amend the claims, the description, and the drawings in the application before the International Preliminary Examining Authority (IPEA) before the international preliminary examination report is established. The amendment may be filed with the demand (PCT Article 34), within the period for reply to the

written opinion of the International Searching Authority (ISA), or within the period for reply to the written opinion of the IPEA.

See MPEP § 1871 or MPEP § 1871.01, as appropriate, regarding the processing of amendments filed prior to or at the start of international preliminary examination. See MPEP 1878.02 regarding amendments filed in reply to the written opinion of the ISA or IPEA. Amendments under PCT Article 34, like amendments under PCT Article 19 (see MPEP § 1853), may not include new matter and must be accompanied by a description of how the replacement sheet differs from the replaced sheet.<

## 1864.02 Applicant's Right To File a Demand

### *PCT Article 31.*

#### *Demand for International Preliminary Examination*

\*\*\*\*\*

(2)(a) Any applicant who is a resident or national, as defined in the Regulations, of a Contracting State bound by Chapter II, and whose international application has been filed with the receiving Office of or acting for such State, may make a demand for international preliminary examination.

\*\*\*\*\*

### *PCT Rule 54.*

#### *The Applicant Entitled to Make a Demand*

##### *54.1. Residence and Nationality*

(a) Subject to the provisions of paragraph (b), the residence or nationality of the applicant shall, for the purposes of Article 31(2), be determined according to Rule 18.1(a) and (b).

(b) The International Preliminary Examining Authority shall, in the circumstances specified in the Administrative Instructions, request the receiving Office or, where the international application was filed with the International Bureau as receiving Office, the national Office of, or acting for, the Contracting State concerned to decide the question whether the applicant is a resident or national of the Contracting State of which he claims to be a resident or national. The International Preliminary Examining Authority shall inform the applicant of any such request. The applicant shall have an opportunity to submit arguments directly to the Office concerned. The Office concerned shall decide the said question promptly.

##### *54.2. Right to Make a Demand*

The right to make a demand under Article 31(2) shall exist if the applicant making the demand or, if there are two or more applicants, at least one of them is a resident or national of a Contracting State bound by Chapter II and the international applica-

tion has been filed with a receiving Office of or acting for a Contracting State bound by Chapter II.

(i) *[Deleted]*

(ii) *[Deleted]*

##### *54.3 International Applications Filed with the International Bureau as Receiving Office*

Where the international application is filed with the International Bureau as receiving Office under Rule 19.1(a)(iii), the International Bureau shall, for the purposes of Article 31(2)(a), be considered to be acting for the Contracting State of which the applicant is a resident or national.

##### *54.4. Applicant Not Entitled to Make a Demand*

If the applicant does not have the right to make a demand or, in the case of two or more applicants, if none of them has the right to make a demand under Rule 54.2, the demand shall be considered not to have been submitted.

If there is a sole applicant, he or she must be a resident or national of a Contracting State bound by Chapter II of the PCT. If there are two or more applicants, it is sufficient that one of them be a resident or national of a Contracting State bound by Chapter II, regardless of the elected State(s) for which each applicant is indicated. Only applicants for the elected States are required to be indicated in the Demand. The detailed requirements for the various indications required in connection with each applicant (name and address, telephone number, facsimile machine number or teleprinter address, nationality and residence) are the same as those required under PCT Rule 4 in connection with the Request. Note that any inventor who is not also an applicant is not indicated in the Demand.

If the recording of a change in the name or person has been requested under PCT Rule 92<sup>bis</sup>.1 before the Demand was filed, it is the applicant(s) of record at the time when the Demand is filed who must be indicated in the Demand.

## 1864.03 States Which May Be Elected [R-2]

### *PCT Article 31.*

#### *Demand for International Preliminary Examination*

\*\*\*\*\*

(4)(a) The demand shall indicate the Contracting State or States in which the applicant intends to use the results of the international preliminary examination ("elected States"). Additional Contracting States may be elected later. Election may relate only to Contracting States already designated under Article 4.

(b) Applicants referred to in paragraph (2)(a) may elect any Contracting State bound by Chapter II. Applicants referred to in paragraph (2)(b) may elect only such Contracting States bound by Chapter II as have declared that they are prepared to be elected by such applicants.

\*\*\*\*\*

>The filing of a demand on or after January 1, 2004, shall constitute the election of all Contracting States which are designated and are bound by Chapter II of the Treaty on the international filing date (PCT Rule 53.7). For demands filed before January 1, 2004, only those eligible states pursuant to PCT Article 31 indicated as being elected are elected.< Only PCT member states which have ratified or acceded to Chapter II and which were designated in the Request may be elected under Chapter II. The Assembly has taken no action to allow persons who are residents or nationals of a State not party to the PCT or not bound by Chapter II to make a Demand under Article 31(2)(b).

### 1864.04 Agent's Right To Act [R-2]

Any agent entitled to practice before the receiving Office where the international application was filed may represent the applicant before the international authorities (PCT Article 49).

If for any reason, the examiner needs to question the right of an attorney or agent to practice before the International Preliminary Examining Authority >(IPEA)<, the USPTO roster of registered attorneys and agents should be consulted. If the international application was filed with a receiving Office other than the United States, Form PCT/IPEA/410 may be used by the requesting IPEA to ask the receiving Office with which the international application was filed, whether the agent named in the international application has the right to practice before that Office.

The PCT Article and Regulations governing the right to practice are PCT Article 49 and PCT Rule 83.

### 1865 Filing of Demand [R-2]

*PCT Article 31.*

*Demand for International Preliminary Examination*

(1) On the demand of the applicant, his international application shall be the subject of an international preliminary examination as provided in the following provisions and the Regulations.

\*\*\*\*\*

(3) The demand for international preliminary examination shall be made separately from the international application. The demand shall contain the prescribed particulars and shall be in the prescribed language and form.

\*\*\*\*\*

(6)(a)The demand shall be submitted to the competent International Preliminary Examining Authority referred to in Article 32.

\*\*\*\*\*

Applicants should mail the Demand and appropriate fees directly to the International Preliminary Examining Authority >(IPEA)< they desire to prepare the International Preliminary Examination Report. United States applicants who have had the international search prepared by the European Patent Office >(EPO)< may also request the \*\*>EPO< to act as the \*\*>IPEA with some exceptions<. See MPEP § 1865.01.

Demands filed in the European Patent Office should be delivered to the European Patent Office Headquarters at Munich:

Location:

Erhardstr. 27  
D-80331 Munchen  
Germany

Mailing address:

D-80298 Munchen  
Germany

Demands filed in the United States Patent and Trademark Office should be addressed as follows:

Mailing address for delivery by the U.S. Postal Service:

\*\*>Mail Stop PCT  
Commissioner for Patents, Box PCT  
P.O. Box 1450  
Alexandria, VA 22313-1450<.

OR

If hand-carried directly to the USPTO PCT Operations Office:

>Mail Stop PCT<  
Commissioner for Patents\*\*  
2011 South Clark Place  
Crystal Plaza Two, 8th Floor Reception Area (PCT  
Operations)  
Arlington, VA 22202

The "Express Mail" provisions of 37 CFR 1.10 may be used to file a Demand under Chapter II in the USPTO. Applicants are advised that failure to comply with the provisions of 37 CFR 1.10 will result in the paper or fee being accorded the date of receipt and not the date of deposit. See MPEP § 513.

Demand for international preliminary examination may be submitted to the USPTO via facsimile. The Certificate of Mailing or Transmission practice under 37 CFR 1.8 CANNOT be used to file a Demand if the date of deposit is desired. If used, the date of the Demand will be the date of receipt in the USPTO. See MPEP § 513, § 1834, and § 1834.01.

All Demands filed in the USPTO must be in the English language.

PCT Rule 59.3 was amended July 1, 1998 to provide a safeguard in the case of a Demand filed with an International Preliminary Examining Authority which is not competent for the international preliminary examination of a particular international application. The USPTO \*>will< forward such a Demand to the International Bureau and the International Bureau will forward the Demand to a competent International Pre-

liminary Examining Authority pursuant to PCT Rule 59.3(c). The competent International Preliminary Examining Authority will process the Demand based on the date of receipt in the USPTO. See 37 CFR 1.416(c)(2).

### CHOICE OF EXAMINING AUTHORITY

\*\*>For most applications, U.S. residents and nationals may choose to have the international preliminary examination done by the EPO if the EPO served as the International Searching Authority (ISA). However, for certain applications including one or more claims directed to the field of biotechnology, the field of business methods or the field of telecommunication, the EPO will not act as a competent IPEA. See< MPEP § 1865.01.

The IPEA/US will serve as International Preliminary Examining Authority for U.S. residents and nationals if the U.S. or EPO served as ISA and the international application was filed in the U.S. Receiving Office or the International Bureau as receiving Office.

The IPEA/US will also serve as International Preliminary Examining Authority for residents or nationals of Barbados, Brazil, India, Israel, Mexico, New Zealand, the Philippines, Saint Lucia, South Africa, and Trinidad and Tobago if the U.S. was the International Searching Authority.

\*\*>

The demand must be filed directly with the competent International Preliminary Examining Authority or, if two or more Authorities are competent, with the one chosen by the applicant. The full name or two-letter code of that Authority may be indicated by the applicant on the line below:  
 IPEA/ US

 is hereby appointed and any earlier appointment of (an) agent(s)/common representative is hereby revoked.  
 is hereby appointed, specifically for the procedure before the International Preliminary Examining Authority, in addition to the agent(s)/common representative appointed earlier.

Name and address: *(Family name followed by given name; for a legal entity, full official designation. The address must include postal code and name of country.)*

SMITH, John J.  
220 Jefferson Davis Highway  
Arlington, Virginia 22202-0234  
United States of America

Telephone No.  
(703) 557 3054

Facsimile No.  
(703) 557 3554

Teleprinter No.

Agent's registration No. with the Office  
77,777

Address for correspondence: Mark this check-box where no agent or common representative is/has been appointed and the space above is used instead to indicate a special address to which correspondence should be sent.

**Box No. IV BASIS FOR INTERNATIONAL PRELIMINARY EXAMINATION**

**Statement concerning amendments:\***

1. The applicant wishes the international preliminary examination to start on the basis of:

- the international application as originally filed
- the description  as originally filed  
 as amended under Article 34
- the claims  as originally filed  
 as amended under Article 19 (together with any accompanying statement)  
 as amended under Article 34
- the drawings  as originally filed  
 as amended under Article 34

- 2.  The applicant wishes any amendment to the claims under Article 19 to be considered as reversed.
- 3.  The applicant wishes the start of the international preliminary examination to be postponed until the expiration of the applicable time limit under Rule 69.1(d).
- 4.  The applicant expressly wishes the international preliminary examination to start earlier than at the expiration of the applicable time limit under Rule 54bis.1(a).

\* Where no check-box is marked, international preliminary examination will start on the basis of the international application as originally filed or, where a copy of amendments to the claims under Article 19 and/or amendments of the international application under Article 34 are received by the International Preliminary Examining Authority before it has begun to draw up a written opinion or the international preliminary examination report, as so amended.

Language for the purposes of international preliminary examination: English

- which is the language in which the international application was filed.
- which is the language of a translation furnished for the purposes of international search.
- which is the language of publication of the international application.
- which is the language of the translation (to be) furnished for the purposes of international preliminary examination.

**Box No. V ELECTION OF STATES**

The filing of this demand constitutes the election of all Contracting States which are designated and are bound by Chapter II of the PCT.

Sheet No. . 3

International application No.  
PCT/US2004/000150

**Box No. VI CHECK LIST**

The demand is accompanied by the following elements, in the language referred to in Box No. IV, for the purposes of international preliminary examination:

- |  |   |       |        |

## 1865.01 The European Patent Office as an International Preliminary Examining Authority [R-2]

\*\*>The European Patent Office (EPO) has expressed the following limitations concerning its competency to act as an International Preliminary Examining Authority (IPEA). For updates or possible changes to these limitations, applicants should consult the PCT Newsletter which is available in electronic form from the web site ([www.wipo.int/pct/en/newslett/index.htm](http://www.wipo.int/pct/en/newslett/index.htm)) of the World Intellectual Property Organization.

### I. FIELD OF BIOTECHNOLOGY

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b) and PCT Article 32(3), and will not carry out international preliminary examination in respect of any international application filed before January 1, 2004, where the corresponding demand was filed with the EPO on or after March 1, 2002, if the application: (A) was filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) was filed in the International Bureau (IB) as receiving Office by a national or resident of the U.S. (provided the application did not also identify as an applicant at its time of filing a national or resident of a European Patent Convention (EPC) Contracting State); where the application contains one or more claims relating to the field of biotechnology as defined by the following units of the International Patent Classification:<

C 12 M	Apparatus for enzymology or microbiology
C 12 N	Micro-organisms or enzymes; compositions thereof
C 12 P	Fermentation or enzyme-using processes to synthesise a desired chemical compound or composition or to separate optical isomers from a racemic mixture

C 12 Q	Measuring or testing processes involving enzymes or micro-organisms; compositions or test papers therefor; processes of preparing such compositions; condition-responsive control in microbiological or enzymological processes
C 07 K	Peptides
G 01 N 33/50 (including subdivisions)	Chemical analysis of biological material, e.g. blood, urine; testing involving biospecific ligand binding methods; immunological testing
A 61 K 39	Medicinal preparations containing antigens or antibodies
A 61 K 48	Medicinal preparations containing genetic material which is inserted into cells of the living body to treat genetic diseases; Gene therapy
A 01 H	New plants or processes for obtaining them; plant reproduction by tissue culture techniques

For information, U.S. classes covering the corresponding subject matter are listed below:

424	Drug, bio-affecting and body treating compositions
435	Chemistry: molecular biology and microbiology
436	Chemistry: analytical and immunological testing
514	Drug, bio-affecting and body treating compositions
530	Chemistry: natural resins or derivatives; peptides or proteins; lignins or reaction products thereof
536	Organic compounds—part of the class 532-570 series

800 Multicellular living organisms and unmodified parts thereof

930 Peptide or protein sequence

\*\*>

**II. FIELD OF BUSINESS METHODS**

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b) and PCT Article 32(3), and will not carry out international preliminary examination in respect of any international application where the corresponding demand was filed with the EPO on or after March 1, 2002, if the application: (A) is filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) is filed in the IB as receiving Office by a national or resident of the U.S. (provided the application does not also identify as an applicant at its time of filing a national or resident of an EPC Contracting State); where the application contains one or more claims relating to the field of business methods as defined by the following units of the International Patent Classification:<

G 06 F 17/60 Digital computing or data processing equipment or methods, specially adapted for specific functions: administrative, commercial, managerial, supervisory or forecasting purposes. To the extent that the application falls under above mentioned subgroup but does not relate to business methods the EPO's competence is not affected.

For information, the U.S. class covering the corresponding subject matter is listed below:

705 Data processing: financial, business practice, management, or cost/price determination

\*\*>

**III. FIELD OF TELECOMMUNICATION**

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b) and PCT Article 32(3), and will not carry out international preliminary examination in respect of any international application where the corresponding demand is filed with the EPO on or after March 1, 2002, and before July 1, 2004, where the application: (A) is filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) is filed in the IB as receiving Office by a national or resident of the U.S. (provided the application does not also identify as an applicant at its time of filing a national or resident of an EPC Contracting State); where the application contains one or more claims relating to the field of telecommunication as defined by the following unit of the International Patent Classification:<

H 04 Electric communication technique with the exception of H04N: Pictorial communication, e.g. television

For information, the U.S. classes covering the corresponding subject matter are listed below:

- 370 Multiplex communications
- 375 Pulse or digital communications
- 379 Telephonic communication
- 380 Cryptography
- 381 Electrical audio signal processing systems and devices
- 455 Telecommunications

Demands for international preliminary examination submitted to a non-competent authority are subject to PCT Rule 59.3. Applicants filing demands with the EPO in applications directed to the above subject matter will receive a notice from the EPO indicating that the demand is being forwarded to the IPEA/US under PCT Rule 59.3(f). Any fees paid by the applicant to

the EPO will be refunded to the applicant. Applicants have one month from the date of receipt of the demand transmitted to the IPEA under PCT Rule 59.3 to pay the handling fee (PCT Rule 57 and 37 CFR 1.482(b)) and the preliminary examination fee (PCT Rule 58 and 37 CFR 1.482(a)). See PCT Rules 57.3 and 58.1(b).

## 1866 Filling in of Headings on Chapter II Forms [R-2]

The examiner will encounter several different forms for use in the Chapter II preliminary examination phase and most of the forms will have the same "header" information to be provided.

The notes below list the common identifying information requested on the top of the first page of most of the forms:

Applicant's mailing address - this is usually the attorney's address taken from the file wrapper.

Applicant's or Agent's File Reference - this is the applicant's or agent's application reference (or docket number) which is composed of either letters or numbers, or both, provided this reference does not exceed twelve characters. This reference may be found in the upper right hand box on the first sheet of the Demand, Form PCT/IPEA/401. See Administrative Instructions Section 109.

International Application Number - this is the \*\* PCT application number as stamped and typed on the international application file wrapper and may also be found on the first page of the Demand, Form PCT/IPEA/401.

International Filing Date - this is the filing date printed on the international application file wrapper and may also be found on the first page of the Demand, Form PCT/IPEA/401.

Applicant (Name) - the first named applicant as set forth on the international application file wrapper and may also be found in box II of the Demand, Form PCT/IPEA/401.

## 1867 Preliminary Examination Fees [R-2]

37 CFR 1.481. *Payment of international preliminary examination fees.*

\*\*>

(a) The handling and preliminary examination fees shall be paid within the time period set in PCT Rule 57.3. The handling fee

or preliminary examination fee payable is the handling fee or preliminary examination fee in effect on the date of payment.<

(1) If the handling and preliminary fees are not paid within the time period set in PCT Rule 57.3, applicant will be notified and given one month within which to pay the deficient fees plus a late payment fee equal to the greater of:

(i) Fifty percent of the amount of the deficient fees, but not exceeding an amount equal to double the handling fee; or

(ii) An amount equal to the handling fee (PCT Rule 58<sup>bis</sup>.2).

(2) The one-month time limit set in this paragraph to pay deficient fees may not be extended.

(b) If the payment needed to cover the handling and preliminary examination fees, pursuant to paragraph (a) of this section, is not timely made in accordance with PCT Rule 58<sup>bis</sup>.1(d), the United States International Preliminary Examination Authority will declare the Demand to be considered as if it had not been submitted.

The preliminary examination fee is for the benefit of the International Preliminary Examining Authority and the amount for the \*>USPTO< doing the preliminary examination is specified in 37 CFR 1.482. The fee is somewhat higher if the international search was performed by an authority other than the USPTO.

The handling fee is a fee for the benefit of the International Bureau and is collected by the International Preliminary Examining Authority. The amount of the handling fee is set out in the PCT schedule of fees which is annexed to the PCT Regulations.

The current amount of both the preliminary examination fee and the handling fee can be found in each weekly issue of the *Official Gazette*. Since supplements to the handling fee were deleted, no additional Chapter II fees are required other than any additional preliminary examination fee where additional inventions are determined to be present. The amount of this fee is also specified in 37 CFR 1.482 and in the weekly issues of the *Official Gazette*. See also PCT Rules 57 and 58.

The time limit for paying the preliminary examination fee and the handling fee is set forth in PCT Rules 57.3 and 58.1(b). >Effective January 1, 2004, for demands filed on or after January 1, 2004, 37 CFR 1.481(a) provides that the preliminary examination fee or handling fee payable is the preliminary examination fee or handling fee in effect on the date of payment. For demands filed before January 1, 2004, former< 37 CFR 1.481(a) provides that the preliminary examination fee or handling fee payable is the preliminary examination fee or handling fee in effect

on the date of receipt of the Demand in the United States International Preliminary Examining Authority. Effective July 1, 1998, PCT Rule 58bis.1(c) was added to consider the preliminary examination fee and handling fee to have been received before the expiration of the time limit set in PCT Rule 57.3 if the fees were submitted prior to the sending of an invitation to pay the fees.

Effective July 1, 1998, PCT Rule 58bis.1(a) was added to permit the International Preliminary Examining Authority to collect a late payment fee set forth in PCT Rule 58bis.2 if the fees for preliminary examination are not paid prior to the sending of the invitation to pay the fees. If the preliminary examination fee and handling fee are not paid within the time set in PCT Rule 57.3, applicants will be notified and given 1 month within which to pay the deficient fees plus a late payment fee equal to the greater of: (1) 50% of the amount of the deficient fees, but not exceeding an amount equal to double the handling fee; or (2) an amount equal to the handling fee. See 37 CFR 1.481(a)(1)(i) and (ii). The 1 month time limit set forth in 37 CFR 1.481(a)(1) to pay deficient fees may not be extended. See 37 CFR 1.481(a)(2).

If the payment needed to cover the preliminary examination fee and handling fee is not timely made in accordance with PCT Rule 58bis.1(d), the United States International Preliminary Examining Authority will declare the Demand to be considered as if it had not been submitted. In this regard, where the Authority sends a notification that the Demand is considered not to have been made and applicant's payment is received on the same date the notification is sent, the fee is considered to be late and the notification remains effective. The fee must antedate the notice in order for the notice not to be effective. See 37 CFR 1.481(b).

## 1868 Correction of Defects in the Demand [R-2]

*PCT Rule 60.*

*Certain Defects in the Demand or Elections*

### *60.1. Defects in the Demand*

\*\*>

(a) Subject to paragraphs (a<sup>bis</sup>) and (a<sup>ter</sup>), if the demand does not comply with the requirements specified in Rules 53.1,

53.2(a)(i) to (iii), 53.2(b), 53.3 to 53.8 and 55.1, the International Preliminary Examining Authority shall invite the applicant to correct the defects within a time limit which shall be reasonable under the circumstances. That time limit shall not be less than one month from the date of the invitation. It may be extended by the International Preliminary Examining Authority at any time before a decision is taken.

(a<sup>bis</sup>) For the purposes of Rule 53.4, if there are two or more applicants, it shall be sufficient that the indications referred to in Rule 4.5(a)(ii) and (iii) be provided in respect of one of them who has the right according to Rule 54.2 to make a demand.

(a<sup>ter</sup>) For the purposes of Rule 53.8, if there are two or more applicants, it shall be sufficient that the demand be signed by one of them.

(b) If the applicant complies with the invitation within the time limit under paragraph (a), the demand shall be considered as if it had been received on the actual filing date, provided that the demand as submitted permitted the international application to be identified; otherwise, the demand shall be considered as if it had been received on the date on which the International Preliminary Examining Authority receives the correction.

(c) If the applicant does not comply with the invitation within the time limit under paragraph (a), the demand shall be considered as if it had not been submitted and the International Preliminary Examining Authority shall so declare.

(d) [Deleted]

(e) If the defect is noticed by the International Bureau, it shall bring the defect to the attention of the International Preliminary Examining Authority, which shall then proceed as provided in paragraphs (a) to (c).<

(f) If the demand does not contain a statement concerning amendments, the International Preliminary Examining Authority shall proceed as provided for in Rules 66.1 and 69.1(a) or (b).

(g) Where the statement concerning amendments contains an indication that amendments under Article 34 are submitted with the demand (Rule 53.9(c)) but no such amendments are, in fact, submitted, the International Preliminary Examining Authority shall invite the applicant to submit the amendments within a time limit fixed in the invitation and shall proceed as provided for in Rule 69.1(e).

\*\*

Defects in the Demand may be corrected. The type of correction determines whether the filing date of the Demand must be changed. The most common defects which result in the mailing of an invitation to correct are found in PCT Rules 53 and 55. If the applicant complies with the invitation, the Demand is considered as if it had been received on the actual filing date, i.e., the original date of receipt. See PCT Rule 60.1(b).

## 1869 Notification to International Bureau of Demand

*PCT Article 31.*

*Demand for International Preliminary Examination*

\*\*\*\*\*

(7) Each elected Office shall be notified of its election.

The International Preliminary Examining Authority, pursuant to PCT Rule 61, promptly notifies the International Bureau and the applicant of the filing of any Demand. The International Bureau in turn notifies each elected Office of their election and also notifies the applicant that such notification has been made.

## 1870 Priority Document and Translation Thereof [R-2]

*PCT Rule 66.*

*Procedure before the International Preliminary Examining Authority*

\*\*\*\*\*

### 66.7. Priority Document

\*\*>

(a) If the International Preliminary Examining Authority needs a copy of the earlier application whose priority is claimed in the international application, the International Bureau shall, on request, promptly furnish such copy. If that copy is not furnished to the International Preliminary Examining Authority because the applicant failed to comply with the requirements of Rule 17.1, and if that earlier application was not filed with that Authority in its capacity as a national Office or the priority document is not available to that Authority from a digital library in accordance with the Administrative Instructions, the international preliminary examination report may be established as if the priority had not been claimed.<

(b) If the application whose priority is claimed in the international application is in a language other than the language or one of the languages of the International Preliminary Examining Authority, that Authority may, where the validity of the priority claim is relevant for the formulation of the opinion referred to in Article 33(1), invite the applicant to furnish a translation in the said language or one of the said languages within two months from the date of the invitation. If the translation is not furnished within that time limit, the international preliminary examination report may be established as if the priority had not been claimed.

\*\*\*\*\*

A copy of the priority document >and/or a translation thereof, if the priority document is not in

English< may be required by the examiner if necessary because of an intervening reference \*\*.

## 1871 >Processing Amendments Filed Under Article 19 and Article 34 Prior to or at the Start of International Preliminary Examination in International Applications Having an International Filing Date On or After January 1, 2004 [R-2]

[Note: The regulations under the PCT were changed effective January 1, 2004. Corresponding changes were made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure*, 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). International applications filed before January 1, 2004, will continue to be processed under the procedures in effect on their international filing date. The discussion of the procedures in effect prior to January 1, 2004, has been moved from this section to newly added MPEP § 1871.01.]

*PCT Rule 62.*

*Copy of the Written Opinion by the International Searching Authority and of Amendments Under Article 19 for the International Preliminary Examining Authority*

### 62.1. Copy of Written Opinion by International Searching Authority and of Amendments Made Before the Demand Is Filed

Upon receipt of a demand, or a copy thereof, from the International Preliminary Examining Authority, the International Bureau shall promptly transmit to that Authority.

(i) a copy of the written opinion established under Rule 43<sup>bis</sup>.1, unless the national Office or intergovernmental organization that acted as International Searching Authority is also acting as International Preliminary Examining Authority; and

(ii) a copy of any amendment under Article 19, and any statement referred to in that Article, unless that Authority has indicated that it has already received such a copy.

### 62.2. Amendments Made After the Demand Is Filed

If, at the time of filing any amendments under Article 19, a demand has already been submitted, the applicant shall preferably, at the same time as he files the amendments with the International Bureau, also file with the International Preliminary Examining Authority a copy of such amendments and any statement referred to in that Article. In any case, the International Bureau shall promptly transmit a copy of such amendments and statement to that Authority

*PCT Rule 62<sup>bis</sup>.**Translation for the International Preliminary Examining Authority of the Written Opinion of the International Searching Authority**62<sup>bis</sup>.1. Translation and Observations*

(a) Upon request of the International Preliminary Examining Authority, the written opinion established under Rule 43<sup>bis</sup>.1 shall, when not in English or in a language accepted by that Authority, be translated into English by or under the responsibility of the International Bureau.

(b) The International Bureau shall transmit a copy of the translation to the International Preliminary Examining Authority within two months from the date of receipt of the request for translation, and shall at the same time transmit a copy to the applicant.

(c) The applicant may make written observations as to the correctness of the translation and shall send a copy of the observations to the International Preliminary Examining Authority and to the International Bureau.

The documents making up the international application may include amendments of the claims filed by the applicant under PCT Article 19. Article 19 amendments are exclusively amendments to the claims and these amendments can only be made after the search report has been established. Article 19 amendments will be transmitted to the International Preliminary Examining Authority (IPEA) by the International Bureau. The International Bureau marks, in the upper right-hand corner of each replacement sheet submitted under PCT Article 19, the international application number, the date on which that sheet was received under PCT Article 19 and, in the middle of the bottom margin, the words "AMENDED SHEET (ARTICLE 19)." If a demand for international preliminary examination has already been submitted, the applicant should preferably, at the time he/she files the Article 19 amendments, also file a copy of the amendments with the IPEA.

The IPEA starts the international preliminary examination when it is in possession of the demand; the required fees; if the applicant is required to furnish a translation under PCT Rule 55.2, that translation; either the international search report or a notice of the declaration by the International Searching Authority under PCT Article 17(2)(a) that no international search report will be established; and the written opinion established under PCT Rule 43<sup>bis</sup>.1, provided that the IPEA shall not start the international preliminary examination before the expiration of the later of three

months from the transmittal of the international search report and written opinion or of the declaration that no international search report will be established; or the expiration of 22 months from the priority date unless the applicant expressly requests an earlier start, with the exception of the following situations:

(A) If the competent IPEA is part of the same national Office or intergovernmental organization as the competent International Searching Authority, the international preliminary examination may, if the IPEA so wishes, start at the same time as the international search, provided that the examination is not to be postponed according to the statement concerning PCT Article 19 amendments (PCT Rule 53.9(b));

(B) Where the statement concerning amendments contains an indication that amendments under PCT Article 19 are to be taken into account (PCT Rule 53.9(a)(i)), the IPEA does not start the international preliminary examination before it has received a copy of the amendments concerned. These will be transmitted to the IPEA by the International Bureau. The applicant should preferably, at the time he/she files the demand, also file a copy of the amendments with the IPEA;

(C) Where the statement concerning amendments contains an indication that the start of the international preliminary examination is to be postponed (PCT Rule 53.9(b)), the IPEA does not start the international preliminary examination before:

(1) it has received a copy of any amendments made under PCT Article 19;

(2) it has received a notice from the applicant that he/she does not wish to make amendments under PCT Article 19; or

(3) the later of three months from the transmittal of the international search report and written opinion or of the declaration that no international search report will be established; or the expiration of 22 months from the priority date;

whichever occurs first;

(D) Where the statement concerning amendments contains an indication that amendments under PCT Article 34 are submitted with the demand (PCT Rule 53.9(c)) but no such amendments are, in fact, submitted, the IPEA does not start the international preliminary examination before it has received the amendments or before the time limit fixed in the invi-

tation referred to in PCT Rule 60.1(g) has expired, whichever occurs first.

The applicant has the right to amend the claims, the description, and the drawings, in the prescribed manner and before the start of international preliminary examination. The amendment must not go beyond the disclosure in the international application as filed. These amendments are referred to as PCT Article 34(2)(b) amendments. It should be noted that PCT Article 19 amendments are strictly amendments to the claims made during the Chapter I search phase while PCT Article 34(2)(b) amendments to the description, claims, and drawings are made during the Chapter II examination phase.

When amendments to the description, claims, or drawings are made under PCT Rule 66.8, they may be accompanied by an explanation. These amendments may have been submitted to avoid possible objections as to lack of novelty or lack of inventive step in view of the citations listed in the international search report and the observations on novelty, inventive step, and industrial applicability set forth in the written opinion established by the International Searching Authority; to meet any objections noted by the International Searching Authority under PCT Article 17(2)(a)(ii) (i.e., that all or at least some claims do not permit a meaningful search) or under PCT Rule 13 (i.e., that there is a lack of unity of invention); or to meet objections that may be raised for some other reason, e.g., to remedy some obscurity which the applicant himself/herself has noted in the original documents.

The amendments are made by the applicant of his/her own volition. This means that the applicant is not restricted to amendments necessary to remedy a defect in his/her international application. It does not, however, mean that the applicant should be regarded as free to amend in any way he/she chooses. Any amendment must not add subject matter which goes beyond the disclosure of the international application as originally filed. Furthermore, it should not itself cause the international application as amended to be objectionable under the PCT, e.g., the amendment should not introduce obscurity.

As a matter of policy and to ensure consistency in handling amendments filed under PCT Articles 19 and 34 of the PCT, the following guidelines for processing these amendments have been established:

(A) Any argument or amendment which complies with 37 CFR 1.485(a) will be considered;

(B) Amendments filed after the demand:

(1) will be considered if filed before the later of: three months from the transmittal of either the international search report or a notice of the declaration by the International Searching Authority under PCT Article 17(2)(a) that no international search report will be established, and the written opinion established under PCT Rule 43<sup>bis</sup>.1; or the expiration of 22 months from the priority date, unless the applicant expressly requests an earlier start to international preliminary examination,

(2) will be considered if filed before the application is docketed to the examiner,

(3) may be considered if filed after docketing. The examiner has discretion to consider such amendments if the examiner determines that the amendment places the application in better condition for examination or the examiner determines that the amendment should otherwise be entered;

(C) Amendments and/or arguments filed after expiration of the period for response to the written opinion:

(1) will be considered if the amendment was requested by the examiner,

(2) need not be taken into account for the purposes of a further written opinion or the international preliminary examination report if they are received after the examiner has begun to draw up that opinion or report. The applicant may file an amendment to the description, the claims and the drawings in the prescribed manner, even if this is outside the time period set for reply in PCT Rule 66.2(d). Since the examiner may begin to draw up the final report once the time period set for reply in PCT Rule 66.2(d) expires, amendments filed after the expiration of the time period set in for reply in PCT Rule 66.2(d) may or may not be considered. There may be situations where it is advisable, to the extent possible, to take such amendments or arguments into account, for example, where the international preliminary examination report has not yet been completed and it is readily apparent to the examiner that consideration of the late-filed response would result in the issuance of a favorable report.

It is expected, due to the relatively short time period for completion of preliminary examination,

that the Chapter II application will be taken up promptly after docketing to the examiner for preparation of either a further written opinion, if necessary, or the final report.

Amendments timely filed but misdirected or otherwise late reaching the examiner will be considered as in the case of regular domestic applications and may require a supplemental written opinion and/or final report.

Clearly, these guidelines offer the examiner flexibility. The examiner should be guided by the overriding principle that the international preliminary examination report (Form PCT/IPEA/409) should be established with as few written opinions as possible and resolution of as many issues as possible consistent with the goal of a timely and quality report.

See also Administrative Instructions Section 602 regarding processing of amendments by the IPEA.

**1871.01 < Processing Amendments Filed Under Article 19 and Article 34 Prior to or at the Start of International Preliminary Examination >in International Applications Having an International Filing Date Before January 1, 2004< [R-2]**

>[Note: If the international filing date is on or after January 1, 2004, the amendments are processed as indicated in MPEP § 1871 rather than as indicated in this section.]

*Former<*

*PCT Rule 62.*

*Copy of Amendments Under Article 19 for the International Preliminary Examining Authority*

*62.1. Amendments Made Before the Demand Is Filed*

Upon receipt of a demand, or a copy thereof, from the International Preliminary Examining Authority, the International Bureau shall promptly transmit a copy of any amendments under Article 19, and any statement referred to in that Article, to that Authority, unless that Authority has indicated that it has already received such a copy.

*62.2. Amendments Made After the Demand Is Filed*

If, at the time of filing any amendments under Article 19, a demand has already been submitted, the applicant shall preferably,

at the same time as he files the amendments with the International Bureau, also file with the International Preliminary Examining Authority a copy of such amendments and any statement referred to in that Article. In any case, the International Bureau shall promptly transmit a copy of such amendments and statement to that Authority.

The documents making up the international application may include amendments of the claims filed by the applicant under PCT Article 19. PCT Article 19 amendments are exclusively amendments to the claims and these amendments can only be made after the search report has been established. PCT Article 19 amendments will be transmitted to the International Preliminary Examining Authority by the International Bureau. If a Demand for international preliminary examination has already been submitted, the applicant should preferably, at the time he files the PCT Article 19 amendments, also file a copy of the amendments with the International Preliminary Examining Authority. In the event that the time limit for filing amendments under PCT Article 19, as provided in PCT Rule 46.1, has not expired and the Demand includes a statement that the start of the international preliminary examination is to be postponed under PCT Rule 53.9(b), the international preliminary examination should not start before the examiner receives a copy of any amendments made under PCT Article 19 or a notice from the applicant that he does not wish to make amendments under PCT Article 19, or before the expiration of 20 months from the priority date, whichever occurs first.

The applicant has the right to amend the claims, the description, and the drawings, in the prescribed manner and before the start of international preliminary examination. The amendment must not go beyond the disclosure in the international application as filed. These amendments are referred to as PCT Article 34(2)(b) amendments. It should be noted that PCT Article 19 amendments are strictly amendments to the claims made during the Chapter I search phase while PCT Article 34(2)(b) amendments to the description, claims, and drawings are made during the Chapter II examination phase.

When amendments to the description, claims, or drawings are made under PCT Rule 66.8, they may be accompanied by an explanation. These amendments may have been submitted to avoid possible objections as to lack of novelty or lack of inventive step in view

of the citations listed in the international search report; to meet any objections noted by the International Searching Authority under PCT Article 17(2)(a)(ii) (i.e., that all or at least some claims do not permit a meaningful search) or under PCT Rule 13 (i.e., that there is a lack of unity of invention); or to meet objections that may be raised for some other reason, e.g., to remedy some obscurity which the applicant himself/herself has noted in the original documents.

The amendments are made by the applicant of his/her own volition. This means that the applicant is not restricted to amendments necessary to remedy a defect in his/her international application. It does not, however, mean that the applicant should be regarded as free to amend in any way he/she chooses. Any amendment must not add subject matter which goes beyond the disclosure of the international application as originally filed. Furthermore, it should not itself cause the international application as amended to be objectionable under the PCT, e.g., the amendment should not introduce obscurity.

As a matter of policy and to ensure consistency in handling amendments filed under PCT Articles 19 and 34 of the PCT, the following guidelines for processing these amendments have been established:

(A) Any amendment which complies with 37 CFR 1.485(a) will be considered;

(B) Amendments filed after the Demand

(1) will be considered if filed before the application is docketed to the examiner,

(2) may be considered if filed after docketing. The examiner has discretion to consider such amendments if the examiner determines that the amendment places the application in better condition for examination or the examiner determines that the amendment should otherwise be entered;

(C) Amendments filed after expiration of the period for response to the written opinion

(1) will be considered if the amendment was requested by the examiner,

(2) may be considered if the examiner determines that the amendment places the application in better condition for examination or the examiner determines that the amendment should otherwise be entered.

It is expected, due to the relatively short time period for completion of preliminary examination, that the Chapter II application will be taken up for preparation of the written opinion promptly after docketing to the examiner and taken up for preparation of the final report promptly after the time expires for response to the written opinion (i.e., after allowing for mail processing). The examiner is not obliged to consider amendments or arguments which are filed after he/she has taken up the case for preparation of the written opinion or the final report.

Amendments timely filed but misdirected or are otherwise late reaching the examiner will be considered as in the case of regular domestic applications and may require a supplemental written opinion and/or final report.

Clearly, these guidelines offer the examiner flexibility. The examiner should be guided by the overriding principle that the final report (the PCT/IPEA/409) should be established with as few written opinions as possible and resolution of as many issues as possible consistent with the goal of a timely and quality report.

See also Administrative Instructions Section 602 regarding processing of amendments by the International Preliminary Examining Authority.

## **1872 Transmittal of Demand to the Examining Corps**

*PCT Administrative Instruction Section 605.*

*File to be used for International Preliminary Examination*

Where the International Preliminary Examining Authority is part of the same national Office or intergovernmental organization as the International Searching Authority, the same file shall serve the purposes of international search and international preliminary examination.

When the PCT International Application Processing Division has finished processing of the papers and fees filed with a complete Demand, a copy of the Demand and other papers are forwarded to the appropriate Technology Center for examination. The documents will be placed in the Search Copy file wrapper before forwarding to the examiner.

\*\*

## 1874 Determination if International Preliminary Examination Is Required and Possible [R-2]

*PCT Article 34.*

*Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

(4)(a) If the International Preliminary Examining Authority considers

(i) that the international application relates to a subject matter on which the International Preliminary Examining Authority is not required, under the Regulations, to carry out an international preliminary examination, and an international preliminary examination, and in the particular case decides not to carry out such examination, or

(ii) that the description, the claims, or the drawings, are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the novelty, inventive step (non-obviousness), or industrial applicability, of the claimed invention, the said authority shall not go into the questions referred to in Article 33(1) and shall inform the applicant of this opinion and the reasons therefor.

(b) If any of the situations referred to in subparagraph (a) is found to exist in, or in connection with, certain claims only, the provisions of that subparagraph shall apply only to the said claims.

There are instances where international preliminary examination is not required because of the nature of the subject matter claimed and also because the claims are so indefinite that no examination is possible. Such instances should seldom occur, especially since most problems of this nature would have already been discovered and indicated at the time of the international search.

If it is found that certain claims of an international application relate to subject matter for which no international preliminary examination is required, \*\*>check the appropriate box on a Form PCT/IPEA/408 in an application having an international filing date before January 1, 2004, or on a Form PCT/IPEA/408 or a Form PCT/IPEA/409, as appropriate, in an application having an international filing date on or after January 1, 2004 (see MPEP § 1860)<. It should be noted that subject matter which is normally examined under U.S. national procedure should also be examined as an International Preliminary Examining Authority.

The examiner should check the appropriate box if it is found that the description, claims or drawings are

so unclear, or the claims are so inadequately supported by the description that no opinion could be formed as to the novelty, inventive step (nonobviousness) and industrial applicability of the claimed invention.

Subject matter not searched under Chapter I will not be the subject of a preliminary examination under Chapter II. This is so even if claims which were not searched under Chapter I are modified to be acceptable for examination.

## 1875 Unity of Invention Before the International Preliminary Examining Authority [R-2]

*PCT Article 34.*

*Procedure before the International Preliminary Examining Authority*

\*\*\*\*\*

(3)(a) If the International Preliminary Examining Authority considers that the international application does not comply with the requirement of unity of invention as set forth in the Regulations, it may invite the applicant, at his option, to restrict the claims so as to comply with the requirement or to pay additional fees.

\*\*\*\*\*

(c) If the applicant does not comply with the invitation referred to in subparagraph (a) within the prescribed time limit, the International Preliminary Examining Authority shall establish an international preliminary examination report on those parts of the international application which relate to what appears to be the main invention and shall indicate the relevant facts in the said report. The national law of any elected State may provide that, where its national Office finds the invitation of the International Preliminary Examining Authority justified, those parts of the international application which do not relate to the main invention shall, as far as effects in that State are concerned, be considered withdrawn unless a special fee is paid by the applicant to that Office.

\*\*\*\*\*

*37 CFR 1.488. Determination of unity of invention before the International Preliminary Examining Authority.*

(a) Before establishing any written opinion or the international preliminary examination report, the International Preliminary Examining Authority will determine whether the international application complies with the requirement of unity of invention as set forth in § 1.475.

(b) If the International Preliminary Examining Authority considers that the international application does not comply with the requirement of unity of invention, it may:

(1) Issue a written opinion and/or an international preliminary examination report, in respect of the entire international application and indicate that unity of invention is lacking and specify the reasons therefor without extending an invitation to restrict or pay additional fees. No international preliminary examination will be conducted on inventions not previously searched by an International Searching Authority.

(2) Invite the applicant to restrict the claims or pay additional fees, pointing out the categories of invention found, within a set time limit which will not be extended. No international preliminary examination will be conducted on inventions not previously searched by an International Searching Authority, or

(3) If applicant fails to restrict the claims or pay additional fees within the time limit set for reply, the International Preliminary Examining Authority will issue a written opinion and/or establish an international preliminary examination report on the main invention and shall indicate the relevant facts in the said report. In case of any doubt as to which invention is the main invention, the invention first mentioned in the claims and previously searched by an International Searching Authority shall be considered the main invention.

(c) Lack of unity of invention may be directly evident before considering the claims in relation to any prior art, or after taking the prior art into consideration, as where a document discovered during the search shows the invention claimed in a generic or linking claim lacks novelty or is clearly obvious, leaving two or more claims joined thereby without a common inventive concept. In such a case the International Preliminary Examining Authority may raise the objection of lack of unity of invention.

The examiner will usually begin the preliminary examination by checking the international application for unity of invention. The international preliminary examination will only be directed to inventions which have been searched by the International Searching Authority. All claims directed to inventions which have not been searched by the International Searching Authority will not be considered by the International Preliminary Examining Authority. If the examiner in the International Preliminary Examining Authority finds lack of unity of invention in the claims to be examined, an invitation is normally prepared and sent to the applicant requesting the payment of additional fees or the restriction of the claims on Form PCT/IPEA/405. Such an invitation will include the identification of what the examiner considers to be the “main invention” which will be examined if no additional fees are paid or restriction is made by the applicant.

The procedure before the International Preliminary Examining Authority regarding lack of unity of invention is governed by PCT Article 34(3)(a) through (c), PCT Rule 68 (see also PCT Rule 70.13), and 37 CFR 1.475 and 1.488. It should be noted that

in most instances lack of unity of invention will have been noted and reported upon by the International Searching Authority which will have drawn up an international search report >(and for international applications having a filing date on or after January 1, 2004, a written opinion)< based on those parts of the international application relating to the invention, or unified linked group of inventions, first mentioned in the claims (“main invention”) >, unless the applicant has paid additional fees<. If the applicant has paid additional search fees, additional inventions would also have been searched. No international preliminary examination will be conducted on inventions not previously searched by an International Searching Authority (37 CFR 1.488(b)(2)).

\*\*

If the examiner determines that unity of invention is lacking, there are two options:

(A) The examiner may conduct an international preliminary examination covering all the claimed and previously searched inventions and indicate that unity of invention is lacking and specify the reasons therefor without extending an invitation to restrict or pay additional fees (PCT Rule 68.1), or

(B) The examiner may invite the applicant to restrict the claims, so as to comply with the requirement, or pay additional fees, pointing out the categories of invention found >using Form PCT/IPEA/405 or USPTO/499 (telephone practice). See MPEP § 1875.01<. The invitation to restrict or pay additional fees shall state the reasons for which the international application is considered as not complying with the requirement of unity of invention. (PCT Rule 68.2). Inventions not previously searched will not be considered or included in the invitation.

The written opinion, if any, and the international preliminary examination report must be established on all inventions for which examination fees have been paid.

If the applicant fails to reply to the invitation to restrict the claims or pay additional examination fees due to lack of unity of invention >(by not paying the additional fees or by not restricting the claims either sufficiently or at all)<, the written opinion>, if any,< and international preliminary examination report must be established on the claims directed to what appears to be the main invention (PCT Article 34(3)(c)). The

main invention, in case of doubt, is the first claimed invention for which an international search report has been issued by the International Searching Authority. The main invention, as viewed by the examiner, must be set forth on Form PCT/IPEA/405.

>If the applicant timely complies with the invitation to pay additional fees even under protest, or to restrict the claims, the examiner carries out international preliminary examination on those claimed inventions for which additional fees have been paid or to which the claims have been restricted. It should be noted that the national law of any elected State may provide that, where its national Office finds the invitation of the International Preliminary Examining Authority justified, those parts of the international application which do not relate to the main invention shall, as far as effects in that State are concerned, be considered withdrawn unless a special fee is paid by the applicant to that Office (PCT Article 34(3)(c)).< Whether or not the question of unity of invention has been raised by the International Searching Authority, it may be considered by the examiner when serving as an authorized officer of the International Preliminary Examining Authority. In the examiner's consideration, all documents cited by the International Searching Authority should be taken into account and any additional relevant documents considered. However, there are cases of lack of unity of invention, where, compared with the procedure of inviting the applicant to restrict the international application or pay additional fees (PCT Rule 68.2), little or no additional effort is involved in establishing the written opinion>, if any,< and the international preliminary examination report for the entire international application. Then reasons of economy may make it advisable for the examiner to use the option referred to in PCT Rule 68.1 by choosing not to invite the applicant to restrict the claims or to pay additional fees.

Unity of invention is defined by 37 CFR 1.475 which describes the circumstances in which the requirement of unity of invention is considered fulfilled.

### **1875.01 Preparation of Invitation Concerning Unity [R-2]**

The "Invitation to restrict or pay additional fees" Form PCT/IPEA/405 is used to invite the applicant, at his/her option, to restrict the claims to comply with

the requirements of unity of invention or to pay additional examination fees. In addition, the examiner must explain the reasons why the international application is not considered to comply with the requirement of unity of invention. The examiner must also specify, on Form PCT/IPEA/405, at least one group or groups of claims which, if elected, would comply with the requirement for unity of invention.

#### **INVITATION >TO RESTRICT OR PAY ADDITIONAL FEES<**

In the space provided on form PCT/IPEA/405, the examiner should identify the disclosed inventions by claim numerals and indicate which disclosed inventions are so linked as to form a single general inventive concept, thereby complying with the requirement of unity of invention. For example, claims to different categories of invention such as a product, claims to a process specifically adapted for the manufacture of the product and a claim for a use of the product would be considered related inventions which comply with the unity of invention requirement, whereas a claim to an apparatus for making the product in the same application would be considered a second invention for which additional fees would be required. The reasons for holding that unity of invention is lacking must be specified. See 37 CFR 1.475 and \*\*>Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO's web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm))<.

Also, the examiner should specify the main invention and claims directed thereto which will be examined if the applicant fails to restrict or pay additional fees. The main invention, in case of doubt, is the first claimed invention or related invention before the International Preliminary Examining Authority for which a search fee has been paid and an international search report has been prepared.

The examiner should indicate the total amount of additional fees required for examination of all claimed inventions.

In the box provided at the top of the form, the time limit for response is set according to PCT Rule 68.2, normally a 1 month time limit >(not shorter than one month but not longer than two months)<. Extensions of time are not permitted.

Since the space provided on Form PCT/IPEA/405 is limited, supplemental attachment sheets, supplied by the examiner, with reference back to the specific section, should be incorporated whenever necessary.

### AUTHORIZED OFFICER

Form PCT/IPEA/405 must be signed by an examiner with at least partial signatory authority.

### TELEPHONIC RESTRICTION PRACTICE

Telephone practice may be used \*\* to allow applicants to elect an invention to be examined or to pay additional fees \*\* if:

(A) \*\* >Applicant or applicant's legal representative has a USPTO< deposit account,

(B) Applicant or the legal representative or agent orally agrees to charge the additional fees to the account, and

(C) A complete record of the telephone conversation is included with the written opinion>, if any, or the international preliminary examination report,< including:

- (1) Examiner's name;
- (2) Authorizing attorney's name;
- (3) Date of conversation;
- (4) Invention elected and/or inventions for which additional fees paid; and
- (5) Deposit account number and amount to be charged.

\*\*

When the telephone practice is used in making lack of unity requirements, it is critical that the examiner orally inform applicant that there is no right to protest the holding of lack of unity of invention for any group of invention(s) for which no additional examination fee has been paid.

The examiner must further orally advise applicant that any protest to the holding of lack of unity or the amount of additional fee required must be filed in writing no later than one month from the mailing date of the written opinion or the international preliminary examination report if the lack of unity holding is first mailed with the IPER because there was no written opinion. The examiner should fill in the information on Form USPTO/499 "Chapter II PCT Telephone Memorandum for Lack of Unity" as a record of the telephonic holding of lack of unity.

>If applicant refuses to either restrict the claims to one invention or authorize payment of additional fees, or if applicant does not have a deposit account, Form PCT/IPEA/405 should be prepared and mailed to applicant.

If a written invitation is required, the examiner should, if possible, submit that written invitation to the TC for review and mailing within 7 days from the date the international application is charged to the examiner.

See MPEP § 1850 for form paragraphs for lack of unity in international applications.<

\*\*

### 1875.02 Reply to Invitation Concerning Lack of Unity of Invention [R-2]

*PCT Administrative Instruction Section 603.*

*Transmittal of Protest Against Payment of Additional Fee and Decision Thereon Where International Application is Considered to Lack Unity of Invention*

The International Preliminary Examining Authority shall transmit to the applicant, at the latest together with the international preliminary examination report, any decision which it has taken under Rule 68.3(c) on the protest of the applicant against payment of the additional fee where the international application is considered to lack unity of invention. At the same time, it shall transmit to the International Bureau a copy of both the protest and the decision thereon, as well as any request by the applicant to forward the texts of both the protest and the decision thereon to the elected Offices.

*37 CFR 1.489. Protest to lack of unity of invention before the International Preliminary Examining Authority.*

(a) If the applicant disagrees with the holding of lack of unity of invention by the International Preliminary Examining Authority, additional fees may be paid under protest, accompanied by a request for refund and a statement setting forth reasons for disagreement or why the required additional fees are considered excessive, or both.

\*\*

(b) >Protest under paragraph (a) of this section will be examined by the Director or the Director's designee. In the event that the applicant's protest is determined to be justified, the additional fees or a portion thereof will be refunded.<

(c) An applicant who desires that a copy of the protest and the decision thereon accompany the international preliminary examination report when forwarded to the Elected Offices, may notify the International Preliminary Examining Authority to that effect any time prior to the issuance of the international preliminary examination report. Thereafter, such notification should be directed to the International Bureau.

Applicant may reply by paying some or all additional fees or by restricting the claims to one invention. If applicant makes no reply within the set time limit, the international preliminary examination will proceed on the basis of the main invention only.

If applicant has paid an additional fee or fees, a protest to the holding of lack of unity of invention may be filed with the International Preliminary Examining Authority.

#### **NOTIFICATION OF DECISION ON PROTEST**

Form PCT/IPEA/420 is used by the Technology Center (TC) to inform the applicant of the decision regarding applicant's protest on the payment of additional fees concerning unity of invention.

#### **NOTIFICATION**

The TC checks the appropriate box, i.e., 1 or 2. If box 2 is checked, a clear and concise explanation as to why the protest concerning the unity of invention was found to be unjustified must be given.

Since the space is limited, supplemental attachment sheet(s) should be incorporated whenever necessary.

#### **AUTHORIZED OFFICER**

Form PCT/IPEA/420 must be signed by a TC Director. See MPEP § 1002.02(\*>c<), >item (2)<.

### **1876 Notation of Errors and Informalities by the Examiner [R-2]**

*PCT Administrative Instruction Section 607.  
Rectifications of Obvious Errors Under Rule 91.1*

Where the International Preliminary Examining Authority authorizes a rectification of an obvious error under Rule 91.1, Rule 70.16 and Section 602(a) and (b) shall apply *mutatis mutandis*, provided that, where a sheet is marked as indicated in Section 602, the words "RECTIFIED SHEET (RULE 91)" shall be used.

Although the examiner is not responsible for discovering errors in the international application, if any errors come to the attention of the examiner, they \*>may< be noted and called to the applicant's attention. The examiner may invite applicant to rectify obvious errors using Form PCT/IPEA/411. Errors that are not obvious may be called to applicant's attention in \*>Box< VII of PCT/IPEA/408.

#### **AUTHORIZED OFFICER**

Form PCT/IPEA/408 and \*>Form PCT/IPEA/411< must be signed by an examiner having at least partial signatory authority.

### **1876.01 Request for Rectification and Notification of Action Thereon [R-2]**

#### **NOTIFICATION OF DECISION CONCERNING REQUEST FOR RECTIFICATION**

The rectification of obvious errors is governed by PCT Rules 91.1 and 66.5.

#### **NOTIFICATION**

If the applicant requests correction of any obvious errors in the international application or in any paper submitted to the International Preliminary Examining Authority, other than in the request, any acceptable correction should be authorized by using Form PCT/IPEA/412.

The procedure governing the rectification of obvious errors is set forth in PCT rules 91.1(d) and 26.4\*. Rectification may be made on the request of the applicant. Any rectification offered to the international preliminary examining authority may be stated in a letter addressed to the international preliminary examining authority if the rectification is of such a nature that it can be transferred from the letter to the international application without adversely affecting the clarity and direct reproducibility of the sheet on to which the rectification is to be transferred; otherwise, the applicant is required to submit a replacement sheet embodying the rectification and the letter accompanying the replacement sheet must draw attention to the differences between the replaced sheet and the replacement sheet.

The examiner after fully considering applicant's Request for Rectification of an obvious error, will notify applicant of the action taken on Form PCT/IPEA/412. Since the space provided is limited, supplemental sheet(s) should be incorporated whenever necessary.

#### **AUTHORIZED OFFICER**

Form PCT/IPEA/412 must be signed by an examiner having at least partial signatory authority.

## 1877 Nucleotide and/or Amino Acid Sequence Listings During the International Preliminary Examination

If the International Preliminary Examining Authority finds that the international application contains disclosure of one or more nucleotide and/or amino acid sequences but (A) the international application does not contain a sequence listing complying with the standard provided for in the Administrative Instructions, or (B) applicant has not furnished a sequence listing in computer readable form complying with the standard provided for in the Administrative Instructions, the International Preliminary Examining Authority may request the applicant to furnish such sequence listing or listing in computer readable form in accordance with the Administrative Instructions. PCT Rule 13<sup>ter</sup>.1(e).

## 1878 >Preparation of the Written Opinion of the International Preliminary Examining Authority in International Applications Having an International Filing Date On or After January 1, 2004 [R-2]

[Note: The regulations under the PCT were changed effective January 1, 2004. Corresponding changes were made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure*, 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). The discussion of the procedures in effect for international applications filed prior to January 1, 2004, has been moved from this section to newly added MPEP § 1878.01.]

### *PCT Article 34.*

#### *Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

(2)(c) The applicant shall receive at least one written opinion from the International Preliminary Examining Authority unless such Authority considers that all of the following conditions are fulfilled:

(i) the invention satisfies the criteria set forth in Article 33(1),

(ii) the international application complies with the requirements of this Treaty and the Regulations in so far as checked by that Authority,

(iii) no observations are intended to be made under Article 35(2), last sentence.

\*\*\*\*\*

#### *37 CFR 1.484. Conduct of international preliminary examination.*

(a) An international preliminary examination will be conducted to formulate a non-binding opinion as to whether the claimed invention has novelty, involves an inventive step (is non-obvious) and is industrially applicable.

(b) International preliminary examination will begin in accordance with PCT Rule 69.1.

(c) No international preliminary examination will be conducted on inventions not previously searched by an International Searching Authority.

(d) The International Preliminary Examining Authority will establish a written opinion if any defect exists or if the claimed invention lacks novelty, inventive step or industrial applicability and will set a non-extendable time limit in the written opinion for the applicant to reply.

(e) The written opinion established by the International Searching Authority under PCT Rule 43bis.1 shall be considered to be a written opinion of the United States International Preliminary Examining Authority for the purposes of paragraph (d) of this section.

(f) The International Preliminary Examining Authority may establish further written opinions under paragraph (d) of this section.

(g) If no written opinion under paragraph (d) of this section is necessary, or if no further written opinion under paragraph (f) of this section is to be established, or after any written opinion and the reply thereto or the expiration of the time limit for reply to such written opinion, an international preliminary examination report will be established by the International Preliminary Examining Authority. One copy will be submitted to the International Bureau and one copy will be submitted to the applicant.

(h) An applicant will be permitted a personal or telephone interview with the examiner, which may be requested after the filing of a Demand, and must be conducted during the period between the establishment of the written opinion and the establishment of the international preliminary examination report. Additional interviews may be conducted where the examiner determines that such additional interviews may be helpful to advancing the international preliminary examination procedure. A summary of any such personal or telephone interview must be filed by the applicant or, if not filed by applicant be made of record in the file by the examiner.

(i) If the application whose priority is claimed in the international application is in a language other than English, the United States International Preliminary Examining Authority may, where the validity of the priority claim is relevant for the formulation of the opinion referred to in Article 33(1), invite the applicant to furnish an English translation of the priority document within two months from the date of the invitation. If the

translation is not furnished within that time limit, the international preliminary report may be established as if the priority had not been claimed.

*PCT Rule 66.*

*Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

*66.1<sup>bis</sup> Written Opinion of the International Searching Authority*

\*\*\*\*\*

(a) Subject to paragraph (b), the written opinion established by the International Searching Authority under Rule 43<sup>bis</sup>.1 shall be considered to be a written opinion of the International Preliminary Examining Authority for the purposes of Rule 66.2(a).

\*\*\*\*\*

*66.4 Additional Opportunity for Submitting Amendments or Argument*

(a) If the International Preliminary Examining Authority wishes to issue one or more additional written opinions, it may do so, and Rules 66.2 and 66.3 shall apply.

\*\*\*\*\*

In applications having an international filing date on or after January 1, 2004, a written opinion must be prepared by the International Searching Authority at the same time the international search report is prepared. The United States International Preliminary Examining Authority (IPEA) will consider the written opinion of the International Searching Authority to be the first written opinion of the IPEA and as such in most instances no further written opinion need be issued by the U.S. examiner handling the international preliminary examination before establishment of the international preliminary examination report, even if there are objections outstanding. The examiner is to take into consideration any comments or amendments made by the applicant when he/she establishes the international preliminary examination report. However, a further written opinion must be prepared if applicant files a response which includes a persuasive argument that the written opinion issued by the International Searching Authority was improper because of a negative opinion with respect to a lack of novelty, inventive step (non-obviousness) or industrial applicability as described in PCT Article 33(2)-(4); and which results in the examiner considering any of the

claims to lack novelty, inventive step (non-obviousness) or industrial applicability as described in PCT Article 33(2)-(4) based on new art not necessitated by any amendment. Such a further written opinion should be established on the Written Opinion of the International Preliminary Examining Authority (Form PCT/IPEA/408).

**BOX NO. I. — BASIS OF OPINION**

Box I of the Form PCT/IPEA/408 should be filled out in accordance with the instructions for Box I of Form PCT/ISA/237 provided in MPEP § 1845.01.

Additionally, for the purpose of completing Box I, item 2, of Form PCT/IPEA/408, substitute and/or rectified sheets of the specification and drawings filed during Chapter I proceedings are considered to be originally filed/furnished pages and should be listed as originally filed/furnished pages. Only those amendments or rectifications to the specification and drawings filed on the date of demand or after the filing of a demand should be listed as pages “received by this Authority on\_\_\_\_\_.” Substitute and/or rectified sheets of claims filed during the Chapter I proceedings are also considered to be originally filed/furnished pages and should be listed as originally filed/furnished pages. However, amended sheets of claims filed under PCT Article 19 in response to the international search report are to be indicated as pages as amended (together with any statement) under PCT Article 19. The International Bureau (IB) marks, in the upper right-hand corner of each replacement sheet submitted under PCT Article 19, the international application number, the date on which that sheet was received under PCT Article 19 and, in the middle of the bottom margin, the words “AMENDED SHEET (ARTICLE 19).” See Administrative Instructions Section 417. Only those pages of claims filed on the date of demand or after the filing of a demand should be listed as pages “received by this Authority on\_\_\_\_\_.”

The examiner must also indicate, in Box I, item 3, if any of the amendments filed resulted in the cancellation of any pages of the description, any of the claims or drawings, or any pages of the sequence listing and/or any tables related to the sequence listing. If the examiner considers any of the amendments to go beyond the original disclosure, the examiner must point this out in Box I, item 4 and explain the reasons for this determination in the Supplemental Box.

**BOX NO. II. — PRIORITY**

Where the priority document is provided by the applicant in compliance with PCT Rule 17.1 after the preparation of the search report and the written opinion of the ISA, any written opinion of the IPEA and/or the international preliminary examination report should reconsider the validity of the priority claim. Where the priority document is a foreign document and it is not already in the file, the IPEA may request a copy of the document from the IB and, if necessary, a translation from the applicant. In the meantime, if the outcome of the examination requires the issuing of an opinion, that opinion should be issued without waiting to obtain the priority document and/or the translation. An appropriate comment should be made under the heading “Additional observations, if necessary” in Box II of the written opinion. If such a copy of the priority document and/or the translation is not available because of non-compliance by the applicant with PCT Rule 17.1 and/or PCT Rule 66.7 (b) within the relevant time period, and if the priority document is not available to that Authority from a digital library in accordance with the Administrative Instructions, any written opinion of the IPEA and/or the IPER may be established as if the priority had not been claimed where there is a pertinent intervening reference. This is indicated by checking the appropriate boxes in item 1 of Box No. II in the opinion or report.

**BOX NO. III. — NON-ESTABLISHMENT OF OPINION ON NOVELTY, INVENTIVE STEP AND INDUSTRIAL APPLICABILITY**

Box III of Form PCT/IPEA/408 is intended to cover situations where some or all claims of an application are so unclear or inadequately supported by the description that the question of novelty, inventive step (nonobviousness), and industrial applicability cannot be considered, or where the international application or claims thereof relate to subject matter which does not require international preliminary examination, or where no international search report has been established for the claims.

Box III of Form PCT/IPEA/408 should be filled out in accordance with the instructions for Box III of Form PCT/ISA/237 provided in MPEP § 1845.01.

**BOX NO. IV. — LACK OF UNITY OF INVENTION**

Box IV of Form PCT/IPEA/408 should be used by the examiner to notify applicant that lack of unity of invention has been found.

If in reply to an invitation to restrict, applicant restricted the claims to a particular group, check the first box under subsection 1. If applicant paid additional fees for examination of additional inventions, check the second box under subsection 1. If the additional fees were paid under protest, check the third box under subsection 1. If applicant neither restricted nor paid additional fees in reply to the objection of lack of unity of invention, check the fourth box under subsection 1.

Subsection 2 of Box IV is to be completed if the examiner determines that unity of invention is lacking but chooses not to invite the applicant to restrict or pay additional fees.

Subsection 3 of Box IV is to be completed to indicate which claims were the subject of international preliminary examination. If all claims are to be examined, check the first box under subsection 3. If only some of the claims were the subject of international preliminary examination, check the second box under subsection 3 and identify the claim numbers.

**BOX NO. V. — REASONED STATEMENT WITH REGARD TO NOVELTY, INVENTIVE STEP, AND INDUSTRIAL APPLICABILITY OF CLAIMS**

In Box V, the examiner must list in summary form all claims with regard to the criteria of novelty (N), inventive step (IS), and industrial applicability (IA), and should be filled out in accordance with the instructions for Box V of Form PCT/ISA/237 provided in MPEP § 1845.01.

In applications where the examiner has determined that an additional written opinion is required, the application should be searched by the examiner at least to the point of bringing the previous search up to date. Prior art discovered in a search and applied in a reasoned statement in Box V must be made of record in Box V. Prior art already cited on the international

search report need not again be cited on the written opinion or international preliminary examination report. The subsequently discovered prior art is to be cited in compliance with PCT Rule 43.5 and Administrative Instructions Section 503 using the same citation format used on the international search report. Two copies of each newly cited reference should be included in the PCT Chapter II file when it is sent to PCT Operations for the mailing of the form PCT/IPEA/408. One of the copies of the newly cited reference will be sent to the applicant and one copy will be retained in the Chapter II file.

#### **BOX NO. VI. — CERTAIN DOCUMENTS CITED**

Box VI provides a convenient manner of listing two different types of newly discovered documents which were not applied in Box V:

(A) Published documents - by the application number or patent number as well as the publication date, filing date and priority date; and

(B) Nonwritten disclosure - by the kind of disclosure, date of the disclosure and the date of the written disclosure referring to the nonwritten disclosure.

As with the newly cited art in Box V, the subsequently discovered prior art is to be cited in compliance with PCT Rule 43.5 and Administrative Instructions Section 503 using the same citation format used on the international search report. Two copies of each newly cited reference should be included in the PCT Chapter II file when it is sent to PCT Operations for the mailing of the Form PCT/IPEA/408. One of the copies of the newly cited reference will be sent to the applicant and one copy will be retained in the Chapter II file.

#### **BOX VII. — CERTAIN DEFECTS IN THE INTERNATIONAL APPLICATION**

In Box VII, defects in the form and content of the international application are identified. Box VII should be filled out in accordance with the instructions for Box No. VII of Form PCT/ISA/237 provided in MPEP § 1845.01.

#### **BOX NO. VIII. — CERTAIN OBSERVATIONS ON THE INTERNATIONAL APPLICATION**

In Box VIII, the examiner notifies the applicant of observations made as to the clarity of the claims, the description, the drawings, or on the question whether the claims are fully supported by the description. Box VIII should be filled out in accordance with the instructions for Box VIII of Form PCT/ISA/237 provided in MPEP § 1845.01.

#### **TIME TO REPLY**

An invitation by the International Preliminary Examining Authority (IPEA) to applicant to reply to the examiner's written opinion will normally set a 2-month time limit for reply.

However, PCT Rule 69.2 sets forth time limits for the IPEA to establish the international preliminary examination report (IPER). Accordingly, in applications filed on or after January 1, 2004, a 1-month time limit should be set by the examiner in situations when a 2-month time limit would risk delaying the date of establishment of the IPER beyond:

(A) 28 months from the priority date; or

(B) 6 months from the time provided under PCT Rule 69.1 for the start of international preliminary examination; or

(C) 6 months from the date of receipt by the IPEA of the translation furnished under PCT Rule 55.2.

As a general rule, a 1-month time limit for reply to the written opinion should be set by the examiner if the written opinion (Form PCT/IPEA/408) has not been completed by the examiner within 24 months following the application's "priority date" as defined in PCT Article 2.

The United States rules pertaining to international preliminary examination of international applications do not provide for any extension of time to reply to a written opinion. See 37 CFR 1.484 (d)-(f) and MPEP § 1878.02.

#### **AUTHORIZED OFFICER**

Every written opinion must be signed by an examiner having at least partial signatory authority.

## 1878.01 < Preparation of the Written Opinion >in International Applications Having an International Filing Date Before January 1, 2004< [R-2]

>[Note: In international applications filed on or after January 1, 2004, the first written opinion is usually prepared by the International Searching Authority (see MPEP §§ 1845-1845.01), and a further written opinion may be prepared by the International Preliminary Examining Authority (see MPEP § 1878.)<

### *PCT Article 34.*

#### *Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

(2)(c) The applicant shall receive at least one written opinion from the International Preliminary Examining Authority unless such Authority considers that all of the following conditions are fulfilled:

- (i) the invention satisfies the criteria set forth in Article 33(1),
- (ii) the international application complies with the requirements of this Treaty and the Regulations in so far as checked by that Authority,
- (iii) no observations are intended to be made under Article 35(2), last sentence.

\*\*\*\*\*

>Former<

#### *37 CFR 1.484. Conduct of international preliminary examination.*

(a) An international preliminary examination will be conducted to formulate a non-binding opinion as to whether the claimed invention has novelty, involves an inventive step (is non-obvious) and is industrially applicable.

(b) International preliminary examination will begin promptly upon receipt of a proper Demand in an application for which the United States International Preliminary Examining Authority is competent, for which the fees for international preliminary examination (§ 1.482) have been paid, and which requests examination based on the application as filed or as amended by an amendment which has been received by the United States International Preliminary Examining Authority. Where a Demand requests examination based on a PCT Article 19 amendment which has not been received, examination may begin at 20 months without receipt of the PCT Article 19 amendment. Where a Demand requests examination based on a PCT Article 34 amendment which has not been received, applicant will be noti-

fied and given a time period within which to submit the amendment.

- (1) Examination will begin after the earliest of:
  - (i) Receipt of the amendment;
  - (ii) Receipt of applicant's statement that no amendment will be made; or
  - (iii) Expiration of the time period set in the notification.
- (2) No international preliminary examination report will be established prior to issuance of an international search report.
- (c) No international preliminary examination will be conducted on inventions not previously searched by an International Searching Authority.

(d) The International Preliminary Examining Authority will establish a written opinion if any defect exists or if the claimed invention lacks novelty, inventive step or industrial applicability and will set a non-extendable time limit in the written opinion for the applicant to reply.

(e) If no written opinion under paragraph (d) of this section is necessary, or after any written opinion and the reply thereto or the expiration of the time limit for reply to such written opinion, an international preliminary examination report will be established by the International Preliminary Examining Authority. One copy will be submitted to the International Bureau and one copy will be submitted to the applicant.

(f) An applicant will be permitted a personal or telephone interview with the examiner, which must be conducted during the non-extendable time limit for reply by the applicant to a written opinion. Additional interviews may be conducted where the examiner determines that such additional interviews may be helpful to advancing the international preliminary examination procedure. A summary of any such personal or telephone interview must be filed by the applicant as a part of the reply to the written opinion or, if applicant files no reply, be made of record in the file by the examiner.

(g) If the application whose priority is claimed in the international application is in a language other than English, the United States International Preliminary Examining Authority may, where the validity of the priority claim is relevant for the formulation of the opinion referred to in Article 33(1), invite the applicant to furnish an English translation of the priority document within two months from the date of the invitation. If the translation is not furnished within that time limit, the international preliminary examination report may be established as if the priority had not been claimed.

A written opinion must be prepared if the examiner:

- (A) Considers that the international application has any of the defects described in PCT Article 34(4);
- (B) Considers that the report should be negative with respect to any of the claims because of a lack of novelty, inventive step (non-obviousness) or industrial applicability;
- (C) Notices any defects in the form or contents of the international application under the PCT;

(D) Considers that any amendment goes beyond the disclosure in the international application as originally filed;

(E) Wishes to make an observation on the clarity of the claims, the description, the drawings or to question whether the claims are fully supported by the description;

(F) Decides not to carry out the international preliminary examination on a claim for which no international search report was issued; or

(G) Considers that no acceptable amino acid sequence listing is available in a form that would allow a meaningful international preliminary examination to be carried out.

The applicant must be notified on Form PCT/IPEA/408 of the defects found in the application. The examiner is further required to fully state the reasons for his/her opinion (PCT Rule 66.2(b)) and invite a written reply, with amendments where appropriate (PCT Rule 66.2(c)), setting a time limit for the reply of normally 2 months.

The examiner should insert the words "first" or "second", as the case may be, in the space provided on page 1 of the written opinion.

## ITEM I. BASIS OF OPINION

Applicant has two opportunities to amend the international application prior to international preliminary examination. Under PCT Article 19, the applicant is entitled to one opportunity to amend the claims of the international application by filing amendments with the International Bureau within 2 months of the mailing of the international search report. See PCT Rule 46.1. Applicant is also permitted to make amendments before the International Preliminary Examining Authority under PCT Article 34(2)(b) and PCT Rule 66.1. Any amendment, however, that does not accompany the filing of the Demand but is filed later may not be considered unless it reaches the examiner before he/she takes up the application for examination.

>When completing Box I, item 1, of Form PCT/IPEA/408, the examiner must indicate whether or not the opinion has been established on the basis of the international application in the language in which it was filed. If a translation was furnished for the purpose of the search, this must be indicated.< For the purpose of completing Box I, Item 1, \*\* substitute

and/or rectified sheets of the specification and drawings filed during Chapter I proceedings are considered to be originally filed pages/sheets and should be listed as originally filed pages/sheets. Only those amendments or rectifications to the specification and drawings filed on the date of Demand or after the filing of a Demand should be listed as later filed pages/sheets. Substitute and/or rectified sheets of claims filed during the Chapter I proceedings are also considered to be originally filed pages/sheets and should be listed as originally filed pages/sheets. However, amended sheets of claims filed under Article 19 in response to the international search report are to be indicated as pages/sheets as amended under Article 19. Only those amendments, or rectifications to the claims filed on the date of Demand or after the filing of a Demand should be listed as later filed pages/sheets. \*\*>The examiner must also indicate, in Box I, item 3, if any of the amendments filed resulted in the cancellation of any pages of the description, any of the claims or drawings, or any pages of the sequence listing and/or any tables related to the sequence listing. If the examiner considers any of the amendments to go beyond the original disclosure, the examiner must point this out in Box I, item 4 and explain the reasons for this determination in the Supplemental Box.<

## ITEM II. PRIORITY

Item II of Form PCT/IPEA/408 is to inform applicant of non-establishment of a request for priority.

If applicant fails to furnish a copy or translation of the earlier application, whose priority has been claimed, within the time limit set by the examiner pursuant to PCT Rule 66.7, check box No. 1 and then check the first box of the subsection if applicant failed to furnish a copy of the earlier application whose priority has been claimed, and check the second box in the subsection if applicant failed to furnish a translation of the earlier application whose priority has been claimed.

When the claim for priority has been found invalid (e.g., the claimed priority date is more than one year prior to the international filing date and the notification under PCT Rule 4.10(d) has been provided or all claims are directed to inventions which were not described and enabled by the earlier application), check box No. 2 of Item II and indicate why the claim for priority has been found invalid following No. 3

“Additional observations”. The examiner is reminded that when some claims in an international application are directed to an invention which was disclosed in the earlier application, the priority claim is valid provided that a copy and/or translation of the earlier application have/has been filed and the filing date of the earlier application is one year or less from the filing date of the international application.

### **ITEM III. NON-ESTABLISHMENT OF OPINION ON NOVELTY, INVENTIVE STEP AND INDUSTRIAL APPLICABILITY**

Item III of Form PCT/IPEA/408 is intended to cover situations where some or all claims of an application are so unclear or inadequately supported by the description that the question of novelty, inventive step (nonobviousness), and industrial applicability cannot be considered, or where the international application or claims thereof relate to subject matter which does not require international preliminary examination, or where no international search report has been established for the claims.

If some or all of the claims of an application relate to subject matter which does not require international preliminary examination, check the appropriate box, indicate which claims relate to that subject matter and specify the reasons.

If some or all of the claims of an application are so unclear that no meaningful opinion could be formed, check the appropriate box, indicate which claims are unclear and specify the reasons.

If some or all of the claims are so inadequately supported by the description that no meaningful opinion could be formed, check the appropriate box.

If no international search report has been established for certain claims, check the appropriate box and indicate the claim numbers.

### **ITEM IV. LACK OF UNITY OF INVENTION**

Item IV of Form PCT/IPEA/408 should be used by the examiner to notify applicant that lack of unity of invention has been found.

If in reply to an invitation to restrict, applicant restricted the claims to a particular group, check the first box under subsection 1.

If applicant paid additional fees for examination of additional invention, check the second box under subsection 1.

If the additional fees were paid under protest, check the third box under subsection 1.

If applicant neither restricted nor paid additional fees in reply to the objection of lack of unity of invention, check the fourth box under subsection 1.

Subsection 2 of Item IV is to be completed if the examiner determines that unity of invention is lacking but chooses not to invite the applicant to restrict or pay additional fees.

Subsection 3 of Item IV is to be completed to indicate which claims were the subject of international preliminary examination.

If all claims are to be examined, check the first box under subsection 3.

If only some of the claims were the subject of international preliminary examination, check the second box under subsection 3 and identify the claim numbers.

### **ITEM V. REASONED STATEMENT WITH REGARD TO NOVELTY, INVENTIVE STEP, AND INDUSTRIAL APPLICABILITY OF CLAIMS**

In Item V, the examiner must list in summary form all claims with regard to the criteria of novelty (N), inventive step (IS), and industrial applicability (IA).

Item V is the main purpose of the Written Opinion. All claims without fatal defects are treated on the merits in Item V as to novelty, inventive step (nonobviousness) and industrial applicability.

The treatment of claims in Item V is similar in format to an Office action in a U.S. national patent application except that the words “rejection” and “patentability” are never used in a written opinion. On the international level, all written opinions are non-binding and a patent does not issue; what does issue is an international preliminary examination report (IPER), which is nonbinding on the Elected States.

Examiner statements in Item V can be positive or negative. If the claims define over the prior art and meet the test of novelty, inventive step (nonobviousness) and industrial applicability, a statement equivalent to detailed reasons for allowance in a corresponding U.S. national application should be provided, indicating how the claims meet the tests of novelty, inventive step and industrial applicability.

Form paragraphs 18.04 and 18.04.01 may be used for this purpose.

*¶ 18.04 Meets Novelty and Inventive Step*

Claim [1] the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest [2].

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and insert the verb --meet-- or --meets--, as appropriate.
2. In bracket 2, insert the details of the claimed subject matter that render it unobvious over the prior art.
3. If the claims also meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.04.01.
4. If the claims do not meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.03.

*¶ 18.04.01 Meets Industrial Applicability*

Claim [1] the criteria set out in PCT Article 33(4), and thus [2] industrial applicability because the subject matter claimed can be made or used in industry.

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --meet-- or -- meets--, as appropriate.
2. In bracket 2, insert --have-- or --has--, as appropriate.
3. If the claims meet all of the requirements of PCT Article 33(2)-(4), use form paragraph 18.04 before this form paragraph to provide positive statements for novelty and inventive step under PCT Article 33(2)-(3).
4. If the claims have industrial applicability but lack novelty and inventive step, use this form paragraph and additionally use form paragraph 18.01.
5. If the claims have industrial applicability and novelty but lack inventive step, use this form paragraph and additionally use one or more of form paragraphs 18.02, 18.02.01 and 18.02.02, as appropriate.
6. If the claims do not have industrial applicability, use form paragraph 18.03 instead of this form paragraph.

If, on the other hand it is the opinion of the examiner that some or all claims lack novelty, inventive step, or industrial applicability, specific reasons must be given similar to those used in U.S. national applications. If the claims lack inventive step over a combination of references, the reasons must explain why one of ordinary skill in the art would have been motivated to combine the teachings of the applied references.

Form paragraphs 18.01, 18.02, 18.02.01, 18.02.02, and 18.03 may be used, as appropriate, to explain the negative statements listed in Item V.

*¶ 18.01 Lacks Novelty*

Claim [1] novelty under PCT Article 33(2) as being anticipated by [2].

**Examiner Note:**

1. In bracket 1, pluralize ‘claim’ if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.

*¶ 18.02 Lacks Inventive Step - One Reference*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over [2]. [3]

**Examiner Note:**

1. In bracket 1, pluralize ‘claim’ if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.
3. In bracket 3, add reasoning.

*¶ 18.02.01 Lacks Inventive Step - Two References*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over [2] in view of [3]. [4]

**Examiner Note:**

1. In bracket 1, pluralize ‘claim’ if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of PRIMARY prior art relied upon.
3. In bracket 3, insert name of SECONDARY prior art relied upon.
4. In bracket 4, add reasoning.

*¶ 18.02.02 Lacks Inventive Step - Additional Reference*

Claim [1] an inventive step under PCT Article 33(3) as being obvious over the prior art as applied in the immediately preceding paragraph and further in view of [2]. [3]

**Examiner Note:**

1. This form paragraph may follow either 18.02 or 18.02.01.
2. In bracket 1, pluralize ‘claim’ if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
3. In bracket 2, insert name of additional prior art relied upon.
4. In bracket 3, add reasoning.

*¶ 18.03 Lacks Industrial Applicability*

Claim [1] industrial applicability as defined by PCT Article 33(4). [2]

**Examiner Note:**

1. In bracket 1, pluralize ‘claim’ if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, add reasoning.

Examiners are encouraged to indicate any amendments which applicant could present which would avoid a negative statement in the international preliminary examination report.

All international applications where an examination has been demanded should be searched by the examiner at least to the point of bringing the previous search up to date. Prior art discovered in a search and applied in an Item V statement must be made of record in Item V. Prior art already cited on the international search report need not again be cited on the written opinion or international preliminary examination report. The subsequently discovered prior art is to be cited in compliance with PCT Rule 43.5 and Administrative Instructions Section 503 using the same citation format used on the international search report. Two copies of each newly cited reference should be included in the PCT Chapter II file when it is sent to PCT Operations for the mailing of the form PCT/IPEA/408. One of the copies of the newly cited reference will be sent to the applicant and one copy will be retained in the Chapter II file.

#### ITEM VI. CERTAIN DOCUMENTS CITED

Item VI provides a convenient manner of listing two different types of documents:

(A) Published documents - by the application number or patent number as well as the publication date, filing date and priority date; and

(B) Nonwritten disclosure - by the kind of disclosure, date of the disclosure and the date of the written disclosure referring to the nonwritten disclosure.

#### ITEM VII. CERTAIN DEFECTS IN THE INTERNATIONAL APPLICATION

In Item VII, defects in the form and content of the international application are identified.

Examples of defects that would be listed in Item VII are:

(A) Informalities such as misplaced and/or omitted drawing numerals, misspelled words, grammatical errors, etc.

(B) \*\* Improper multiple-dependent claims (PCT Rule 6.4) if not indicated under Item III.

The following form paragraphs are used in Box VII of PCT/IPEA/408 or PCT/IPEA/409 "Certain defects in the international application" for noting technical defects.

#### ¶ 18.08 Drawing Objections - Defects

The drawings are objected to under PCT Rule 66.2(a)(iii) as containing the following defect(s) in the form or content thereof: [1]

#### Examiner Note:

In bracket 1, insert identification of defects in drawings.

#### ¶ 18.08.01 Drawing Is Required

The subject matter of this application admits of illustration by drawing to facilitate understanding of the invention. Applicant is required under PCT Article 7(1) to furnish a drawing.

#### ¶ 18.09 Description Defective

The description is objected to as containing the following defect(s) under PCT Rule 66.2(a)(iii) in the form or contents thereof: [1]

#### Examiner Note:

In bracket 1, insert the technical problem, e.g., misspelled word.

#### ¶ 18.10 Claims Defective

Claim [1] objected to under PCT Rule 66.2(a)(iii) as containing the following defect(s) in the form or contents thereof: [2]

#### Examiner Note:

1. In bracket 1, pluralize 'claim' if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, identify the technical deficiency.

#### ITEM VIII. CERTAIN OBSERVATIONS ON THE INTERNATIONAL APPLICATION

In Item VIII, the examiner notifies the applicant of observations made as to the clarity of the claims, the description, the drawings, or on the question whether the claims are fully supported by the description.

If the claims, the description, or the drawings are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the question of novelty, inventive step (nonobviousness) or industrial applicability, the applicant is so informed in Item III (PCT Article 34(4)(a)(ii)). Reasons for the examiner's opinion that the claims, description and drawings, etc., lack clarity must also be provided.

If the above situation is found to exist in certain claims only, the provisions of PCT Article 34(4)(ii) shall apply to those claims only.

If the lack of clarity of the claims, the description, or the drawings is of such a nature that it is possible to form a meaningful opinion on the claimed subject matter, then it is required that the examiner consider the claims and render a written opinion on novelty,

inventive step, and industrial applicability in Item V of Form PCT/IPEA/408.

Since the claims of an international application are not subject to a rejection on either art or indefiniteness consistent with U.S. practice, observations by the examiner with regard to clarity of the claims, the description and the drawings will be treated in the form of an objection in the written opinion in Item VIII.

The following form paragraphs are used in Box VIII “Certain observations on the international application” of PCT/IPEA/408 and PCT/IPEA/409 for noting objections which are substantive rather than merely technical in nature.

*¶ 18.11 Drawing Objections - Lack Clarity*

The drawings are objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 7 because: [1]

**Examiner Note:**

In bracket 1, insert reasons why the drawings lack clarity, e.g., inaccurate showing.

*¶ 18.12.01 Claims Objectionable - Inadequate Written Description*

Claim [1] objected to as lacking clarity under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The application, as originally filed, did not describe: [3]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s), and the verb --is-- or --are--, as appropriate.
2. In bracket 2, pluralize “claim” if needed, and insert the verb -is- or --are--.
3. In bracket 3, identify subject matter not described in the application as filed.

*¶ 18.13.01 Claims Objectionable - Non-Enabling Disclosure*

Claim [1] objected to as lacking clarity under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The description does not disclose the claimed invention in a manner sufficiently clear and complete for the claimed invention to be carried out by a person skilled in the art because: [3]

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize “claim” if needed, insert the verb --is-- or --are--.
3. In bracket 3, identify the claimed subject matter that is not enabled and explain why it is not enabled.

*¶ 18.14.01 Claims Objectionable - Lack of Best Mode*

Claim [1] objected to under PCT Rule 66.2(a)(v) because the claim [2] not fully supported by the description. The description fails to set forth the best mode contemplated by the applicant for carrying out the claimed invention as required by PCT Rule 5.1(a)(v) because: [3].

**Examiner Note:**

1. In bracket 1, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize “claim” if needed, and insert the appropriate verb --is-- or --are--.
3. In bracket 3, insert the objection and reasons.

*¶ 18.15 Claims Objectionable - Indefiniteness*

Claim [1] objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because claim [2] indefinite for the following reason(s): [3]

**Examiner Note:**

1. In brackets 1 and 2, pluralize “claim” if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 3, insert reasons.

**TIME TO REPLY**

An invitation by the International Preliminary Examining Authority (IPEA) to applicant to reply to the examiner’s written opinion will normally set a 2-month time limit for reply.

However, PCT Rule 69.2 sets forth time limits for the IPEA to establish the international preliminary examination report (IPER). Accordingly, a 1-month time limit should be set by the examiner in situations when a 2-month time limit would risk delaying the date of establishment of the IPER beyond:

- (A) 28 months from the priority date; or
- (B) 8 months from the date of payment of the handling fee referred to in PCT Rule 57.1 and the preliminary examination fee referred to in PCT Rule 58.1(a); or
- (C) 8 months from the date of receipt by the IPEA of the translation furnished under PCT Rule 55.2.

As a general rule, a 1-month time limit for reply to the written opinion should be set by the examiner if the written opinion (Form PCT/IPEA/408) has not been completed by the examiner within 24 months following the application’s “priority date” as defined in PCT Article 2.

The United States rules pertaining to international preliminary examination of international applications do not provide for any extension of time to reply to a first written opinion. See 37 CFR 1.484(d) and MPEP § 1878.02.

### AUTHORIZED OFFICER

Every written opinion must be signed by an examiner having at least partial signatory authority.

The first document prepared by the examiner in most international applications during the international preliminary examination proceedings will be the written opinion. Normally only in those international applications where all the formal matters are proper and the claims are directed to inventions which have novelty, inventive step and industrial applicability will an international preliminary examination report be established without a written opinion having been issued first.

### 1878.01(a) Prior Art \*\*>for Purposes of the Written Opinion and the International Preliminary Examination Report< [R-2]

*PCT Article 33.*

*The International Preliminary Examination*

\*\*\*\*\*

(6) The international preliminary examination shall take into consideration all the documents cited in the international search report. It may take into consideration any additional documents considered to be relevant in the particular case.

*PCT Rule 64.*

*Prior Art for International Preliminary Examination*

#### 64.1. Prior Art

(a) For the purposes of Article 33(2) and (3), everything made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations) shall be considered prior art provided that such making available occurred prior to the relevant date.

(b) For the purposes of paragraph (a), the relevant date will be:

(i) subject to item (ii), the international filing date of the international application under international preliminary examination;

(ii) where the international application under international preliminary examination validly claims the priority of an earlier application, the filing date of such earlier application.

#### 64.2. Non-Written Disclosures

In cases where the making available to the public occurred by means of an oral disclosure, use, exhibition or other non-written means ("non-written disclosure") before the relevant date as defined in Rule 64.1(b) and the date of such non-written disclosure is indicated in a written disclosure which has been made available to the public on a date which is the same as, or later than, the relevant date, the non-written disclosure shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such non-written disclosure in the manner provided for in Rule 70.9.

#### 64.3. Certain Published Documents

In cases where any application or any patent which would constitute prior art for the purposes of Article 33(2) and (3) had it been published prior to the relevant date referred to in Rule 64.1 was published on a date which is the same as, or later than, the relevant date but was filed earlier than the relevant date or claimed the priority of an earlier application which had been filed prior to the relevant date, such published application or patent shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such application or patent in the manner provided for in Rule 70.10.

>The above provisions apply *mutatis mutandis* to the written opinion of the International Searching Authority. See PCT Rule 43<sup>bis</sup>.1(b).<

The relevant date for the purpose of considering prior art is defined in PCT Rule 64.1(b) as the international filing date or, where the international application contains a valid claim for priority, that date of priority.

>When a potentially relevant document has been published between a claimed priority date of the application and its international filing date, the examiner is required to consider whether the claimed priority date is valid for the purposes of determining the "relevant date" of the claims in the international application. Note that if there is time left for the applicant to perfect, correct or add a priority claim but there is insufficient time for the examiner to make a proper determination as to whether the priority claim is valid, due to the need to issue a timely written opinion by the International Searching Authority, the "relevant date" for the purposes of the written opinion will be based on the claimed priority date. See Chapter 11 of the International Search and Preliminary Examination Guidelines, which may be obtained from WIPO's website ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm)).< In cases where any application or any

patent which would constitute prior art for the purpose of international preliminary examination as to novelty and inventive step (nonobviousness) was published on or after the relevant date of the international application under consideration but was filed earlier than the relevant date or claimed the priority of an earlier application which was filed prior to the relevant date, the published application or patent is not to be considered part of the prior art for the purpose of international preliminary examination as to novelty and inventive step. Nevertheless, these documents are to be listed on Form PCT/IPEA/409 under the heading "CERTAIN PUBLISHED DOCUMENTS".

In determining whether there is inventive step, account should be taken of what the applicant acknowledges in his/her description as known. Such acknowledged prior art should be regarded as correct and used during preliminary examination where appropriate.

For oral or nonwritten disclosure, see PCT Rules 64.2 and 70.9.

### **1878.01(a)(1) Novelty \*\*>for Purposes of the Written Opinion and the International Preliminary Examination Report< [R-2]**

Novelty is defined in PCT Article 33(2).

#### *PCT Article 33.*

##### *The International Preliminary Examination*

\*\*\*\*\*

(2) For the purposes of the international preliminary examination, a claimed invention shall be considered novel if it is not anticipated by the prior art as defined in the Regulations.

\*\*\*\*\*

>The above provisions apply *mutatis mutandis* to the written opinion of the International Searching Authority. See PCT Rule 43<sup>bis</sup>.1(b).<

### **1878.01(a)(2) Inventive Step \*\*>for Purposes of the Written Opinion and the International Preliminary Examination Report< [R-2]**

Inventive step is defined in PCT Article 33(3).

#### *PCT Article 33.*

##### *The International Preliminary Examination*

\*\*\*\*\*

(3) For purposes of the international preliminary examination, a claimed invention shall be considered to involve an inventive step if, having regard to the prior art as defined in the Regulations, it is not, at the prescribed relevant date, obvious to a person skilled in the art.

\*\*\*\*\*

#### *PCT Rule 65.*

##### *Inventive Step or Non-Obviousness*

#### *65.1.Approach to Prior Art*

For the purposes of Article 33(3), the international preliminary examination shall take into consideration the relation of any particular claim to the prior art as a whole. It shall take into consideration the claim's relation not only to individual documents or parts thereof taken separately but also its relation to combinations of such documents or parts of documents, where such combinations are obvious to a person skilled in the art.

#### *65.2.Relevant Date*

For the purposes of Article 33(3), the relevant date for the consideration of inventive step (non-obviousness) is the date prescribed in Rule 64.1.

>The above provisions apply *mutatis mutandis* to the written opinion of the International Searching Authority. See PCT Rule 43<sup>bis</sup>.1(b).<

### **1878.01(a)(3) Industrial Applicability \*\*>for Purposes of the Written Opinion and the International Preliminary Examination Report< [R-2]**

Industrial applicability is defined in PCT Article 33(4).

#### *PCT Article 33.*

##### *The International Preliminary Examination*

\*\*\*\*\*

(4) For the purposes of the international preliminary examination, a claimed invention shall be considered industrially applicable if, according to its nature, it can be made or used (in the technological sense) in any kind of industry. "Industry" shall be understood in its broadest sense, as in the Paris Convention for the Protection of Industrial Property.

\*\*\*\*\*

>The above provisions apply *mutatis mutandis* to the written opinion of the International Searching Authority. See PCT Rule 43<sup>bis</sup>.1(b).<

## 1878.02 Reply to the Written Opinion >of the ISA or IPEA< [R-2]

### *PCT Article 34.*

#### *Procedure Before the International Preliminary Examining Authority*

\*\*\*\*\*

\*\*>

(2)(d)< The applicant may respond to the written opinion.

\*\*\*\*\*

### *PCT Rule 66.*

#### *Procedure before the International Preliminary Examining Authority*

\*\*\*\*\*

#### *66.3. Formal Response to the International Preliminary Examining Authority*

(a) The applicant may respond to the invitation referred to in Rule 66.2(c) of the International Preliminary Examining Authority by making amendments or - if he disagrees with the opinion of that Authority - by submitting arguments, as the case may be, or do both.

(b) Any response shall be submitted directly to the International Preliminary Examining Authority.

\*\*\*\*\*

#### *66.5. Amendment*

Any change, other than the rectification of obvious errors, in the claims, the description, or the drawings, including cancellation of claims, omission of passages in the description, or omission of certain drawings, shall be considered an amendment.

#### *66.6. Informal Communications with the Applicant*

The International Preliminary Examining Authority may, at any time, communicate informally, over the telephone, in writing, or through personal interviews, with the applicant. The said Authority shall, at its discretion, decide whether it wishes to grant more than one personal interview if so requested by the applicant, or whether it wishes to reply to any informal written communication from the applicant.

\*\*\*\*\*

#### *66.8. Form of Amendments*

(a) Subject to paragraph (b), the applicant shall be required to submit a replacement sheet for every sheet of the international application which, on account of an amendment, differs from the

sheet previously filed. The letter accompanying the replacement sheets shall draw attention to the differences between the replaced sheets and the replacement sheets and shall preferably also explain the reasons for the amendment.

(b) Where the amendment consists in the deletion of passages or in minor alterations or additions, the replacement sheet referred to in paragraph (a) may be a copy of the relevant sheet of the international application containing the alterations or additions, provided that the clarity and direct reproducibility of that sheet are not adversely affected. To the extent that any amendment results in the cancellation of an entire sheet, that amendment shall be communicated in a letter which shall preferably also explain the reasons for the amendment.

#### *66.9. Language of Amendments*

(a) Subject to paragraphs (b) and (c), if the international application has been filed in a language other than the language in which it is published, any amendment, as well as any letter referred to in Rule 66.8, shall be submitted in the language of publication.

(b) If the international preliminary examination is carried out, pursuant to rule 55.2, on the basis of a translation of the international application, any amendment, as well as any letter referred to in paragraph (a), shall be submitted in the language of that translation.

(c) Subject to Rule 55.3, if an amendment or letter is not submitted in a language as required under paragraph (a) or (b), the International Preliminary Examining Authority shall, if practicable, having regard to the time limit for establishing the international preliminary examination report, invite the applicant to furnish the amendment or letter in the required language within a time limit which shall be reasonable under the circumstances.

(d) If the applicant fails to comply, within the time limit under paragraph (c), with the invitation to furnish an amendment in the required language, the amendment shall not be taken into account for the purposes of the international preliminary examination. If the applicant fails to comply, within the time limit under paragraph (c), with the invitation to furnish a letter referred to in paragraph (a) in the required language, the amendment concerned need not be taken into account for the purposes of the international preliminary examination.

#### *37 CFR 1.485. Amendments by applicant during international preliminary examination.*

(a) The applicant may make amendments at the time of filing the Demand. The applicant may also make amendments within the time limit set by the International Preliminary Examining Authority for reply to any notification under § 1.484(b) or to any written opinion. Any such amendments must:

(1) Be made by submitting a replacement sheet in compliance with PCT Rules 10 and 11.1 to 11.13 for every sheet of the application which differs from the sheet it replaces unless an entire sheet is cancelled; and

(2) Include a description of how the replacement sheet differs from the replaced sheet. Amendments that do not comply with PCT Rules 10 and 11.1 to 11.13 may not be entered

(b) If an amendment cancels an entire sheet of the international application, that amendment shall be communicated in a letter.

All amendments in reply to a written opinion must be received within the time limit set for reply in order to be assured of consideration in the international preliminary examination report. Amendments filed at or before expiration of the period for reply will be considered. Since the examiner will begin to draw up the final report rather promptly after the time period expires, amendments filed after expiration of the reply period may not be considered. >However, as indicated in MPEP § 1871, there may be situations where it is advisable, to the extent possible, to take such amendments or arguments into account, for example, where the international preliminary examination report has not yet been completed and it is readily apparent to the examiner that consideration of the late-filed response would result in the issuance of a favorable report.< In view of the short time period for completion of preliminary examination, applicants are strongly encouraged to file any amendments promptly. 37 CFR 1.484(d) does not allow for extensions of time to reply to a written opinion. The policy of not allowing extensions of time is to ensure that the USPTO can meet its treaty deadline for transmission of the final report.

Any change, other than the rectification of obvious errors in the claims, the description, or the drawings, including the cancellation of claims, omission of passages in the description or omission of certain drawings will be considered an amendment (PCT Rule 66.5). The Patent and Trademark Office when acting as the International Preliminary Examining Authority will not accept any non-English applications or amendments.

Any amendments to the claims, the description, and the drawings in reply to a written opinion must (1) be made by submitting a replacement sheet for every sheet of the application which differs from the sheet it replaces unless an entire sheet is cancelled and (2) include a description of how the replacement sheet differs from the replaced sheet in accordance with PCT Rule 66.8.

In the particular case where the amendment cancels claims, passages in the description or certain drawings resulting in the cancellation of an entire sheet, the

amendment must be submitted in the form of a letter cancelling the sheet (PCT Rule 66.8(a)).

Replacement sheets must be in typed form.

Any paper submitted by the applicant, if not in the form of a letter, must be accompanied by a letter signed by the applicant or agent (PCT Rule 92.1). The letter must draw attention to the differences between the replaced sheet and the replacement sheet.

The examiner should make sure that amendments filed in accordance with the PCT, which are necessary to correct any deficiencies notified to the applicant, do not go beyond the disclosure of the international application as filed, thus violating PCT Article 34(2)(b). In other words, no amendment should contain matter that cannot be substantiated by the application as originally filed. In a situation where new matter is introduced by amendment in reply to a written opinion, the international preliminary examination report will be established as if the amendment had not been made, and the report should so indicate. It shall also indicate the reasons why the amendment goes beyond the disclosure (PCT Rule 70.2(c)).

## INTERVIEWS

The examiner or applicant may, >after the filing of a demand and< during the time limit for reply to the written opinion, request a telephone or personal interview. Only one interview is a matter of right, whether by telephone or in person. Additional interviews may be authorized by the examiner in a particular international application where such additional interview may be helpful to advance the international preliminary examination procedure.

All interviews of substance must be made of record by using PCT/IPEA/428 Notice on Informal Communication with the Applicant.

When an interview is arranged, whether by telephone or in writing, and whether by the examiner or by the applicant, the matters for discussion should be stated.

The records of interviews or telephone conversations should indicate, where appropriate, whether a reply is due from the applicant or agent or whether the examiner wishes to issue an additional written opinion or establish the international preliminary examination report.

If the applicant desires to reply to the written opinion, such reply must be filed within the time limit set

for reply in order to assure consideration. No extensions to the time limit will be considered or granted. If no timely reply is received from the applicant, the international preliminary examination report will be established by the examiner, treating each claim substantially as it was treated in the written opinion. Replies to the written opinion which are not filed within the time limit set but which reach the examiner before the examiner takes up the application for preparation of the final report may be considered. Thus, only timely replies can be assured of consideration.

The applicant may reply to the invitation referred to in Rule 66.2(c) by making amendments or, if the applicant disagrees with the opinion of the authority, by submitting arguments, as the case may be, or both (PCT Rule 66.3).

If applicant does not reply to the written opinion, the international preliminary examination report will be prepared in time for forwarding to the International Division in finished form by 27 months from the priority date.

## **1879 Preparation of the International Preliminary Examination Report [R-2]**

### *PCT Article 35.*

#### *The International Preliminary Examination Report*

(1) The international preliminary examination report shall be established within the prescribed time limit and in the prescribed form.

(2) The international preliminary examination report shall not contain any statement on the question whether the claimed invention is or seems to be patentable or unpatentable according to any national law. It shall state, subject to the provisions of paragraph (3), in relation to each claim, whether the claim appears to satisfy the criteria of novelty, inventive step (non-obviousness), and industrial applicability, as defined for the purposes of the international preliminary examination in Article 33(1) to (4). The statement shall be accompanied by the citation of the documents believed to support the stated conclusion with such explanations as the circumstances of the case may require. The statement shall also be accompanied by such other observation as the Regulations provide for.

(3)(a) If, at the time of establishing the international preliminary examination report, the International Preliminary Examining Authority considers that any of the situations referred to in Article 34(4)(a) exists, that report shall state this opinion and the reasons therefor. It shall not contain any statement as provided in paragraph (2).

(b) If a situation under Article 34(4)(b) is found to exist, the international preliminary examination report shall, in relation

to the claims in question, contain the statement as provided in subparagraph (a), whereas, in relation to the other claims, it shall contain the statement as provided in paragraph (2).

### *PCT Administrative Instruction Section 604.*

#### *Guidelines for Explanations Contained in the International Preliminary Examination Report*

(a) Explanations under Rule 70.8 shall clearly point out to which of the three criteria of novelty, inventive step (non-obviousness) and industrial applicability referred to in Article 35(2), taken separately, any cited document is applicable and shall clearly describe, with reference to the cited documents, the reasons supporting the conclusion that any of the said criteria is or is not satisfied.

(b) Explanations under Article 35(2) shall be concise and preferably in the form of short sentences.

\*\*

The international preliminary examination report is established on Form PCT/IPEA/409.

The international preliminary examination report must be established within:

>For applications having an international filing date on or after January 1, 2004:

- (A) 28 months from the priority date; or
- (B) 6 months from the time provided under PCT Rule 69.1 for the start of international preliminary examination; or
- (C) 6 months from the date of receipt by the IPEA of the translation furnished under PCT Rule 55.2 whichever expires last, as provided in PCT Rule 69.2.

For applications having an international filing date before January 1, 2004:<

- (A) 28 months from the priority date; or
- (B) 8 months from the date of payment of the fees referred to in PCT Rules 57.1 and 58.1(a); or
- (C) 8 months from the date of receipt by the International Preliminary Examining Authority of the translation furnished under PCT Rule 55.2, whichever expires last, as provided in PCT Rule 69.2.

To meet the 28-month date for establishing the report, Office practice is to complete internal processing by 27 months from the priority date in order to provide adequate time for reviewing, final processing and mailing. Thus, under normal circumstances, the applicant receives the report, at the latest, 2 months before national processing at the elected Offices may start. This ensures that he/she has time to consider whether, and in which elected Offices, he/she wants to

enter the national stage and to take the necessary action.

The international preliminary examination report contains, among other things, a statement (in the form of simple “yes” or “no”), in relation to each claim which has been examined, on whether the claim appears to satisfy the criteria of novelty, inventive step (non-obviousness) and industrial applicability. The statement is, where appropriate, accompanied by the citation of relevant documents together with concise explanations pointing out the criteria to which the cited documents are applicable and giving reasons for the International Preliminary Examining Authority’s conclusions. Where applicable, the report also includes remarks relating to the question of unity of invention.

The international preliminary examination report identifies the basis on which it is established, that is, whether, and if so, which amendments have been taken into account. Replacement sheets containing amendments under PCT Article 19 and/or Article 34 which have been taken into account are attached as “annexes” to the international preliminary examination report. Amendments under PCT Article 19 which have been considered as reversed by an amendment under PCT Article 34 \*\* are not annexed to the report; neither are the letters which accompany replacement sheets.

>Superseded amendments are not normally included. However, if a first replacement sheet is acceptable and a second replacement sheet for the same numbered sheet contains subject matter that goes beyond the original disclosure of the application as filed, the second replacement sheet supersedes the first replacement sheet, but both the first and second replacement sheets shall be attached to the international preliminary examination report. In this case, the superseded replacement sheets are to be marked as provided in Administrative Instructions Section 602.< The international preliminary examination report may not express a view on the patentability of the invention. PCT Article 35(2) expressly states that “the international preliminary examination report shall not contain any statement on the question whether the claimed invention is or seems to be patentable or unpatentable according to any national law.”

## CLASSIFICATION OF SUBJECT MATTER

The classification of the subject matter shall be either (1) that given by the International Searching Authority under PCT Rule 43.3, if the examiner agrees with such classification, or (2) shall be that which the examiner considers to be correct, if the examiner does not agree with that classification. Both the International Patent Classification (IPC) and the U.S. classification should be given. This classification is placed on the first sheet of the report.

### \* >BOX NO.< I. BASIS OF REPORT

>When completing Box I, item 1, of Form PCT/IPEA/409, the examiner must indicate whether or not the report has been established on the basis of the international application in the language in which it was filed. If a translation was furnished for the purpose of the search, the publication or the examination, this must be indicated.< The international preliminary examination report will be established on the basis of any amendments, rectifications, priority and/or unity of invention holdings and shall answer the questions concerning novelty, inventive step, and industrial applicability for each of the claims under examination.

In completing Form PCT/IPEA/409, the examiner should first indicate any amendments and/or rectifications of obvious errors taken into account in establishing the international preliminary examination report. The amendments and/or rectifications should be indicated by references to the dates on which the amendments and/or rectifications were filed.

For the purpose of completing Box I, item 1, substitute and/or rectified sheets of the specification and drawings filed during Chapter I proceedings are considered to be originally filed pages/sheets and should be listed as originally filed pages/sheets. Only those amendments or rectifications to the specification and drawings filed on the date of Demand or after the filing of a Demand should be listed as later filed pages/sheets.

Substitute and/or rectified sheets of claims filed during the Chapter I proceedings are also considered to be originally filed claims and should be listed as originally filed claims. However, amended sheets of claims filed under Article 19 in response to the international search report are to be indicated as claims as amended under Article 19. Applicant’s submission of

a timely amendment to the claims alleged to be under Article 19 is accepted under Article 34 (not Article 19) unless the International Bureau has indicated the amendments were accepted under Article 19. Only those amendments, or rectifications to the claims filed on the date of Demand or after the filing of a Demand should be listed as later filed claims. \*\*

Amendments and/or rectifications filed but not taken into account in the establishment of the report (e.g., an amendment not taken into account because the amendment went beyond the disclosure of the international application as filed or a rectification that is not considered to be merely a correction of an obvious error) are then indicated separately. The replacement sheets (but not replacement sheets superseded by later replacement sheets) or letters cancelling sheets under PCT Rule 66.8(a) are included as an annex to the report.

>With respect to Box I, item 3, the examiner must indicate whether any amendments have resulted in the cancellation of pages of the description, claims, drawings, sequence listings or any tables related to sequence listings.

With respect to Box 1, item 4, the examiner must indicate whether any amendments to the description, claims, drawings, sequence listings or any tables related to sequence listing that are annexed to the report, have been treated as if they had not been made because they go beyond the disclosure as filed.<

The final report package when sent to the International Application Processing Division for mailing must include copies of all amendments and rectifications entered and any cover letters to those amendments.

**\* >BOX NO.< II. PRIORITY**

\*>Box 2< II of Form PCT/IPEA/409 is to inform applicant of non-establishment of a request for priority. If the report is established as if the priority claim contained in the Request of the international application had not been made, it shall so indicate. This will occur in the event that the applicant has failed to comply with the invitation to furnish either

- (A) a copy of the earlier application whose priority is claimed, or
- (B) a translation of the earlier application, or
- (C) where the priority claim is found invalid, e.g., the claimed priority date is more than one year prior

to the international filing date (PCT Rule 17) or all claims are directed to inventions which were not described and enabled by the earlier application (PCT Rule 64.1), or

- (D) where the priority claim has been withdrawn.

**\* >BOX NO.< III. NON-ESTABLISHMENT OF OPINION WITH REGARD TO NOVELTY, INVENTIVE STEP OR INDUSTRIAL APPLICABILITY**

Indications that a report has not been established on the questions of novelty, inventive step or industrial applicability, either as to some claims or as to all claims, are given in Item III on the Report. The examiner must specify that the report has not been established because:

(A) the application relates to subject matter which does not require international preliminary examination;

(B) the description, claims or drawings are so unclear that no meaningful opinion could be formed;

(C) the claims are so inadequately supported by the description that no meaningful opinion could be formed.

Where the report has not been established in relation to certain claims only, the claims affected must be specified.

>If the nucleotide and/or amino acid sequence listing, and/or tables related thereto, do not comply with the standard in Annex C of the Administrative Instructions, the examiner must indicate the reason for non-compliance.<

**\* >BOX NO.< IV. LACK OF UNITY OF INVENTION**

If the applicant has paid additional fees or has restricted the claims in response to an invitation to do so or if the applicant has failed to respond to the invitation to pay additional fees or restrict the claims, the international preliminary examination report shall so indicate. The examiner should indicate whether:

- (A) the claims have been restricted;
- (B) additional fees have been paid without protest;
- (C) additional fees have been paid by the applicant under protest;

(D) the applicant has neither restricted the claims nor paid additional fees;

(E) the examiner was of the opinion that the international application did not comply with the requirement of unity of invention but decided not to issue an invitation to restrict the claims or pay additional fees.

In addition, if the examiner is examining less than all the claims, the examiner must indicate which parts of the international application were, and which parts were not, the subject of international preliminary examination.

In the case where additional fees were paid under protest, the text of the protest, together with the decision thereon, must be annexed to the report by International Application Processing Division IPEA personnel if the applicant has so requested.

Where an indication has been given under item (E) above, the examiner must also specify the reasons for which the international application was not considered as complying with the requirement of unity of invention.

**\* >BOX NO.< V. REASONED STATEMENT UNDER ARTICLE 35(2) WITH REGARD TO NOVELTY, INVENTIVE STEP, AND INDUSTRIAL APPLICABILITY; AND CITATIONS AND EXPLANATIONS SUPPORTING SUCH STATEMENT**

The examiner must indicate whether each claim appears to satisfy the criteria of novelty, inventive step (nonobviousness), and industrial applicability. The determination or statement should be made on each of the three criteria taken separately. The determination as to any criteria should be negative if the criteria as to the particular claim is not satisfied. The examiner should always cite documents believed to support any negative determination as to novelty and inventive step. Any negative holding as to lack of industrial applicability must be fully explained. See the >furthur< discussion \*>in< MPEP § \*\*>1845.01 relating to Box No. V of Form PCT/ISA/237<. The citation of documents should be in accordance with Administrative Instructions Sections 503 and 611. The procedure is the same as the procedure for search report citations. Explanations should clearly indicate, with reference to the cited documents, the reasons supporting the conclusions that any of the said criteria is or is not satisfied, unless the statement is positive

and the reason for citing any document is easy to understand when consulting the document. If only certain passages of the cited documents are relevant, the examiner should identify them, for example, by indicating the page, column, or the lines where such passages appear. Preferably, a reasoned statement should be provided in all instances.

**\* >BOX NO.< VI. CERTAIN DOCUMENTS CITED**

If the examiner has discovered, or the international search report has cited, a relevant document which refers to a nonwritten disclosure, and the document was only published on or after the relevant date of the international application, the examiner must indicate on the international preliminary examination report:

(A) the date on which the document was made available to the public;

(B) the date on which the non-written public disclosure occurred.

The examiner should also identify any published application or patent and should provide for each such published application or patent the following indications:

(A) its date of publication;

(B) its filing date, and its claimed priority date (if any).

The Report may also indicate that, in the opinion of the International Preliminary Examining Authority, the priority date of the document cited has not been validly claimed (PCT Rule 70.10).

Guidelines explaining to the examiner the manner of indicating certain special categories of documents as well as the manner of indicating the claims to which the documents cited in such report are relevant are set forth in Administrative Instructions Sections 507(c), (d), and (e) and 508.

**\* >BOX NO.< VII. CERTAIN DEFECTS IN THE INTERNATIONAL APPLICATION**

If, in the opinion of the examiner, defects existing in the form or contents of the international application have not been suitably solved at the prescribed time limit for establishing the international preliminary examination report, the examiner may include this opinion in the report, and if included, must also

indicate the reasons therefor. See the >further< discussion \*in< MPEP § \*\*>1845.01 relating to Box No. VII of Form PCT/ISA/237.

#### **\*\* >BOX NO. VIII.< CERTAIN OBSERVATIONS ON THE INTERNATIONAL APPLICATION**

If, in the opinion of the examiner, the clarity of claims, the description, and the drawings, or the question as to whether the claims are fully supported by the description have not been suitably solved at the prescribed time limit for establishing the international preliminary examination report, the examiner may include this opinion in the report, and if included, must also indicate the reasons therefor. See the >further< discussion \*in< MPEP § \*\*>1845.01 relating to Box No. VIII of Form PCT/ISA/237.

#### **FINALIZATION OF THE INTERNATIONAL PRELIMINARY EXAMINATION REPORT**

The date on which the report was completed and the name and mailing address of the International Pre-

liminary Examining Authority are indicated on the cover sheet (Form PCT/IPEA/416) of the international preliminary examination report. This information is generated automatically by the OACS software when preparing the report. In addition, the date on which the demand for international preliminary examination was submitted and the name of the authorized officer responsible for the report must be indicated. Pursuant to Administrative Instructions Section 612, an “authorized officer” is the person who actually performed the examination work and prepared the international preliminary examination report or another person who was responsible for supervising the examination. Thus, an examiner need not have signatory authority in order to be named as an authorized officer on the examination report. However, the “file copy” of the international preliminary examination report must be signed by a primary examiner.

\*\*

PATENT COOPERATION TREATY

From the  
INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

**PCT**

NOTIFICATION OF TRANSMITTAL OF  
INTERNATIONAL PRELIMINARY  
REPORT ON PATENTABILITY  
(Chapter II of the Patent Cooperation Treaty)

(PCT Rule 71.1)

To:

John J. Smith  
220 Jefferson Davis Highway  
Arlington, Virginia 22202-0234

Date of mailing  
(day/month/year) **04 MAY 2004**

Applicant's or agent's file reference  
CMC-123-PCT

**IMPORTANT NOTIFICATION**

International application No.  
PCT/US04/00150

International filing date (day/month/year)  
05 January 2004 (05.01.2004)

Priority date (day/month/year)  
06 January 2003 (06.01.2003)

Applicant  
ACME FASTENER CORPORATION

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**  
The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).  
Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.  
For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the *PCT Applicant's Guide*.  
The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed invention is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

Applicant ACME FASTENER CORPORATION		

1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 6 sheets, including this cover sheet.

3. This report is also accompanied by ANNEXES, comprising:

a.  (sent to the applicant and to the International Bureau) a total of 2 sheets, as follows:

sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).

sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.

b.  (sent to the International Bureau only) a total of \_\_\_\_\_, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).

4. This report contains indications relating to the following items:

Box No. I Basis of the report

Box No. II Priority

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Box No. IV Lack of unity of invention

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Box No. VI Certain documents cited

Box No. VII Certain defects in the international application

Box No. VIII Certain observations on the international application

Date of submission of the demand	Date of completion of this report  21 April 2004 (21.04.2004)

Form PCT/IPEA/409 (cover sheet) (January 2004)

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.  
PCT/US04/00150

Box No. I Basis of the report

1. With regard to the **language**, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.

- This report is based on translations from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of:
  - international search (under Rules 12.3 and 23.1(b))
  - publication of the international application (under Rule 12.4)
  - international preliminary examination (under Rules 55.2 and/or 55.3)

2. With regard to the **elements** of the international application, this report is based on *(replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report)*:

- the international application as originally filed/furnished
- the description:
  - pages 1 - 10 \_\_\_\_\_ as originally filed/furnished
  - pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_
  - pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_
- the claims:
  - pages \_\_\_\_\_ as originally filed/furnished
  - pages\* \_\_\_\_\_ as amended (together with any statement) under Article 19
  - pages\* 11 and 12 \_\_\_\_\_ received by this Authority on 24 February 2004 (25.02.2004)
  - pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_
- the drawings:
  - pages 1/2 - 2/2 \_\_\_\_\_ as originally filed/furnished
  - pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_
  - pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_
- a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.

3.  The amendments have resulted in the cancellation of:

- the description, pages \_\_\_\_\_
- the claims, Nos. 4 \_\_\_\_\_
- the drawings, sheets/figs \_\_\_\_\_
- the sequence listing (*specify*): \_\_\_\_\_
- any table(s) related to sequence listing (*specify*): \_\_\_\_\_

4.  This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

- the description, pages \_\_\_\_\_
- the claims, Nos. \_\_\_\_\_
- the drawings, sheets/figs \_\_\_\_\_
- the sequence listing (*specify*): \_\_\_\_\_
- any table(s) related to sequence listing (*specify*): \_\_\_\_\_

\* If item 4 applies, some or all of those sheets may be marked "superseded."

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/US04/00150

## Box No. IV Lack of unity of invention

1.  In response to the invitation to restrict or pay additional fees the applicant has:
- restricted the claims.
- paid additional fees.
- paid additional fees under protest.
- neither restricted nor paid additional fees.
2.  This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is:
- complied with.
- not complied with for the following reasons:
- This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.
- Group I, claim(s) 1 - 3, 5 and 16 - 20 drawn to an electromagnetic fastener driver with means to hold the fastener magazine in a predetermined position.
- Group II, claim(s) 6 - 10, drawn to an electromagnetic fastener driver with a control means to provide for multiple driving strokes to be delivered to the same fastener with a single actuation of the tool.
- Group III, claim(s) 11 - 15, drawn to an electromagnetic fastener driver with a fastener jam clearance feature.
- The inventions listed as Groups I - III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the Group I invention is the claimed means to hold the fastener magazine in a predetermined position. The special technical feature of the Group II invention is the claimed control means to provide for multiple driving strokes to be delivered to the same fastener with a single actuation of the tool. The special technical feature of the Group III invention is the claimed fastener jam clearance feature. None of these special technical features are common to the other groups, nor do they correspond to a special technical feature in the other groups. Therefore, unity of invention is lacking.
4. Consequently, this report has been established in respect of the following parts of the international application:
- all parts.
- the parts relating to claims Nos. \_\_\_\_\_

International application No.  
PCT/US04/00150

## Supplemental Box

In case the space in any of the preceding boxes is not sufficient.  
Continuation of:

## 2. Citations and Explanations

Claims 6 - 10 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. in view of Barrett et al. Novak et al. teaches an electromagnetic fastener tool 10 with a housing 12 having a fastener magazine assembly 18 mounted thereon with the magazine assembly having a fastener output channel. The magazine assembly 18 is pivoted between a first position wherein the tool can not be actuated and a second position wherein a fastener may be driven from the tool (note figure 3 and column 1, line 65 through column 2, line 5). The magazine assembly 18 is moved from the first position to the second position by placing the fastener output channel firmly against a work piece. As shown in figure 3 and described at column 4, lines 6 - 49, the magazine assembly 18 and the trigger button 24 are coupled by a safety mechanism 62. This safety mechanism has a sliding rod 64 with the lower end of the rod 64 being attached to the top of channel 48 of the magazine assembly such that rod 64 moves with the magazine assembly. When magazine assembly 18 is placed on a work piece, it rotates into the second position and pushes rod 64 upward. The upper portion of rod 64 has a spring 74 which includes a cam surface 76, a curved surface 78 and a bottom edge 81. Bottom edge 81 of spring 74 is normally positioned adjacent flange 86 of trigger button 24 and blocks upward movement of the trigger button. Thus, the trigger button may not be depressed (moved upward) to fire the tool until the bottom edge 81 of spring 74 is moved away from flange 86. This is accomplished by the interaction of curved surface 78 of spring 74 with a corresponding curved surface 82 fixed to the housing 12. When rod 64 moves upward, spring 74 is bent away from trigger button 24 by the interaction of curved surfaces 78 and 82. Thus, placing the fastener output channel of the magazine assembly 18 against a work piece moves bottom surface 81 of spring 74 out of its blocking position adjacent flange 86 of trigger button 24 and permits the tool to be fired. Novak et al. does not teach the claimed electronic control means to provide multiple blows from the driver to a single fastener. Barrett et al. discloses a control means which provides for multiple blows by the driver 32 on the fastener for each actuation of the trigger. Barrett et al. teaches at column 1, lines 40 - 49 that it is advantageous to operate solenoid actuated fastener drivers in this manner because these tools may require two or more blows from the driver to properly drive the fastener an adequate depth into the work piece. In view of this known teaching, it would have been obvious to one of ordinary skill in this art to provide the Novak et al. tool with the claimed control means to provide a predetermined plurality of driving strokes to a single fastener.

Claims 11 - 15 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. in view of D'Haem et al. Novak et al. does not teach the provision of an anti-jam means to clear jammed fasteners from the fastener output channel. The claims call for the fastener output channel to be formed with a removable cover plate to permit clearing the tool in the event of a fastener jam. D'Haem et al. teaches the use of a removable cover plate to allow clearing the tool as claimed (see column 4, line 76 - column 5, line 23). In view of this teaching, it would have been obvious to one of ordinary skill in this art to provide the claimed anti-jam feature in the Novak et al. tool.

Claims 1 - 3, 5, and 16 - 20 meet the criteria set out in PCT Article 33(2) - (3), because the prior art does not teach or fairly suggest the means to hold the fastener magazine in the second position as claimed.

Claims 1 - 3 and 5 - 20 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

## 1879.01 > Time Limit for Preparing Report in International Applications Having an International Filing Date On or After January 1, 2004 [R-2]

[Note: The regulations under the PCT were changed effective January 1, 2004 and corresponding changes were made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure*, 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). The discussion of the procedures in effect for applications filed prior to January 1, 2004 has been moved from this section to newly added MPEP § 1879.01(a).]

### *PCT Rule 69.*

#### *Start of and Time Limit for International Preliminary Examination*

##### *69.1. Start of International Preliminary Examination*

(a) Subject to paragraphs (b) to (e), the International Preliminary Examining Authority shall start the international preliminary examination when it is in possession of all of the following:

- (i) the demand;
- (ii) the amount due (in full) for the handling fee and the preliminary examination fee, including where applicable, the late payment fee under Rule 58<sup>bis</sup>.2; and
- (iii) either the international search report and the written opinion established under Rule 43<sup>bis</sup>.1 or a notice of the declaration by the International Searching Authority under Article 17(2)(a) that no international search report will be established;

provided that the International Preliminary Examining Authority shall not start the international preliminary examination before the expiration of the applicable time limit under Rule 54<sup>bis</sup>.1(a) unless the applicant expressly requests an earlier start.

(b) If the national Office or intergovernmental organization that acts as International Searching Authority also acts as International Preliminary Examining Authority, the international preliminary examination may, if that national Office or intergovernmental organization so wishes and subject to paragraphs (d) and (e), start at the same time as the international search.

(b<sup>bis</sup>) Where, in accordance with paragraph (b), the national Office or intergovernmental organization that acts as both International Searching Authority and International Preliminary Examining Authority wishes to start the international preliminary examination at the same time as the international search and considers that all of the conditions referred to in Article 34(2)(c)(i) to (iii) are fulfilled, that national Office or intergovernmental organi-

zation need not, in its capacity as International Searching Authority, establish a written opinion under Rule 43<sup>bis</sup>.1

(c) Where the statement concerning amendments contains an indication that amendments under Article 19 are to be taken into account (Rule 53.9(a)(i)), the International Preliminary Examining Authority shall not start the international preliminary examination before it has received a copy of the amendments concerned.

(d) Where the statement concerning amendments contains an indication that the start of the international preliminary examination is to be postponed (Rule 53.9(b)), the International Preliminary Examining Authority shall not start the international preliminary examination before whichever of the following occurs first:

- (i) it has received a copy of any amendments made under Article 19;
- (ii) it has received a notice from the applicant that he does not wish to make amendments under Article 19; or
- (iii) the expiration of the applicable time limit under Rule 54<sup>bis</sup>.1(a).

(e) Where the statement concerning amendments contains an indication that amendments under Article 34 are submitted with the demand (Rule 53.9(c)) but no such amendments are, in fact, submitted, the International Preliminary Examining Authority shall not start the international preliminary examination before it has received the amendments or before the time limit fixed in the invitation referred to in Rule 60.1(g) has expired, whichever occurs first.

##### *69.2. Time Limit for International Preliminary Examination*

The time limit for establishing the international preliminary examination report shall be whichever of the following periods expires last:

- (i) 28 months from the priority date; or
- (ii) six months from the time provided under Rule 69.1 for the start of the international preliminary examination; or
- (iii) six months from the date of receipt by the International Preliminary Examining Authority of the translation furnished under Rule 55.2.

PCT Rule 69.2 was amended as reproduced above for applications having an international filing date on or after January 1, 2004. The time limit for preparing the international preliminary examination report is 28 months from the priority date, or 6 months from the time provided under PCT Rule 69.1 for the start of the international preliminary examination, or 6 months from the date of receipt by the International Preliminary Examining Authority of the translation furnished under PCT Rule 55.2, whichever expires first. This time limit is 27 months internally to ensure sufficient time to process, review and mail the report in sufficient time to reach the International Bureau by 28 months from the earliest priority date.

### 1879.01(a) < Time Limit for Preparing Report >in International Application Having an International Filing Date Before January 1, 2004< [R-2]

>[Note: For international applications filed on or after January 1, 2004, see MPEP § 1879.01.]

Former<

*PCT Rule 69.*

*Start of and Time Limit for International Preliminary Examination*

>(as amended July 1, 1998)<

#### 69.1.Start of International Preliminary Examination

(a) Subject to paragraphs (b) to (e), the International Preliminary Examining Authority shall start the international preliminary examination when it is in possession both of the demand and of either the international search report or a notice of the declaration by the International Searching Authority under Article 17(2)(a) that no international search report will be established.

(b) If the competent International Preliminary Examining Authority is part of the same national Office or intergovernmental organization as the competent International Searching Authority, the international preliminary examination may, if the International Preliminary Examining Authority so wishes and subject to paragraph (d), start at the same time as the international search.

(c) Where the statement concerning amendments contains an indication that amendments under Article 19 are to be taken into account (Rule 53.9(a)(i)), the International Preliminary Examining Authority shall not start the international preliminary examination before it has received a copy of the amendments concerned

(d) Where the statement concerning amendments contains an indication that the start of the international preliminary examination is to be postponed (Rule 53.9(b)), the International Preliminary Examining Authority shall not start the international preliminary examination before

(i) it has received a copy of any amendments made under Article 19,

(ii) it has received a notice from the applicant that he does not wish to make amendments under Article 19, or

(iii) the expiration of 20 months from the priority date, whichever occurs first.

(e) Where the statement concerning amendments contains an indication that amendments under Article 34 are submitted with the demand (Rule 53.9(c)) but no such amendments are, in fact, submitted, the International Preliminary Examining Authority shall not start the international preliminary examination before it has received the amendments or before the time limit fixed in the invitation referred to in Rule 60.1(g) has expired, whichever occurs first.

#### 69.2.Time Limit for International Preliminary Examination

The time limit for establishing the international preliminary examination report shall be:

(i) 28 months from the priority date, or

(ii) eight months from the date of payment of the fees referred to in Rules 57.1 and 58.1(a), or

(iii) eight months from the date of receipt by the International Preliminary Examining Authority of the translation furnished under Rule 55.2, whichever expires last.

\*\*>For international applications having an international filing date before January 1, 2004, the period for preparing the IPER is set forth in former PCT Rule 69.2 (as amended July 1, 1998)<. The time limit for preparing the international preliminary examination report is 28 months from the priority date, or 8 months from the date of payment of the fees referred to in PCT Rules 57.1 and 58.1(a), or 8 months from the date of receipt by the International Preliminary Examining Authority of the translation furnished under PCT Rule 55.2, whichever expires first. This time limit is 27 months internally to ensure sufficient time to process, review and mail the report in sufficient time to reach the International Bureau by 28 months from the earliest priority date.

### 1879.02 Transmittal of the International Preliminary Examination Report

*PCT Article 36.*

*Transmittal, Translation, and Communication of the International Preliminary Examination Report*

(1) The international preliminary examination report, together with the prescribed annexes, shall be transmitted to the applicant and to the International Bureau.

\*\*\*\*\*

*PCT Rule 71.*

*Transmittal of the International Preliminary Examination Report*

#### 71.1.Recipients

The International Preliminary Examining Authority shall, on the same day, transmit one copy of the international preliminary examination report and its annexes, if any, to the International Bureau, and one copy to the applicant.

#### 71.2.Copies of Cited Documents

(a) The request under Article 36(4) may be presented any time during seven years from the international filing date of the international application to which the report relates.

(b) The International Preliminary Examining Authority may require that the party (applicant or elected Office) presenting the request pay to it the cost of preparing and mailing the copies. The level of the cost of preparing copies shall be provided for in the agreements referred to in Article 32(2) between the International Preliminary Examining Authorities and the International Bureau.

(c) *[Deleted]*

(d) Any International Preliminary Examining Authority may perform the obligations referred to in paragraphs (a) and (b) through another agency responsible to it.

The international preliminary examination report is transmitted to the International Bureau using a transmittal Form PCT/IPEA/416. Every effort is made to ensure that the transmittal is effected in sufficient time to reach the International Bureau before the expiration of the time limit set in PCT Rule 69.2.

### AUTHORIZED OFFICER

Form PCT/IPEA/416 must be signed by a primary examiner.

### 1879.03 Translations [R-2]

\*\*

#### *PCT Article 36.*

#### *Transmittal, Translation, and Communication of the International Preliminary Examination Report*

\*\*\*\*\*

(2)(a) The international preliminary examination report and its annexes shall be translated into the prescribed languages.

(b) Any translation of the said report shall be prepared by or under the responsibility of the International Bureau, whereas any translation of the said annexes shall be prepared by the applicant.

\*\*\*\*\*

>

#### *PCT Rule 70.*

#### *International Preliminary Report on Patentability by the International Preliminary Examining Authority (International Preliminary Examination Report)*

\*\*\*\*\*

#### *70.17 Languages of the Report and the Annexes*

The report and any annex shall be in the language in which the international application to which they relate is published, or, if the international preliminary examination is carried out, pursuant to Rule 55.2, on the basis of a translation of the international application, in the language of that translation.<

#### *PCT Rule 72.*

\*\*>*Translation of the International Preliminary Examination Report and of the Written Opinion of the International Searching Authority*<

#### *72.1. Languages*

(a) Any elected State may require that the international preliminary examination report, established in any language other than the official language, or one of the official languages, of its national Office, be translated into English.

(b) Any such requirement shall be notified to the International Bureau, which shall promptly publish it in the Gazette.

#### *72.2. Copy of Translation for the Applicant*

The International Bureau shall transmit a copy of the translation referred to in Rule 72.1(a) of the international preliminary examination report to the applicant at the same time as it communicates such translation to the interested elected Office or Offices.

\*\*>

#### *72.2<sup>bis</sup>. Translation of the Written Opinion of the International Searching Authority Established Under Rule 43<sup>bis</sup>.1*

In the case referred to in Rule 73.2(b)(ii), the written opinion established by the International Searching Authority under Rule 43<sup>bis</sup>.1 shall, upon request of the elected Office concerned, be translated into English by or under the responsibility of the International Bureau. The International Bureau shall transmit a copy of the translation to the elected Office concerned within two months from the date of receipt of the request for translation, and shall at the same time transmit a copy to the applicant.

#### *72.3. Observations on the Translation*

The applicant may make written observations as to the correctness of the translation of the international preliminary examination report or of the written opinion established by the International Searching Authority under Rule 43<sup>bis</sup>.1 and shall send a copy of the observations to each of the interested elected Offices and to the International Bureau.<

The >written opinion established by the International Searching Authority and the< international preliminary examination report and any annexes are established in Chinese, English, French, German, Japanese, Russian or Spanish, if the international application was filed in one of those languages or translated into one of those languages. See PCT Rules 48.3(b), 55.2 and 70.17. Each elected State may require that >the written opinion and/or< the report, if it is not in (one of) the official language(s) of its national Office, be translated into English. See PCT Rule 72.1(a). In that case, the translation of the body of the >written opinion and/or< report is prepared by >the< International Bureau, which transmits copies to the applicant

and to each interested elected Office. If any elected Office requires a translation of annexes to the report, the preparation and furnishing of that translation is the responsibility of the applicant. See PCT Article 36(2)(b).

The U.S. requires the final report and the annexes thereto to be in English. Translation of the annexes for national stage purposes is required pursuant to 35 U.S.C. 371(c)(5) and 37 CFR 1.495(e). Failure to timely provide such translation results in cancellation of the annexes.

## 1879.04 Confidential Nature of the Report [R-2]

### *PCT Article 38.*

#### *Confidential Nature of the International Preliminary Examination*

(1) Neither the International Bureau nor the International Preliminary Examining Authority shall, unless requested or authorized by the applicant, allow access within the meaning, and with the proviso, of Article 30(4) to the file of the international preliminary examination by any person or authority at any time, except by the elected Offices once the international preliminary examination report has been established.

(2) Subject to the provisions of paragraph (1) and Articles 36(1) and (3) and 37(3)(b), neither the International Bureau nor the International Preliminary Examining Authority shall, unless requested or authorized by the applicant, give information on the issuance or non-issuance of an international preliminary examination report and on the withdrawal or non-withdrawal of the demand or of any election.

>

### *PCT Rule 44<sup>ter</sup>.*

#### *Confidential Nature of Written Opinion, Report, Translation and Observations*

(a) The International Bureau and the International Searching Authority shall not, unless requested or authorized by the applicant, allow access by any person or authority before the expiration of 30 months from the priority date:

(i) to the written opinion established under Rule 43<sup>bis</sup>.1, to any translation thereof prepared under Rule 44<sup>bis</sup>.3(d) or to any written observations on such translation sent by the applicant under Rule 44<sup>bis</sup>.4;

(ii) if a report is issued under Rule 44<sup>bis</sup>.1, to that report, to any translation of it prepared under Rule 44<sup>bis</sup>.3(b) or to any written observations on that translation sent by the applicant under Rule 44<sup>bis</sup>.4.

(b) For the purposes of paragraph (a), the term “access” covers any means by which third parties may acquire cognizance, including individual communication and general publication.<

### *37 CFR 1.11. Files open to the public.*

(a) The specification, drawings, and all papers relating to the file of an abandoned published application, except if a redacted copy of the application was used for the patent application publication, a patent, or a statutory invention registration are open to inspection by the public, and copies may be obtained upon the payment of the fee set forth in § 1.19(b)(2). See § 2.27 for trademark files.

\*\*\*\*\*

### *37 CFR 1.14. Patent applications preserved in confidence.*

\*\*\*\*\*

\*\*>

(g) *International applications.* (1) Copies of international application files for international applications which designate the U.S. and which have been published in accordance with PCT Article 21(2), or copies of a document in such application files, will be furnished in accordance with PCT Articles 30 and 38 and PCT Rules 94.2 and 94.3, upon written request including a showing that the publication of the application has occurred and that the U.S. was designated, and upon payment of the appropriate fee (see § 1.19(b)), if:

(i) With respect to the Home Copy (the copy of the international application kept by the Office in its capacity as the Receiving Office, see PCT Article 12(1)), the international application was filed with the U.S. Receiving Office;

(ii) With respect to the Search Copy (the copy of an international application kept by the Office in its capacity as the International Searching Authority, see PCT Article 12(1)), the U.S. acted as the International Searching Authority, except for the written opinion of the International Searching Authority which shall not be available until the expiration of thirty months from the priority date; or

(iii) With respect to the Examination Copy (the copy of an international application kept by the Office in its capacity as the International Preliminary Examining Authority), the United States acted as the International Preliminary Examining Authority, an International Preliminary Examination Report has issued, and the United States was elected.

(2) A copy of an English language translation of a publication of an international application which has been filed in the United States Patent and Trademark Office pursuant to 35 U.S.C. 154(d)(4) will be furnished upon written request including a showing that the publication of the application in accordance with PCT Article 21(2) has occurred and that the U.S. was designated, and upon payment of the appropriate fee (§ 1.19(b)(4)).

(3) Access to international application files for international applications which designate the U.S. and which have been published in accordance with PCT Article 21(2), or copies of a document in such application files, will be permitted in accordance with PCT Articles 30 and 38 and PCT Rules 44<sup>ter</sup>.1, 94.2

and 94.3, upon written request including a showing that the publication of the application has occurred and that the U.S. was designated.

(4) In accordance with PCT Article 30, copies of an international application-as-filed under paragraph (a) of this section will not be provided prior to the international publication of the application pursuant to PCT Article 21(2).

(5) Access to international application files under paragraphs (a)(1)(i) through (a)(1)(vi) and (g)(3) of this section will not be permitted with respect to the Examination Copy in accordance with PCT Article 38.

(h) *Access or copies in other circumstances.* The Office, either *sua sponte* or on petition, may also provide access or copies of all or part of an application if necessary to carry out an Act of Congress or if warranted by other special circumstances. Any petition by a member of the public seeking access to, or copies of, all or part of any pending or abandoned application preserved in confidence pursuant to paragraph (a) of this section, or any related papers, must include:

(1) The fee set forth in § 1.17(h); and

(2) A showing that access to the application is necessary to carry out an Act of Congress or that special circumstances exist which warrant petitioner being granted access to all or part of the application.

For a discussion of the availability of copies of documents from international application files and/or access to international application files, see MPEP § 110.<

## 1880 Withdrawal of Demand or Election [R-2]

### *PCT Article 37.*

#### *Withdrawal of Demand or Election*

(1) The applicant may withdraw any or all elections.

(2) If the election of all elected States is withdrawn, the demand shall be considered withdrawn.

(3)(a) Any withdrawal shall be notified to the International Bureau.

(b) The elected Office concerned and the International Preliminary Examining Authority concerned shall be notified accordingly by the International Bureau.

(4)(a) Subject to the provisions of subparagraph (b), withdrawal of the demand or of the election of a Contracting State shall, unless the national law of that State provides otherwise, be considered to be withdrawal of the international application as far as that State is concerned.

(b) Withdrawal of the demand or of the election shall not be considered to be withdrawal of the international application if such withdrawal is effected prior to the expiration of the applicable time limit under Article 22; however, any Contracting State may provide in its national law that the aforesaid shall apply only if its national Office has received, within the said time limit, a

copy of the international application, together with a translation (as prescribed), and the national fee.

### *PCT Rule 90<sup>bis</sup>. Withdrawals*

\*\*\*\*\*

#### *90<sup>bis</sup>.4. Withdrawal of the Demand, or of Elections*

(a) The applicant may withdraw the demand or any or all elections at any time prior to the expiration of 30 months from the priority date.

(b) Withdrawal shall be effective upon receipt of a notice addressed by the applicant to the International Bureau.

(c) If the notice of withdrawal is submitted by the applicant to the International Preliminary Examining Authority, that Authority shall mark the date of receipt on the notice and transmit it promptly to the International Bureau. The notice shall be considered to have been submitted to the International Bureau on the date marked.

\*\*\*\*\*

### *PCT Administrative Instruction Section 606. Cancellation of Elections*

\*\*>

(a) The International Preliminary Examining Authority shall cancel *ex officio*:

(i) the election of any State which is not a designated State;

(ii) the election of any State not bound by Chapter II of the Treaty.

(b) The International Preliminary Examining Authority shall enclose that election within square brackets, shall draw a line between the square brackets while still leaving the election legible and shall enter, in the margin, the words "CANCELLED EX OFFICIO BY IPEA" or their equivalent in the language of the demand, and shall notify the applicant accordingly.

Any withdrawal of the demand or any election must be sent to the International Bureau or to the International Preliminary Examining Authority<. Withdrawal, if timely, is effective upon receipt by the International Bureau >or the International Preliminary Examining Authority. Pursuant to PCT Rule 90<sup>bis</sup>.5, the withdrawal must be signed by all of the applicants, except as provided in PCT Rule 90<sup>bis</sup>.5(b) in the case where an applicant/inventor for the United States could not be found or reached after diligent effort and the withdrawal is signed by at least one applicant. Pursuant to PCT Rules 90.4(e) and 90.5(d), the requirement for a separate power of attorney or a copy of the general power of attorney shall not be waived in cases of withdrawal.<

**1881 Receipt of Notice of Election and Preliminary Examination Report by the United States Patent and Trademark Office [R-2]**

*PCT Rule 61.*

*Notification of the Demand and Elections*

\*\*\*\*\*

*61.2. Notification to the Elected Offices*

(a) The notification provided for in Article 31(7) shall be effected by the International Bureau.

\*\*>

(b) The notification shall indicate the number and filing date of the international application, the name of the applicant, the filing date of the application whose priority is claimed (where priority is claimed) and the date of receipt by the International Preliminary Examining Authority of the demand.<

(c) The notification shall be sent to the elected Office together with the communication provided for in Article 20. Elections effected after such communication shall be notified promptly after they have been made.

\*\*>

(d) Where the applicant makes an express request to an elected Office under Article 40(2) prior to the international publication of the international application, the International Bureau shall, upon request of the applicant or the elected Office, promptly effect the communication provided for in Article 20 to that Office.<

*61.3. Information for the Applicant*

The International Bureau shall inform the applicant in writing of the notification referred to in Rule 61.2 and of the elected Offices notified under Article 31(7).

\*\*\*\*\*

All notices of election are received by the >Office of< PCT \*\*>Operations< from the International Bureau. The >Office of< PCT \*\*>Operations< prepares the appropriate records of the election and places the paper in storage with the communicated copy of the international application until the national stage is entered. >The international preliminary examination report received by the USPTO will also be included in the national stage file. The international preliminary examination report is communicated to the elected Offices by the International Bureau.<

\*\*

**1893 National Stage (U.S. National Application Filed Under 35 U.S.C. 371) [R-2]**

*37 CFR 1.9. Definitions.*

(a)(1) A national application as used in this chapter means a U.S. application for patent which was either filed in the Office under 35 U.S.C. 111, or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

(2) A provisional application as used in this chapter means a U.S. national application for patent filed in the Office under 35 U.S.C. 111(b).

(3) A nonprovisional application as used in this chapter means a U.S. national application for patent which was either filed in the Office under 35 U.S.C. 111(a), or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

\*\*\*\*\*

Thus, there are three types of U.S. national applications: a national stage application under the PCT (an application which entered the national stage in the U.S. from an international application after compliance with 35 U.S.C. 371), a regular domestic national application filed under 35 U.S.C. 111(a), and a provisional application filed under 35 U.S.C. 111(b).

An applicant who uses the Patent Cooperation Treaty gains the benefit of:<

(A) a delay in the time when papers must be submitted to the national offices;

(B) an international search (to judge the level of the relevant prior art) >and, for international applications filed on or after January 1, 2004, a written opinion on the question of whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable< before having to expend resources for filing fees, translations and other costs;

(C) a delay in the expenditure of fees;

(D) additional time for research;

(E) additional time to evaluate financial, marketing, commercial and other considerations>; and

(F) the option of obtaining international preliminary examination<.

The time delay is, however, the benefit most often recognized as primary. Ultimately, applicant might choose to submit the national stage application. The national stage is unique compared to a domestic national application in that

(A) it is submitted later (i.e., normally 30 months or more from a claimed priority date as compared to 12 months for a domestic application claiming priority).

(B) the status of the prior art is generally known before the national stage begins and this is not necessarily so in a domestic national application.

(C) if the filing of an international application is to be taken into account in determining the patentability or validity of any application for patent or granted patent, then special provisions apply. See MPEP § 1895.01, subsection (E) and MPEP § 1896.

### IDENTIFICATION OF THE NATIONAL STAGE APPLICATION

Once an international application enters the U.S. national phase (“national stage application”) has been accorded a U.S. application number (the two digit series code followed by a six digit serial number), that number should be used whenever papers or other communications are directed to the USPTO regarding the national stage application. See 37 CFR 1.5 (a). The national stage application is tracked through the Patent Application Locating and Monitoring (PALM) system by the eight digit U.S. application number. Therefore, processing is expedited if the U.S. application number is indicated. The international application number, international filing date, and the national stage entry date under 35 U.S.C. 371 (if such has been accorded) should also be included, as such would also be helpful for identification purposes and can be used to cross-check a possibly erroneous U.S. application number.

### 1893.01 Commencement and Entry [R-1]

\*\*

#### 35 U.S.C. 371. National stage: Commencement.

(a) Receipt from the International Bureau of copies of international applications with any amendments to the claims, international search reports, and international preliminary examination reports including any annexes thereto may be required in the case of international applications designating or electing the United States.

(b) Subject to subsection (f) of this section, the national stage shall commence with the expiration of the applicable time limit under article 22 (1) or (2), or under article 39 (1)(a) of the treaty.

(c) The applicant shall file in the Patent and Trademark Office —

(1) the national fee provided in section 41(a) of this title;

(2) a copy of the international application, unless not required under subsection (a) of this section or already communicated by the International Bureau, and a translation into the English language of the international application, if it was filed in another language;

(3) amendments, if any, to the claims in the international application, made under article 19 of the treaty, unless such amendments have been communicated to the Patent and Trademark Office by the International Bureau, and a translation into the English language if such amendments were made in another language;

(4) an oath or declaration of the inventor (or other person authorized under chapter 11 of this title) complying with the requirements of section 115 of this title and with regulations prescribed for oaths or declarations of applicants;

(5) a translation into the English language of any annexes to the international preliminary examination report, if such annexes were made in another language.

(d) The requirement with respect to the national fee referred to in subsection (c)(1), the translation referred to in subsection (c)(2), and the oath or declaration referred to in subsection (c)(4) of this section shall be complied with by the date of the commencement of the national stage or by such later time as may be fixed by the Director. The copy of the international application referred to in subsection (c)(2) shall be submitted by the date of the commencement of the national stage. Failure to comply with these requirements shall be regarded as abandonment of the application by the parties thereof, unless it be shown to the satisfaction of the Director that such failure to comply was unavoidable. The payment of a surcharge may be required as a condition of accepting the national fee referred to in subsection (c)(1) or the oath or declaration referred to in subsection (c)(4) of this section if these requirements are not met by the date of the commencement of the national stage. The requirements of subsection (c)(3) of this section shall be complied with by the date of the commencement of the national stage, and failure to do so shall be regarded as a cancellation of the amendments to the claims in the international application made under article 19 of the treaty. The requirement of subsection (c)(5) shall be complied with at such time as may be fixed by the Director and failure to do so shall be regarded as cancellation of the amendments made under article 34 (2)(b) of the treaty.

(e) After an international application has entered the national stage, no patent may be granted or refused thereon before the expiration of the applicable time limit under article 28 or article 41 of the treaty, except with the express consent of the applicant. The applicant may present amendments to the specification, claims, and drawings of the application after the national stage has commenced.

(f) At the express request of the applicant, the national stage of processing may be commenced at any time at which the application is in order for such purpose and the applicable requirements of subsection (c) of this section have been complied with.

*37 CFR 1.491. National stage commencement and entry.*

(a) Subject to 35 U.S.C. 371(f), the national stage shall commence with the expiration of the applicable time limit under PCT Article 22(1) or (2), or under PCT Article 39(1)(a).

(b) An international application enters the national stage when the applicant has filed the documents and fees required by 35 U.S.C. 371(c) within the period set in \*\* § 1.495.

Subject to 35 U.S.C. 371(f), commencement of the national stage occurs upon expiration of the applicable time limit, as stated in 35 U.S.C. 371(b) and 37 CFR 1.491(a).

Entry into the national stage occurs upon completion of certain acts, as stated in 37 CFR 1.491(b).

### 1893.01(a) Entry via the U.S. Designated or Elected Office [R-2]

#### *PCT Article 2. Definitions*

\*\*\*\*\*

(xiii)“designated Office” means the national Office of or acting for the State designated by the applicant under Chapter I of this Treaty;

(xiv)“elected Office” means the national Office of or acting for the State elected by the applicant under Chapter II of this Treaty;

\*\*\*\*\*

#### *37 CFR 1.414. The United States Patent and Trademark Office as a Designated Office or Elected Office.*

(a) The United States Patent and Trademark Office will act as a Designated Office or Elected Office for international applications in which the United States of America has been designated or elected as a State in which patent protection is desired.

(b) The United States Patent and Trademark Office, when acting as a Designated Office or Elected Office during international processing will be identified by the full title “United States Designated Office” or by the abbreviation “DO/US” or by the full title “United States Elected Office” or by the abbreviation “EO/US.”

(c) The major functions of the United States Designated Office or Elected Office in respect to international applications in which the United States of America has been designated or elected, include:

(1) Receiving various notifications throughout the international stage and

(2) Accepting for national stage examination international applications which satisfy the requirements of 35 U.S.C. 371.

An international application designating the U.S. will enter the national stage via the U.S. Designated Office unless a Demand electing the U.S. is filed

under PCT Article 31 whereupon entry will be via the U.S. Elected Office. The procedure for entry is as prescribed in 37 CFR 1.495.

#### *37 CFR 1.495. Entering the national stage in the United States of America.*

(a) The applicant in an international application must fulfill the requirements of 35 U.S.C. 371 within the time periods set forth in paragraphs (b) and (c) of this section in order to prevent the abandonment of the international application as to the United States of America. The thirty-month time period set forth in paragraphs (b), (c), (d), (e) and (h) of this section may not be extended. International applications for which those requirements are timely fulfilled will enter the national stage and obtain an examination as to the patentability of the invention in the United States of America.

(b) To avoid abandonment of the application, the applicant shall furnish to the United States Patent and Trademark Office not later than the expiration of thirty months from the priority date:

(1) A copy of the international application, unless it has been previously communicated by the International Bureau or unless it was originally filed in the United States Patent and Trademark Office; and

(2) The basic national fee (see § 1.492(a)).

\*\*>

(c) If applicant complies with paragraph (b) of this section before expiration of thirty months from the priority date but omits either a translation of the international application, as filed, into the English language, if the international application was originally filed in another language and if any English language translation of the publication of the international application previously submitted under 35 U.S.C. 154(d) (§ 1.417) is not also a translation of the international application as filed (35 U.S.C. 371(c)(2)), or the oath or declaration of the inventor (35 U.S.C. 371(c)(4) and § 1.497), if a declaration of inventorship in compliance with § 1.497 has not been previously submitted in the international application under PCT Rule 4.17(iv) within the time limits provided for in PCT Rule 26<sup>ter</sup>.1, applicant will be so notified and given a period of time within which to file the translation and/or oath or declaration in order to prevent abandonment of the application. The payment of the processing fee set forth in § 1.492(f) is required for acceptance of an English translation later than the expiration of thirty months after the priority date. The payment of the surcharge set forth in § 1.492(e) is required for acceptance of the oath or declaration of the inventor later than the expiration of thirty months after the priority date. A “Sequence Listing” need not be translated if the “Sequence Listing” complies with PCT Rule 12.1(d) and the description complies with PCT Rule 5.2(b).<

(d) A copy of any amendments to the claims made under PCT Article 19, and a translation of those amendments into English, if they were made in another language, must be furnished not later than the expiration of thirty months from the priority date. Amendments under PCT Article 19 which are not received by the expiration of thirty months from the priority date will be considered to be canceled.

(e) A translation into English of any annexes to an international preliminary examination report (if applicable), if the

annexes were made in another language, must be furnished not later than the expiration of thirty months from the priority date. Translations of the annexes which are not received by the expiration of thirty months from the priority date may be submitted within any period set pursuant to paragraph (c) of this section accompanied by the processing fee set forth in § 1.492(f). Annexes for which translations are not timely received will be considered canceled.

(f) Verification of the translation of the international application or any other document pertaining to an international application may be required where it is considered necessary, if the international application or other document was filed in a language other than English.

\*\*>

(g) The documents and fees submitted under paragraphs (b) and (c) of this section must be clearly identified as a submission to enter the national stage under 35 U.S.C. 371. Otherwise, the submission will be considered as being made under 35 U.S.C. 111(a).<

(h) An international application becomes abandoned as to the United States thirty months from the priority date if the requirements of paragraph (b) of this section have not been complied with within thirty months from the priority date. If the requirements of paragraph (b) of this section are complied with within thirty months from the priority date but either of any required translation of the international application as filed or the oath or declaration are not timely filed, an international application will become abandoned as to the United States upon expiration of the time period set pursuant to paragraph (c) of this section.

### **1893.01(a)(1) Submissions Required by 30 Months from the Priority Date [R-2]**

To begin entry into the national stage, applicant is required to comply with 37 CFR 1.495(b) within 30 months from the priority date. Thus, applicant must pay the basic national fee on or before 30 months from the priority date and be sure that a copy of the international application has been received by the U.S. Designated or Elected Office prior to expiration of 30 months from the priority date. \*\*>Where the international application was filed with the United States Receiving Office as the competent receiving Office, the copy of the international application referred to in 37 CFR 1.495(b) is not required.< Payment of the basic national fee will indicate applicant's intention to enter the national stage and will provide a U.S. correspondence address in most instances.

Facsimile transmission is not acceptable for submission of the basic national fee and/or the copy of the international application. See 37 CFR 1.6(d).

Likewise, the certificate of mailing procedures of 37 CFR 1.8 do not apply to the filing of the copy of the international application and payment of the basic national fee. See 37 CFR 1.8(a)(2)(i)(F).

Applicants cannot pay the basic national fee with a surcharge after the 30 month deadline. Failure to pay the basic national fee within 30 months from the priority date will result in abandonment of the application. The time for payment of the basic fee is not extendable.

Similarly, the copy of the international application \* required \* >under 37 CFR 1.495(b) must< be provided within 30 months from the priority date >to avoid abandonment<. A copy of the international application is provided to the U.S. Designated or Elected Office by the International Bureau (the copy is ordinarily received shortly after publication at about 18 months from the priority date). The International Bureau also mails a confirmation (Form \*>PCT/IB/308)< to applicant upon which applicant can rely that the copy has been provided. >This confirmation constitutes conclusive evidence of transmission of the international application.< See PCT Rule 47.1(c). The copy >of the international application< is placed in a file to await applicant's submission of the basic national fee and other national stage requirements.

If the basic national fee has been paid >and the copy of the international application (if required) has been received< by expiration of 30 months from the priority date>,< but the required oath >or< declaration or translation has not been filed within 30 months from the priority date, \*\* the Office will send applicant a \*>Notification of Missing Requirements (Form PCT/DO/EO/905) identifying any deficiency< and provide a period of time to \*>correct< the deficiency as set forth in 37 CFR 1.495(c). The time period usually set is 2 months from the date of the notification by the Office or 32 months from the priority date, whichever is later. This period may be extended for up to 5 additional months pursuant to the provisions of 37 CFR 1.136(a). \*\*>Failure to timely file the proper reply to the notification will result in abandonment of the national stage application.

For further information regarding the oath or declaration required under 35 U.S.C. 371(c)(4) and 37 CFR 1.497 for entry into the U.S. national phase, see MPEP § 1893.01(e).

For further information regarding the translation required under 35 U.S.C. 371(c)(2) and 37 CFR 1.495(c), see MPEP § 1893.01(d).<

### **1893.01(a)(2) Article 19 Amendment (Filed With the International Bureau) [R-2]**

The >claims of an< international application may be amended under >PCT< Article 19 after issuance of the search report. >The description and drawings may not be amended under PCT Article 19.< The amendment is forwarded to the U.S. Designated Office by the International Bureau for inclusion in the U.S. national stage application. Article 19 amendments which were made in English will be entered by substituting each page of amendment for the corresponding English language page of claims of the international application. If the Article 19 amendments were made in a language other than English, applicant must provide an English translation for the U.S. national stage application. The >Article 19 amendment(s) and the< English translation of the amendment(s) must be \*>received by the Office< by 30 months from the priority date, \*>unless applicant has requested early processing of the national stage application under 35 U.S.C. 371(f), in which case the amendment(s) under PCT Article 19 and the English translation of the amendment(s) must be filed by the time applicant has submitted the basic national fee, an oath or declaration in compliance with 37 CFR 1.497(a)-(b), and any required translation of the international application if such time is earlier than 30 months from the priority date. Otherwise,< the amendment(s) will be considered to be canceled, 35 U.S.C. 371(d). \*\* If such >canceled< amendments are desired, they \*>must< be offered under 37 CFR 1.121 as a preliminary amendment or a responsive amendment under 37 CFR 1.111.

Applicants entering the national stage in the U.S. are encouraged to submit an amendment in accordance with 37 CFR 1.121 rather than an English translation of an Article 19 amendment. Sometimes when an Article 19 amendment is translated into English, it cannot be entered. That is, each page of an Article 19 amendment must be entered by substituting a page of amendment for the corresponding page of claims of the international application. After translation of a

page, the translated page may no longer correspond to a page of the claims of the international application such that the amendment is capable of entry by substituting the page of English translation (of the amendment) for the corresponding page of claims of the international application without leaving an inconsistency. Where applicant chooses to submit an English translation of the Article 19 amendment, applicant should check to be sure that the English translation can be entered by substituting the pages of translation for corresponding pages of the claims of the international application without leaving an inconsistency. If entry of the page of translation causes inconsistencies in the claims of the international application the translation will not be entered. For example, if the translation of the originally filed application has a page which begins with claim 1 and ends with a first part of claim 2 with the remainder of claim 2 on the next page then translation of the Article 19 amendment to only claim 1 must include a substitute page or pages beginning with the changes to claim 1 and ending with the last of the exact same first part of claim 2. This enables the original translated first page of claims to be replaced by the translation of the amendment without changing the subsequent unamended page(s). Alternatively, applicant may submit a preliminary amendment in accordance with 37 CFR 1.121.

### **1893.01(a)(3) Article 34 Amendments (Filed with the International Preliminary Examining Authority) [R-2]**

\*\*>Amendments to the international application that were properly made under PCT Article 34 during the international preliminary examination phase (i.e., Chapter II) will be annexed by the International Preliminary Examining Authority to the international preliminary examination report (IPER) and communicated to the elected Offices. See PCT Article 36, PCT Rule 70.16, and MPEP § 1893.03(e). If these annexes are in English, they will normally be entered into the U.S. national stage application by the Office absent a clear instruction by the applicant that the annexes are not to be entered. However, if entry of the replacement sheets will result in an obvious inconsistency in the description, claims or drawings of the international application, then the annexes will not be

entered. If the annexes are in a foreign language, a proper translation of the annexes must be furnished to the Office not later than the expiration of 30 months from the priority date, unless a period has been set pursuant to 37 CFR 1.495(c) to furnish an oath or declaration or English translation of the international application, in which case the translations of the annexes, accompanied by the processing fee set forth in 37 CFR 1.492(f), may be submitted within the period set pursuant to 37 CFR 1.495(c). See 37 CFR 1.495(e). Annexes for which translations are not timely received will be considered canceled. Amendments made under PCT Article 34 to the international application after commencement and entry into the U.S. national phase (see MPEP § 1893.01) will not be considered in a U.S. national stage application. However, applicants may still amend the U.S. national stage application by way of a preliminary amendment submitted in accordance with 37 CFR 1.115 and 37 CFR 1.121.

Where an English translation of the annexes is provided, the translation must be such that the translation of the originally filed application can be changed by replacing the originally filed application page(s) (of translation) with substitute page(s) of translation of the annex. \*\*>Thus<, applicant should check to be sure that the English translation can be entered by substituting the pages of translation for corresponding pages of the claims of the international application without leaving an inconsistency. If entry of the page of translation causes inconsistencies in the specification or claims of the international application the translation will not be entered. >Non-entry of the annexes will be indicated on the “NOTICE OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C. 371 AND 37 CFR 1.495” (Form PCT/DO/EO/903).< For example, if the translation of the originally filed application has a page which begins with claim 1 and ends with a first part of claim 2 with the remainder of claim 2 on the next page then translation of the annex to only claim 1 must include a substitute page or pages beginning with the changes to claim 1 and ending with the last of the exact same first part of claim 2. This enables the original translated first page of claims to be replaced by the translation of the annex without changing the subsequent unamended page(s). Alternatively applicant may submit a preliminary amendment in accordance with 37 CFR 1.121.

>The fact that an amendment made to the international application during the international phase was entered in the national stage application does not necessarily mean that the amendment is proper. Specifically, amendments are not permitted to introduce “new matter” into the application. See PCT Article 34(2)(b). Where it is determined that such amendments introduce new matter into the application, then the examiner should proceed as in the case of regular U.S. national applications filed under 35 U.S.C. 111(a) by requiring removal of the new matter and making any necessary rejections to the claims. See MPEP § 608.04 and § 2163.06.<

### 1893.01(c) Fees [R-2]

Because the national stage fees are subject to change, applicants and examiners should always consult the *Official Gazette* for the current fee listing.

Fees under 37 CFR 1.16 relate to national applications under 35 U.S.C. 111(a), and not to international applications entering the national stage under 35 U.S.C. 371. National stage fees are specifically provided for in 37 CFR 1.492. >However, an authorization to charge fees under 37 CFR 1.16 in an international application entering the national stage under 35 U.S.C. 371 will be treated as an authorization to charge fees under 37 CFR 1.492. See 37 CFR 1.25(b). Accordingly, applications< will not be held abandoned if an authorization to charge fees under 37 CFR 1.16 has been provided instead of an authorization to charge fees under 37 CFR 1.492.

\*\* >A preliminary amendment accompanying the initial national stage submission under 35 U.S.C. 371 that cancels claims and/or eliminates multiple dependent claims will be effective to reduce the number of claims to be considered in calculating extra claim fees required under 37 CFR 1.492(b)-(c) and/or eliminate the multiple dependent claim fee required under 37 CFR 1.492(d). A subsequently filed amendment canceling claims and/or eliminating multiple dependent claims will not entitle applicant to a refund of fees previously paid. See MPEP § 607 and § 608.<

### 1893.01(d) Translation [R-2]

Applicants entering the national stage in the U.S. are required to file \*>an English< translation of the international application \*if the international application was filed in another language \*>and was not pub-

lished under PCT Article 21(2) in English. 35 U.S.C. 371(c)(2) and 37 CFR 1.495(c). A “Sequence Listing” need not be translated if the “Sequence Listing” complies with PCT Rule 12.1(d) and the description complies with PCT Rule 5.2(b). See 37 CFR 1.495(c). The translation must be a translation of the international application as filed or with any changes which have been properly accepted under PCT Rule 26 or any rectifications which have been properly accepted under PCT Rule 91. A translation of less than all of the international application (e.g., a translation that fails to include a translation of text contained in the drawings or a translation that includes a translation of claims amended under PCT Article 19 or 34 but does not include a translation of the original claims) is unacceptable. In addition, a translation that includes modifications other than changes that have been properly accepted under PCT Rule 26 or 91 (e.g., a translation that includes headings that were not present in the international application as originally filed) is unacceptable. A translation of words contained in the drawings must be furnished either in the form of new drawings or in the form of a copy of the original drawings with the translation pasted on the original text matter. See PCT Rule 49.5(d).

Amendments, even those considered to be minor or to not include new matter, may not be incorporated into the translation. If an amendment to the international application as filed is desired for the national stage, it may be submitted in accordance with 37 CFR 1.121. An amendment filed under 37 CFR 1.121 should be submitted within 1 month after completion of the 35 U.S.C. 371(c) requirements and entry into the national stage. See 37 CFR 1.496(a). If applicant has timely paid the basic national fee and submitted the copy of the international application but the translation is missing or is defective, a Notification of Missing Requirements (PCT/DO/EO/905) will be sent to applicant setting a period to correct any missing or defective requirements. The time period is 32 months from the priority date or 2 months from the date of the notice, whichever expires later. The time period may be extended for up to five additional months as provided in 37 CFR 1.136(a). A processing fee is required for accepting a translation after 30 months from the priority date. See 37 CFR 1.492(f).

Pursuant to PCT Rule 48.3(c), if the international application is published in a language other than

English, the publication shall include an English translation of the title of the invention, the abstract, and any text matter pertaining to the figure or figures accompanying the abstract. The translations shall be prepared under the responsibility of the International Bureau.

A translation of the international application as filed and identified as provided in 37 CFR 1.417 submitted for the purpose of obtaining provisional rights pursuant to 35 U.S.C. 154(d)(4) can be relied on to fulfill the translation requirement under 35 U.S.C. 371(c)(2) in a national stage application. See 37 CFR 1.495(g).

### 1893.01(e) Oath/Declaration [R-2]

*37 CFR 1.497. Oath or declaration under 35 U.S.C. 371(c)(4).*

(a) When an applicant of an international application desires to enter the national stage under 35 U.S.C. 371 pursuant to § 1.495, and a declaration in compliance with this section has not been previously submitted in the international application under PCT Rule 4.17(iv) within the time limits provided for in PCT Rule 26<sup>ter</sup>.1, he or she must file an oath or declaration that:

- (1) Is executed in accordance with either §§ 1.66 or 1.68;
- (2) Identifies the specification to which it is directed;
- (3) Identifies each inventor and the country of citizenship of each inventor; and
- (4) States that the person making the oath or declaration believes the named inventor or inventors to be the original and first inventor or inventors of the subject matter which is claimed and for which a patent is sought.

(b)(1) The oath or declaration must be made by all of the actual inventors except as provided for in §§ 1.42, 1.43 or 1.47.

(2) If the person making the oath or declaration or any supplemental oath or declaration is not the inventor (§§ 1.42, 1.43, or §1.47), the oath or declaration shall state the relationship of the person to the inventor, and, upon information and belief, the facts which the inventor would have been required to state. If the person signing the oath or declaration is the legal representative of a deceased inventor, the oath or declaration shall also state that the person is a legal representative and the citizenship, residence and mailing address of the legal representative.

(c) Subject to paragraph (f) of this section, if the oath or declaration meets the requirements of paragraphs (a) and (b) of this section, the oath or declaration will be accepted as complying with 35 U.S.C. 371(c)(4) and § 1.495(c). However, if the oath or declaration does not also meet the requirements of § 1.63, a supplemental oath or declaration in compliance with § 1.63 or an application data sheet will be required in accordance with § 1.67.

(d) If the oath or declaration filed pursuant to 35 U.S.C. 371(c)(4) and this section names an inventive entity different from the inventive entity set forth in the international application, or if a change to the inventive entity has been effected under PCT Rule 92bis subsequent to the execution of any oath or declaration

which was filed in the application under PCT Rule 4.17(iv) or this section and the inventive entity thus changed is different from the inventive entity identified in any such oath or declaration, applicant must submit:

(1) A statement from each person being added as an inventor and from each person being deleted as an inventor that any error in inventorship in the international application occurred without deceptive intention on his or her part;

(2) The processing fee set forth in § 1.17(i); and

(3) If an assignment has been executed by any of the original named inventors, the written consent of the assignee (see § 3.73(b) of this chapter); and

(4) Any new oath or declaration required by paragraph (f) of this section.

(e) The Office may require such other information as may be deemed appropriate under the particular circumstances surrounding the correction of inventorship.

(f) A new oath or declaration in accordance with this section must be filed to satisfy 35 U.S.C. 371(c)(4) if the declaration was filed under PCT Rule 4.17(iv), and:

(1) There was a change in the international filing date pursuant to PCT Rule 20.2 after the declaration was executed; or

(2) A change in the inventive entity was effected under PCT Rule 92bis after the declaration was executed and no declaration which sets forth and is executed by the inventive entity as so changed has been filed in the application.

(g) If a priority claim has been corrected or added pursuant to PCT Rule 26<sup>bis</sup> during the international stage after the declaration of inventorship was executed in the international application under PCT Rule 4.17(iv), applicant will be required to submit either a new oath or declaration or an application data sheet as set forth in § 1.76 correctly identifying the application upon which priority is claimed.

Applicants entering the national stage in the U.S. are required to file an oath or declaration of the inventor in accordance with 37 CFR 1.497(a) and (b). If the basic national fee and copy of the international application has been received by the expiration of 30 months from the priority date, but the required oath or declaration has not been filed, the Office will send applicant a Notification of Missing Requirements (Form PCT/DO/EO/905) setting a time period to correct any missing or defective requirements and to submit the surcharge fee required under 37 CFR 1.492(e) unless previously paid. The time period is 32 months from the priority date or 2 months from the date of the notice, whichever expires later. The time period may be extended for up to five additional months as provided in 37 CFR 1.136(a). Failure to timely file the required oath or declaration will result in abandonment of the application.

An oath or declaration satisfying the requirements of 37 CFR 1.497(a)-(b) will be sufficient for the pur-

poses of entering the U.S. national phase. However, if the oath or declaration fails to also comply with the additional requirements for oaths and declarations set forth in 37 CFR 1.63, applicants will need to submit a supplemental oath or declaration, or an application data sheet where permitted under 37 CFR 1.63(c), to correct the deficiency. See 37 CFR 1.497(c).

In general, the requirement for an oath or declaration in compliance with 37 CFR 1.497(a)-(b) will have been previously satisfied if a declaration in compliance with PCT Rule 4.17 (iv) and executed by all the inventors was submitted within the time limits provided in PCT Rule 26<sup>ter</sup>.1 in the international phase. However, if the inventorship was changed in the international application under PCT Rule 92<sup>bis</sup> such that the inventorship identified in the PCT Rule 4.17(iv) declaration no longer corresponds to that of the international application (see 37 CFR 1.41(a)(4)), then a new oath or declaration in accordance with 37 CFR 1.497(a)-(b) will be required to enter the national stage. See 37 CFR 1.497(f)(2). Similarly, a new oath or declaration in compliance with 37 CFR 1.497(a)-(b) is required where the PCT Rule 4.17(iv) declaration was executed prior to a change in the international filing date pursuant to PCT Rule 20.2. See 37 CFR 1.497(f)(1). In addition, where a priority claim has been corrected or added pursuant to PCT Rule 26<sup>bis</sup> after execution of the PCT Rule 4.17(iv) declaration, then a supplemental oath or declaration, or an application data sheet, identifying the correct priority claim will be required. See 37 CFR 1.497(g).

## CORRECTION OF INVENTORSHIP

The inventorship of an international application entering the national stage under 35 U.S.C. 371 is that inventorship set forth in the international application, which includes any changes effected under PCT Rule 92<sup>bis</sup>. See 37 CFR 1.41(a)(4). Accordingly, an oath or declaration that names an inventive entity different than that set forth in the international application will not be accepted for purposes of entering the U.S. national phase unless the requirements under 37 CFR 1.497(d) are satisfied. These requirements include: (A) a statement from each person being added as an inventor and from each person being deleted as an inventor that any error in inventorship in the international application occurred without deceptive inten-

tion on his or her part; (B) the processing fee set forth in 37 CFR 1.17(i); and (C) the written consent of the assignee if an assignment has been executed by any of the original named inventors (see 37 CFR 3.73(b)).<

If an inventor refuses to execute the oath or declaration or \*\*>cannot be found or reached after diligent effort<, applicant must file an oath or declaration and a petition in accordance with 37 CFR 1.47. >See 37 CFR 1.497(b) and MPEP § 409.03.< Similarly, where an inventor is deceased or legally incapacitated, an oath or declaration in accordance with the provisions of 37 CFR 1.42 or 1.43 must be provided. \*\*>See 37 CFR 1.497(b) and MPEP § 409.01 and § 409.02.

Where there has been no change of inventorship but the name of an inventor indicated in the international application is different from the corresponding name indicated in an oath or declaration submitted under 37 CFR 1.497, for example, on account of marriage, then a petition under 37 CFR 1.182 will be required to accept the oath or declaration with the changed name. See MPEP § 605.04(c).<

### 1893.02 Abandonment [R-1]

If the requirements of 35 U.S.C. 371(c) are not complied with by the time period set in \*\* 37 CFR 1.495(b) and (c), \*\* the application is considered to be abandoned, see \*\* 37 CFR 1.495(h).

Examiners and applicants should be aware that sometimes papers filed for the national stage are deficient and abandonment results. For example, if the fee submitted does not include at least the amount of the basic national fee that is due, the application becomes abandoned.

Applicant may file a petition to revive an abandoned application in accordance with the provisions of 37 CFR 1.137. See MPEP § 711.03(c).

### 1893.03 Prosecution of U.S. National Stage Applications Before the Examiner [R-2]

*37 CFR 1.496. Examination of international applications in the national stage.*

(a) International applications which have complied with the requirements of 35 U.S.C. 371(c) will be taken up for action based on the date on which such requirements were met. However, unless an express request for early processing has been filed under 35 U.S.C. 371(f), no action may be taken prior to one month after entry into the national stage.

(b) A national stage application filed under 35 U.S.C. 371 may have paid therein the basic national fee as set forth in § 1.492(a)(4) if it contains, or is amended to contain, at the time of entry into the national stage, only claims which have been indicated in an international preliminary examination report prepared by the United States Patent and Trademark Office as satisfying the criteria of PCT Article 33(1)-(4) as to novelty, inventive step and industrial applicability. Such national stage applications in which the basic national fee as set forth in § 1.492(a)(4) has been paid may be amended subsequent to the date of entry into the national stage only to the extent necessary to eliminate objections as to form or to cancel rejected claims. Such national stage applications in which the basic national fee as set forth in § 1.492(a)(4) has been paid will be taken up out of order.

An international application which enters the national stage will be forwarded to the appropriate Technology Center (TC) for examination in turn based on the 35 U.S.C. 371(c) date of the application. As set forth in 37 CFR 1.496(b), if an application includes only claims which have been indicated in an IPER prepared by the USPTO to satisfy the criteria of PCT Article 33(1)-(4), the application qualifies for the reduced basic national fee set forth in 37 CFR 1.492(a)(4). Applications in which the reduced basic national fee has been paid will be taken up out of order by the examiner. See MPEP § 708 for a discussion of the order of examination of applications by examiners.

Once the national stage application has been taken up by the examiner, prosecution proceeds in the same manner as for a domestic application with the exceptions that:

(A) the international filing date is the date to keep in mind when searching the prior art; and

(B) unity of invention proceeds as under 37 CFR 1.475.

>In addition, the International Publication Number and the Publication Date MUST be in the national stage application if the application is allowed. The International Publication Number and the Publication date can be found in the WIPO Publication block on the DO/US Worksheet. If the Publication Number and the Publication date are not found on the worksheet or if the worksheet is missing, the information may be taken either from the International Publication or the *PCT Gazette* page. The examiner should ensure that the International Publication Number and the Publication date are in one of these three locations before the application is sent to Office of Patent Publication.<

### 1893.03(a) How To Identify That an Application Is a U.S. National Stage Application [R-2]

Applicant's initially deposited application must be clearly identified as a submission to enter the national stage under 35 U.S.C. 371. See 37 CFR 1.495(g). Otherwise, unless the submission is clearly identified as a submission pursuant to 35 U.S.C. 154(d)(4) for the purpose of obtaining provisional rights, the application will be treated as an application filed under 35 U.S.C. 111(a). See 37 CFR 1.417.

That is, if applicant wishes the application to be filed under 35 U.S.C. 111(a), applicant's originally filed application papers need indicate simply that the papers are for a new U.S. patent application. If, however, applicant is submitting papers for entry into the national stage of a PCT application, or to establish an effective date for provisional rights resulting from the filing of a PCT application under 35 U.S.C. 154(d), applicant must so state. Examination of the original application papers occurs in either the Office of Initial Patent Examination or in the National Stage Processing Division of the Office of PCT Operations where it is determined whether applicant has asked that the papers be treated as a submission to enter the national stage under 35 U.S.C. 371. If the application is accepted for entry into the national stage, the National Stage Processing Division will mail Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 and will stamp the face of the file with an indication that the application is "filed under 35 U.S.C. 371." Accordingly, the key indicators which reflect that an application is an application which entered the national stage from an international application after compliance with 35 U.S.C. 371 are:

(A) The file face indication of "filed under 35 U.S.C. 371";

(B) PALM will indicate that the application is a national stage application (e.g., under "Continuity Data");

(C) The Form PCT/DO/EO/903 indicating acceptance of the application as a national stage application which has met the requirements of 35 U.S.C. 371; and

\*>

(D) Applicant's statement (or the equivalent) in the originally filed application papers that the application is a submission to enter the national stage under 35 U.S.C. 371. Applicants who use transmittal Form PCT/DO/EO/1390 will, in the absence of conflicting instructions, satisfy the requirement for such a statement since the form includes an indication that the application is a national stage submission under 35 U.S.C. 371.

Initially, the examiner should inspect the face of the file wrapper (if not an IFW) and/or PALM for an indication that it was submitted under 35 U.S.C. 371 and should also check the application papers for the presence of Form PCT/DO/EO/903. If neither of these indications are present the application may, in the absence of evidence to the contrary (there is an indication in the originally filed application papers that processing as a national stage is desired), be treated as a filing under 35 U.S.C. 111(a). Thus, if both indications are present, the application should be treated as a submission under 35 U.S.C. 371. If the application is not an IFW and the face of the file wrapper does not indicate "filed under 35 U.S.C. 371," but a properly completed Form PCT/DO/EO/903 is in the file, the examiner should complete the face of the file by adding "filed under 35 U.S.C. 371" in the upper left margin thereof. The examiner should initial and date this change. If the file wrapper does not include a properly completed Form PCT/DO/EO/903 but the face of the file indicates "filed under 35 U.S.C. 371," the application should be returned to the National Stage Processing Division of the Office of PCT Operations for certification that the application has been accepted for the national stage.

In accordance with the notice at 1077 O.G. 13 (14 April 1987), if the applicant files a U.S. national application and clearly identifies in the accompanying oath or declaration the specification to which it is directed by referring to a particular international application by PCT Application Number and International Filing Date and that he or she is executing the declaration as, and seeking a U.S. Patent as, the inventor of the invention described in the identified international application, then the application will be accepted as submitted under 35 U.S.C. 371. Merely claiming priority of an international (PCT)

application in an oath or declaration will not serve to indicate a \*>submission< under 35 U.S.C. 371. Also, if there are any conflicting instructions as to whether the filing is under 35 U.S.C. 111(a) or 35 U.S.C. 371, the application will be accepted as filed under 35 U.S.C. 111(a). \*\*>A conflicting instruction will be present, for example, where applicant includes in the initial submission under 35 U.S.C. 371, a “Utility

Patent Application Transmittal” (Form PTO/SB/05) or includes a benefit claim under 35 U.S.C. 120 to the international application. Applications that have been processed under 35 U.S.C. 371 and later found by the examiner to contain conflicting instructions should be forwarded to the Office of PCT Legal Administration for resolution.<

CONFIRMATION NO. 1271

371 ACCEPTANCE LETTER

\*OC00000009879118\*

Date Mailed: 02/19/2004

**NOTICE OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C 371 AND 37 CFR 1.495**

The applicant is hereby advised that the United States Patent and Trademark Office in its capacity as a Designated / Elected Office (37 CFR 1.495), has determined that the above identified international application has met the requirements of 35 U.S.C. 371, and is ACCEPTED for national patentability examination in the United States Patent and Trademark Office.

The United States Application Number assigned to the application is shown above and the relevant dates are:

11/01/200311/01/2003

DATE OF RECEIPT OF 35 U.S.C. 371(c)(1), (c)(2)  
 and (c)(4) REQUIREMENTS

DATE OF COMPLETION OF ALL 35 U.S.C. 371  
 REQUIREMENTS

A Filing Receipt (PTO-103X) will be issued for the present application in due course. **THE DATE APPEARING ON THE FILING RECEIPT AS THE " FILING DATE" IS THE DATE ON WHICH THE LAST OF THE 35 U.S.C. 371 (c)(1), (c)(2) and (c)(4) REQUIREMENTS HAS BEEN RECEIVED IN THE OFFICE. THIS DATE IS SHOWN ABOVE.** The filing date of the above identified application is the international filing date of the international application (Article 11(3) and 35 U.S.C. 363). Once the Filing Receipt has been received, send all correspondence to the Group Art Unit designated thereon.

The following items have been received:

- Indication of Small Entity Status
- Copy of the International Application filed on 11/01/2003
- English Translation of the IA filed on 11/01/2003
- Copy of the International Search Report filed on 11/01/2003
- Copy of IPE Report filed on 11/01/2003
- Copy of Annexes to the IPE filed on 11/01/2003
- Copy of Article 19 Amendments filed on 11/01/2003
- Preliminary Amendments filed on 11/01/2003
- Information Disclosure Statements filed on 11/01/2003
- Biochemical Sequence Diskette filed on 11/01/2003
- Oath or Declaration filed on 11/01/2003
- Biochemical Sequence Listing filed on 11/01/2003
- Small Entity Statement filed on 11/01/2003
- Request for Immediate Examination filed on 11/01/2003
- Copy of references cited in ISR filed on 11/01/2003

- U.S. Basic National Fees filed on 11/01/2003
- Substitute Specification filed on 11/01/2003
- Assignment filed on 11/01/2003
- Priority Documents filed on 11/01/2003
- Power of Attorney filed on 11/01/2003

The following defects have been observed:

- The translations of Annexes are canceled since the translations were not submitted prior to 30 months from the priority date.

---

Applicant is reminded that any communications to the United States Patent and Trademark Office must be mailed to the address given in the heading and include the U.S. application no. shown above (37 CFR 1.5)

PART 1 - ATTORNEY/APPLICANT COPY

FORM PCT/DO/EO/903 (371 Acceptance Notice)

<

### 1893.03(b) The Filing Date of a U.S. National Stage Application [R-2]

An international application designating the U.S. has two stages (international and national) with the filing date being the same in both stages. Often the date of entry into the national stage is confused with the filing date. It should be borne in mind that the filing date of the international stage application is also the filing date for the national stage application. Specifically, 35 U.S.C. 363 provides that

An international application designating the United States shall have the effect, from its international filing date under Article 11 of the treaty, of a national application for patent regularly filed in the Patent and Trademark Office except as otherwise provided in section 102(e) of this title.

Similarly, PCT Article 11(3) provides that

...an international filing date shall have the effect of a regular national application in each designated State as of the international filing date, which date shall be considered to be the actual filing date in each designated State.

37 CFR 1.496(a), first sentence, reads “International applications which have complied with the requirements of 35 U.S.C. 371(c) will be taken up for action based on the date on which such requirements were met.” Thus, when the file wrapper label or PALM bib-data sheet \*and filing receipt are printed, the information is read from the PALM data base and the information printed in the filing date box is the date of receipt of 35 U.S.C. 371(c)(1), (c)(2) and (c)(4) requirements rather than the actual international filing date.

\*The NOTIFICATION OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C. 371 AND 37 CFR 1.495 (Form PCT/DO/EO/903), a copy of which is reproduced in MPEP § 1893.03(a), indicates the date of receipt of the 35 U.S.C. 371(c)(1), (c)(2), and (c)(4) requirements, and it also indicates the date of completion of all 35 U.S.C. 371 requirements, which is further explained below.

The “Application Filing Date” field formerly displayed in \*\*PAIR\*\* was changed to “Filing or 371(c) Date” to clearly indicate that for international applications that enter the national stage under 35 U.S.C. 371, the information displayed in this field

is the date of receipt of the 35 U.S.C. 371(c)(1), (c)(2) and (c)(4) requirements. Applicants are quite often confused as to the true filing date and will ask for corrected filing receipts thinking that the information thereon is wrong. This explanation should offer some clarity. For most legal purposes, the filing date is the PCT international filing date. Exceptions to this general rule include the following:

(A) Availability as a prior art reference under former 35 U.S.C. 102(e) (prior to the amendment by the American Inventors Protection Act of 1999 (AIPA) (Pub. L. 106-113, 113 Stat. 1501 (1999))). If a U.S. patent issued from an international application filed prior to November 29, 2000, the international application was not considered to have been filed in the United States for prior art purposes under 35 U.S.C. 102(e) and PCT Article 64(4)(a) until the date the application fulfilled the requirements of 35 U.S.C. 371(c) (1), (2), and (4).

(B) Availability as a prior art reference under 35 U.S.C. 102(e) as amended by the AIPA, and further amended by the Intellectual Property and High Technology Technical Amendments Act of 2002 (Pub. L. 107-273, 116 Stat. 1758 (2002)). If an international application was filed on or after November 29, 2000, but did not designate the U.S. or was not published in English under PCT Article 21(2), the international filing date is not treated as a U.S. filing date for prior art purposes under 35 U.S.C. 102(e). See MPEP § 706.02(a) and § 2136.03.

(C) Patent term adjustment under 35 U.S.C. 154(b)(1)(B) and 37 CFR 1.702(b) when the USPTO has failed to issue a patent within three years of the “actual filing date” of an application. In this situation, the “actual filing date” is the date the national stage commenced under 35 U.S.C. 371(b) or (f). See MPEP § 2730.

>The “Date of Completion of all 35 U.S.C. 371 Requirements” included on the NOTIFICATION OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C. 371 AND 37 CFR 1.495 (Form PCT/DO/EO/903) is relevant for purposes of patent term adjustment under 35 U.S.C. 154(b)(1)(A)(i)(II) and 37 CFR 1.702(a)(1) when the USPTO has failed to mail at least one of a notification under 35 U.S.C. 132 or a notice of allowance under 35 U.S.C. 151 not later than fourteen months after the date on which the

requirements under 35 U.S.C. 371 were fulfilled. This date is the latest of:

(A) the date of submission of the basic national fee;

(B) the date of submission or communication of the copy of the international application;

(C) the date of submission of the translation of the international application if the international application is not in the English language;

(D) the date of submission of an oath or declaration of the inventor in compliance with 35 U.S.C. 371 (c)(4) (see 37 CFR 1.497(c) for an explanation of when an oath or declaration will be accepted as complying with 35 U.S.C. 371(c)(4));

(E) the earlier of 30 months from the priority date or the date of request for early processing under 35 U.S.C. 371(f) if requested prior to 30 months from the priority date (Form PCT/DO/EO/903 will indicate the date early processing was requested);

(F) if a request for early processing has not been requested prior to 30 months from the priority date, the date of submission of any translation of the annexes to the international preliminary examination report if the annexes are filed within the time period set in a Notice of Missing Requirements (Form PCT/DO/EO/905) requiring either a translation of the international application or an oath or declaration; and

(G) the date of submission of any surcharge for submitting the oath or declaration later than 30 months from the priority date.<

### **1893.03(c) The Priority Date, Priority Claim, and Priority Papers for a U.S. National Stage Application [R-2]**

A U.S. national stage application **\*\*>**may be entitled to: (A) a right of priority under 35 U.S.C. 119(a) and 365(b) based on a prior foreign application or international application designating at least one country other than the United States; and (B) the benefit of an earlier filed U.S. national application or international application designating the United States pursuant to 35 U.S.C. 119(e) or 35 U.S.C. 120 and 365(c).

### **RIGHT OF< PRIORITY \* UNDER 35 U.S.C. 119(a) and 365(b)**

**\*\*>**Pursuant to 35 U.S.C. 365(b)< a U.S. national stage application **\*\*>**shall be entitled to a right of priority based on a prior foreign application or international application designating at least one country other than the United States in accordance with the conditions and requirements of< 35 U.S.C. 119(a) and **\*\*>**the treaty and the PCT regulations. See in particular PCT Article 8 and PCT Rules 4.10 and 26<sup>bis</sup>. To obtain priority in the U.S. national stage application to such applications, the priority must have been timely claimed in the international stage of the international application. See 37 CFR 1.55(a)(1)(ii). If priority< was properly claimed in the international stage of the international application, the claim for priority is acknowledged and the national stage application file is checked to see if the file contains a copy of the certified copy of the priority document submitted to the International Bureau.

If the **\*\*** priority claim in the national stage application is to an application, the priority of which was not claimed in the international stage of the international application, the claim for priority must be denied for failing to meet the requirements of the Patent Cooperation Treaty, specifically PCT Rule 4.10.

For a comparison with 35 U.S.C. 119(a)-(d) priority claims in a national application filed under 35 U.S.C. 111(a), see MPEP § 1895.01.

### **THE CERTIFIED COPY**

The requirement in PCT Rule 17 for a certified copy of the foreign priority application is normally fulfilled by applicant providing a certified copy to the receiving Office or to the International Bureau within 16 months from the priority date. Subsequently, the International Bureau forwards a photocopy of the certified priority document when it forwards a copy of the international application (shortly after publication at 18 months from the priority date) to each Designated Office. The copy from the International Bureau is placed in the U.S. national stage file. The International Bureau stamps the face of the photocopy of the certified priority document with an indication that the certified priority document was received at the International Bureau. The stamped copy of the priority document sent to the U.S. Patent and Trademark

Office from the International Bureau is acceptable to establish that applicant has filed a certified copy of the priority document. The examiner should acknowledge in the next Office action that the certified copy of the foreign priority document has been filed. Note

the example of an acceptable priority document with the stamp (box) in the upper right hand section indicating receipt by the International Bureau (WIPO) on 30 November 1992 and the stamped term "PRIORITY DOCUMENT."

## CERTIFICATS D'UTILITÉ CERTIFICATS D'ADDITION

### Copie officielle

Le Directeur général de l'Institut national de la propriété industrielle certifie que le document ci-annexé est la copie certifiée conforme, d'une demande de titre de propriété industrielle déposée à l'Institut.

Fait à Paris le       - 7 SEP. 1992      

*Pour le Directeur général de l'Institut  
national de la propriété industrielle*

*Le Chef de Division*

*Yves CAMPENON*

26bis, rue de Léninegrad 75800 PARIS Cédex 08  
Tél. (1) 42 94 52 52 Télex 290 368 INPI PAR Télécopie (1) 42 93 59 30  
Établissement public national créé par la loi n° 51-444 du 19 avril 1951

BA 267/141190

If applicant has not forwarded a certified copy of the priority application in time for the International Bureau to forward it to the U.S. Designated Office with the copy of the international application, then applicant will have to provide a certified copy of the priority document during the national stage to fulfill the requirement of 37 CFR 1.55(a)(2).

**\*>BENEFIT< CLAIM UNDER 35 U.S.C. 119(e), OR 120 AND 365(c)**

A national stage application may include a \*>benefit< claim under 35 U.S.C. 119(e), or 120 and 365(c) to a prior U.S. national application or under 35 U.S.C. 120 and 365(c) to a prior international application designating the U.S. The conditions for according benefit under 35 U.S.C. 120 are as described in MPEP § 201.07, § 201.08, and § 201.11 and are similar regardless of whether the U.S. national application is a national stage application submitted under 35 U.S.C. 371 or a national application filed under 35 U.S.C. 111(a).

The conditions for according benefit under 35 U.S.C. 119(e) are also similar for national stage applications and applications filed under 35 U.S.C. 111(a), and the conditions are described in MPEP § 201.11.

In order for a national stage application (of international application “X”) to obtain benefit under 35 U.S.C. 119(e) of a prior U.S. provisional application, the national stage application must comply with the requirements set forth in 37 CFR 1.78(a)(4) through 37 CFR 1.78(a)(6). Public Law 106-113 amended 35 U.S.C. 119(e) to eliminate the copendency requirement for a nonprovisional application claiming benefit of a provisional application. 35 U.S.C. 119(e)(2) as amended became effective on November 29, 1999 and applies to provisional applications filed on or after June 8, 1995. 37 CFR 1.78(a)(4) requires that the prior provisional application must be entitled to a filing date as set forth in 37 CFR 1.53(c), and the basic filing fee set forth in 37 CFR 1.16(k) must be paid on the provisional application within the time period set forth in 37 CFR 1.53(g). Additionally, the provisional application must name as an inventor at least one inventor named in the later filed international application “X” and disclose the named inventor’s invention claimed in at least one claim of the national stage application in the

manner provided by the first paragraph of 35 U.S.C. 112. The national stage application must contain a reference to the provisional application (either in an application data sheet (37 CFR 1.76) or in the first sentence of the specification), identifying it as a provisional application, and including the provisional application number (series code and serial number). The required reference to the earlier provisional application must be submitted within the time period provided by 37 CFR 1.78(a)(5)(ii). This time period is not extendable. >However, if the entire delay, between the date the claim was due under 37 CFR 1.78(a)(5)(ii) and the date the claim was filed, was unintentional, a petition under 37 CFR 1.78(a)(6) may be filed to accept the delayed claim.< If the provisional application was filed in a language other than English, the provisional application or the national stage application must contain an English-language translation of the non-English language provisional application and a statement that the translation is accurate. If the translation and statement that the translation is accurate were not previously filed in the provisional application or in the later-filed national stage application, applicant will be notified and given a period of time within which to file an English-language translation and a statement that the translation is accurate. Failure to timely reply to such a notice will result in abandonment of the national stage application. See 37 CFR 1.78(a)(5)(iv).

In order for a national stage application (of international application “X”) to obtain benefit under 35 U.S.C. 120 and 365(c) of a prior filed copending nonprovisional application or prior filed copending international application designating the United States of America, the national stage application must comply with the requirements set forth in 37 CFR 1.78(a)(1) through 37 CFR 1.78(a)(3). The prior nonprovisional application or international application must name as an inventor at least one inventor named in the later filed international application “X” and disclose the named inventor’s invention claimed in at least one claim of the national stage application in the manner provided by the first paragraph of 35 U.S.C. 112. The national stage application must contain a reference to the prior nonprovisional or international application (either in an application data sheet (37 CFR 1.76) or in the first sentence of the specification), identifying it by application number (series

code and serial number) or international application number and international filing date and indicating the relationship of the applications. The required reference to the earlier filed application must be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior-filed application. This time period is not extendable and failure to timely submit the required reference to the earlier application will be considered a waiver of any benefit under 35 U.S.C. 120, 121, or 365(c) to such prior-filed application. See 37 CFR 1.78(a)(2)(ii). However, if the entire delay, between the date the claim was due under 37 CFR 1.78(a)(2)(ii) and the date the claim was filed, was unintentional, a petition under 37 CFR 1.78(a)(3) may be filed to accept the delayed claim.

A prior filed nonprovisional application is copending with the national stage application if the prior U.S. national application was pending on the international filing date of the national stage application.

A prior international application designating the United States of America is copending with the national stage application if the prior international application was not abandoned or withdrawn on the international filing date of international application "X."

Note: a national stage application submitted under 35 U.S.C. 371 may not claim benefit of the filing date of the international application of which it is the national stage since its filing date is the date of filing of that international application. See also MPEP § 1893.03(b). Stated differently, since the international application is not an earlier application (it has the same filing date as the national stage), a benefit claim >under 35 U.S.C. 120< in the national stage to the international application is inappropriate >and may result in the submission being treated as an application filed under 35 U.S.C. 111(a). See MPEP § 1893.03(a)<. Accordingly, it is not necessary for the applicant to amend the first sentence of the specification to reference the international application number that was used to identify the application during international processing of the application by the international authorities prior to commencement of the national stage.

For a comparison with 35 U.S.C. 120 benefit claims in a national application filed under 35 U.S.C. 111(a), see MPEP § 1895.

### **1893.03(d) Unity of Invention [R-2]**

*37 CFR 1.499. Unity of invention during the national stage*

If the examiner finds that a national stage application lacks unity of invention under § 1.475, the examiner may in an Office action require the applicant in the response to that action to elect the invention to which the claims shall be restricted. Such requirement may be made before any action on the merits but may be made at any time before the final action at the discretion of the examiner. Review of any such requirement is provided under §§ 1.143 and 1.144.

PCT Rule 13 was amended effective July 1, 1992. 37 CFR 1.475 was amended effective May 1, 1993 to correspond to PCT Rule 13.

Examiners are reminded that unity of invention (not restriction) practice is applicable in international applications (both Chapter I and II) and in national stage applications submitted under 35 U.S.C. 371. Restriction practice continues to apply to U.S. national applications filed under 35 U.S.C. 111(a), even if the application filed under 35 U.S.C. 111(a) claims >benefit under 35 U.S.C. 120 and 365(c)< to an earlier international application >designating the United States< or to an earlier U.S. national stage application submitted under 35 U.S.C. 371.

When making a lack of unity of invention requirement, the examiner must (1) list the different groups of claims and (2) explain why each group lacks unity with each other group (i.e., why there is no single general inventive concept) specifically describing the unique special technical feature in each group.

The principles of unity of invention are used to determine the types of claimed subject matter and the combinations of claims to different categories of invention that are permitted to be included in a single international or national stage patent application. >See MPEP § 1850 for a detailed discussion of Unity of Invention.< The basic principle is that an application should relate to only one invention or, if there is more than one invention, that applicant would have a right to include in a single application only those inventions which are so linked as to form a single general inventive concept.

A group of inventions is considered linked to form a single general inventive concept where there is a technical relationship among the inventions that

involves at least one common or corresponding special technical feature. The expression special technical features is defined as meaning those technical features that define the contribution which each claimed invention, considered as a whole, makes over the prior art. For example, a corresponding technical feature is exemplified by a key defined by certain claimed structural characteristics which correspond to the claimed features of a lock to be used with the claimed key. Note also >the< examples \*\* contained in \*\*>Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from WIPO's web site ([www.wipo.int/pct/en/texts/gdlines.htm](http://www.wipo.int/pct/en/texts/gdlines.htm))<.

A process is “specially adapted” for the manufacture of a product if the claimed process inherently produces the claimed product with the technical relationship being present between the claimed process and the claimed product. The expression “specially adapted” does not imply that the product could not also be manufactured by a different process.

An apparatus or means is specifically designed for carrying out the process when the apparatus or means is suitable for carrying out the process with the technical relationship being present between the claimed apparatus or means and the claimed process. The expression specifically designed does not imply that the apparatus or means could not be used for carrying out another process, nor does it imply that the process could not be carried out using an alternative apparatus or means.

Note: the determination regarding unity of invention is made without regard to whether a group of inventions is claimed in separate claims or as alternatives within a single claim. The basic criteria for unity of invention are the same, regardless of the manner in which applicant chooses to draft a claim or claims.

>

## FORM PARAGRAPHS FOR LACK OF UNITY IN NATIONAL STAGE APPLICATIONS

### ¶ 18.19 National Stage Restriction in 35 U.S.C. 371 Applications

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

#### Examiner Note:

1. This form paragraph is to be used when making a restriction requirement in an application filed under the provisions of 35 U.S.C. 371.
2. This form paragraph is to be followed by form paragraphs 18.06 through 18.06.02, as appropriate, and by form paragraph 18.07.

### ¶ 18.20 National Stage Election of Species in 35 U.S.C. 371 Applications

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

[1]

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

#### Examiner Note:

1. This form paragraph is to be used when making an election of species requirement in an application filed under the provisions of 35 U.S.C. 371.
2. In bracket 1, list each species by Fig. No. or embodiment.
3. This form paragraph is to be followed by form paragraphs 18.17 and 18.18.

### ¶ 18.21 National Stage Election by Original Presentation in 35 U.S.C. 371 Applications

Newly submitted claim [1] directed to an invention that lacks unity with the invention originally claimed for the following reasons: [2]

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim [3] withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

<

### **1893.03(e) Papers Received from the International Bureau and Placed in a U.S. National Stage Application File [R-2]**

The national stage application includes papers forwarded by the International Bureau and papers from applicant. Some of the papers from the International Bureau are identified in this section with a brief note as to their importance to the national stage application. The examiner should review each such paper and the important aspect indicated.

#### **THE PAMPHLET**

The Pamphlet includes

(A) a cover page with the applicant/inventor data, the application data (\*>application< number, filing date, etc.) and the Abstract (and, if appropriate, a figure of drawing),

(B) the description, claims and drawing parts of the international application, and

(C) the search report (Form PCT/ISA/210).

The cover page is important as a source of the correct application data, most importantly the filing date and priority date accorded to the international application. If the pamphlet is published in English, \*\*>the< Office will use the description, claims, abstract and drawings as published in the pamphlet for the U.S. national stage \*>application< under 35 U.S.C. 371. The description, claims and drawing parts of the international application reflect the application subject matter on the international filing date and are important for comparison with any amendments to check for new matter. The search report reflects the International Searching Authority's opinion regarding the prior art.

When the international application is published as the pamphlet, the abstract is reproduced on the cover page of the publication, even though it appears on a separate sheet of the international application in accordance with PCT Rule 11.4(a). Thus the requirement of 37 CFR 1.52(b) that the abstract "commence on a separate >physical< sheet >or electronic page<" does not apply to the copy of the application (pamphlet) communicated to the designated Offices by the International Bureau under PCT Article 20. Accordingly, it is improper for the examiner of the U.S.

national stage application to require the applicant to provide an abstract commencing on a separate sheet if the abstract does not appear on a separate sheet in the pamphlet. Unless the abstract is properly amended under the U.S. rules during national stage processing, the abstract that appears on the cover page of the pamphlet will be the abstract published by the USPTO under 35 U.S.C. 122(b) and in any U.S. patent issuing from the application.

>In addition, the Office will normally use the title of the invention indicated on the cover page of the publication as the title of the national stage application that will appear on the filing receipt. The cover page will include an English translation of the title if the international application was published in a foreign language. See PCT Rule 48.3(c). Applicants desiring to have the filing receipt reflect a title that is different than the English language title appearing on the cover page must submit either a preliminary amendment amending the title or an application data sheet (37 CFR 1.76) with the desired title. Filing receipts are mailed shortly after the mailing of the NOTIFICATION OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C. 371 AND 37 CFR 1.495 (Form PCT/DO/EO/903).<

#### **THE INTERNATIONAL PRELIMINARY EXAMINATION REPORT \*\*>AND THE INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (CHAPTER I AND II)**

When an international preliminary examination is performed by an International Preliminary Examining Authority (IPEA), an international preliminary examination report (IPER) is prepared on Form PCT/IPEA/409 by the IPEA and sent to the elected Offices. This report reflects the IPEA's non-binding opinion regarding novelty, inventive step and industrial applicability. For international applications filed on or after January 1, 2004, the IPER bears the title "International Preliminary Report on Patentability (Chapter II of the Patent Cooperation Treaty)".

If the applicant did not timely file a demand for international preliminary examination with the IPEA, and the international application has a filing date on or after January 1, 2004, then an "International Preliminary Report on Patentability (Chapter I of the Patent Cooperation Treaty)" reflecting the International Searching Authority's (ISA's) non-binding

opinion regarding novelty, inventive step and industrial applicability is sent to the designated Offices.

The examiner may adopt any portion or all of the report on patentability of the IPEA or ISA upon consideration in the national stage so long as it is consistent with U.S. practice. The first Office action on the merits should indicate the report on patentability of the IPEA or ISA has been considered by the examiner. The indication may be a mere acknowledgement.

The IPER may include annexes, i.e., amendments to the international application that were made during the international phase. See MPEP § 1893.01(a)(3). These annexes will be placed in the U.S. national stage application file. Consequently, if the international application has been extensively amended during the international stage, there may be a number of different copies of the description, claims and drawings present in the national stage application file. The IPER may be consulted in Box No. I “Basis of the report” to determine what pages the report was based upon. Using the IPER as a roadmap of what happened during Chapter II examination will help determine which version should be examined.

Original sheets, substitute sheets, and rectified sheets included as part of the application examined under Chapter II are listed in the IPER as pages “originally filed/furnished.” Replacement sheets showing amendments made under PCT Article 19 or 34 and considered during Chapter II are also listed. See MPEP § 1879. If the IPER was established in a language other than English, the International Bureau will translate the IPER into English. However, the International Bureau will not translate the annexes to the IPER into English. Unless proper and timely translations are furnished by the applicant, foreign language annexes will be considered canceled. See MPEP § 1893.01(a)(3). All replacement sheets in the international application are marked with the international application number and the date of receipt in the upper right-hand corner. Replacement sheets that contain changes in format only and are accepted by the receiving Office are marked as “SUBSTITUTE SHEET” at the bottom of the page. Replacement sheets that contain a rectification of an obvious error and are accepted by either the ISA or the IPEA are marked as “RECTIFIED SHEET” at the bottom of the

page. Additionally, replacement sheets to the claims submitted to the International Bureau as Article 19 Amendments will be marked as “AMENDED SHEET (Article 19)” at the bottom of the page. Furthermore, replacement sheets to the description, claims and drawings submitted to the IPEA as Article 34 Amendments will be marked as “AMENDED SHEET” at the bottom of the page. The IPER will indicate in “Box No. I Basis of the Report” that replacement sheets submitted under either PCT Article 19 or 34 have been considered and will indicate the date they were received and the replacement sheets will be annexed to the IPER. The NOTIFICATION OF ACCEPTANCE OF APPLICATION UNDER 35 U.S.C. 371 AND 37 CFR 1.495 (Form PCT/DO/EO/903) should also be consulted, as it will indicate if the annexes or their translation have not been entered. A sample copy of the form has been reproduced at the end of MPEP § 1893.03(a). Additionally, if the annexes have been entered, the National Stage Processing Division of the Office of PCT Operations will write in pencil on any original sheet(s) or translations thereof that were replaced, “Replaced by Article 34 Amendment” and on the amended sheet(s) or translations thereof,” Article 34.”<

## THE PRIORITY DOCUMENT

See the discussion in MPEP § 1893.03(c).

## NOTIFICATION OF WITHDRAWAL

If the national stage application papers include an indication that the international application or US designation has been withdrawn, then the application should be brought to the attention of the Office of PCT Legal Administration to determine whether the withdrawal occurred prior to completion of the requirements under 35 U.S.C. 371(c). If the withdrawal occurred prior to completion of the requirements under 35 U.S.C. 371(c), then entry into the U.S. national stage is prohibited. See 35 U.S.C. 366. The indication of withdrawal may appear on a Notification of Withdrawal (PCT/IB/307 or PCT/RO/136), a Notification that International Application Considered to Be Withdrawn (Form PCT/RO/117), or other notification.

### **1893.03(f) Drawings and PCT Rule 11 [R-2]**

The drawings for the national stage application must comply with PCT Rule 11. The copy of the drawings provided by the International Bureau has already been checked and should be in compliance with PCT Rule 11. Accordingly, the drawing provided by the International Bureau >(see MPEP § 1893.03(e)< should be acceptable. The USPTO may not impose requirements beyond those imposed by the Patent Cooperation Treaty (e.g., PCT Rule 11). However, the examiner does \* have the authority to require new \*\* drawings if the drawings were published without meeting all requirements under the PCT for drawings. \*\*

### **1893.03(g) Information Disclosure Statement in a National Stage Application [R-2]**

An extensive discussion of Information Disclosure Statement practice is to be found in MPEP § 609. Although not specifically stated therein, the duty to disclose information material to patentability as defined in 37 CFR 1.56 is placed on individuals associated with the filing and prosecution of a national stage application in the same manner as for a domestic national application. The \*\*>averment< with respect to the duty under 37 CFR 1.56 >required under 37 CFR 1.63(b)(3) in an oath or declaration is applicable to oaths and declarations filed in U.S. national stage applications. See 37 CFR 1.497(c)<.

When an international application is filed under the Patent Cooperation Treaty (PCT), prior art documents may be cited by the examiner in the international search report and/or the international preliminary examination report. It is desirable for the U.S. examiner to consider the documents cited in the international application when examining the U.S. national stage application or when examining an application filed under 35 U.S.C. 111(a) which claims the benefit of the international application under 35 U.S.C. 365(a) or (c).

As a result of an agreement among the European Patent Office (EPO), Japan Patent Office (JPO), and the United States Patent and Trademark Office (USPTO), copies of documents cited in the international search report issued by any one of these Inter-

national Searching Authority Offices generally are being sent to the other Offices when designated in the international application. Accordingly, in many national stage applications where the international search was conducted by the EPO, JPO, or USPTO, copies of the documents cited in the international search report are made available to the examiner in the national stage application.

When all the requirements for a national stage application have been completed, applicant is notified (Form PCT/DO/EO/903) of the acceptance of the application under 35 U.S.C. 371, including an itemized list of the items received. The itemized list includes an indication of whether a copy of the international search report and copies of the references cited therein are present in the national stage file. The examiner will consider the documents cited in the international search report, without any further action by applicant under 37 CFR 1.97 and 1.98, when both the international search report and copies of the documents are indicated to be present in the national stage file. The examiner will note the consideration in the first Office action. There is no requirement that the examiners list the documents on a PTO-892 form. See form paragraphs 6.53, 6.54, and 6.55 (reproduced in MPEP § 609). Otherwise, applicant must follow the procedure set forth in 37 CFR 1.97 and 1.98 in order to ensure that the examiner considers the documents cited in the international search report.

This practice applies only to documents cited in the international search report relative to a national stage application filed under 35 U.S.C. 371. It does not apply to documents cited in an international preliminary examination report that are not cited in the search report. It does not apply to applications filed under 35 U.S.C. 111(a) claiming the benefit of an international application filing date.

### **1895 A Continuation>, Divisional,< or Continuation-in-Part Application of a PCT Application Designating the United States [R-2]**

It is possible to file a U.S. national application under 35 U.S.C. 111(a) during the pendency (prior to the abandonment) of an international application which designates the United States without completing the requirements for entering the national stage

under 35 U.S.C. 371(c). The ability to take such action is based on provisions of the United States patent law. 35 U.S.C. 363 provides that “[a]n international application designating the United States shall have the effect, from its international filing date under article 11 of the treaty, of a national application for patent regularly filed in the Patent and Trademark Office....” 35 U.S.C. 371(d) indicates that failure to timely comply with the requirements of 35 U.S.C. 371(c) “shall be regarded as abandonment... by the parties thereof....” It is therefore clear that an international application which designates the United States has the effect of a pending U.S. application from the international application filing date until its abandonment as to the United States. The first sentence of 35 U.S.C. 365(c) specifically provides that “[i]n accordance with the conditions and requirements of section 120 of this title,... a national application shall be entitled to the benefit of the filing date of a prior international application designating the United States.” The condition of 35 U.S.C. 120 relating to the time of filing requires the later application to be filed before the patenting or abandonment of or termination of proceedings on the first application. The filing of continuations \*\* of an international (PCT) application designating the U.S. was used primarily in instances where there was difficulty in obtaining a signed oath or declaration by the expiration of the time for entry into the national stage. Because these continuation \*\* applications historically resulted from a need to bypass the requirements of 35 U.S.C. 371, they became known as “bypass” applications. Since applicants are now notified of missing or defective oaths or declarations and/or translations, and are given a time period to respond which is extendable under 37 CFR 1.136(a), the use of this practice >with respect to continuation applications< has diminished.

\*\*>Continuation-in-part applications are generally filed in instances where applicants seek to add matter to the disclosure which is not supported by the disclosure of the international application as originally filed, as new matter may not be added to a U.S. national stage application. See 37 CFR 1.121(f).<

## 1895.01 Handling of and Considerations in the Handling of \*\* Continuations>, Divisions,< and Continuations-In-Part of \* PCT \*>Applications< [R-2]

\*\*

Rather than \*\*>submitting< national stage application >papers under 35 U.S.C. 371<, a continuing application (i.e., continuation, C-I-P, or division) under 35 U.S.C. 111(a) of the international >(PCT)< application may be filed. Pursuant to 35 U.S.C. 365(c), a regular national application filed under 35 U.S.C. 111(a) and 37 CFR 1.53(b) (not under 37 CFR 1.53(d) or former 37 CFR 1.60 or 1.62) may claim benefit of the filing date of an international application which designates the United States.

A typical time line involving a continuing application filed during the pendency of an international application is illustrated as follows:

\*\*>To obtain benefit under 35 U.S.C. 120 and 365(c) of a prior international application designating the U.S., the continuing application must:

(A) include a specific reference to the prior international application (either in the application data sheet (37 CFR 1.76) or in the first sentence of the specification),

(B) be copending with the prior international application, and

(C) have at least one inventor in common with the prior international application.

With regard to (A), the specific reference to the international application required under 35 U.S.C. 120 and 365(c) must either be contained in the first sentence of the specification or included in an application data sheet. 37 CFR 1.78(a)(2)(iii). The specific reference must identify the parent international application by international application number and inter-

national filing date and indicate the relationship of the applications (i.e., continuation, continuation-in-part, or division). See 37 CFR 1.78(a)(2)(i) and MPEP § 201.11. An example of an appropriate first sentence of the specification is, for example, “This is a continuation of International Application PCT/EP2004/000000, with an international filing date of January 5, 2004, now abandoned.” The required reference must be submitted within the time period provided by 37 CFR 1.78(a)(5)(ii). This time period is not extendable. A certified copy of the international application (and an English translation) of the international application may be required by the examiner to perfect the claim for benefit under 35 U.S.C. 120 and 365(c) if the international application did not originate in the United States and such is necessary, for example, where an intervening reference is found and applied in a rejection of one or more claims. If the international application was published by the International Bureau pursuant to PCT Article 21, then a certified copy would not normally be necessary.

If benefit under 35 U.S.C. 119(e), 120 and 365(c) is also being claimed to an earlier filed national application (or international application designating the U.S.) via an intermediate international application designating the U.S., the examiner must examine the intermediate international application to see if it contains a proper reference to the earlier application. The reference will usually be included on the cover page of the published international application and/or may appear in the first sentence of the description of the published application. A lack of a proper reference in the published international application does not necessarily mean that a proper reference is not contained in the second international application. Accordingly, the examiner may need to inspect the Home Copy of the international application (if the USPTO was the receiving Office) to determine whether the requirements under 37 CFR 1.78(a) have been satisfied. For example, the Home Copy file may contain a proper reference in a separate paper or a decision granting a petition to accept a late benefit claim may be present in the application file. See MPEP § 201.11(a).

With regard to (B), a U.S. national application is considered copending with a prior international application designating the U.S. if the international application was pending on the filing date of the U.S. national application. Generally, except in cases where

the international application has been withdrawn (either generally or as to the United States), an international application becomes abandoned as to the United States upon expiration of 30 months from the priority date (i.e., the priority date claimed in the international application or, if no priority is claimed, the international filing date) unless a proper submission under 35 U.S.C. 371 to enter the U.S. national phase is filed prior to the expiration of this 30-month period. See MPEP § 1893.01(a)(1) and § 1893.02. However, if the international application is one where the 20-month period from the priority date expired before April 1, 2002, then it was necessary to file a demand electing the United States prior to the expiration of 19 months from the priority date in order to extend the international phase to 30 months from the priority date. If such a demand was not timely filed, then under former 37 CFR 1.494, such an international application became abandoned at the expiration of 20 months from the priority date unless a proper submission under 35 U.S.C. 371 to enter the U.S. national phase was made prior to the expiration of 20 months from the priority date. Accordingly, if the international application is not subject to the filing of a demand in order to delay entry into the U.S. national phase to 30 months from the priority date, then a national application filed prior to the expiration of this 30 month period will be copending with the international application unless the international application was withdrawn, either generally or as to the United States, prior to the filing of the national application. To determine whether the application was withdrawn, the examiner must either review the Home Copy of the international application file (if the USPTO was the receiving Office), or require applicant to certify that the international application was not withdrawn or considered to be withdrawn, either generally or as to the United States, prior to the filing date of the national application claiming benefit under 35 U.S.C. 120 and 365(c) to such international application. If the national application claiming benefit to the international application was filed after the expiration of this 30-month period, then there will be no copendency in the absence of a timely and proper submission to enter the U.S. national phase under 35 U.S.C. 371. The existence of a national stage application may be checked through PALM and the records of the national stage application should be consulted to ver-

ify copendency. Additionally, if the 20-month period from the priority date of the international application expired before April 1, 2002 and the national application claiming benefit under 35 U.S.C. 120 and 365(c) was filed later than 20 months from the priority date of the international application, the applicant may be required to submit proof of the filing of a demand electing the United States within 19 months from the priority date. This proof may be in the form of a copy of the “Notification of Receipt of Demand by Competent International Preliminary Examining Authority” (Form PCT/IPEA/402) showing the demand was received prior to the expiration of 19 months from the priority date, and a copy of the “Notification Concerning Elected Offices Notified of Their Election” (Form PCT/IB/332) showing the election of the United States. If the parent international application was not copending (i.e., abandoned or withdrawn), benefit under 35 U.S.C. 120 is not possible.

With regard to (C), inventors will normally be identified on the cover page of the published international application. In addition, such information is indicated in the *PCT Gazette*, which is available in electronic form from WIPO’s web site ([www.wipo.int/pct/en/index.html](http://www.wipo.int/pct/en/index.html)).

#### **PRIORITY CLAIMS UNDER 35 U.S.C. 119(a)-(d)**

A claim for foreign priority under 35 U.S.C. 119 (a)-(d) must be made in the continuing application in order to obtain the benefit of the filing date of the prior filed foreign application. This is true regardless of whether such a claim was made in the parent international application. A foreign priority claim is proper in the continuing application if the foreign application was filed within 12 months prior to the filing of the continuing application or within 12 months prior to the international filing date of the parent international application. In addition, the required claim must be made within the time period set forth in 37 CFR 1.55 (a)(1). This time period is not extendable. See MPEP § 201.14. A certified copy of any foreign priority document must be provided by the applicant unless the parent international application has entered the national stage under 35 U.S.C. 371 and the national stage application contains a photocopy of the priority document from the International Bureau. See MPEP § 1893.03(c). In such case, the applicant, in the con-

tinuing application, may state that the priority document is contained in the national stage application.

For a discussion of U.S. national applications filed under 35 U.S.C. 111(a) having foreign priority claims under 35 U.S.C. 119(a)-(d) and 365(a) to a prior international application designating at least one country other than the United States, see MPEP § 201.13(b).<

#### **1896 The Differences Between a National Application Filed Under 35 U.S.C. 111(a) and a National Stage Application Submitted Under 35 U.S.C. 371 [R-2]**

The following section describes the differences between a U.S. national application filed under 35 U.S.C. 111(a), including those claiming benefit of a PCT application under 35 U.S.C. 120 (a **continuation**), **division**,< or a **continuation-in-part** of a PCT application), and a U.S. **national stage application** (submitted under 35 U.S.C. 371).

*Chart of Some Common Differences*

	National Applications (filed under 35 U.S.C. 111(a))	National Stage Applications (submitted under 35 U.S.C. 371)
Filing Date	Deposit date in USPTO of specification, claim and any necessary drawing	International filing date of PCT application
Date application was “filed in the United States” for prior art purposes under 35 U.S.C. 102(e)	See MPEP § 706.02(f)(1)	See MPEP §§ 706.02(f)(1), 1857.01, and 1895.01

	National Applications (filed under 35 U.S.C. 111(a))	National Stage Applications (submitted under 35 U.S.C. 371)
35 U.S.C. 119(a)-(d) Priority Requirement	Claim & certified copy provided by applicant	Copy of certified copy provided by WIPO, claim by applicant
Unity of Invention	U.S. restriction practice	Unity of invention practice under 37 CFR 1.499
Filing Fees	37 CFR 1.16	37 CFR 1.492
Reference to Application in Declaration	Attached application, U.S. Application No., etc.	Same as in a 35 U.S.C. 111(a) filing or may refer to the international application
Copendency with International Application	Applicant provides proof	Not an issue

The differences between a national application filed under 35 U.S.C. 111(a) and a national application submitted under 35 U.S.C. 371 are often subtle, but the differences are important.

## I. FILING DATE

The filing date of a 35 U.S.C. 111(a) application is the date when the USPTO receives a specification >as prescribed by 35 U.S.C. 112 containing a description and at least one< claim, and any >required< drawings. See 37 CFR 1.53(b).

The filing date of a PCT international application is the date applicant satisfies Article 11 requirements, i.e., includes a >description, a claim, names at least one applicant who is a resident or national of a PCT Contracting State, filed in the prescribed language, and designates at least one Contracting State. See

MPEP § 1810. By virtue of 35 U.S.C. 363, the U.S. filing date of an international application that designates the United States is, for most legal purposes, the international filing date. See MPEP § 1893.03(b).<

## II. EFFECTIVE DATE AS A REFERENCE

A reference under 35 U.S.C. 102(e) must be a U.S. patent, a U.S. application publication (35 U.S.C. 122(b)), or a WIPO publication of an international application under PCT Article 21(2).

### *References That Did Not Result From, Nor Claimed Benefit of, an International Application*

The 35 U.S.C. 102(e) date of a reference that did not result from, nor claimed the benefit of, an international application is its earliest effective U.S. filing date, taking into consideration any proper priority or benefit claims to prior U.S. applications under 35 U.S.C. 119(e) or 120 if the prior application(s) properly support(s) the subject matter used to make the rejection. See MPEP § 706.02(a).

### *References That Resulted From, or Claimed Benefit of, an International Application*

If a reference resulted from, or claimed the benefit of, an international application, the following must be determined:

(A) If the international application meets the following three conditions:

- (1) an international filing date on or after November 29, 2000;
- (2) designated the United States; and
- (3) published under PCT Article 21(2) in English,

the international filing date is a U.S. filing date for prior art purposes under 35 U.S.C. 102(e). If such an international application properly claims benefit to an earlier-filed U.S. or international application, or priority to an earlier-filed U.S. provisional application, apply the reference under 35 U.S.C. 102(e) as of the earlier filing date, assuming all the conditions of 35 U.S.C. 102(e), 119(e), 120, or 365(c) are met. Note, where the earlier application is an international application, the earlier international application must satisfy the same three conditions (i.e., filed on or after November 29, 2000, designated the U.S., and had been published in English under PCT Article 21(2))

for the earlier international filing date to be a U.S. filing date for prior art purposes under 35 U.S.C. 102(e).

(B) If the international application was filed on or after November 29, 2000, but did **not** designate the United States or was **not** published in English under PCT Article 21(2), do **not** treat the international filing date as a U.S. filing date for prior art purposes under 35 U.S.C. 102(e). In this situation, do **not** apply under 35 U.S.C. 102(e) the reference as of its international filing date, its date of completion of the 35 U.S.C. 371(c)(1), (2) and (4) requirements, or any earlier filing date to which such an international application claims benefit or priority. The reference may be applied under 35 U.S.C. 102(a) or (b) as of its publication date, or 35 U.S.C. 102(e) as of any later U.S. filing date of an application that properly claimed the benefit of the international application (if applicable).

(C) If the international application has an international filing date prior to November 29, 2000, apply the reference under the provisions of 35 U.S.C. 102 and 374, prior to the AIPA amendments:

(1) For U.S. patents, apply the reference under 35 U.S.C. 102(e) as of the earlier of the date of completion of the requirements of 35 U.S.C. 371(c)(1), (2) and (4) or the filing date of the later-filed U.S. application that claimed the benefit of the international application;

(2) For U.S. application publications and WIPO publications directly resulting from international applications under PCT Article 21(2), never apply these references under 35 U.S.C. 102(e). These references may be applied as of their publication dates under 35 U.S.C. 102(a) or (b);

(3) For U.S. application publications of applications that claim the benefit under 35 U.S.C. 120 or 365(c) of an international application filed prior to November 29, 2000, apply the reference under 35 U.S.C. 102(e) as of the actual filing date of the later-filed U.S. application that claimed the benefit of the international application.

Examiners should be aware that although a publication of, or a U.S. patent issued from, an international application may not have a 35 U.S.C. 102(e) date at all, or may have a 35 U.S.C. 102(e) date that is after the effective filing date of the application being examined (so it is not “prior art”, the corresponding WIPO

publication of an international application may have an earlier 35 U.S.C. 102(a) or (b) date.

### III. 35 U.S.C. 119(a)-(d) AND 365(b) < PRIORITY REQUIREMENTS

The certified copy of the foreign priority application must be provided to the Office by applicant in a U.S. national application filed under 35 U.S.C. 111(a). Where applicant filed an international application claiming priority to an earlier filed national application, the certified copy of the priority application may be provided to the International Bureau by applicant during the international stage. The International Bureau (WIPO) then sends a copy of the certified copy of the priority application to each designated office for inclusion in the national stage application. A U.S. national stage application filed under 35 U.S.C. 371 will have a photocopy of the priority document with the first page stamped by the International Bureau to indicate that it is a priority document received by WIPO and the date of such receipt. Such a photocopy is acceptable in a U.S. national stage application to establish that applicant has filed a certified copy of the priority document. If the photocopy is missing from the national stage application file, either the document has been misplaced or it was not provided due to a defect in priority during the international stage. If the priority claim was not in accordance with PCT Rule 4.10 or the priority document was not provided in accordance with PCT Rule 17, the photocopy of the priority document will not have been provided by the International Bureau. If a copy of the foreign priority document is not in the national stage application file but applicant asserts that a certified copy of the priority document was timely furnished under PCT Rule 17 in the international phase, then the examiner should consult with a Special Program Examiner in his or her Technology Center.

### IV. UNITY OF INVENTION

U.S. national applications filed under 35 U.S.C. 111(a) are subject to restriction practice in accordance with 37 CFR 1.141-1.146. See MPEP § 803. U.S. national stage applications (which entered the national stage from international applications after compliance with 35 U.S.C. 371) are subject to unity of invention

practice in accordance with 37 CFR 1.475 and 1.499 (effective May 1, 1993).

**V. FILING FEES**

U.S. national applications filed under 35 U.S.C. 111(a) are subject to the national application filing fees set forth at 37 CFR 1.16. Submissions to enter the U.S. national stage under 35 U.S.C. 371 are subject to the national stage fees prescribed at 37 CFR 1.492.

**VI. REFERENCE TO APPLICATION IN DECLARATION**

Applicant's oath or declaration is required to identify the specification to which it is directed (37 CFR

1.63(b)(1)). The specification may be identified in a U.S. national application filed under 35 U.S.C. 111(a) by reference to an attached specification or by reference to the application number and filing date of a specification previously filed in the Office. MPEP § 601.01(a) gives the minimum requirements for identification of the specification. Submissions to enter the U.S. national stage under 35 U.S.C. 371 may identify the specification (in the oath or declaration) in the same manner as applications filed under 35 U.S.C. 111(a) or may identify the specification by reference to the application number and filing date of the international application.

## 1907 Unauthorized Participation by Protestor

## 1920 Citation of Prior Art Under 37 CFR 1.501(a)

## 1901 Protest Under 37 CFR 1.291

*37 CFR 1.291. Protests by the public against pending applications.*

(a) Protests by a member of the public against pending applications will be referred to the examiner having charge of the subject matter involved. A protest specifically identifying the application to which the protest is directed will be entered in the application file if:

(1) The protest is submitted prior to the date the application was published or the mailing of a notice of allowance under § 1.311, whichever occurs first; and

(2) The protest is either served upon the applicant in accordance with § 1.248, or filed with the Office in duplicate in the event service is not possible.

(b) Protests raising fraud or other inequitable conduct issues will be entered in the application file, generally without comment on those issues. Protests which do not adequately identify a pending patent application will be returned to the protestor and will not be further considered by the Office. A protest submitted in accordance with the second sentence of paragraph (a) of this section will be considered by the Office if the application is still pending when the protest and application file are brought before the examiner and it includes:

(1) A listing of the patents, publications, or other information relied upon;

(2) A concise explanation of the relevance of each listed item;

(3) A copy of each listed patent or publication or other item of information in written form or at least the pertinent portions thereof; and

(4) An English language translation of all the necessary and pertinent parts of any non-English language patent, publication, or other item of information in written form relied upon.

(c) A member of the public filing a protest in an application under paragraph (a) of this section will not receive any communications from the Office relating to the protest, other than the return

of a self-addressed postcard which the member of the public may include with the protest in order to receive an acknowledgment by the Office that the protest has been received. In the absence of a request by the Office, an applicant has no duty to, and need not, reply to a protest. The limited involvement of the member of the public filing a protest pursuant to paragraph (a) of this section ends with the filing of the protest, and no further submission on behalf of the protestor will be considered, except for additional prior art, or unless such submission raises new issues which could not have been earlier presented.

*37 CFR 1.248. Service of papers; manner of service; proof of service; proof of service in cases other than interferences.*

(a) Service of papers must be on the attorney or agent of the party if there be such or on the party if there is no attorney or agent, and may be made in any of the following ways:

(1) By delivering a copy of the paper to the person served;

(2) By leaving a copy at the usual place of business of the person served with someone in his employment;

(3) When the person served has no usual place of business, by leaving a copy at the person's residence, with some person of suitable age and discretion who resides there;

(4) Transmission by first class mail. When service is by mail the date of mailing will be regarded as the date of service;

(5) Whenever it shall be satisfactorily shown to the Commissioner that none of the above modes of obtaining or serving the paper is practicable, service may be by notice published in the *Official Gazette*.

(b) Papers filed in the Patent and Trademark Office which are required to be served shall contain proof of service. Proof of service may appear on or be affixed to papers filed. Proof of service shall include the date and manner of service. In the case of personal service, proof of service shall also include the name of any person served, certified by the person who made service. Proof of service may be made by:

(1) An acknowledgement of service by or on behalf of the person served or

(2) A statement signed by the attorney or agent containing the information required by this section.

(c) See § 1.646 for service of papers in interferences.

The degree of participation allowed a protestor is solely within the discretion of the Commissioner of Patents and Trademarks.

37 CFR 1.291(a) gives recognition to the value of written protests in bringing information to the attention of the Office and in avoiding the issuance of invalid patents. All protests must be submitted prior to the publication of the application or the mailing of a notice of allowance, whichever occurs first, because no protest or other form of preissuance opposition to the grant of a patent may be initiated after publication of the application without the applicant's express

written consent as specified by 35 U.S.C. 122(c). 37 CFR 1.291(a) provides that public protests against pending applications will be referred to the examiner having charge of the subject matter involved and will be entered in the application file if the protest is submitted prior to the date the application was published or the mailing of a notice of allowance under 37 CFR 1.311, whichever occurs first, and the protest is either served upon the applicant or filed in duplicate in the event service is not possible. Paragraph (b) of 37 CFR 1.291 assures members of the public that a protest will be fully considered by the Office if the protest is submitted in accordance with 37 CFR 1.291(a), the application is still pending when the protest and application file are brought before the examiner, and the protest includes:

(A) a listing of the patents, publications, or other information relied on;

(B) a concise explanation of the relevance of each listed item;

(C) a copy of each listed patent, publication, or other item of information in written form, or at least the pertinent portions thereof; and

(D) an English language translation of all necessary and pertinent parts of any non-English language document relied on.

A party obtaining knowledge of an application pending in the Office may file a protest against the application and may therein call attention to any facts within protestor's knowledge which, in protestor's opinion, would make the grant of a patent thereon improper.

A protestor does not, however, by the mere filing of a protest, obtain the "right" to argue the protest before the Office. Active participation by a protestor "ends with the filing of the protest, and no further submission on behalf of the protestor will be considered, except for additional prior art, or unless such submission raises new issues which could not have been earlier presented." 37 CFR 1.291(c). The USPTO will acknowledge the receipt of a protest in an original or a reissue application file only if a self-addressed postcard is included with the protest (see MPEP § 1901.05). The question of whether or not a patent will issue is a matter between the applicant and the Office acting on behalf of the public.

### **1901.01 Who Can Protest**

Any member of the public, including private persons, corporate entities, and government agencies, may file a protest under 37 CFR 1.291. A protest may be filed by an attorney or other representative on behalf of an unnamed principal since 37 CFR 1.291 does not require that the principal be identified.

### **1901.02 Information Which Can Be Relied on in Protest**

Any information which, in the protestor's opinion, would make the grant of a patent improper can be relied on in a protest under 37 CFR 1.291(a). While prior art documents, such as patents and publications, are most often the types of information relied on in protests, 37 CFR 1.291(a) is not limited to prior art documents. Protests may be based on any facts or information adverse to patentability. The content and substance of the protest are more important than whether prior art documents, or some other form of evidence adverse to patentability, are being relied on. The Office recognizes that when evidence other than prior art documents is relied on, problems may arise as to authentication and the probative value to assign to such evidence. However, the fact that such problems may arise, and have to be resolved, does not preclude the Office from considering such evidence, nor does it mean that such evidence cannot be relied on in a protest under 37 CFR 1.291. Information in a protest should be set forth in the manner required by 37 CFR 1.291(b).

The following are examples of the kinds of information, in addition to prior art documents, which can be relied on in a protest under 37 CFR 1.291(a):

(A) Information demonstrating that the invention was publicly "known or used by others in this country... before the invention thereof by the applicant for patent" and is therefore barred under 35 U.S.C. 102(a) and/or 103.

(B) Information that the invention was "in public use or on sale in this country, more than 1 year prior to the date of the application for patent in the United States" (35 U.S.C. 102(b)).

(C) Information that the applicant "has abandoned the invention" (35 U.S.C. 102(c)) or "did not himself invent the subject matter sought to be patented" (35 U.S.C. 102(f)).

(D) Information relating to inventorship under 35 U.S.C. 102(g).

(E) Information relating to sufficiency of disclosure or failure to disclose best mode, under 35 U.S.C. 112.

(F) Any other information demonstrating that the application lacks compliance with the statutory requirements for patentability.

(G) Information indicating “fraud” or “violation of the duty of disclosure” under 37 CFR 1.56 may be the subject of a protest under 37 CFR 1.291(a). Protests raising fraud or other inequitable conduct issues will be entered in the application file, generally without comment on those issues. 37 CFR 1.291(b).

Different forms of evidence may accompany, or be submitted as a part of, a protest under 37 CFR 1.291(a). Conventional prior art documents such as patents and publications are the most common form of evidence. However, other forms of evidence can likewise be submitted. Some representative examples of other forms of evidence are litigation-related materials such as complaints, answers, depositions, answers to interrogatories, exhibits, transcripts of hearings or trials, court orders and opinions, stipulations of the parties, etc. Where only a portion of the litigation-related materials is relevant to the protest, protestors are encouraged to submit only the relevant portion(s).

In a protest based on an alleged public use or sale by, or on behalf of, the applicant or applicant’s assignee, evidence of such public use or sale may be submitted along with affidavits or declarations identifying the source(s) of the evidence and explaining its relevance and meaning. Such evidence might include documents containing offers for sale by applicant or applicant’s assignee, orders, invoices, receipts, delivery schedules, etc. The Office will make a decision as to whether or not public use or sale has been established based on the evidence the Office has available. If applicant denies the authenticity of the documents and/or evidence, or if the alleged public use and/or sale is by a party other than applicant or applicant’s assignee, protestor may find it desirable or necessary to proceed via 37 CFR 1.292 (public use proceedings) rather than by a protest under 37 CFR 1.291.

While the forms in which evidence and/or information may be submitted with, or as a part of, a protest under 37 CFR 1.291(a) are not limited, protestors

must recognize that such submissions may encounter problems such as establishing authenticity and/or the probative value to apply to the evidence. Obviously, the Office will have to evaluate each item of evidence and/or information submitted with a view as to both its authenticity and what weight to give thereto.

Information which is subject to a court-imposed protective or secrecy order may be submitted with, or as a part of, a protest under 37 CFR 1.291(a). Trade secret information which was obtained by a protestor through agreements with others can likewise be submitted. Such information, if submitted, will be treated in accordance with the guidelines set forth in MPEP § 724 and will be made public if a reasonable examiner would consider the information important in deciding whether to allow the application to issue as a patent.

### **1901.03 How Protest Is Submitted**

A protest under 37 CFR 1.291(a) must be submitted in writing, must specifically identify the application to which the protest is directed by application number or serial number and filing date, and must include a listing of all patents, publications, or other information relied on; a concise explanation of the relevance of each listed item; an English language translation of all relevant parts of any non-English language document; and be accompanied by a copy of each patent, publication, or other document relied on. Protestors are encouraged to use form PTO-1449 “Information Disclosure Statement” (or an equivalent form) when preparing a protest under 37 CFR 1.291, especially the listing enumerated under 37 CFR 1.291(b)(1). See MPEP § 609. In addition, the protest and any accompanying papers must either (1) reflect that a copy of the same has been served upon the applicant or upon the applicant’s attorney or agent of record; or (2) be filed with the Office in duplicate in the event service is not possible.

It is important that any protest against a pending application specifically identify the application to which the protest is directed with the identification being as complete as possible. If possible, the following information should be placed on the protest:

- (A) Name of Applicant(s).
- (B) Application number (mandatory).
- (C) Filing date of application.
- (D) Title of invention.

(E) Group art unit number (if known).

(F) Name of examiner to whom the application is assigned (if known).

(G) Current status and location of application (if known).

(H) The word “ATTENTION:” followed by the area of the Office to which the protest is directed as set forth below.

In addition to the above information, the protest itself should be clearly identified as a “PROTEST UNDER 37 CFR 1.291(a).” If the protest includes exhibits or other attachments, these should also contain identifying information thereon in order to prevent them from becoming inadvertently separated and lost.

Any protest can be submitted by mail to the Assistant Commissioner for Patents, Washington, D.C. 20231, and should be directed to the attention of the Director of the particular Technology Center in which the application is pending. If the protestor is unable to specifically identify the application to which the protest is directed, but, nevertheless, believes such an application to be pending, the protest should be directed to the attention of the Office of Petitions, along with as much identifying data for the application as possible. Protests which do not adequately identify a pending patent application will be returned to the protestor and will not be further considered by the Office.

Where a protest is directed to a reissue application for a patent which is involved in litigation, the outside envelope and the top right-hand portion of the protest should be marked with the words “REISSUE LITIGATION.” The notations preferably should be written in a bright color with a felt point marker. Any “REISSUE LITIGATION” protest mailed to the Office should be so marked and mailed to BOX DAC. However, in view of the urgent nature of most “REISSUE LITIGATION” protests, protestor may wish to hand-carry the protest to the appropriate area in order to ensure prompt receipt and to avoid any unnecessary delays.

### **INITIAL PROTEST SUBMISSION MUST BE COMPLETE**

A protest must be complete and contain a copy of every document relied on by protestor, whether the document is a prior art document, court litigation

material, affidavit, or declaration, etc., because a protestor will *not* be given an opportunity to supplement or complete any protest which is incomplete. Active participation by protestor ends with the filing of the initial protest, as provided in 37 CFR 1.291(c), and no further submission on behalf of protestor will be acknowledged or considered, except for additional prior art, or unless such submission clearly raises new issues which could not have been earlier presented. Protests which will not be entered in the application file include those further submissions in violation of 37 CFR 1.291(c) by which protestor merely seeks to participate in the examination process. For example, mere arguments relating to an Office action or an applicant’s reply would not qualify as a new protest. Likewise, additional comments seeking to bring in further or even new data or information with respect to an issue previously raised by protestor would not qualify as a new protest. The Office will not add these arguments or comments to the original protest and will not enter them in the application file.

Even new protests which also argue Office actions or replies or any matter beyond the new issue should not be accepted. Improper protests will be returned by the Technology Center (TC) Director. While improper protests will be returned, a new protest by an earlier protestor will be proper and can be entered if it is clearly limited to new issues which could not have been earlier presented, and thereby constitutes a new protest.

As indicated in 37 CFR 1.291(b)(3), a protest must be accompanied by a copy of each prior art document relied on in order to ensure consideration by the examiner, although a protest without copies of prior art documents will not necessarily be ignored. While a protest without copies of documents will not necessarily be ignored, the submission of such documents with the protest will obviously expedite and ensure consideration of the documents, which consideration might not otherwise occur. Further, some documents which are available to protestor may not be otherwise available to the Office.

Every effort should be made by a protestor to serve a copy of the protest upon the attorney or agent of record or upon the applicant if no attorney or agent is of record. Of course, the copy served upon applicant or upon applicant’s attorney or agent should be a complete copy including a copy of each prior art or other

document relied on in the same manner as required by 37 CFR 1.291(a) for the Office copy. The protest filed in the Office should reflect, by an appropriate “Certificate of Service,” that service has been made as provided in 37 CFR 1.291(a). Only in those instances where service is not possible should the protest be filed in duplicate in order that the Office can attempt service.

#### **1901.04 When Should the Protest Be Submitted**

A protest under 37 CFR 1.291(a) must be submitted prior to the date the application was published or the mailing of a notice of allowance under 37 CFR 1.311, whichever occurs first, and the application must be pending when the protest and application file are brought before the examiner in order to be ensured of consideration. As a practical matter, any protest should be submitted as soon as possible after the protestor becomes aware of the existence of the application to which the protest is to be directed. By submitting a protest early in the examination process, i.e., before the Office acts on the application if possible, the protestor ensures that the protest will receive maximum consideration and will be of the most benefit to the Office in its examination of the application. A protest submitted after the mailing of the notice of allowance will not knowingly be ignored if the protest includes prior art documents which clearly anticipate or clearly render obvious one or more claims. However, the likelihood of consideration of a protest decreases as the patent date approaches.

A protest filed after final rejection and complying with 37 CFR 1.291(a) will be considered if the application is still pending when the protest and application are provided to the examiner. However, prosecution will not ordinarily be reopened after final rejection if the prior art cited in the protest is merely cumulative of the prior art cited in the final rejection. If a protest is not submitted within the time period set forth in 37 CFR 1.291(a)(1) it will be acknowledged as set forth in MPEP § 1901.05 only if a self-addressed postcard is included with the protest, and referred to the examiner having charge of the subject matter involved for handling as set forth in MPEP § 1901.06.

A protest with regard to a reissue application should be filed within the 2-month period following

announcement of the filing of the reissue application in the *Official Gazette*. If, for some reason, the protest of the reissue application cannot be filed within the 2-month period provided by MPEP § 1441, the protest can be submitted at a later time, but the protestor must be aware that reissue applications are “special” and a later filed protest may be received after action by the examiner. Any request by a protestor in a reissue application for an extension of the 2-month period following the announcement in the *Official Gazette* will be considered only if filed in the form of a petition under 37 CFR 1.182 and accompanied by the petition fee set forth in 37 CFR 1.17(h). The petition under 37 CFR 1.182 and the petition fee must be filed prior to the expiration of the 2-month period provided by MPEP § 1441. The petition must explain why the additional time is necessary and the nature of the protest intended. A copy of such petition must be served upon applicant in accordance with 37 CFR 1.248. The petition should be directed to the appropriate Technology Center (TC) which will forward the petition to the Office of Petitions for decision. Any such petition will be critically reviewed as to demonstrated need before being granted since the delay of examination of a reissue application of another party is being requested. Accordingly, the requests should be made only where necessary, for the minimum period required, and with a justification establishing the necessity for the extension.

If the protest is a “REISSUE LITIGATION” protest, it is particularly important that it be filed early if protestor wishes it considered at the time the Office first acts on the application. Protestors should be aware that the Office will entertain petitions under 37 CFR 1.182, when accompanied by the petition fee set forth in 37 CFR 1.17(h), to waive the 2-month delay period of MPEP § 1441 in appropriate circumstances. Accordingly, protestors to reissue applications cannot automatically assume that the full 2-month delay period of MPEP § 1441 will always be available.

If a protest is filed in a reissue application related to a patent involved in a pending interference proceeding, the reissue application should be referred to the Office of the Deputy Commissioner for Patent Examination Policy before the protest is considered and the application is acted on by the TC. See also MPEP § 1441 as to the filing of a protest in a reissue application.

## **1901.05 Initial Office Handling and Acknowledgment of Protest**

### **PROTESTS REFERRED TO EXAMINER**

Protests filed against pending applications will be referred to the examiner having charge of the application involved. 37 CFR 1.291(a). A protest specifically identifying the application to which it is directed will be entered in the application file, if (1) the protest is submitted prior to the publication of the application or the mailing of a notice of allowance under 37 CFR 1.311, whichever occurs first, (see MPEP § 1901.04) and (2) a copy has been served on applicant in accordance with 37 CFR 1.248, or a duplicate copy is filed with the Office in the event service is not possible. 37 CFR 1.291(a).

A protest where the application is specifically identified, which is submitted in conformance with 37 CFR 1.291(a) and (b), will be considered by the Office.

### **PROTEST DOES NOT INDICATE SERVICE**

If the protest filed in the Office does not, however, indicate service on applicant or applicant's attorney or agent, and is not filed in duplicate, then the Office will undertake to determine whether or not service has been made by contacting applicant or applicant's attorney or agent by telephone or in writing to ascertain if service has been made. If service has not been made and no duplicate has been filed, then the Office may request protestor to file such a duplicate before the protest is referred to the examiner. Alternatively, if the protest involves only a few pages, the Office may, in its sole discretion, elect to reproduce the protest rather than delay referring it to the examiner. If duplicate protest papers are mailed to applicant or applicant's attorney or agent by the Office, the application file should reflect that fact, either by a letter transmitting the protest or, if no transmittal letter is used, simply by an appropriate notation in the "Contents" section of the application file wrapper.

### **ACKNOWLEDGMENT OF PROTEST**

A protestor in an original or reissue application will not receive any communications from the Office relat-

ing to the protest, or to the application, other than the return of a self-addressed postcard which protestor may include with the protest in order to receive an acknowledgment that the protest has been received by the Office. 37 CFR 1.291(c). The Office will acknowledge a protest by return of the self-addressed postcard prior to the protest's entry into the application file or return to the protestor, as appropriate.

### **APPLICATIONS AND STATUS THEREOF MAINTAINED IN CONFIDENCE**

The postcard acknowledging receipt of a protest in other than a reissue application will not and must not indicate whether such application in fact exists or the status of any such application. Office employees must exercise care to ensure that matters relating to applications are *not* discussed with protestor or communicated in writing to protestor. Original applications are, of course, required by 35 U.S.C. 122 to be kept in confidence unless published pursuant to 35 U.S.C. 122(b). Thus, unless a protestor has been granted access to an original application, the protestor is not entitled to obtain from the Office any information concerning the same, including the mere fact that such an application exists. Petitions for access to patent applications with the exception of applications involved in or related to a proceeding before the Board of Patent Appeals or Interferences are decided by the Office of Petitions pursuant to delegation contained in MPEP § 1002.02(b). Reissue applications filed on, or after, March 1, 1977 are pursuant to 37 CFR 1.11(b) "open to inspection by the general public." After an application is published pursuant to 35 U.S.C. 122(b), a copy of the file wrapper of the published application may be requested by filing a written request under 37 CFR 1.14(c)(2) including the fee as set forth in 37 CFR 1.19(b)(2).

The Office will communicate with the applicant regarding any protest entered in an application file and may require the applicant to supply information pursuant to 37 CFR 1.291(c), including replies to specific questions raised by the protest, in order for the Office to decide any issues raised thereby. Under 37 CFR 1.291(c), the examiner can require the applicant to reply to the protest and answer specific questions raised by the protest.

## 1901.06 Examiner Treatment of Protest

Office practice as defined in 37 CFR 1.291(a) gives recognition to the value of the written protests in avoiding the issuance of invalid patents. However, the fact that one or more protests has been filed in an application, whether the application is an original application or a reissue application, does not relieve the examiner from conducting a *normal* examination on the merits, including the required search. Evidence submitted in a protest will be considered on the same basis as other *ex parte* evidence. *In re Reuter*, 651 F.2d 751, 758, 210 USPQ 249, 255 (CCPA 1981).

### INITIAL REVIEW

An examiner initially receiving a protest will immediately review the same for the following:

(A) To ensure that either the protest or the application file wrapper indicates that a copy of the protest has been served on applicant or applicant's attorney or agent. If a copy is not indicated as having been served on applicant or applicant's attorney and is not filed in duplicate, then the examiner should undertake to determine whether or not service has been made by contacting applicant or applicant's attorney or agent, but *not* protestor. If it has, this should be noted on the protest or on the application file. If service has not been made, the protest and application file should be brought to the attention of the TC Director for appropriate action. See MPEP § 1901.05.

(B) A protest raising issues of "fraud," "inequitable conduct," or "violation of duty of disclosure" will be entered in the application file, generally without comments on those issues.

If a protest is filed in a reissue application and the reissue application is related to a patent involved in a pending interference proceeding, such application should be referred to the Office of Patent Legal Administration before considering the protest and acting on the applications.

### PERIOD FOR COMMENTS BY APPLICANT

If the primary examiner's initial review reveals that the protest is ready for consideration during the examination, the examiner may nevertheless consider it desirable, or necessary, to obtain applicant's comments on the protest before further action. In such sit-

uations, the examiner will offer applicant an opportunity to file comments within a set period, usually 1 month, unless circumstances warrant a longer period.

Form Paragraph 19.01 can be used to offer applicant an opportunity to file comments on the protest.

#### ¶ 19.01 Period for Comments on Protest by Applicant

A protest against issuance of a patent based upon this application has been filed under 37 CFR 1.291(a) on [1], and a copy [2]. Any comments or reply applicant desires to file before consideration of the protest must be filed by [3].

#### Examiner Note:

1. Applicant is normally given one month to submit any comments, unless circumstances in the case would warrant a longer period.
2. A copy of this Office action is NOT sent to the protestor. See 37 CFR 1.291(c).
3. In bracket 2, insert either-- has been served on applicant-- or -- is attached hereto--.

Where necessary or desirable to decide questions raised by the protest, under 37 CFR 1.291(c) the primary examiner can require the applicant to reply to the protest and answer specific questions raised by the protest. The primary examiner cannot require a reply to questions relating to "fraud," "inequitable conduct," or "violation of the duty of disclosure" since those issues are generally not commented on by the Office. Any questions directed to applicant by the primary examiner must be limited to seeking answers reasonably necessary in order for the primary examiner to decide questions raised by the protest and which are before the primary examiner for decision. The primary examiner is not permitted, under 37 CFR 1.291(c), to seek answers to questions which are not before the primary examiner for decision. The primary examiner must use care in requiring information from applicant pursuant to 37 CFR 1.291(c) to ensure that the required information is necessary to the decision to be made.

Form Paragraph 19.02 can be used to require additional information from applicant regarding issues raised by the protest.

#### ¶ 19.02 Requirement for Information

The protest under 37 CFR 1.291 filed on [1] has been considered. In order to reach a full and proper consideration of the issues raised therein, it is necessary to obtain additional information from applicant regarding these issues. In particular [2]. The failure to reply to this requirement for information within ONE MONTH or THIRTY DAYS, whichever is longer, of the mailing date of

this requirement will result in abandonment of the application. This time period may be extended under the provisions of 37 CFR 1.136.

**Examiner Note:**

While the examiner normally should not need further information from applicant, this form paragraph may be used to request specific additional information from the applicant.

**PROTESTOR NOT PERMITTED TO COMPLETE INCOMPLETE PROTEST**

A protestor may not complete an incomplete protest, nor further participate in, or inquire as to the status of, any Office proceedings relating to the initial protest. 37 CFR 1.291. The examiner must not, therefore, communicate with protestor in any way and will not consider a later submission by protestor, except for additional prior art, or unless such submission raises new issues which could not have been earlier raised and constitutes in effect a new protest (see MPEP § 1901.07). Improper protests will be returned by the TC Director.

**TREATMENT OF TIMELY SUBMITTED PROTEST**

If the protest has been timely submitted, i.e., before the publication of the application or the mailing of a notice of allowance under 37 CFR 1.311, whichever occurs first, and the application is still pending when the protest and application file are brought before the examiner, the examiner must consider each of the prior art or other documents submitted in conformance with 37 CFR 1.291(b). At least those prior art documents which the examiner relies on in rejecting claims will be made of record by means of form PTO-892, unless the protestor has listed such prior art or other documents on form PTO-1449 (or an acceptable substitute as provided by MPEP § 609), in which case the examiner will place the examiner's initials adjacent to the citations in the boxes provided on the form PTO-1449 (see MPEP § 609). Where the prior art or other documents have not been cited on a PTO-892, or listed and initialed on a PTO-1449, the examiner will place a notation in the protest paper adjacent to the reference to the documents. The notation should include the examiner's initials and the term "checked." The examiner will also indicate in the next

Office action that all documents submitted have been considered.

It is not intended that the examiner be overly technical in construing 37 CFR 1.291(b) and refuse consideration of a protest because it does not include all of the contents enumerated by 37 CFR 1.291(b). The examiner should consider the protest to the extent it is helpful even though one or more of the listed items is omitted.

Where prior art or other documents are considered by the examiner, even though not submitted in full conformance with 37 CFR 1.291(b), the examiner *must*, for all those documents considered but not listed on the form PTO-892, (1) mark "checked" and place the examiner's initials beside each citation, or (2) where all the documents cited on a given page have been considered, mark "All checked" and place the examiner's initials in the left-hand margin beside the citations. See MPEP § 609. Where prior art or other documents are listed by the protestor on form PTO-1449, even though not submitted in full conformance with 37 CFR 1.291(b), the examiner *must*, for all those documents considered, place the examiner's initials adjacent to the citations in the boxes provided on the form PTO-1449. Where the prior art or other documents are listed by the protestor on form PTO-1449, but are not submitted in full compliance with 37 CFR 1.291(b), the examiner *must*, for all those documents not considered, draw a line through the citation on the form PTO-1449. See MPEP § 609. If a protest entered in an application file complies with 37 CFR 1.291(b), the examiner is required to fully consider *all* the issues, except for any issues of "fraud," "inequitable conduct," or "duty of disclosure" raised by the protestor, and clearly state the examiner's position thereon in detail.

**PROTEST FILED AFTER ALLOWANCE OR THE PUBLICATION OF THE APPLICATION**

If the protest is submitted after the publication of the application or the mailing of a notice of allowance under 37 CFR 1.311, whichever occurs first, it should not be entered in the application file. The applicant should be notified that the protest is untimely and that it is not being entered in the application file. The handling of the protest will vary depending on the particular situation as follows.

**A. Service of Copy Included**

Where the protest includes an indication of service of copy on the applicant, the original protest should be discarded.

**B. Service of Copy Not Included**

Where the protest does not include an indication of service, the duplicate copy of the protest (if present) should be discarded and the original protest papers should be sent to the applicant along with the notification of nonentry.

**COPIES OF DOCUMENTS NOT SUBMITTED**

If the protest is not accompanied by a copy of each prior art or other document relied on as required by 37 CFR 1.291(b), the examiner will consider the documents submitted. The protestor cannot be assured that the examiner will consider the missing document(s). However, if the examiner does so, the examiner will either cite the document on form PTO-892 or place a notation in the protest paper adjacent to the reference to the document which will include the examiner's initials and the term "checked." If the examiner considered a document not submitted, the next Office action will so indicate.

**CONSIDERATION OF PROTESTOR'S ARGUMENTS**

In view of the value of written protests, the examiner must give careful consideration to the points and arguments made on behalf of the protestor. Any Office action by the examiner treating the merits of a timely submitted protest complying with 37 CFR 1.291(b) must specifically consider and make evident by detailed reasoning the examiner's position as to the major arguments and points raised by the protestor. While it is not necessary for the examiner to respond to each and every minute argument or point, the major arguments and points must be specifically covered. The examiner will not, under any circumstances, treat or discuss those arguments or points directed to "fraud," "inequitable conduct," or "violation of duty of disclosure."

**RESULTS OF CONSIDERATION REPORTED TO TECHNOLOGY CENTER (TC) DIRECTOR**

After the examiner has considered the protest, the examiner will report the results of such consideration to the TC Director.

**1901.07 Protestor Participation**

In accordance with the limited protestor participation in protests, 37 CFR 1.291(c) was amended effective July 1, 1982, and further amended on December 1, 1997, to provide that:

"limited involvement of the member of the public filing a protest . . . ends with the filing of the protest, and no further submission on behalf of the protestor will be considered, except for additional prior art, or unless such submission raises new issues which could not have been earlier presented."

37 CFR 1.291(c) was amended effective December 1, 1997, by removing the blanket limitation of one protest per protestor, and now provides for a second or subsequent submission in the form of additional prior art. However, mere argument that is later submitted by an initial protestor would not be entered and would be returned unless it is shown that the argument relates to a new issue that could not have been earlier raised. Prior art submitted by a previous protestor prior to the publication of the application or the mailing of the notice of allowance under 37 CFR 1.311, whichever occurs first, will be made of record without a showing that it relates to a new issue. However, it should be noted that entry of later submitted prior art in the file record does not assure its consideration by the examiner if submitted late in the examination process. See MPEP § 1901 and § 1901.04. Accordingly, initial protests should be as complete as possible when first filed. The mere filing of a protest does not grant access to protestor or relieve the Office of its obligations under 35 U.S.C. 122 to maintain applications "in confidence." Nor does the mere filing of a protest automatically mean that protestor will have any "right" to participate to any particular degree. 37 CFR 1.291(c) does not permit protestor, or any other member of the public, to contact or receive information from the Office as to the disposition or status of the protest, or the application to which it is directed, or to participate in any Office proceedings relating to the protest. The Office does not serve cop-

ies of Office actions or other documents mailed by the Office on protestors, and does not require applicants to serve copies of papers filed with the Office on protestors. Furthermore, a protestor is not permitted to participate in interviews, appeal a decision by the examiner adverse to the protestor to the Board of Patent Appeals and Interferences, or participate in an appeal by applicant. The disposition of the protest will, once it has been filed under paragraph (c), be an *ex parte* matter between the Office and the applicant. Where protestor has access to an application, for example, a reissue application which is open to the public and may be inspected under 37 CFR 1.11, the proceedings may thereby be monitored.

Under 37 CFR 1.291(c), applicant may be required by the Office to reply to a protest. Any reply thereto would be *ex parte* and would not be served on the protestor. The *ex parte* nature of the requirements for information under paragraph (c) differs from past practice under which information could be required, or requested, from applicant and one or more protestors.

### **1901.07(a) Filing of Multiple Papers Relating to Same Issues**

Under 37 CFR 1.291(c), protestor participation ends with the filing of the initial protest, and protestor will not be allowed to complete any protest that is incomplete. No further submission on behalf of protestor will be considered, except for additional prior art, or unless such submission clearly raises new issues which could not have been earlier presented. Protests which will not be entered in the application file include those further submissions in violation of 37 CFR 1.291(c) by which protestor seeks to participate in the examination process. For example, mere arguments relating to an Office action or an applicant's reply would not qualify as a new issue. Likewise, additional comments seeking to bring in further or even new data or information with respect to an issue previously raised by protestor would not qualify as a new issue. Even new protests which also argue

Office actions or replies or any matter beyond the new issue should not be accepted. Improper protests will be refused consideration and returned by the Technology Center (TC) Director. While improper protests will be returned, a new protest by an earlier protestor will be proper and can be entered if it is clearly limited to new issues which could not have been earlier presented.

### **1906 Supervisory Review of an Examiner's Decision Adverse to Protestor**

As pointed out in MPEP § 1901.07, a protestor cannot appeal to the Board of Patent Appeals and Interferences from an adverse decision of the examiner. Further, a decision by examiner adverse to a protestor is final, and under the restricted protestor participation permitted under 37 CFR 1.291(c) is not petitionable to the Commissioner.

### **1907 Unauthorized Participation by Protestor**

Office personnel must exercise care to ensure that substantive matters relating to the application are not discussed *ex parte* with protestor or communicated in writing *ex parte* to protestor. The examiner must not communicate in any manner with protestor. See 37 CFR 1.291(c).

### **1920 Citation of Prior Art Under 37 CFR 1.501(a)**

37 CFR 1.501(a) permits any person at any time during the period of enforceability of a patent to cite to the Office, in writing, prior art consisting of patent and printed publications which that person states to be pertinent and applicable to the patent and believes to have a bearing on the patentability of any claim(s) of the patent. See MPEP § 2202 - § 2208.

## 2000.01 Introduction [R-2]

This Chapter deals with the duties owed toward the U.S. Patent and Trademark Office by the inventor and every other individual who is substantively involved in the preparation or prosecution of the application and who is associated with the inventor or the inventor’s assignee. These duties, of candor and good faith and disclosure, have been codified in 37 CFR 1.56, as promulgated pursuant to carrying out the duties of the \*>Director< under Sections 2, 3, 131, and 132 of Title 35 of the United States Code.

## 2001 Duty of Disclosure, Candor, and Good Faith

37 CFR 1.56. *Duty to disclose information material to patentability.*

(a) A patent by its very nature is affected with a public interest. The public interest is best served, and the most effective

patent examination occurs when, at the time an application is being examined, the Office is aware of and evaluates the teachings of all information material to patentability. Each individual associated with the filing and prosecution of a patent application has a duty of candor and good faith in dealing with the Office, which includes a duty to disclose to the Office all information known to that individual to be material to patentability as defined in this section. The duty to disclose information exists with respect to each pending claim until the claim is cancelled or withdrawn from consideration, or the application becomes abandoned. Information material to the patentability of a claim that is cancelled or withdrawn from consideration need not be submitted if the information is not material to the patentability of any claim remaining under consideration in the application. There is no duty to submit information which is not material to the patentability of any existing claim. The duty to disclose all information known to be material to patentability is deemed to be satisfied if all information known to be material to patentability of any claim issued in a patent was cited by the Office or submitted to the Office in the manner prescribed by §§ 1.97(b)-(d) and 1.98. However, no patent will be granted on an application in connection with which fraud on the Office was practiced or attempted or the duty of disclosure was violated through bad faith or intentional misconduct. The Office encourages applicants to carefully examine:

(1) Prior art cited in search reports of a foreign patent office in a counterpart application, and

(2) The closest information over which individuals associated with the filing or prosecution of a patent application believe any pending claim patentably defines, to make sure that any material information contained therein is disclosed to the Office.

(b) Under this section, information is material to patentability when it is not cumulative to information already of record or being made of record in the application, and

(1) It establishes, by itself or in combination with other information, a *prima facie* case of unpatentability of a claim; or

(2) It refutes, or is inconsistent with, a position the applicant takes in:

(i) Opposing an argument of unpatentability relied on by the Office, or

(ii) Asserting an argument of patentability.

A *prima facie* case of unpatentability is established when the information compels a conclusion that a claim is unpatentable under the preponderance of evidence, burden-of-proof standard, giving each term in the claim its broadest reasonable construction consistent with the specification, and before any consideration is given to evidence which may be submitted in an attempt to establish a contrary conclusion of patentability.

(c) Individuals associated with the filing or prosecution of a patent application within the meaning of this section are:

(1) Each inventor named in the application;

(2) Each attorney or agent who prepares or prosecutes the application; and

(3) Every other person who is substantively involved in the preparation or prosecution of the application and who is associated with the inventor, with the assignee or with anyone to whom there is an obligation to assign the application.

(d) Individuals other than the attorney, agent or inventor may comply with this section by disclosing information to the attorney, agent, or inventor.

(e) In any continuation-in-part application, the duty under this section includes the duty to disclose to the Office all information known to the person to be material to patentability, as defined in paragraph (b) of this section, which became available between the filing date of the prior application and the national or PCT international filing date of the continuation-in-part application.

37 CFR 1.56 defines the duty to disclose information to the Office.

### 2001.01 Who Has Duty To Disclose

*37 CFR 1.56. Duty to disclose information material to patentability.*

\*\*\*\*\*

(c) Individuals associated with the filing or prosecution of a patent application within the meaning of this section are:

- (1) Each inventor named in the application;
- (2) Each attorney or agent who prepares or prosecutes the application; and

(3) Every other person who is substantively involved in the preparation or prosecution of the application and who is associated with the inventor, with the assignee or with anyone to whom there is an obligation to assign the application.

\*\*\*\*\*

Individuals having a duty of disclosure are limited to those who are “substantively involved in the preparation or prosecution of the application.” This is intended to make clear that the duty does not extend to typists, clerks, and similar personnel who assist with an application.

The word “with” appears before “the assignee” and “anyone to whom there is an obligation to assign” to make clear that the duty applies only to individuals, not to organizations. For instance, the duty of disclosure would not apply to a corporation or institution as such. However, it would apply to individuals within the corporation or institution who were substantively involved in the preparation or prosecution of the application, and actions by such individuals may affect the rights of the corporation or institution.

### 2001.03 To Whom Duty of Disclosure Is Owed [R-2]

37 CFR 1.56(a) states that the “duty of candor and good faith” is owed “in dealing with the Office” and that all associated with the filing and prosecution of a

patent application have a “duty to disclose to the Office” material information. This duty “in dealing with” and “to” the Office extends, of course, to all dealings which such individuals have with the Office, and is not limited to representations to or dealings with the examiner. For example, the duty would extend to proceedings before the Board of Patent Appeals and Interferences and the Office of the \* Commissioner for Patents.

### 2001.04 Information Under 37 CFR 1.56(a) [R-2]

*37 CFR 1.56. Duty to disclose information material to patentability.*

(a) A patent by its very nature is affected with a public interest. The public interest is best served, and the most effective patent examination occurs when, at the time an application is being examined, the Office is aware of and evaluates the teachings of all information material to patentability. Each individual associated with the filing and prosecution of a patent application has a duty of candor and good faith in dealing with the Office, which includes a duty to disclose to the Office all information known to that individual to be material to patentability as defined in this section. The duty to disclose information exists with respect to each pending claim until the claim is cancelled or withdrawn from consideration, or the application becomes abandoned. Information material to the patentability of a claim that is cancelled or withdrawn from consideration need not be submitted if the information is not material to the patentability of any claim remaining under consideration in the application. There is no duty to submit information which is not material to the patentability of any existing claim. The duty to disclose all information known to be material to patentability is deemed to be satisfied if all information known to be material to patentability of any claim issued in a patent was cited by the Office or submitted to the Office in the manner prescribed by §§ 1.97(b)-(d) and 1.98. However, no patent will be granted on an application in connection with which fraud on the Office was practiced or attempted or the duty of disclosure was violated through bad faith or intentional misconduct. The Office encourages applicants to carefully examine:

(1) Prior art cited in search reports of a foreign patent office in a counterpart application, and

(2) The closest information over which individuals associated with the filing or prosecution of a patent application believe any pending claim patentably defines, to make sure that any material information contained therein is disclosed to the Office.

\*\*\*\*\*

The language of 37 CFR 1.56 (and 37 CFR 1.555) has been modified effective March 16, 1992 to emphasize that there is a duty of candor and good faith which is broader than the duty to disclose material information. 37 CFR 1.56 further states that “no

patent will be granted on an application in connection with which fraud on the Office was practiced or attempted or the duty of disclosure was violated through bad faith or intentional misconduct.”

The Office strives to issue valid patents. The Office has both an obligation not to unjustly issue patents and an obligation not to unjustly deny patents. Innovation and technological advancement are best served when an inventor is issued a patent with the scope of protection that is deserved. The rules as adopted serve to remind individuals associated with the preparation and prosecution of patent applications of their duty of candor and good faith in their dealings with the Office, and will aid the Office in receiving, in a timely manner, the information it needs to carry out effective and efficient examination of patent applications.

The amendment to 37 CFR 1.56 was proposed to address criticism concerning a perceived lack of certainty in the materiality standard. The rule as promulgated will provide greater clarity and hopefully minimize the burden of litigation on the question of inequitable conduct before the Office, while providing the Office with the information necessary for effective and efficient examination of patent applications. 37 CFR 1.56 has been amended to present a clearer and more objective definition of what information the Office considers material to patentability. The rules do not define fraud or inequitable conduct which have elements both of materiality and of intent.

The definition of materiality in 37 CFR 1.56 does not impose substantial new burdens on applicants, but is intended to provide the Office with the information it needs to make a proper and independent determination on patentability. It is the patent examiner who should make the determination after considering all the facts involved in the particular case.

37 CFR 1.56 states that each individual associated with the filing and prosecution of a patent application has a duty to disclose all information known to that individual to be material to patentability as defined in the section. Thus, the duty applies to contemporaneously or presently known information. The fact that information was known years ago does not mean that it was recognized that the information is material to the present application.

The term “information” as used in 37 CFR 1.56 means all of the kinds of information required to be disclosed and includes any information which is

“material to patentability.” Materiality is defined in 37 CFR 1.56(b) and discussed herein at MPEP § 2001.05. In addition to prior art such as patents and publications, 37 CFR 1.56 includes, for example, information on >enablement,< possible prior public uses, sales, offers to sell, derived knowledge, prior invention by another, inventorship conflicts, and the like. >“Materiality is not limited to prior art but embraces *any* information that a reasonable examiner would be substantially likely to consider important in deciding whether to allow an application to issue as a patent.” *Bristol-Myers Squibb Co. v. Rhone-Poulenc Rorer, Inc.*, 326 F.3d 1226, 1234, 66 USPQ2d 1481, 1486 (Fed. Cir. 2003) (emphasis in original) (finding article which was not prior art to be material to enablement issue).<

The term “information” is intended to be all encompassing, similar to the scope of the term as discussed with respect to 37 CFR 1.291(a) (see MPEP § 1901.02). 37 CFR 1.56(a) also states: “The Office encourages applicants to carefully examine: (1) prior art cited in search reports of a foreign patent office in a counterpart application, and (2) the closest information over which individuals associated with the filing or prosecution of a patent application believe any pending claim patentably defines, to make sure that any material information contained therein is disclosed to the Office.” The sentence does not create any new duty for applicants, but is placed in the text of the rule as helpful guidance to individuals who file and prosecute patent applications.

It should be noted that the rules are *not* intended to require information *favorable* to patentability such as, for example, evidence of commercial success of the invention. Similarly, the rules are not intended to require, for example, disclosure of information concerning the level of skill in the art for purposes of determining obviousness.

37 CFR 1.56(a) states that the duty to disclose information exists until the application becomes abandoned. The duty to disclose information, however, does not end when an application becomes allowed but extends until a patent is granted on that application. The rules provide for information being considered after a notice of allowance is mailed and before the issue fee is paid (37 CFR 1.97(d)) (see MPEP § 609, paragraph B(3)). The rules also provide for an application to be withdrawn from issue

(A) because one or more claims are unpatentable (37 CFR 1.313(c)(1));

(B) for express abandonment so that information may be considered in a continuing application before a patent issues (37 CFR 1.313(c)(3)); or

(C) for consideration of a request for continued examination (RCE) under 37 CFR 1.114 (37 CFR 1.313(a) and (c)(2)). Note that RCE practice does not apply to utility or plant applications filed before June 8, 1995 or to design applications. See MPEP § 706.07(h).

See MPEP § 1308 for additional information pertaining to withdrawal of an application from issue.

In a continuation-in-part application, individuals covered by 37 CFR 1.56 have a duty to disclose to the Office all information known to be material to patentability which became available between the filing date of the prior application and the national or PCT international filing date of the continuation-in-part application. See 37 CFR 1.56(e).

37 CFR 1.56 provides that the duty of disclosure can be met by submitting information to the Office in the manner prescribed by 37 CFR 1.97 and 1.98. See MPEP § 609. Applicants are provided certainty as to when information will be considered, and applicants will be informed when information is not considered. Note, however, that the Office may order or conduct reexamination proceedings based on prior art that was *cited/considered* in any prior related Office proceeding. See MPEP § 2242 and MPEP § 2258.01.

The Office does not believe that courts should, or will, find violations of the duty of disclosure because of unintentional noncompliance with 37 CFR 1.97 and 1.98. If the noncompliance is intentional, however, the applicant will have assumed the risk that the failure to submit the information in a manner that will result in its being considered by the examiner may be held to be a violation.

The Office does not anticipate any significant change in the quantity of information cited to the Office. Presumably, applicants will continue to submit information for consideration by the Office in applications rather than making and relying on their own determinations of materiality. An incentive remains to submit the information to the Office because it will result in a strengthened patent and will avoid later questions of materiality and intent to deceive. In addition, the new rules will actually facili-

tate the filing of information since the burden of submitting information to the Office has been reduced by eliminating, in most cases, the requirement for a concise statement of the relevance of each item of information listed in an information disclosure statement. It should also be noted that 37 CFR 1.97(h) states that the filing of an information disclosure statement shall not be considered to be an admission that the information cited in the statement is, or is considered to be, material to patentability as defined in 37 CFR 1.56.

## 2001.05 Materiality Under 37 CFR 1.56(b)

37 CFR 1.56. *Duty to disclose information material to patent ability.*

\*\*\*\*\*

(b) Under this section, information is material to patentability when it is not cumulative to information already of record or being made of record in the application, and

(1) It establishes, by itself or in combination with other information, a *prima facie* case of unpatentability of a claim; or

(2) It refutes, or is inconsistent with, a position the applicant takes in:

(i) Opposing an argument of unpatentability relied on by the Office, or

(ii) Asserting an argument of patentability.

A *prima facie* case of unpatentability is established when the information compels a conclusion that a claim is unpatentable under the preponderance of evidence, burden-of-proof standard, giving each term in the claim its broadest reasonable construction consistent with the specification, and before any consideration is given to evidence which may be submitted in an attempt to establish a contrary conclusion of patentability.

\*\*\*\*\*

Under the rule, information is not material unless it comes within the definition of 37 CFR 1.56(b)(1) or (2). If information is not material, there is no duty to disclose the information to the Office. Thus, it is theoretically possible for applicants to draft claims and a specification to avoid a *prima facie* case of obviousness over a reference and then to be able to withhold the reference from the examiner. The Office believes that most applicants will wish to submit the information, however, even though they may not be required to do so, to strengthen the patent and avoid the risks of an incorrect judgment on their part on materiality or that it may be held that there was an intent to deceive the Office.

## 2001.06 Sources of Information [R-2]

All individuals covered by 37 CFR 1.56 (reproduced in MPEP § 2001.01) have a duty to disclose to the U.S. Patent and Trademark Office all material information they are *aware* of regardless of the source of or how they become aware of the information. >See *Brasseler, U.S.A. I, L.P. v. Stryker Sales Corp.*, 267 F.3d 1370, 1383, 60 USPQ2d 1482, 1490 (Fed. Cir. 2001) (“Once an attorney, or an applicant has notice that information exists that appears material and questionable, that person cannot ignore that notice in an effort to avoid his or her duty to disclose.”).< Materiality controls whether information must be disclosed to the Office, not the circumstances under which or the source from which the information is obtained. If material, the information must be disclosed to the Office. The duty to disclose material information extends to information such individuals are aware of prior to or at the time of filing the application or become aware of during the prosecution thereof.

Such individuals may be or become aware of material information from various sources such as, for example, co-workers, trade shows, communications from or with competitors, potential infringers, or other third parties, related foreign applications (see MPEP § 2001.06(a)), prior or copending United States patent applications (see MPEP § 2001.06(b)), related litigation (see MPEP § 2001.06(c)) and preliminary examination searches.

### 2001.06(a) Prior Art Cited in Related Foreign Applications [R-2]

Applicants and other individuals, as set forth in 37 CFR 1.56, have a duty to bring to the attention of the Office any material prior art or other information cited or brought to their attention in any related foreign application. The inference that such prior art or other information is material is especially strong \*\* where it has been used in rejecting the same or similar claims in the foreign application >or where it has been identified in some manner as particularly relevant<. See *Gemveto Jewelry Co. v. Lambert Bros., Inc.*, 542 F. Supp. 933, 216 USPQ 976 (S.D. N.Y. 1982) wherein a patent was held invalid or unenforceable because patentee’s foreign counsel did not disclose to patentee’s United States counsel or to the Office prior

art cited by the Dutch Patent Office in connection with the patentee’s corresponding Dutch application. The court stated, 542 F. Supp. at 943, 216 USPQ at 985:

Foreign patent attorneys representing applicants for U.S. patents through local correspondent firms surely must be held to the same standards of conduct which apply to their American counterparts; a double standard of accountability would allow foreign attorneys and their clients to escape responsibility for fraud or inequitable conduct merely by withholding from the local correspondent information unfavorable to patentability and claiming ignorance of United States disclosure requirements.

### 2001.06(b) Information Relating to or From Copending United States Patent Applications [R-2]

The individuals covered by 37 CFR 1.56 have a duty to bring to the attention of the examiner, or other Office official involved with the examination of a particular application, information within their knowledge as to other copending United States applications which are “material to patentability” of the application in question. As set forth by the court in *Armour & Co. v. Swift & Co.*, 466 F.2d 767, 779, 175 USPQ 70, 79 (7th Cir. 1972):

[W]e think that it is unfair to the busy examiner, no matter how diligent and well informed he may be, to assume that he retains details of every pending file in his mind when he is reviewing a particular application . . . [T]he applicant has the burden of presenting the examiner with a complete and accurate record to support the allowance of letters patent.

See also MPEP § 2004, paragraph 9.

Accordingly, the individuals covered by 37 CFR 1.56 cannot assume that the examiner of a particular application is necessarily aware of other applications which are “material to patentability” of the application in question, but must instead bring such other applications to the attention of the examiner. >See *Dayco Prod., Inc. v. Total Containment, Inc.*, 329 F.3d 1358, 1365-69, 66 USPQ2d 1801, 1806-08 (Fed. Cir. 2003).< For example, if a particular inventor has different applications pending in which similar subject matter but patentably indistinct claims are present that fact must be disclosed to the examiner of each of the involved applications. Similarly, the prior art references from one application must be made of record

in another subsequent application if such prior art references are “material to patentability” of the subsequent application.>See *Dayco Prod.*, 329 F.3d at 1369, 66 USPQ2d at 1808.<

\*\*>If< the application under examination is identified as a continuation>, divisional,< or continuation-in-part of an earlier application, the examiner will consider the prior art cited in the earlier application.>See MPEP § 609.< The examiner must indicate in the first Office action whether the prior art in a related earlier application has been reviewed. Accordingly, no separate citation of the same prior art need be made in the later application.

### **2001.06(c) Information From Related Litigation [R-2]**

Where the subject matter for which a patent is being sought is or has been involved in litigation, the existence of such litigation and any other material information arising therefrom must be brought to the attention of the U.S. Patent and Trademark Office. Examples of such material information include evidence of possible prior public use or sales, questions of inventorship, prior art, allegations of “fraud,” “inequitable conduct,” and “violation of duty of disclosure.” Another example of such material information is any assertion that is made during litigation which is contradictory to assertions made to the examiner. *Environ Prods., Inc. v. Total Containment, Inc.*, 43 USPQ2d 1288, 1291 (E.D. Pa. 1997). Such information might arise during litigation in, for example, pleadings, admissions, discovery including interrogatories, depositions, and other documents and testimony.

Where a patent for which reissue is being sought is, or has been, involved in litigation which raised a question material to examination of the reissue application, such as the validity of the patent, or any allegation of “fraud,” “inequitable conduct,” or “violation of duty of disclosure,” the existence of such litigation must be brought to the attention of the Office by the applicant at the time of, or shortly after, filing the application, either in the reissue oath or declaration, or in a separate paper, preferably accompanying the application, as filed. Litigation begun after filing of the reissue application should be promptly brought to the attention of the Office. The details and documents

from the litigation, insofar as they are “material to patentability” of the reissue application as defined in 37 CFR 1.56, should accompany the application as filed, or be submitted as promptly thereafter as possible. See *Critikon, Inc. v. Becton Dickinson Vascular Access, Inc.*, 120 F.3d 1253, 1258, 1259, 43 USPQ2d 1666, 1670-71 (Fed. Cir. 1997) (patent held unenforceable due to inequitable conduct based on patentee's failure to disclose a relevant reference and for failing to disclose ongoing litigation).

For example, the defenses raised against validity of the patent, or charges of “fraud” or “inequitable conduct” in the litigation, would normally be “material to the examination” of the reissue application. It would, in most situations, be appropriate to bring such defenses to the attention of the Office by filing in the reissue application a copy of the court papers raising such defenses. At a minimum, the applicant should call the attention of the Office to the litigation, the existence and the nature of any allegations relating to validity and/or “fraud,” or “inequitable conduct” relating to the original patent, and the nature of litigation materials relating to these issues. Enough information should be submitted to clearly inform the Office of the nature of these issues so that the Office can intelligently evaluate the need for asking for further materials in the litigation. See MPEP § 1442.04.

>If litigation papers of a live litigation relating to a pending reissue application are filed with the Office, the litigation papers along with the reissue application file should be forwarded to the Solicitor's Office for processing. If the litigation is not live, the litigation papers are processed by the Technology Center assigned the reissue application.<

### **2001.06(d) Information Relating to Claims Copied From a Patent [R-2]**

Where claims are copied or substantially copied from a patent, 37 CFR 1.607(c) requires applicant shall, at the time he or she presents the claim(s), identify the patent and the numbers of the patent claims. \*\*Clearly, the information required by 37 CFR 1.607(c) as to the source of copied claims is material information under 37 CFR 1.56 and failure to inform the USPTO of such information may violate the duty of disclosure.

## 2002 Disclosure — By Whom and How Made

37 CFR 1.56. *Duty to disclose information material to patentability.*

\*\*\*\*\*

(d) Individuals other than the attorney, agent or inventor may comply with this section by disclosing information to the attorney, agent, or inventor.

\*\*\*\*\*

### 2002.01 By Whom Made

37 CFR 1.56(d) makes clear that information may be disclosed to the Office through an attorney or agent of record or through a *pro se* inventor, and that other individuals may satisfy their duty of disclosure to the Office by disclosing information to such an attorney, agent, or inventor who then is responsible for disclosing the same to the Office. Information that is not material need not be passed along to the Office.

### 2002.02 Must be in Writing

37 CFR 1.2. *Business to be transacted in writing.*

All business with the Patent and Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

37 CFR 1.4. *Nature of correspondence and signature requirements.*

\*\*\*\*\*

(b) Since each file must be complete in itself, a separate copy of every paper to be filed in a patent or trademark application, patent file, trademark registration file, or other proceeding must be furnished for each file to which the paper pertains, even though the contents of the papers filed in two or more files may be identical. The filing of duplicate copies of correspondence in the file of an application, patent, trademark registration file, or other proceeding should be avoided, except in situations in which the Office requires the filing of duplicate copies. The Office may dispose of duplicate copies of correspondence in the file of an application, patent, trademark registration file, or other proceeding.

\*\*\*\*\*

A disclosure under 37 CFR 1.56 must be in writing as prescribed by 37 CFR 1.2, and a copy of any such disclosure must be filed in each application or other

proceeding to which the disclosure pertains (37 CFR 1.4(b)).

## 2003 Disclosure — When Made

In reissue applications, applicants are encouraged to file information disclosure statements at the time of filing or within 2 months of filing, since reissue applications are taken up “special” (see MPEP § 1442 and § 1442.03). However, in a reissue where waiver of the normal 2 month delay period of 37 CFR 1.176 is being requested (see MPEP § 1441), the statement should be filed at the time of filing the application, or as soon thereafter as possible.

The presumption of validity is generally strong when prior art was before and considered by the Office and weak when it was not. See *Bolkcom v. Carborundum Co.*, 523 F.2d 492, 498, 186 USPQ 466, 471 (6th Cir. 1975).

### 2003.01 Disclosure After Patent Is Granted [R-2]

>

#### I. < BY CITATIONS OF PRIOR ART UNDER 37 CFR 1.501

Where a patentee or any member of the public (including private persons, corporate entities, and government agencies) has prior >art< patents or printed publications which the patentee or member of the public desires to have made of record in the patent file, patentee or such member of the public may file a citation of such prior art with the U.S. Patent and Trademark Office pursuant to >35 U.S.C. 301 and< 37 CFR 1.501. Such citations and papers will be entered without comment by the Office. The Office >generally< does not \*\* consider the citation and papers but merely places them of record in the patent file. Information which may be filed under 37 CFR 1.501 is limited to prior art patents and printed publications. Any citations which include items other than patents and printed publications will not be entered in the patent file. See MPEP § 2202 through § 2208.

>

#### II. < BY REEXAMINATION

Where any person, including patentee, has prior art patents and/or printed publications which said person

desires to have the U.S. Patent and Trademark Office consider after a patent has issued, such person may file a request for *>ex parte<* reexamination of the patent (see 37 CFR 1.510 and MPEP § 2209 through § 2220). *>*For a request for *inter partes* reexamination, see 37 CFR 1.913 and MPEP § 2609 through § 2620.*<*

## 2004 Aids to Compliance With Duty of Disclosure [R-2]

While it is not appropriate to attempt to set forth procedures by which attorneys, agents, and other individuals may ensure compliance with the duty of disclosure, the items listed below are offered as examples of possible procedures which could help avoid problems with the duty of disclosure. Though compliance with these procedures may not be required, they are presented as helpful suggestions for avoiding duty of disclosure problems.

1. Many attorneys, both corporate and private, are using letters and questionnaires for applicants and others involved with the filing and prosecution of the application and checklists for themselves and applicants to ensure compliance with the duty of disclosure. The letter generally explains the duty of disclosure and what it means to the inventor and assignee. The questionnaire asks the inventor and assignee questions about

- the origin of the invention and its point of departure from what was previously known and in the prior art,

- possible public uses and sales,

- prior publication, knowledge, patents, foreign patents, etc.

The checklist is used by the attorney to ensure that the applicant has been informed of the duty of disclosure and that the attorney has inquired of and cited material prior art.

The use of these types of aids would appear to be most helpful, though not required, in identifying prior art and may well help the attorney and the client avoid or more easily explain a potentially embarrassing and harmful “fraud” allegation.

2. It is desirable to ask questions about inventorship. Who is the proper inventor? Are there disputes or possible disputes about inventorship? If there are

questions, call them to the attention of the U.S. Patent and Trademark Office.

3. It is desirable to ask questions of the inventor about the disclosure of the best mode. Make sure that the best mode is described. See MPEP § 2165 - § 2165.04.

4. It is desirable for an attorney or agent to make certain that the inventor, especially a foreign inventor, recognizes his or her responsibilities in signing the oath or declaration. See 37 CFR 1.69(a).

*37 CFR 1.69. Foreign language oaths and declarations.*

(a) Whenever an individual making an oath or declaration cannot understand English, the oath or declaration must be in a language that such individual can understand and shall state that such individual understands the content of any documents to which the oath or declaration relates.

\*\*\*\*\*

Note MPEP § 602.06 for a more detailed discussion.

5. It is desirable for an attorney or agent to carefully evaluate and explain to the applicant and others involved the scope of the claims, particularly the broadest claims. Ask specific questions about possible prior art which might be material in reference to the broadest claim or claims. There is some tendency to mistakenly evaluate prior art in the light of the gist of what is regarded as the invention or narrower interpretations of the claims, rather than measuring the art against the broadest claim with all of its reasonable interpretations. It is desirable to pick out the broadest claim or claims and measure the materiality of prior art against a reasonably broad interpretation of these claims.

6. It may be useful to evaluate the materiality of prior art or other information from the viewpoint of whether it is the closest prior art or other information. This will tend to put the prior art or other information in better perspective. See *Semiconductor Energy Laboratory Co. v. Samsung Electronics Co.*, 204 F.3d 1368, 1374, 54 USPQ2d 1001, 1005 (Fed. Cir. 2000) (“A withheld reference may be highly material when it discloses a more complete combination of relevant features, even if those features are before the patent examiner in other references.” (citations omitted)). However, 37 CFR 1.56 may still require the submission of prior art or other information which is not as close as that of record.

7. Care should be taken to see that prior art or other information cited in a specification or in an information disclosure statement is properly described and that the information is not incorrectly or incompletely characterized. It is particularly important for an attorney or agent to review, before filing, an application which was prepared by someone else, e.g., a foreign application. It is also important that an attorney or agent make sure that foreign clients, including foreign applicants, attorneys, and agents understand the requirements of the duty of disclosure, and that the U.S. attorney or agent review any information disclosure statements or citations to ensure that compliance with 37 CFR 1.56 is present. See *Semiconductor Energy Laboratory Co. v. Samsung Electronics Co.*, 204 F.3d 1368, 54 USPQ2d 1001 (Fed. Cir. 2000). During prosecution patentee submitted an untranslated 29-page Japanese reference as well as a concise explanation of its relevance and an existing one-page partial English translation, both of which were directed to less material portions of the reference. The untranslated portions of the Japanese reference “contained a more complete combination of the elements claimed [in the patent] than anything else before the PTO.” 204 F.3d at 1374, 54 USPQ2d at 1005. The patentee, whose native language was Japanese, was held to have understood the materiality of the reference. “The duty of candor does not require that the applicant translate every foreign reference, but only that the applicant refrain from submitting partial translations and concise explanations that it knows will misdirect the examiner’s attention from the reference’s relevant teaching.” 204 F.3d at 1378, 54 USPQ2d at 1008. See also *Gemveto Jewelry Co. v. Lambert Bros., Inc.*, 542 F. Supp. 933, 216 USPQ 976 (S.D.N.Y. 1982) wherein a patent was held invalid or unenforceable because patentee’s foreign counsel did not disclose to patentee’s United States counsel or to the Office prior art cited by the Dutch Patent Office in connection with the patentee’s corresponding Dutch application. The court stated, 542 F. Supp. at 943, 216 USPQ at 985:

Foreign patent attorneys representing applicants for U.S. patents through local correspondent firms surely must be held to the same standards of conduct which apply to their American counterparts; a double standard of accountability would allow foreign attorneys and their clients to escape responsibility for fraud or inequitable conduct merely by withholding from the local correspondent

information unfavorable to patentability and claiming ignorance of United States disclosure requirements.

8. Care should be taken to see that inaccurate statements or inaccurate experiments are not introduced into the specification, either inadvertently or intentionally. For example, stating that an experiment “was run” or “was conducted” when in fact the experiment was not run or conducted is a misrepresentation of the facts. No results should be represented as actual results unless they have actually been achieved. Paper >or prophetic< examples should not be described using the past tense. \*>*Hoffman-La Roche, Inc. v. Promega Corp.*, 323 F.3d 1354, 1367, 66 USPQ2d 1385, 1394 (Fed. Cir. 2003); see also< MPEP § 608.01(p) and § 707.07(l). Also, misrepresentations can occur when experiments which were run or conducted are inaccurately reported in the specification, e.g., an experiment is changed by leaving out one or more ingredients. See *Steierman v. Connelly*, 192 USPQ 433 (Bd. Pat. Int. 1975); 192 USPQ 446 (Bd. Pat. Int. 1976).

9. Do not rely on the examiner of a particular application to be aware of other applications belonging to the same applicant or assignee. It is desirable to call such applications to the attention of the examiner even if there is only a question that they might be “material to patentability” of the application the examiner is considering. >See *Dayco Prod., Inc. v. Total Containment, Inc.*, 329 F.3d 1358, 1365-69, 66 USPQ2d 1801, 1806-08 (Fed. Cir. 2003) (contrary decision of another examiner reviewing substantially similar claims is ‘material’; copending application may be ‘material’ even though it cannot result in a shorter patent term, when it could affect the rights of the patentee to assign the issued patents).< It is desirable to be particularly careful that prior art or other information in one application is cited to the examiner in other applications to which it would be material. Do not assume that an examiner will necessarily remember, when examining a particular application, other applications which the examiner is examining, or has examined. \*\*>A “lapse on the part of the examiner does not excuse the applicant.”< *KangaROOS U.S.A., Inc. v. Caldor, Inc.*, 778 F.2d 1571, 1576, 228 USPQ 32, 35 (Fed. Cir. 1985)\*\*>; see also MPEP § 2001.06(b).<

10. When in doubt, it is desirable and safest to submit information. Even though the attorney, agent, or

applicant doesn't consider it necessarily material, someone else may see it differently and embarrassing questions can be avoided. The court in *U.S. Industries v. Norton Co.*, 210 USPQ 94, 107 (N.D. N.Y. 1980) stated "In short, the question of relevancy in close cases, should be left to the examiner and not the applicant." See also *LaBounty Mfg., Inc. v. U.S. Int'l Trade Comm'n*, 958 F.2d 1066, 22 USPQ2d 1025 (Fed. Cir. 1992).

11. It may be desirable to submit information about prior uses and sales even if it appears that they may have been experimental, not involve the specifically claimed invention, or not encompass a completed invention. See *Hycor Corp. v. The Schlueter Co.*, 740 F.2d 1529, 1534-37, 222 USPQ 553, 557-559 (Fed. Cir. 1984). See also *LaBounty Mfg., Inc. v. U.S. Int'l Trade Comm'n*, 958 F.2d 1066, 22 USPQ2d 1025 (Fed. Cir. 1992).

12. Submit information promptly. An applicant, attorney, or agent who is aware of prior art or other information and its significance should submit same early in prosecution, e.g., before the first action by the examiner, and not wait until after allowance. Potentially material information discovered late in the prosecution should be immediately submitted. That the issue fee has been paid is no reason or excuse for failing to submit information. See *Elmwood Liquid Products, Inc. v. Singleton Packing Corp.*, 328 F. Supp. 974, 170 USPQ 398 (M.D. Fla. 1971).

13. It is desirable to avoid the submission of long lists of documents if it can be avoided. Eliminate clearly irrelevant and marginally pertinent cumulative information. If a long list is submitted, highlight those documents which have been specifically brought to applicant's attention and/or are known to be of most significance. See *Penn Yan Boats, Inc. v. Sea Lark Boats, Inc.*, 359 F. Supp. 948, 175 USPQ 260 (S.D. Fla. 1972), *aff'd*, 479 F.2d 1338, 178 USPQ 577 (5th Cir. 1973), *cert. denied*, 414 U.S. 874 (1974). But cf. *Molins PLC v. Textron Inc.*, 48 F.3d 1172, 33 USPQ2d 1823 (Fed. Cir. 1995).

14. Watch out for continuation-in-part applications where intervening material information or documents may exist; particularly watch out for foreign patents and publications related to the parent application and dated more than 1 year before the filing date of the CIP. These and other intervening documents may be material information. See *In re Ruscetta*, 255 F.2d

687, 690-91, 118 USPQ 101, 104 (CCPA 1958); *In re van \*>Langenhoven<*, 458 F.2d 132, 173 USPQ 426 (CCPA 1972); *Chromalloy American Corp. v. Alloy Surfaces Co.*, 339 F. Supp. 859, 173 USPQ 295 (D. Del. 1972).

15. Watch out for information that might be deemed to be prior art under 35 U.S.C. 102(f) and (g).

Prior art under 35 U.S.C. 102(f) may be available under 35 U.S.C. 103. See *OddzOn Products, Inc. v. Just Toys, Inc.*, 122 F.3d 1396, 1401, 43 USPQ2d 1641, 1644 (Fed. Cir. 1997)(35 U.S.C. "102(f) is a prior art provision for purposes of § 103"); *Dale Electronics v. R.C.L. Electronics*, 488 F.2d 382, 386, 180 USPQ 225, 227 (1st. Cir. 1973); and *Ex parte Andresen*, 212 USPQ 100, 102 (Bd. App. 1981).

Note also that evidence of prior invention under 35 U.S.C. 102(g) may be available under 35 U.S.C. 103, such as in *In re Bass*, 474 F.2d 1276, 177 USPQ 178 (CCPA 1973).

Note 35 U.S.C. 103(c) disqualifies 35 U.S.C. 102(f)/103 or 102(g)/103 prior art which was, at the time the second invention was made, owned by or subject to an obligation of assignment to, the person who owned the first invention. Further note that 35 U.S.C. 103(c) disqualifies 35 U.S.C. 102(e)/103 prior art for applications filed on or after November 29, 1999. See MPEP § 706.02(1) - § 706.02(1)(2).

16. Watch out for information picked up by the inventors and others at conventions, plant visits, in-house reviews, etc. See, for example, *Dale Electronics v. R.C.L. Electronics*, 488 F.2d 382, 386-87, 180 USPQ 225, 228 (1st Cir. 1973).

17. Make sure that all of the individuals who are subject to the duty of disclosure, such as spelled out in 37 CFR 1.56, are informed of and fulfill their duty.

18. Finally, if information was specifically considered and discarded as not material, this fact might be recorded in an attorney's file or applicant's file, including the reason for discarding it. If judgment might have been bad or something might have been overlooked inadvertently, a note made at the time of evaluation might be an invaluable aid in explaining that the mistake was honest and excusable. Though such records are not required, they could be helpful in recalling and explaining actions in the event of a question of "fraud" or "inequitable conduct" raised at a later time.

## 2005 Comparison to Requirement for Information [R-2]

Under 37 CFR 1.56, each individual associated with the filing and prosecution of a patent application has a duty to disclose on his or her own initiative information material to patentability under 37 CFR 1.56. By contrast, under 37 CFR 1.105, an examiner or other Office employee is authorized to require, from parties identified in 37 CFR 1.56, information reasonably necessary to examine or treat a matter in an application. The provisions of 37 CFR 1.105 are detailed in MPEP § 704 *et seq.* The criteria for requiring information under 37 CFR 1.56, i.e., materiality to the patentability of claimed subject matter, is substantially higher than the criteria for requiring information under 37 CFR 1.105, i.e., reasonable necessity to the examination of the application. >See, e.g., *Star Fruits S.N.C. v. United States*, 280 F.Supp.2d 512, 515-61 (E.D. Va 2003) (“Beyond that which a patent applicant is duty-bound to disclose pursuant to 37 CFR 1.56, an examiner may require the production of ‘such information as may be reasonably necessary to properly examine or treat the matter.’”).< Thus, information required by the examiner pursuant to 37 CFR 1.105 would not necessarily be considered material to patentability in itself, but would be necessary to obtain a complete record from which a determination of patentability will be made.

## 2010 Office Handling of Duty of Disclosure/Inequitable Conduct Issues [R-2]

Determination of inequitable conduct issues requires an evaluation of the intent of the party involved. While some court decisions have held that intent may be inferred in some circumstances, consideration of the good faith of the party, or lack thereof, is often required. In several court decisions, a high level of proof of intent to mislead the Office was required in order to prove inequitable conduct under 37 CFR 1.56. See *In re Harito*, 847 F.2d 801, 6 USPQ2d 1930 (Fed. Cir. 1988) and *FMC Corp. v. Manitowoc Co.*, 835 F.2d 1411, 5 USPQ2d 1112 (Fed. Cir. 1987). The Office is not the best forum in which to determine whether there was an “intent to mislead”; such intent is best determined when the trier of facts can observe demeanor of witnesses subjected

to cross-examination. A court, with subpoena power, is presently the best forum to consider duty of disclosure issues under the present evidentiary standard for finding an “intent to mislead.” The court proceeding involves two participating adverse parties. This is not the case in the Office, since even “protesting” parties are not permitted to participate under the rules. Also, it is the courts and not the Office that are in the best position to fashion an equitable remedy to fit the precise facts in those cases where inequitable conduct is established. Furthermore, inequitable conduct is not set by statute as a criteria for patentability but rather is a judicial application of the doctrine of unclean hands which is appropriate to be handled by the courts rather than by an administrative body. Because of the lack of tools in the Office to deal with this issue and because of its sensitive nature and potential impact on a patent, Office determinations generally will not deter subsequent litigation of the same issue in the courts on appeal or in separate litigation. Office determinations would significantly add to the expense and time involved in obtaining a patent with little or no benefit to the patent owner or any other parties with an interest.

Accordingly, the Office does not investigate and reject original or reissue applications under 37 CFR 1.56. Likewise, the Office will not comment upon duty of disclosure issues which are brought to the attention of the Office in original or reissue applications except to note in the application, in appropriate circumstances, that such issues are no longer considered by the Office during its examination of patent applications. Examination of lack of deceptive intent in reissue applications will continue but without any investigation of inequitable conduct issues. Applicant’s statement of lack of deceptive intent normally will be accepted as dispositive except in special circumstances such as an admission or judicial determination of fraud or inequitable conduct. >See notice published in the *Official Gazette* at 1095 O.G. 16 (October 11, 1988).< See >also< MPEP § 2022.05.

>Issues of fraud and/or inequitable conduct in an interference proceeding before the Board of Patent Appeals and Interferences (Board) will be considered by the Board if they are raised by way of preliminary motion for judgment under 37 CFR 1.633(a). The motion must be filed during the period set for filing preliminary motions (37 CFR 1.636(a)), or good

cause (37 CFR 1.655(b)) must be shown as to why the issues of fraud and/or inequitable conduct were not timely raised during the preliminary motion period. Issues of fraud and/or inequitable conduct will not be considered in any interference in which the times for taking testimony or the times for filing briefs for final hearing have already been set, unless 'good cause' is shown under 37 CFR 1.655(b). An example of good cause would be where fraud or inequitable conduct is first discovered during taking of testimony. See notice published in the *Official Gazette* at 1133 O.G. 21 (December 10, 1991).<

## 2012 Reissue Applications Involving Issues of Fraud, Inequitable Conduct, and/or Violation of Duty of Disclosure [R-2]

Questions of "fraud," "inequitable conduct," or violation of "duty of disclosure" or "candor and good faith" can arise in reissue applications.

### REQUIREMENT FOR "ERROR WITHOUT ANY DECEPTIVE INTENTION"

Both 35 U.S.C. 251 and 37 CFR 1.175 promulgated pursuant thereto require that the error must have arisen "without any deceptive intention." *In re Heany*, 1911 C.D. 138, 180 (1911), unequivocally states:

Where such a condition [fraudulent or deceptive intention] is shown to exist the right to reissue the patent is forfeited.

Similarly, the court in *In re Clark*, 522 F.2d 623, 627, 187 USPQ 209, 213 (CCPA 1975) indicated:

Reissue is not available to rescue a patentee who had presented claims limited to avoid particular prior art and then had failed to disclose that prior art . . . after that failure to disclose has resulted in invalidating of the claims.

It is clear that "fraud" cannot be purged through the reissue process. See conclusions of Law 89 and 91 in *Intermountain Research and Eng'g Co. v. Hercules Inc.*, 171 USPQ 577, 631-32 (C.D. Cal. 1971).

Clearly, where several patents or applications stem from an original application which contained fraudulent claims ultimately allowed, the doctrine of unclean hands bars allowance or enforcement of any of the claims of any of the applications or patents. See *Keystone Driller Co. v. General Excavator Co.*, 290 U.S.

240, 245, 19 USPQ 228, 230 (1933); *East Chicago Machine Tool Corp. v. Stone Container Corp.*, 181 USPQ 744, 748 (N.D. Ill.), *modified*, 185 USPQ 210 (N.D. Ill. 1974). See also *Chromalloy American Corp. v. Alloy Surfaces Co.*, 339 F. Supp. 859, 173 USPQ 295 (D.Del. 1972) and *Strong v. General Electric Co.*, 305 F. Supp. 1084, 162 USPQ 141 (N.D. Ga. 1969), *aff'd*, 434 F.2d 1042, 168 USPQ 8 (5th Cir. 1970), *cert. denied*, 403 U.S. 906 (1971) where fraud or inequitable conduct affecting only certain claims or only one of related patents was held to affect the other claims or patent. Clearly, "fraud" practiced or attempted in an application which issues as a patent is "fraud" practiced or attempted in connection with any subsequent application to reissue that patent. The reissue application and the patent are inseparable as far as questions of "fraud," "inequitable conduct," or "violation of the duty of disclosure" are concerned. See *In re Heany, supra*; and *Norton v. Curtiss*, 433 F.2d 779, 792, 167 USPQ 532, 543 (CCPA 1970), wherein the court stated:

We take this to indicate that any conduct which will prevent the enforcement of a patent after the patent issues should, if discovered earlier, prevent the issuance of the patent.

Clearly, if a reissue patent would not be enforceable after its issue because of "fraud," "inequitable conduct" or "violation of the duty of disclosure" during the prosecution of the patent sought to be reissued, the reissue patent application should not issue. \*>Where no investigation is needed to establish< such circumstances, an appropriate remedy would be to reject the claims in the application in accordance with 35 U.S.C. 251. See MPEP § 1448.

The examiner is **not to make any investigation** as to the lack of deceptive intent requirement in reissue applications. Applicant's statement (in the oath or declaration) of lack of deceptive intent will be accepted as dispositive except in special circumstances such as **an admission or judicial determination** of fraud, inequitable conduct or violation of the duty of disclosure, where no investigation need be made and the fact of the admission or judicial determination exists *per se*. Also, any admission of fraud, inequitable conduct or violation of the duty of disclosure must be explicit, unequivocal, and not subject to other interpretation. Where a rejection is made based upon such an admission (see MPEP § 1448) and applicant

responds with any reasonable interpretation of the facts that would not lead to a conclusion of fraud, inequitable conduct or violation of the duty of disclosure, the rejection should be withdrawn. Alternatively, if applicant shows that the admission noted by the examiner was not in fact an admission, the rejection should also be withdrawn.

### 2012.01 Collateral Estoppel [R-2]

The Supreme Court in *Blonder-Tongue Labs., Inc. v. Univ. of Ill. Found.*, 402 U.S. 313, 169 USPQ 513 (1971) set forth the rule that once a patent has been declared invalid via judicial inquiry, a collateral estoppel barrier is created against further litigation involving the patent, unless the patentee-plaintiff can demonstrate “that he did not have” a full and fair chance to litigate the validity of his patent in “the earlier case.” See also *Ex parte Varga*, 189 USPQ 209 (Bd. App. 1973). As stated in *Kaiser Industries Corp. v. Jones & Laughlin Steel Corp.*, 515 F.2d 964, 987, 185 USPQ 343, 362 (3rd Cir. 1975):

In fashioning the rule of *Blonder-Tongue*, Justice White for a unanimous Court made it clear that a determination of patent invalidity, after a thorough and equitable judicial inquiry, creates a collateral estoppel barrier to further litigation to enforce that patent.

Under 35 U.S.C. 251, the \*>Director< can reissue a patent only if there is “error without any deceptive intention.” The \*>Director< is without authority to reissue a patent when “deceptive intention” was present during prosecution of the parent application. See *In re Clark*, 522 F.2d 62, 187 USPQ 209 (CCPA 1975) and *In re Heany*, 1911 C.D. 138, 180 (1911). Thus, the collateral estoppel barrier applies where reissue is sought of a patent which has been held invalid or unenforceable for “fraud” or “violation of duty of disclosure” in procuring of said patent. It was held in *In re Kahn*, 202 USPQ 772, 773 (Comm’r Pat. 1979):

Therefore, since the Kahn patent was held invalid, *inter alia*, for “failure to disclose material facts of which \* \* \* [Kahn] was aware” this application may be stricken under 37 CFR 1.56 via the doctrine of collateral estoppel as set forth in *Blonder-Tongue*, *supra*.

\*\*\*\*\*

The Patent and Trademark Office . . . has found no clear justification for not adhering to the doctrine of collateral estoppel under *Blonder-Tongue* in this case.

Applicant has had his day in court. He appears to have had a full and fair chance to litigate the validity of his patent.

See MPEP § 2259 for collateral estoppel in reexamination proceedings.

### 2013 Protests Involving Issues of Fraud, Inequitable Conduct, and/or Violation of Duty of Disclosure [R-2]

37 CFR 1.291 permits protests by the public against pending applications.

Submissions under 37 CFR 1.291 are not limited to prior art documents such as patents and publications, but are intended to include any information, which in the protestor’s opinion, would make or have made the grant of the patent improper (see MPEP § 1901.02). This includes, of course, information indicating the presence of “fraud” or “inequitable conduct” or “violation of the duty of disclosure,” which will be entered in the application file, generally without comment >other than to state that such information will not be considered (see MPEP § 2010).< See MPEP § 1901.06.

Protests should be in conformance with 37 CFR 1.291(a) and (b), and include a statement of the alleged facts involved, the point or points to be reviewed, and the action requested. Any briefs or memoranda in support of the petition, and any affidavits, declarations, depositions, exhibits, or other material in support of the alleged facts, should accompany the protest.

### 2014 Duty of Disclosure in Reexamination Proceedings [R-2]

As provided in 37 CFR 1.555, the duty of disclosure in >both *ex parte* and *inter partes*< reexamination proceedings applies to the patent owner. That duty is a continuing obligation on the part of the patent owner throughout the proceedings. However, issues of “fraud,” “inequitable conduct,” or “violation of duty of disclosure” are not considered in reexamination. See MPEP § 2280 >for *ex parte* reexamination proceedings and MPEP § 2684 for *inter partes* reexamination proceedings<. If questions of “fraud” or “inequitable conduct” or “violation of the duty of disclosure” are discovered during reexamination proceedings, the existence of such questions will be noted by the examiner in an Office action

without further comment. See MPEP § 2258 >for *ex parte* reexamination proceedings and MPEP § 2658 for *inter partes* reexamination proceedings<.

For the patent owner's duty to disclose prior or concurrent proceedings in which the patent is or was involved, see MPEP § 2282 >(for *ex parte* reexamination), § 2686 (for *inter partes* reexamination),< and § 2001.06(c).

## 2016 Fraud, Inequitable Conduct, or Violation of Duty of Disclosure Affects All Claims

A finding of “fraud,” “inequitable conduct,” or violation of duty of disclosure with respect to any claim in an application or patent, renders all the claims thereof unpatentable or invalid. See *Chromalloy American Corp. v. Alloy Surfaces Co.*, 339 F. Supp. 859, 173 USPQ 295 (D.Del. 1972) and *Strong v. General Electric Co.*, 305 F. Supp. 1084, 162 USPQ 141 (N.D. Ga. 1969), *aff'd*, 434 F.2d 1042, 168 USPQ 8 (5th Cir. 1970), *cert. denied*, 403 U.S. 906 (1971). In *J. P. Stevens & Co. v. Lex Tex Ltd.*, 747 F.2d 1553, 1561, 223 USPQ 1089, 1093-94 (Fed. Cir. 1984), the court stated:

Once a court concludes that inequitable conduct occurred, all the claims — not just the particular claims in which the inequitable conduct is directly connected — are unenforceable. See *generally*, cases collected in 4 Chisum, PATENTS, paragraph 19.03[6] at 19-85 n. 10 (1984). Inequitable conduct “goes to the patent right as a whole, independently of particular claims.” *In re Clark* 522 F.2d 623, 626, 187 USPQ 209, 212 (CCPA).

The court noted in footnote 8 of *Stevens*:

In *In re Multiple Litigation Involving Frost Patent*, 540 F.2d 601, 611, 191 USPQ 241, 249 (3rd. Cir. 1976),

some claims were upheld despite nondisclosure with respect to others. The case is not precedent in this court.

As stated in *Gemveto Jewelry Co. v. Lambert Bros., Inc.*, 542 F. Supp. 933, 943, 216 USPQ 976, 984 (S. D. N. Y. 1984) (quoting Patent Law Perspectives, 1977 Developments, § G.1 [1]-189):

The gravamen of the fraud defense is that the patentee has failed to discharge his duty of dealing with the examiner in a manner free from the taint of “fraud or other inequitable conduct.” If such conduct is established in connection with the prosecution of a patent, the fact that the lack of candor did not directly affect *all* the claims in the patent has never been the governing principle. It is the inequitable conduct that generates the unenforceability of the patent and we cannot think of cases where a patentee partially escaped the consequences of his wrongful acts by arguing that he only committed acts of omission or commission with respect to a limited number of claims. It is an all or nothing proposition. [Emphasis in original.]

## 2022.05 Determination of “Error Without Any Deceptive Intention” [R-2]

If the application is a reissue application, the action by the examiner may extend to a determination as to whether at least one “error” required by 35 U.S.C. 251 has been alleged, i.e., identified. Further, the examiner should determine whether applicant has *averred* in the reissue oath or declaration, as required by 37 CFR 1.175(a)(2), (b)(1), and (b)(2), that all “errors” arose “without any deceptive intention.” However, the examiner should not normally comment or question as to whether \*\* the averred statement as to lack of deceptive intention appears correct or true. See MPEP § 1414.

# Chapter 2100 Patentability

- 2105 Patentable Subject Matter — Living Subject Matter**
- 2106 Patentable Subject Matter — Computer-Related Inventions**
  - 2106.01 Computer Programming and 35 U.S.C. 112, First Paragraph
  - 2106.02 Disclosure in Computer Programming Cases
- 2107 General Principles Governing Utility Rejections**
  - 2107.01 Procedural Considerations Related to Rejections for Lack of Utility
  - 2107.02 Special Considerations for Asserted Therapeutic or Pharmacological Utilities
- 2111 Claim Interpretation; Broadest Reasonable Interpretation**
  - 2111.01 Plain Meaning
  - 2111.02 Effect of Preamble
  - 2111.03 Transitional Phrases
- 2112 Requirements of Rejection Based on Inherency; Burden of Proof**
  - 2112.01 Composition, Product, and Apparatus Claims
  - 2112.02 Process Claims
- 2113 Product-by-Process Claims**
- 2114 Apparatus and Article Claims — Functional Language**

## **2105 Patentable Subject Matter — Living Subject Matter [R-1]**

The decision of the Supreme Court in *Diamond v. Chakrabarty*, 447 U.S. 303, 206 USPQ 193 (1980), held that microorganisms produced by genetic engineering are not excluded from patent protection by 35 U.S.C. 101. It is clear from the Supreme Court decision and opinion that the question of whether or not an invention embraces living matter is irrelevant to the issue of patentability. The test set down by the Court for patentable subject matter in this area is whether the living matter is the result of human intervention.

In view of this decision, the Office has issued these guidelines as to how 35 U.S.C. 101 will be interpreted.

The Supreme Court made the following points in the *Chakrabarty* opinion:

1. “Guided by these canons of construction, this Court has read the term ‘manufacture’ in § 101 in accordance with its dictionary definition to mean ‘the production of articles for use from raw materials prepared by giving to these materials new forms, qualities, properties, or combinations whether by hand labor or by machinery.’”
2. “In choosing such expansive terms as ‘manufacture’ and ‘composition of matter,’ modified by the comprehensive ‘any,’ Congress plainly contemplated that the patent laws would be given wide scope.”
3. “The Act embodied Jefferson’s philosophy that ‘ingenuity should receive a liberal encouragement.’ 5 Writings of Thomas Jefferson, at 75-76. See *Graham v. John Deere Co.*, 383 U.S. 1, 7-10 (1966). Subsequent patent statutes in 1836, 1870, and 1874 employed this same broad language. In 1952, when the patent laws were recodified, Congress replaced the word ‘art’ with ‘process,’ but otherwise left Jefferson’s language intact. The Committee Reports accompanying the 1952 act inform us that Congress intended statutory subject matter to ‘include any thing under the sun that is made by man.’ S. Rep. No. 1979, 82d Cong., 2d Sess., 5 (1952).”
4. “This is not to suggest that § 101 has no limits or that it embraces every discovery. The laws of nature, physical phenomena, and abstract ideas have been held not patentable.”
5. “Thus, a new mineral discovered in the earth or a new plant found in the wild is not patentable subject matter. Likewise, Einstein could not patent his celebrated law

that  $E=mc^2$ ; nor could Newton have patented the law of gravity.”

6. “His claim is not to a hitherto unknown natural phenomenon, but to a nonnaturally occurring manufacture or composition of matter — a product of human ingenuity ‘having a distinctive name, character [and] use.’”

7. “Congress thus recognized that the relevant distinction was not between living and inanimate things, but between products of nature, whether living or not, and human-made inventions. Here, respondent’s microorganism is the result of human ingenuity and research.”

8. After reference to *Funk Seed Co. & Kalo Co.*, 333 U.S.127 (1948), “Here, by contrast, the patentee has produced a new bacterium with markedly different characteristics from any found in nature and one having the potential for significant utility. His discovery is not nature’s handiwork, but his own; accordingly it is patentable subject matter under § 101.”

A review of the Court statements above as well as the whole *Chakrabarty* opinion reveals:

(A) That the Court did not limit its decision to genetically engineered living organisms;

(B) The Court enunciated a very broad interpretation of “manufacture” and “composition of matter” in 35 U.S.C. 101 (Note esp. quotes 1, 2, and 3 above);

(C) The Court set forth several tests for weighing whether patentable subject matter under 35 U.S.C. 101 is present, stating (in quote 7 above) that:

The relevant distinction was not between living and inanimate things but between products of nature, whether living or not, and human-made inventions.

The tests set forth by the Court are (note especially the italicized portions):

(A) “The laws of nature, physical phenomena and abstract ideas” are not patentable subject matter.

(B) A “nonnaturally occurring manufacture or composition of matter — a product of human ingenuity — having a distinctive name, character, [and] use” is patentable subject matter.

(C) “[A] new mineral discovered in the earth or a new plant found in the wild is not patentable subject matter. Likewise, Einstein could not patent his celebrated  $E=mc^2$ ; nor could Newton have patented the law of gravity. Such discoveries are ‘manifestations of... nature, free to all men and reserved exclusively to none.’”

(D) “[T]he production of articles for use from raw materials prepared by giving to these materials *new*

*forms, qualities, properties, or combinations whether by hand labor or by machinery*” [emphasis added] is a “manufacture” under 35 U.S.C. 101.

In analyzing the history of the Plant Patent Act of 1930, the Court stated: “In enacting the Plant Patent Act, Congress addressed both of these concerns [the concern that plants, even those artificially bred, were products of nature for purposes of the patent law and the concern that plants were thought not amenable to the written description]. It explained at length its belief that the work of the plant breeder ‘in aid of nature’ was patentable invention. S. Rep. No. 315, 71st Cong., 2d Sess., 6-8 (1930); H.R. Rep. No. 1129, 71st Cong., 2d Sess., 7-9 (1930).”

The Office will decide the questions as to patentable subject matter under 35 U.S.C. 101 on a case-by-case basis following the tests set forth in *Chakrabarty*, e.g., that “a nonnaturally occurring manufacture or composition of matter” is patentable, etc. It is inappropriate to try to attempt to set forth here in advance the exact parameters to be followed.

The standard of patentability has not and will not be lowered. The requirements of 35 U.S.C. 102 and 103 still apply. The tests outlined above simply mean that a rational basis will be present for any 35 U.S.C. 101 determination. In addition, the requirements of 35 U.S.C. 112 must also be met. In this regard, see MPEP § 608.01(p).

\*\*>In another case addressing< the scope of 35 U.S.C. 101, the \*\*>Supreme Court< held that patentable subject matter under 35 U.S.C. 101 includes \*\*>newly developed plant breeds<, even though plant protection is also available under the Plant Patent Act (35 U.S.C. 161 - 164) and the Plant Variety Protection Act (7 U.S.C. 2321 *et. seq.*). \*\*> *J.E.M. Ag Supply, Inc. v. Pioneer Hi-Bred Int’ l, Inc.*, 534 U.S. 124, 143-46, 122 S.Ct. 593, 605-06, 60 USPQ2d 1865, 1874 (2001) (The scope of coverage of 35 U.S.C.101 is not limited by the Plant Patent Act or the Plant Variety Protection Act; each statute can be regarded as effective because of its different requirements and protections).< See also *Ex parte Hibberd*, 227 USPQ 443 (Bd. Pat. App. & Inter. 1985), wherein the Board held that plant subject matter may be the proper subject of a patent under 35 U.S.C. 101 even though such subject matter may be protected under the Plant Patent Act or the Plant Variety Protection Act. Following the reasoning in *Chakrabarty*, the Board of Patent

Appeals and Interferences has also determined that animals are patentable subject matter under 35 U.S.C. 101. In *Ex parte Allen*, 2 USPQ2d 1425 (Bd. Pat. App. & Inter. 1987), the Board decided that a polyploid Pacific coast oyster could have been the proper subject of a patent under 35 U.S.C. 101 if all the criteria for patentability were satisfied. Shortly after the *Allen* decision, the Commissioner of Patents and Trademarks issued a notice (Animals - Patentability, 1077 O.G. 24, April 21, 1987) that the Patent and Trademark Office would now consider nonnaturally occurring, nonhuman multicellular living organisms, including animals, to be patentable subject matter within the scope of 35 U.S.C. 101.

If the broadest reasonable interpretation of the claimed invention as a whole encompasses a human being, then a rejection under 35 U.S.C. 101 must be made indicating that the claimed invention is directed to nonstatutory subject matter. Furthermore, the claimed invention must be examined with regard to all issues pertinent to patentability, and any applicable rejections under 35 U.S.C. 102, 103, or 112 must also be made.

## **2106 Patentable Subject Matter — Computer-Related Inventions [R-2]**

### **I. INTRODUCTION**

These Examination Guidelines for Computer-Related Inventions (“Guidelines”) are to assist Office personnel in the examination of applications drawn to computer-related inventions. “Computer-related inventions” include inventions implemented in a computer and inventions employing computer-readable media. The Guidelines are based on the Office’s current understanding of the law and are believed to be fully consistent with binding precedent of the Supreme Court, the Federal Circuit and the Federal Circuit’s predecessor courts.

These Guidelines do not constitute substantive rule-making and hence do not have the force and effect of law. These Guidelines have been designed to assist Office personnel in analyzing claimed subject matter for compliance with substantive law. Rejections will be based upon the substantive law and it is these rejections which are appealable. Consequently, any failure by Office personnel to follow the Guidelines is neither appealable nor petitionable.

The Guidelines alter the procedures Office personnel will follow when examining applications drawn to computer-related inventions and are equally applicable to claimed inventions implemented in either hardware or software. The Guidelines also clarify the Office’s position on certain patentability standards related to this field of technology. Office personnel are to rely on these Guidelines in the event of any inconsistent treatment of issues between these Guidelines and any earlier provided guidance from the Office.

Office personnel should no longer rely on the Freeman-Walter-Abele test to determine whether a claimed invention is directed to statutory subject matter. *State Street Bank & Trust Co. v. Signature Financial Group Inc.*, 149 F. 3d 1368, 1374, 47 USPQ2d 1596, 1601-02 (Fed. Cir. 1998) (“After *Diehr* and *Chakrabarty*, the Freeman-Walter-Abele test has little, if any, applicability to determining the presence of statutory subject matter.”).

Office personnel have had difficulty in properly treating claims directed to methods of doing business. Claims should not be categorized as methods of doing business. Instead, such claims should be treated like any other process claims, pursuant to these Guidelines when relevant. See, e.g., *State Street*, 149 F.3d at 1374-75, 47 USPQ2d at 1602 (Fed. Cir. 1998); *In re Toma*, 575 F.2d 872, 877-78, 197 USPQ 852, 857 (CCPA 1978); *In re Musgrave*, 431 F.2d 882, 893, 167 USPQ 280, 289-90 (CCPA 1970). See also *In re Schrader*, 22 F.3d 290, 297-98, 30 USPQ2d 1455, 1461-62 (Fed. Cir. 1994) (Newman, J., dissenting); *Paine, Webber, Jackson & Curtis, Inc. v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 564 F. Supp. 1358, 1368-69, 218 USPQ 212, 220 (D. Del. 1983).

The appendix which appears at the end of this section includes a flow chart of the process Office personnel will follow in conducting examinations for computer-related inventions.

### **II. DETERMINE WHAT APPLICANT HAS INVENTED AND IS SEEKING TO PATENT**

It is essential that patent applicants obtain a prompt yet complete examination of their applications. Under the principles of compact prosecution, each claim should be reviewed for compliance with every statutory requirement for patentability in the initial review of the application, even if one or more claims are

found to be deficient with respect to some statutory requirement. Thus, Office personnel should state all reasons and bases for rejecting claims in the first Office action. Deficiencies should be explained clearly, particularly when they serve as a basis for a rejection. Whenever practicable, Office personnel should indicate how rejections may be overcome and how problems may be resolved. A failure to follow this approach can lead to unnecessary delays in the prosecution of the application.

Prior to focusing on specific statutory requirements, Office personnel must begin examination by determining what, precisely, the applicant has invented and is seeking to patent, and how the claims relate to and define that invention. (As the courts have repeatedly reminded the Office: “The goal is to answer the question ‘What did applicants invent?’ ” *In re Abele*, 684 F.2d 902, 907, 214 USPQ 682, 687. Accord, e.g., *Arrhythmia Research Tech. v. Corazonix Corp.*, 958 F.2d 1053, 1059, 22 USPQ2d 1033, 1038 (Fed. Cir. 1992).) Consequently, Office personnel will no longer begin examination by determining if a claim recites a “mathematical algorithm.” Rather they will review the complete specification, including the detailed description of the invention, any specific embodiments that have been disclosed, the claims and any specific, substantial, and credible utilities that have been asserted for the invention.

#### **A. Identify and Understand Any Practical Application Asserted for the Invention**

The claimed invention as a whole must accomplish a practical application. That is, it must produce a “useful, concrete and tangible result.” *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601-02. The purpose of this requirement is to limit patent protection to inventions that possess a certain level of “real world” value, as opposed to subject matter that represents nothing more than an idea or concept, or is simply a starting point for future investigation or research (*Brenner v. Manson*, 383 U.S. 519, 528-36, 148 USPQ 689, 693-96); *In re Ziegler*, 992, F.2d 1197, 1200-03, 26 USPQ2d 1600, 1603-06 (Fed. Cir. 1993)). Accordingly, a complete disclosure should contain some indication of the practical application for the claimed invention, i.e., why the applicant believes the claimed invention is useful.

Apart from the utility requirement of 35 U.S.C. 101, usefulness under the patent eligibility standard requires significant functionality to be present to satisfy the useful result aspect of the practical application requirement. See *Arrhythmia*, 958 F.2d at 1057, 22 USPQ2d at 1036. Merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make the invention eligible for patenting. For example, a claim directed to a word processing file stored on a disk may satisfy the utility requirement of 35 U.S.C. 101 since the information stored may have some “real world” value. However, the mere fact that the claim may satisfy the utility requirement of 35 U.S.C. 101 does not mean that a useful result is achieved under the practical application requirement. The claimed invention as a whole must produce a “useful, concrete and tangible” result to have a practical application.

Although the courts have yet to define the terms useful, concrete, and tangible in the context of the practical application requirement for purposes of these guidelines, the following examples illustrate claimed inventions that have a practical application because they produce useful, concrete, and tangible result:

- Claims drawn to a long-distance telephone billing process containing mathematical algorithms were held to be directed to patentable subject matter because “the claimed process applies the Boolean principle to produce a useful, concrete, tangible result without pre-empting other uses of the mathematical principle.” *AT&T Corp. v. Excel Communications, Inc.*, 172 F.3d 1352, 1358, 50 USPQ2d 1447, 1452 (Fed. Cir. 1999);

- “[T]ransformation of data, representing discrete dollar amounts, by a machine through a series of mathematical calculations into a final share price, constitutes a practical application of a mathematical algorithm, formula, or calculation, because it produces ‘a useful, concrete and tangible result’ -- a final share price momentarily fixed for recording and reporting purposes and even accepted and relied upon by regulatory authorities and in subsequent trades.” *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601; and

- Claims drawn to a rasterizer for converting discrete waveform data samples into anti-aliased pixel illumination intensity data to be displayed on a

display means were held to be directed to patentable subject matter since the claims defined “a specific machine to produce a useful, concrete, and tangible result.” *In re Alappat*, 33 F.3d 1526, 1544, 31 USPQ2d 1545, 1557 (Fed. Cir. 1994).

A process that consists solely of the manipulation of an abstract idea is not concrete or tangible. See *In re Warmerdam*, 33 F.3d 1354, 1360, 31 USPQ2d 1754, 1759 (Fed. Cir. 1994). See also *Schrader*, 22 F.3d at 295, 30 USPQ2d at 1459. Office personnel have the burden to establish a *prima facie* case that the claimed invention as a whole is directed to solely an abstract idea or to manipulation of abstract ideas or does not produce a useful result. Only when the claim is devoid of any limitation to a practical application in the technological arts should it be rejected under 35 U.S.C. 101. Compare *Musgrave*, 431 F.2d at 893, 167 USPQ at 289; *In re Foster*, 438 F.2d 1011, 1013, 169 USPQ 99, 101 (CCPA 1971). Further, when such a rejection is made, Office personnel must expressly state how the language of the claims has been interpreted to support the rejection.

The applicant is in the best position to explain why an invention is believed useful. Office personnel should therefore focus their efforts on pointing out statements made in the specification that identify all practical applications for the invention. Office personnel should rely on such statements throughout the examination when assessing the invention for compliance with all statutory criteria. An applicant may assert more than one practical application, but only one is necessary to satisfy the utility requirement. Office personnel should review the entire disclosure to determine the features necessary to accomplish at least one asserted practical application.

### ***B. Review the Detailed Disclosure and Specific Embodiments of the Invention To Determine What the Applicant Has Invented***

The written description will provide the clearest explanation of the applicant’s invention, by exemplifying the invention, explaining how it relates to the prior art and explaining the relative significance of various features of the invention. Accordingly, Office personnel should begin their evaluation of a computer-related invention as follows:

- determine what the programmed computer does when it performs the processes dictated by the software (i.e., the functionality of the programmed computer) (*Arrhythmia*, 958 F.2d at 1057, 22 USPQ at 1036, “It is of course true that a modern digital computer manipulates data, usually in binary form, by performing mathematical operations, such as addition, subtraction, multiplication, division, or bit shifting, on the data. But this is only how the computer does what it does. Of importance is the significance of the data and their manipulation in the real world, i.e., what the computer is doing.”);

- determine how the computer is to be configured to provide that functionality (i.e., what elements constitute the programmed computer and how those elements are configured and interrelated to provide the specified functionality); and

- if applicable, determine the relationship of the programmed computer to other subject matter outside the computer that constitutes the invention (e.g., machines, devices, materials, or process steps other than those that are part of or performed by the programmed computer). (Many computer-related inventions do not consist solely of a computer. Thus, Office personnel should identify those claimed elements of the computer-related invention that are not part of the programmed computer, and determine how those elements relate to the programmed computer. Office personnel should look for specific information that explains the role of the programmed computer in the overall process or machine and how the programmed computer is to be integrated with the other elements of the apparatus or used in the process.)

Patent applicants can assist the Office by preparing applications that clearly set forth these aspects of a computer-related invention.

### ***C. Review the Claims***

The claims define the property rights provided by a patent, and thus require careful scrutiny. The goal of claim analysis is to identify the boundaries of the protection sought by the applicant and to understand how the claims relate to and define what the applicant has indicated is the invention. Office personnel must first determine the scope of a claim by thoroughly analyzing the language of the claim before determining if the claim complies with each statutory requirement for patentability. See *In re Hiniker Co.*, 150 F.3d

1362, 1369, 47 USPQ2d 1523, 1529 (Fed. Cir. 1998) (“[T]he name of the game is the claim.”).

Office personnel should begin claim analysis by identifying and evaluating each claim limitation. For processes, the claim limitations will define steps or acts to be performed. For products, the claim limitations will define discrete physical structures or materials. Product claims are claims that are directed to either machines, manufactures or compositions of matter. The discrete physical structures or materials may be comprised of hardware or a combination of hardware and software.

Office personnel are to correlate each claim limitation to all portions of the disclosure that describe the claim limitation. This is to be done in all cases, i.e., whether or not the claimed invention is defined using means or step plus function language. The correlation step will ensure that Office personnel correctly interpret each claim limitation.

The subject matter of a properly construed claim is defined by the terms that limit its scope. It is this subject matter that must be examined. As a general matter, the grammar and intended meaning of terms used in a claim will dictate whether the language limits the claim scope. Language that suggests or makes optional but does not require steps to be performed or does not limit a claim to a particular structure does not limit the scope of a claim or claim limitation. The following are examples of language that may raise a question as to the limiting effect of the language in a claim:

- (A) statements of intended use or field of use,
- (B) “adapted to” or “adapted for” clauses,
- (C) “wherein” clauses, or
- (D) “whereby” clauses.

This list of examples is not intended to be exhaustive.

Office personnel must rely on the applicant’s disclosure to properly determine the meaning of \*\* the claims. *Markman v. Westview Instruments*, 52 F.3d 967, 980, 34 USPQ2d 1321, 1330 (Fed. Cir.) (*en banc*), *aff’d*, U.S. , 116 S. Ct. 1384 (1996). \*\*>Claim terms are presumed to have the ordinary and customary meanings attributed to them by those of ordinary skill in the art. *Sunracer Roots Enter. Co. v. SRAM Corp.*, 336 F.3d 1298, 1302, 67 USPQ2d 1438, 1441 (Fed. Cir. 2003); *Brookhill-Wilk I, LLC v. Intuitive Surgical, Inc.*, 334 F.3d 1294, 1298, 67

USPQ2d 1132, 1136 (Fed. Cir. 2003)(“In the absence of an express intent to impart a novel meaning to the claim terms, the words are presumed to take on the ordinary and customary meanings attributed to them by those of ordinary skill in the art.”) However, an applicant is entitled to be his or her own lexicographer and may rebut the presumption that claim terms are to be given their ordinary and customary meaning by clearly setting forth a definition of the term that is different from its ordinary and customary meaning. *See In re Paulsen*, 30 F.3d 1475, 1480, 31 USPQ2d 1671, 1674 (Fed. Cir. 1994).< Where an explicit definition is provided by the applicant for a term, that definition will control interpretation of the term as it is used in the claim. *Toro Co. v. White Consolidated Industries Inc.*, 199 F.3d 1295, 1301, 53 USPQ2d 1065, 1069 (Fed. Cir. 1999) (meaning of words used in a claim is not construed in a “lexicographic vacuum, but in the context of the specification and drawings.”). \*\* Any special meaning assigned to a term “must be sufficiently clear in the specification that any departure from common usage would be so understood by a person of experience in the field of the invention.” *Multi-form Desiccants Inc. v. Medzam Ltd.*, 133 F.3d 1473, 1477, 45 USPQ2d 1429, 1432 (Fed. Cir. 1998). \*\*>See also MPEP § 2111.01.<

If the applicant asserts that a term has a meaning that conflicts with the term’s art-accepted meaning, Office personnel should encourage the applicant to amend the claim to better reflect what applicant intends to claim as the invention. If the application becomes a patent, it becomes prior art against subsequent applications. Therefore, it is important for later search purposes to have the patentee employ commonly accepted terminology, particularly for searching text-searchable databases.

Office personnel must always remember to use the perspective of one of ordinary skill in the art. Claims and disclosures are not to be evaluated in a vacuum. If elements of an invention are well known in the art, the applicant does not have to provide a disclosure that describes those elements. In such a case the elements will be construed as encompassing any and every art-recognized hardware or combination of hardware and software technique for implementing the defined requisite functionalities.

Office personnel are to give claims their broadest reasonable interpretation in light of the supporting

disclosure. *In re Morris*, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Limitations appearing in the specification but not recited in the claim are not read into the claim. >*E-Pass Techs., Inc. v. 3Com Corp.*, 343 F.3d 1364, 1369, 67 USPQ2d 1947, 1950 (Fed. Cir. 2003) (claims must be interpreted “in view of the specification” without importing limitations from the specification into the claims unnecessarily).< *In re Prater*, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-551 (CCPA 1969). See also *In re Zletz*, 893 F.2d 319, 321-22, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989) (“During patent examination the pending claims must be interpreted as broadly as their terms reasonably allow.... The reason is simply that during patent prosecution when claims can be amended, ambiguities should be recognized, scope and breadth of language explored, and clarification imposed.... An essential purpose of patent examination is to fashion claims that are precise, clear, correct, and unambiguous. Only in this way can uncertainties of claim scope be removed, as much as possible, during the administrative process.”).

Where means plus function language is used to define the characteristics of a machine or manufacture invention, claim limitations must be interpreted to read on only the structures or materials disclosed in the specification and “equivalents thereof.” (Two *en banc* decisions of the Federal Circuit have made clear that the Office is to interpret means plus function language according to 35 U.S.C. 112, sixth paragraph. In the first, *In re Donaldson*, 16 F.3d 1189, 1193, 29 USPQ2d 1845, 1848 (Fed. Cir. 1994), the court held:

The plain and unambiguous meaning of paragraph six is that one construing means-plus-function language in a claim must look to the specification and interpret that language in light of the corresponding structure, material, or acts described therein, and equivalents thereof, to the extent that the specification provides such disclosure. Paragraph six does not state or even suggest that the PTO is exempt from this mandate, and there is no legislative history indicating that Congress intended that the PTO should be. Thus, this court must accept the plain and precise language of paragraph six.

Consistent with *Donaldson*, in the second decision, *In re Alappat*, 33 F.3d 1526, 1540, 31 USPQ2d 1545, 1554 (Fed. Cir. 1994) (in banc), the Federal Circuit held:

Given *Alappat*'s disclosure, it was error for the Board majority to interpret each of the means clauses in claim 15 so broadly as to “read on any and every means for performing the function” recited, as it said it was doing, and then to conclude that claim 15 is nothing more than a process claim wherein each means clause represents a step in that process. Contrary to suggestions by the Commissioner, this court's precedents do not support the Board's view that the particular apparatus claims at issue in this case may be viewed as nothing more than process claims.

Disclosure may be express, implicit or inherent. Thus, at the outset, Office personnel must attempt to correlate claimed means to elements set forth in the written description. The written description includes the original specification and the drawings. Office personnel are to give the claimed means plus function limitations their broadest reasonable interpretation consistent with all corresponding structures or materials described in the specification and their equivalents including the manner in which the claimed functions are performed. See *Kemco Sales, Inc. v. Control Papers Company, Inc.*, 208 F.3d 1352, 54 USPQ2d 1308 (Fed. Cir. 2000). Further guidance in interpreting the scope of equivalents is provided in MPEP § 2181 through § 2186.

While it is appropriate to use the specification to determine what applicant intends a term to mean, a positive limitation from the specification cannot be read into a claim that does not impose that limitation. A broad interpretation of a claim by Office personnel will reduce the possibility that the claim, when issued, will be interpreted more broadly than is justified or intended. An applicant can always amend a claim during prosecution to better reflect the intended scope of the claim.

Finally, when evaluating the scope of a claim, every limitation in the claim must be considered. Office personnel may not dissect a claimed invention into discrete elements and then evaluate the elements in isolation. Instead, the claim as a whole must be considered. See, e.g., *Diamond v. Diehr*, 450 U.S. at 188-89, 209 USPQ at 9 (“In determining the eligibility of respondents' claimed process for patent protection under 101, their claims must be considered as a whole. It is inappropriate to dissect the claims into old and new elements and then to ignore the presence of the old elements in the analysis. This is particularly true in a process claim because a new combination of steps in a process may be patentable even though all

the constituents of the combination were well known and in common use before the combination was made.”).

### III. CONDUCT A THOROUGH SEARCH OF THE PRIOR ART

Prior to classifying the claimed invention under 35 U.S.C. 101, Office personnel are expected to conduct a thorough search of the prior art. Generally, a thorough search involves reviewing both U.S. and foreign patents and nonpatent literature. In many cases, the result of such a search will contribute to Office personnel’s understanding of the invention. Both claimed and unclaimed aspects of the invention described in the specification should be searched if there is a reasonable expectation that the unclaimed aspects may be later claimed. A search must take into account any structure or material described in the specification and its equivalents which correspond to the claimed means plus function limitation, in accordance with 35 U.S.C. 112, sixth paragraph and MPEP § 2181 through § 2186.

### IV. DETERMINE WHETHER THE CLAIMED INVENTION COMPLIES WITH 35 U.S.C. 101

#### A. Consider the Breadth of 35 U.S.C. 101 Under Controlling Law

As the Supreme Court has held, Congress chose the expansive language of 35 U.S.C. 101 so as to include “anything under the sun that is made by man.” *Diamond v. Chakrabarty*, 447 U.S. 303, 308-09, 206 USPQ 193, 197 (1980). Accordingly, section 101 of title 35, United States Code, provides:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

In *Chakrabarty*, 447 U.S. at 308-309, 206 USPQ at 197, the court stated:

In choosing such expansive terms as “manufacture” and “composition of matter,” modified by the comprehensive “any,” Congress plainly contemplated that the patent laws would be given wide scope. The relevant legislative history also supports a broad construction. The Patent Act of 1793, authored by Thomas Jefferson, defined statutory

subject matter as “any new and useful art, machine, manufacture, or composition of matter, or any new or useful improvement [thereof].” Act of Feb. 21, 1793, ch. 11, § 1, 1 Stat. 318. The Act embodied Jefferson’s philosophy that “ingenuity should receive a liberal encouragement.” V Writings of Thomas Jefferson, at 75-76. See *Graham v. John Deere Co.*, 383 U.S. 1, 7-10 (148 USPQ 459, 462-464) (1966). Subsequent patent statutes in 1836, 1870, and 1874 employed this same broad language. In 1952, when the patent laws were recodified, Congress replaced the word “art” with “process,” but otherwise left Jefferson’s language intact. The Committee Reports accompanying the 1952 Act inform us that Congress intended statutory subject matter to “include anything under the sun that is made by man.” S. Rep. No. 1979, 82d Cong., 2d Sess., 5 (1952); H.R. Rep. No. 1923, 82d Cong., 2d Sess., 6 (1952). [Footnote omitted]

This perspective has been embraced by the Federal Circuit:

The plain and unambiguous meaning of section 101 is that any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may be patented if it meets the requirements for patentability set forth in Title 35, such as those found in sections 102, 103, and 112. The use of the expansive term “any” in section 101 represents Congress’s intent not to place any restrictions on the subject matter for which a patent may be obtained beyond those specifically recited in section 101 and the other parts of Title 35. . . . Thus, it is improper to read into section 101 limitations as to the subject matter that may be patented where the legislative history does not indicate that Congress clearly intended such limitations.

*Alappat*, 33 F.3d at 1542, 31 USPQ2d at 1556.

As cast, 35 U.S.C. 101 defines four categories of inventions that Congress deemed to be the appropriate subject matter of a patent; namely, processes, machines, manufactures and compositions of matter. The latter three categories define “things” while the first category defines “actions” (i.e., inventions that consist of a series of steps or acts to be performed). See 35 U.S.C. 100(b) (“The term ‘process’ means process, art, or method, and includes a new use of a known process, machine, manufacture, composition of matter, process, machine, manufacture, composition of matter, or material.”).

Federal courts have held that 35 U.S.C. 101 does have certain limits. First, the phrase “anything under the sun that is made by man” is limited by the text of 35 U.S.C. 101, meaning that one may only patent something that is a machine, manufacture, composition of matter or a process. See, e.g., *Alappat*, 33 F.3d at 1542, 31 USPQ2d at 1556; *Warmerdam*, 33 F.3d at

1358, 31 USPQ2d at 1757 (Fed. Cir. 1994). Second, 35 U.S.C. 101 requires that the subject matter sought to be patented be a “useful” invention. Accordingly, a complete definition of the scope of 35 U.S.C. 101, reflecting Congressional intent, is that any new and useful process, machine, manufacture or composition of matter under the sun that is made by man is the proper subject matter of a patent.

The subject matter courts have found to be outside the four statutory categories of invention is limited to abstract ideas, laws of nature and natural phenomena. While this is easily stated, determining whether an applicant is seeking to patent an abstract idea, a law of nature or a natural phenomenon has proven to be challenging. These three exclusions recognize that subject matter that is not a practical application or use of an idea, a law of nature or a natural phenomenon is not patentable. See, e.g., *Rubber-Tip Pencil Co. v. Howard*, 87 U.S. (20 Wall.) 498, 507 (1874) (“idea of itself is not patentable, but a new device by which it may be made practically useful is”); *Mackay Radio & Telegraph Co. v. Radio Corp. of America*, 306 U.S. 86, 94, 40 USPQ 199, 202 (1939) (“While a scientific truth, or the mathematical expression of it, is not patentable invention, a novel and useful structure created with the aid of knowledge of scientific truth may be.”); *Warmerdam*, 33 F.3d at 1360, 31 USPQ2d at 1759 (“steps of ‘locating’ a medial axis, and ‘creating’ a bubble hierarchy . . . describe nothing more than the manipulation of basic mathematical constructs, the paradigmatic ‘abstract idea’”).

Courts have expressed a concern over “preemption” of ideas, laws of nature or natural phenomena. The concern over preemption was expressed as early as 1852. See *Le Roy v. Tatham*, 55 U.S. 156, 175 (1852) (“A principle, in the abstract, is a fundamental truth; an original cause; a motive; these cannot be patented, as no one can claim in either of them an exclusive right.”); *Funk Brothers Seed Co. v. Kalo Inoculant Co.*, 333 U.S. 127, 132, 76 USPQ 280, 282 (1948) (combination of six species of bacteria held to be nonstatutory subject matter). The concern over preemption serves to bolster and justify the prohibition against the patenting of such subject matter. In fact, such concerns are only relevant to claiming a scientific truth or principle. Thus, a claim to an “abstract idea” is nonstatutory because it does not represent a

practical application of the idea, not because it would preempt the idea.

### ***B. Classify the Claimed Invention as to Its Proper Statutory Category***

To properly determine whether a claimed invention complies with the statutory invention requirements of 35 U.S.C. 101, Office personnel should classify each claim into one or more statutory or nonstatutory categories. If the claim falls into a nonstatutory category, that should not preclude complete examination of the application for satisfaction of all other conditions of patentability. This classification is only an initial finding at this point in the examination process that will be again assessed after the examination for compliance with 35 U.S.C. 102, 103, and 112 is completed and before issuance of any Office action on the merits.

If the invention as set forth in the written description is statutory, but the claims define subject matter that is not, the deficiency can be corrected by an appropriate amendment of the claims. In such a case, Office personnel should reject the claims drawn to nonstatutory subject matter under 35 U.S.C. 101, but identify the features of the invention that would render the claimed subject matter statutory if recited in the claim.

#### **1. Nonstatutory Subject Matter**

Claims to computer-related inventions that are clearly nonstatutory fall into the same general categories as nonstatutory claims in other arts, namely natural phenomena such as magnetism, and abstract ideas or laws of nature which constitute “descriptive material.” Abstract ideas, *Warmerdam*, 33 F.3d at 1360, 31 USPQ2d at 1759, or the mere manipulation of abstract ideas, *Schrader*, 22 F.3d at 292-93, 30 USPQ2d at 1457-58, are not patentable. Descriptive material can be characterized as either “functional descriptive material” or “nonfunctional descriptive material.” In this context, “functional descriptive material” consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of “data structure” is “a physical or logical relationship among data elements, designed to support specific data manipulation functions.” The New IEEE Standard Dictionary of Electrical and Electronics Terms 308

(5th ed. 1993).) “Nonfunctional descriptive material” includes but is not limited to music, literary works and a compilation or mere arrangement of data.

Both types of “descriptive material” are nonstatutory when claimed as descriptive material *per se*. *Warmerdam*, 33 F.3d at 1360, 31 USPQ2d at 1759. When functional descriptive material is recorded on some computer-readable medium it becomes structurally and functionally interrelated to the medium and will be statutory in most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32 USPQ2d 1031, 1035 (Fed. Cir. 1994) (claim to data structure stored on a computer readable medium that increases computer efficiency held statutory) and *Warmerdam*, 33 F.3d at 1360-61, 31 USPQ2d at 1759 (claim to computer having a specific data structure stored in memory held statutory product-by-process claim) with *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). When nonfunctional descriptive material is recorded on some computer-readable medium, it is not statutory since no requisite functionality is present to satisfy the practical application requirement. Merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. Such a result would exalt form over substance. *In re Sarkar*, 588 F.2d 1330, 1333, 200 USPQ 132, 137 (CCPA 1978) (“[E]ach invention must be evaluated as claimed; yet semantogenic considerations preclude a determination based solely on words appearing in the claims. In the final analysis under 101, the claimed invention, as a whole, must be evaluated for what it is.”) (quoted with approval in *Abele*, 684 F.2d at 907, 214 USPQ at 687). See also *In re Johnson*, 589 F.2d 1070, 1077, 200 USPQ 199, 206 (CCPA 1978) (“form of the claim is often an exercise in drafting”). Thus, nonstatutory music is not a computer component and it does not become statutory by merely recording it on a compact disk. Protection for this type of work is provided under the copyright law.

Claims to processes that do nothing more than solve mathematical problems or manipulate abstract ideas or concepts are more complex to analyze and are addressed below.

If the “acts” of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter. *Schrader*, 22 F.3d at 294-95, 30 USPQ2d at 1458-59. Thus, a process consisting solely of mathematical operations, i.e., converting one set of numbers into another set of numbers, does not manipulate appropriate subject matter and thus cannot constitute a statutory process.

In practical terms, claims define nonstatutory processes if they:

- consist solely of mathematical operations without some claimed practical application (i.e., executing a “mathematical algorithm”); or
- simply manipulate abstract ideas, e.g., a bid (*Schrader*, 22 F.3d at 293-94, 30 USPQ2d at 1458-59) or a bubble hierarchy (*Warmerdam*, 33 F.3d at 1360, 31 USPQ2d at 1759), without some claimed practical application.

Cf. *Alappat*, 33 F.3d at 1543 n.19, 31 USPQ2d at 1556 n.19 in which the Federal Circuit recognized the confusion:

The Supreme Court has not been clear . . . as to whether such subject matter is excluded from the scope of 101 because it represents laws of nature, natural phenomena, or abstract ideas. See *Diehr*, 450 U.S. at 186 (viewed mathematical algorithm as a law of nature); *Gottschalk v. Benson*, 409 U.S. 63, 71-72 (1972) (treated mathematical algorithm as an “idea”). The Supreme Court also has not been clear as to exactly what kind of mathematical subject matter may not be patented. The Supreme Court has used, among others, the terms “mathematical algorithm,” “mathematical formula,” and “mathematical equation” to describe types of mathematical subject matter not entitled to patent protection standing alone. The Supreme Court has not set forth, however, any consistent or clear explanation of what it intended by such terms or how these terms are related, if at all.

Certain mathematical algorithms have been held to be nonstatutory because they represent a mathematical definition of a law of nature or a natural phenomenon. For example, a mathematical algorithm representing the formula  $E = mc^2$  is a “law of nature” — it defines a “fundamental scientific truth” (i.e., the relationship between energy and mass). To comprehend how the law of nature relates to any object, one invariably has to perform certain steps (e.g., multiplying a number representing the mass of an object by

the square of a number representing the speed of light). In such a case, a claimed process which consists solely of the steps that one must follow to solve the mathematical representation of  $E = mc^2$  is indistinguishable from the law of nature and would “pre-empt” the law of nature. A patent cannot be granted on such a process.

**(a) Functional Descriptive Material: “Data Structures” Representing Descriptive Material *Per Se* or Computer Programs Representing Computer Listings *Per Se***

Data structures not claimed as embodied in computer-readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention which permit the data structure’s functionality to be realized. In contrast, a claimed computer-readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure’s functionality to be realized, and is thus statutory.

Similarly, computer programs claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs, are not physical “things.” They are neither computer components nor statutory processes, as they are not “acts” being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer which permit the computer program’s functionality to be realized. In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program’s functionality to be realized, and is thus statutory. Accordingly, it is important to distinguish claims that define descriptive material *per se* from claims that define statutory inventions.

Computer programs are often recited as part of a claim. Office personnel should determine whether the computer program is being claimed as part of an otherwise statutory manufacture or machine. In such a case, the claim remains statutory irrespective of the fact that a computer program is included in the claim. The same result occurs when a computer program is used in a computerized process where the computer executes the instructions set forth in the computer program. Only when the claimed invention taken as a whole is directed to a mere program listing, i.e., to only its description or expression, is it descriptive material *per se* and hence nonstatutory.

Since a computer program is merely a set of instructions capable of being executed by a computer, the computer program itself is not a process and Office personnel should treat a claim for a computer program, without the computer-readable medium needed to realize the computer program’s functionality, as nonstatutory functional descriptive material. When a computer program is claimed in a process where the computer is executing the computer program’s instructions, Office personnel should treat the claim as a process claim. See paragraph IV.B.2(b), below. When a computer program is recited in conjunction with a physical structure, such as a computer memory, Office personnel should treat the claim as a product claim. See paragraph IV.B.2(a), below.

**(b) Nonfunctional Descriptive Material**

Descriptive material that cannot exhibit any functional interrelationship with the way in which computing processes are performed does not constitute a statutory process, machine, manufacture or composition of matter and should be rejected under 35 U.S.C. 101. Thus, Office personnel should consider the claimed invention as a whole to determine whether the necessary functional interrelationship is provided.

Where certain types of descriptive material, such as music, literature, art, photographs and mere arrangements or compilations of facts or data, are merely stored so as to be read or outputted by a computer without creating any functional interrelationship, either as part of the stored data or as part of the computing processes performed by the computer, then such descriptive material alone does not impart functionality either to the data as so structured, or to the computer. Such “descriptive material” is not a

process, machine, manufacture or composition of matter. (Data consists of facts, which become information when they are seen in context and convey meaning to people. Computers process data without any understanding of what that data represents. Computer Dictionary 210 (Microsoft Press, 2d ed. 1994).)

The policy that precludes the patenting of nonfunctional descriptive material would be easily frustrated if the same descriptive material could be patented when claimed as an article of manufacture. For example, music is commonly sold to consumers in the format of a compact disc. In such cases, the known compact disc acts as nothing more than a carrier for nonfunctional descriptive material. The purely nonfunctional descriptive material cannot alone provide the practical application for the manufacture.

Office personnel should be prudent in applying the foregoing guidance. Nonfunctional descriptive material may be claimed in combination with other functional descriptive multi-media material on a computer-readable medium to provide the necessary functional and structural interrelationship to satisfy the requirements of 35 U.S.C. 101. The presence of the claimed nonfunctional descriptive material is not necessarily determinative of nonstatutory subject matter. For example, a computer that recognizes a particular grouping of musical notes read from memory and upon recognizing that particular sequence, causes another defined series of notes to be played, defines a functional interrelationship among that data and the computing processes performed when utilizing that data, and as such is statutory because it implements a statutory process.

### (c) Natural Phenomena Such as Electricity and Magnetism

Claims that recite nothing but the physical characteristics of a form of energy, such as a frequency, voltage, or the strength of a magnetic field, define energy or magnetism, *per se*, and as such are nonstatutory natural phenomena. *O'Reilly v. Morse*, 56 U.S. (15 How.) 62, 112-14 (1853). However, a signal claim directed to a practical application of electromagnetic energy is statutory regardless of its transitory nature. See *O'Reilly*, 56 U.S. at 114-19; *In re Breslow*, 616 F.2d 516, 519-21, 205 USPQ 221, 225-26 (CCPA 1980).

## 2. Statutory Subject Matter

For the purposes of a 35 U.S.C. 101 analysis, it is of little relevance whether the claim is directed to a machine or a process. The legal principles are the same. *AT&T Corp. v. Excel Communications, Inc.*, 172 F.3d 1352, 1357, 50 USPQ2d 1447, 1451 (Fed. Cir. 1999).

### (a) Statutory Product Claims

Products may be either machines, manufactures, or compositions of matter.

A *machine* is “a concrete thing, consisting of parts or of certain devices and combinations of devices.” *Burr v. Duryee*, 68 U.S. (1 Wall.) 531, 570 (1863).

A *manufacture* is “the production of articles for use from raw or prepared materials by giving to these materials new forms, qualities, properties or combinations, whether by hand labor or by machinery.” *Chakrabarty*, 447 U.S. at 308, 206 USPQ at 196-97 (quoting *American Fruit Growers, Inc. v. Brogdex Co.*, 283 U.S. 1, 11 (1931)).

A *composition of matter* is “a composition of two or more substances [or] . . . a[] composite article, whether [it] be the result[] of chemical union, or of mechanical mixture, or whether . . . [it] be [a] gas[], fluid[], powder[], or solid[].” *Id.* at 308, 206 USPQ at 197 (quoting *Shell Development Co. v. Watson*, 149 F. Supp. 279, 280, 113 USPQ 265, 266 (D.D.C. 1957), *aff'd per curiam*, 252 F.2d 861, 116 USPQ 428 (D.C. Cir. 1958)).

If a claim defines a useful machine or manufacture by identifying the physical structure of the machine or manufacture in terms of its hardware or hardware and software combination, it defines a statutory product. See, e.g., *Lowry*, 32 F.3d at 1583, 32 USPQ2d at 1034-35; *Warmerdam*, 33 F.3d at 1361-62, 31 USPQ2d at 1760.

Office personnel must treat each claim as a whole. The mere fact that a hardware element is recited in a claim does not necessarily limit the claim to a specific machine or manufacture. Cf. *In re Iwahashi*, 888 F.2d 1370, 1374-75, 12 USPQ2d 1908, 1911-12 (Fed. Cir. 1989), cited with approval in *Alappat*, 33 F.3d at 1544 n.24, 31 USPQ2d at 1558 n.24.

A claim limited to a machine or manufacture, which has a practical application in the technological arts, is statutory. In most cases, a claim to a specific machine or manufacture will have a practical application in the technological arts. See *Alappat*, 33 F.3d at 1544, 31 USPQ2d at 1557 (“the claimed invention as a whole is directed to a combination of interrelated elements which combine to form a machine for converting discrete waveform data samples into anti-aliased pixel illumination intensity data to be displayed on a display means. This is not a disembodied mathematical concept which may be characterized as an ‘abstract idea,’ but rather a specific machine to produce a useful, concrete, and tangible result.”); and *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601 (“the transformation of data, representing discrete dollar amounts, by a machine through a series of mathematical calculations into a final share price, constitutes a practical application of a mathematical algorithm, formula, or calculation, because it produces ‘a useful, concrete and tangible result’ – a final share price momentarily fixed for recording and reporting purposes and even accepted and relied upon by regulatory authorities and in subsequent trades.”). Also see *AT&T*, 172 F.3d at 1358, 50 USPQ2d at 1452 (Claims drawn to a long-distance telephone billing process containing mathematical algorithms were held patentable subject matter because the process used the algorithm to produce a useful, concrete, tangible result without preempting other uses of the mathematical principle.).

### (b) Statutory Process Claims

A claim that requires one or more acts to be performed defines a process. However, not all processes are statutory under 35 U.S.C. 101. *Schrader*, 22 F.3d at 296, 30 USPQ2d at 1460. To be statutory, a claimed computer-related process must either: (A) result in a physical transformation outside the computer for which a practical application in the technological arts is either disclosed in the specification or would have been known to a skilled artisan (discussed in i) below), or (B) be limited to a practical application within the technological arts (discussed in ii) below). See *Diamond v. Diehr*, 450 U.S. at 183-84, 209 USPQ at 6 (quoting *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1877)) (“A [statutory] process is a mode of treatment of certain materials to produce a given result. It

is an act, or a series of acts, performed upon the subject-matter to be transformed and reduced to a different state or thing.... The process requires that certain things should be done with certain substances, and in a certain order; but the tools to be used in doing this may be of secondary consequence.”). See also *Alappat*, 33 F.3d at 1543, 31 USPQ2d at 1556-57 (quoting *Diamond v. Diehr*, 450 U.S. at 192, 209 USPQ at 10). See also *id.* at 1569, 31 USPQ2d at 1578-79 (Newman, J., concurring) (“unpatentability of the principle does not defeat patentability of its practical applications”) (citing *O’Reilly v. Morse*, 56 U.S. (15 How.) at 114-19). If a physical transformation occurs outside the computer, a disclosure that permits a skilled artisan to practice the claimed invention, i.e., to put it to a practical use, is sufficient. On the other hand, it is necessary for the claimed invention taken as a whole to produce a practical application if there is only a transformation of signals or data inside a computer or if a process merely manipulates concepts or converts one set of numbers into another.

A claimed process is clearly statutory if it results in a physical transformation outside the computer, i.e., falls into one or both of the following specific categories (“safe harbors”).

#### i) Safe Harbors

##### - Independent Physical Acts (Post-Computer Process Activity)

A process is statutory if it requires physical acts to be performed outside the computer independent of and following the steps to be performed by a programmed computer, where those acts involve the manipulation of tangible physical objects and result in the object having a different physical attribute or structure. *Diamond v. Diehr*, 450 U.S. at 187, 209 USPQ at 8. Thus, if a process claim includes one or more post-computer process steps that result in a physical transformation outside the computer (beyond merely conveying the direct result of the computer operation), the claim is clearly statutory.

Examples of this type of statutory process include the following:

- A method of curing rubber in a mold which relies upon updating process parameters, using a computer processor to determine a time period for curing the rubber, using the computer processor to

determine when the time period has been reached in the curing process and then opening the mold at that stage.

- A method of controlling a mechanical robot which relies upon storing data in a computer that represents various types of mechanical movements of the robot, using a computer processor to calculate positioning of the robot in relation to given tasks to be performed by the robot, and controlling the robot's movement and position based on the calculated position.

Examples of claimed processes that do not achieve a practical application include:

- step of "updating alarm limits" found to constitute changing the number value of a variable to represent the result of the calculation (*Parker v. Flook*, 437 U.S. 584, 585, 198 USPQ 193, 195 (1978));

- final step of "equating" the process outputs to the values of the last set of process inputs found to constitute storing the result of calculations (*In re Gelnovatch*, 595 F.2d 32, 41 n.7, 201 USPQ 136, 145 n.7 (CCPA 1979); and

- step of "transmitting electrical signals representing" the result of calculations (*In re De Castelet*, 562 F.2d 1236, 1244, 195 USPQ 439, 446 (CCPA 1977) ("That the computer is instructed to transmit electrical signals, representing the results of its calculations, does not constitute the type of 'post solution activity' found in *Flook*, [437 U.S. 584, 198 USPQ 193 (1978)], and does not transform the claim into one for a process merely using an algorithm. The final transmitting step constitutes nothing more than reading out the result of the calculations.")); and

-step of displaying a calculation as a gray code scale (*In re Abele*, 684 F.2d 902, 908, 214 USPQ 682, 687 (CCPA 1982)).

**- Manipulation of Data Representing Physical Objects or Activities (Pre-Computer Process Activity)**

Another statutory process is one that requires the measurements of physical objects or activities to be transformed outside of the computer into computer data (*In re Gelnovatch*, 595 F.2d 32, 41 n.7, 201 USPQ 136, 145 n.7 (CCPA 1979) (data-gathering

step did not measure physical phenomenon); *Arrhythmia*, 958 F.2d at 1056, 22 USPQ2d at 1036), where the data comprises signals corresponding to physical objects or activities external to the computer system, and where the process causes a physical transformation of the signals which are intangible representations of the physical objects or activities. *Schrader*, 22 F.3d at 294, 30 USPQ2d at 1459 citing with approval *Arrhythmia*, 958 F.2d at 1058-59, 22 USPQ2d at 1037-38; *Abele*, 684 F.2d at 909, 214 USPQ at 688; *In re Taner*, 681 F.2d 787, 790, 214 USPQ 678, 681 (CCPA 1982).

Examples of this type of claimed statutory process include the following:

- A method of using a computer processor to analyze electrical signals and data representative of human cardiac activity by converting the signals to time segments, applying the time segments in reverse order to a high pass filter means, using the computer processor to determine the amplitude of the high pass filter's output, and using the computer processor to compare the value to a predetermined value. In this example the data is an intangible representation of physical activity, i.e., human cardiac activity. The transformation occurs when heart activity is measured and an electrical signal is produced. This process has real world value in predicting vulnerability to ventricular tachycardia immediately after a heart attack.

- A method of using a computer processor to receive data representing Computerized Axial Tomography ("CAT") scan images of a patient, performing a calculation to determine the difference between a local value at a data point and an average value of the data in a region surrounding the point, and displaying the difference as a gray scale for each point in the image, and displaying the resulting image. In this example the data is an intangible representation of a physical object, i.e., portions of the anatomy of a patient. The transformation occurs when the condition of the human body is measured with X-rays and the X-rays are converted into electrical digital signals that represent the condition of the human body. The real world value of the invention lies in creating a new CAT scan image of body tissue without the presence of bones.

- A method of using a computer processor to conduct seismic exploration, by imparting spherical seismic energy waves into the earth from a seismic source, generating a plurality of reflected signals in response to the seismic energy waves at a set of receiver positions in an array, and summing the reflection signals to produce a signal simulating the reflection response of the earth to the seismic energy. In this example, the electrical signals processed by the computer represent reflected seismic energy. The transformation occurs by converting the spherical seismic energy waves into electrical signals which provide a geophysical representation of formations below the earth's surface. Geophysical exploration of formations below the surface of the earth has real world value.

Examples of claimed processes that independently limit the claimed invention to safe harbor include:

- a method of conducting seismic exploration which requires generating and manipulating signals from seismic energy waves before "summing" the values represented by the signals (*Taner*, 681 F.2d at 788, 214 USPQ at 679); and
- a method of displaying X-ray attenuation data as a signed gray scale signal in a "field" using a particular algorithm, where the antecedent steps require generating the data using a particular machine (e.g., a computer tomography scanner). *Abele*, 684 F.2d at 908, 214 USPQ at 687 ("The specification indicates that such attenuation data is available only when an X-ray beam is produced by a CAT scanner, passed through an object, and detected upon its exit. Only after these steps have been completed is the algorithm performed, and the resultant modified data displayed in the required format.").

Examples of claimed processes that do not limit the claimed invention to pre-computing safe harbor include:

- "perturbing" the values of a set of process inputs, where the subject matter "perturbed" was a number and the act of "perturbing" consists of substituting the numerical values of variables (*Gelnovatch*, 595 F.2d at 41 n.7, 201 USPQ at 145 n.7 ("Appellants' claimed step of perturbing the values of a set of process inputs (step 3), in addi-

tion to being a mathematical operation, appears to be a data-gathering step of the type we have held insufficient to change a nonstatutory method of calculation into a statutory process.... In this instance, the perturbed process inputs are not even measured values of physical phenomena, but are instead derived by numerically changing the values in the previous set of process inputs.")); and

- selecting a set of arbitrary measurement point values (*Sarkar*, 588 F.2d at 1331, 200 USPQ at 135).

If a claim does not clearly fall into one or both of the safe harbors, the claim may still be statutory if it is limited to a practical application in the technological arts.

## ii) **Computer-Related Processes Limited to a Practical Application in the Technological Arts**

There is always some form of physical transformation within a computer because a computer acts on signals and transforms them during its operation and changes the state of its components during the execution of a process. Even though such a physical transformation occurs within a computer, such activity is not determinative of whether the process is statutory because such transformation alone does not distinguish a statutory computer process from a nonstatutory computer process. What is determinative is not how the computer performs the process, but what the computer does to achieve a practical application. See *Arrhythmia*, 958 F.2d at 1057, 22 USPQ2d at 1036.

A process that merely manipulates an abstract idea or performs a purely mathematical algorithm is nonstatutory despite the fact that it might inherently have some usefulness. In *Sarkar*, 588 F.2d at 1335, 200 USPQ at 139, the court explained why this approach must be followed:

No mathematical equation can be used, as a practical matter, without establishing and substituting values for the variables expressed therein. Substitution of values dictated by the formula has thus been viewed as a form of mathematical step. If the steps of gathering and substituting values were alone sufficient, every mathematical equation, formula, or algorithm having any practical use would be per se subject to patenting as a "process" under 101. Consideration of whether the substitution of specific values is enough to convert the disembodied ideas present in the formula into an embodiment of those ideas, or into

an application of the formula, is foreclosed by the current state of the law.

For such subject matter to be statutory, the claimed process must be limited to a practical application of the abstract idea or mathematical algorithm in the technological arts. See *Alappat*, 33 F.3d at 1543, 31 USPQ2d at 1556-57 (quoting *Diamond v. Diehr*, 450 U.S. at 192, 209 USPQ at 10). See also *Alappat* 33 F.3d at 1569, 31 USPQ2d at 1578-79 (Newman, J., concurring) (“unpatentability of the principle does not defeat patentability of its practical applications”) (citing *O’Reilly v. Morse*, 56 U.S. (15 How.) at 114-19). A claim is limited to a practical application when the method, as claimed, produces a concrete, tangible and useful result; i.e., the method recites a step or act of producing something that is concrete, tangible and useful. See *AT&T*, 172 F.3d at 1358, 50 USPQ2d at 1452. Likewise, a machine claim is statutory when the machine, as claimed, produces a concrete, tangible and useful result (as in *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601) and/or when a specific machine is being claimed (as in *Alappat*, 33 F.3d at 1544, 31 USPQ2d at 1557 (in banc)). For example, a computer process that simply calculates a mathematical algorithm that models noise is nonstatutory. However, a claimed process for digitally filtering noise employing the mathematical algorithm is statutory.

Examples of this type of claimed statutory process include the following:

- A computerized method of optimally controlling transfer, storage and retrieval of data between cache and hard disk storage devices such that the most frequently used data is readily available.
- A method of controlling parallel processors to accomplish multi-tasking of several computing tasks to maximize computing efficiency. See, e.g., *In re Bernhart*, 417 F.2d 1395, 1400, 163 USPQ 611,616 (CCPA 1969).
- A method of making a word processor by storing an executable word processing application program in a general purpose digital computer’s memory, and executing the stored program to impart word processing functionality to the general purpose digital computer by changing the state of the computer’s arithmetic logic unit when pro-

gram instructions of the word processing program are executed.

- A digital filtering process for removing noise from a digital signal comprising the steps of calculating a mathematical algorithm to produce a correction signal and subtracting the correction signal from the digital signal to remove the noise.

## V. EVALUATE APPLICATION FOR COMPLIANCE WITH 35 U.S.C. 112

Office personnel should begin their evaluation of an application’s compliance with 35 U.S.C. 112 by considering the requirements of 35 U.S.C. 112, second paragraph. The second paragraph contains two separate and distinct requirements: (A) that the claim(s) set forth the subject matter applicants regard as the invention, and (B) that the claim(s) particularly point out and distinctly claim the invention. An application will be deficient under 35 U.S.C. 112, second paragraph when (A) evidence including admissions, other than in the application as filed, shows applicant has stated that he or she regards the invention to be different from what is claimed, or when (B) the scope of the claims is unclear.

After evaluation of the application for compliance with 35 U.S.C. 112, second paragraph, Office personnel should then evaluate the application for compliance with the requirements of 35 U.S.C. 112, first paragraph. The first paragraph contains three separate and distinct requirements:

- (A) adequate written description,
- (B) enablement, and
- (C) best mode.

An application will be deficient under 35 U.S.C. 112, first paragraph when the written description is not adequate to identify what the applicant has invented, or when the disclosure does not enable one skilled in the art to make and use the invention as claimed without undue experimentation. Deficiencies related to disclosure of the best mode for carrying out the claimed invention are not usually encountered during examination of an application because evidence to support such a deficiency is seldom in the record. *Fonar Corp. v. General Electric Co.*, 107 F.3d 1543, 1548-49, 41 USPQ2d 1801, 1804 (Fed. Cir. 1997).

If deficiencies are discovered with respect to 35 U.S.C. 112, Office personnel must be careful to apply the appropriate paragraph of 35 U.S.C. 112.

**A. Determine Whether the Claimed Invention Complies with 35 U.S.C. 112, Second Paragraph Requirements**

**1. Claims Setting Forth the Subject Matter Applicant Regards as Invention**

Applicant's specification must conclude with claim(s) that set forth the subject matter which the applicant regards as the invention. The invention set forth in the claims is presumed to be that which applicant regards as the invention, unless applicant considers the invention to be something different from what has been claimed as shown by evidence, including admissions, outside the application as filed. An applicant may change what he or she regards as the invention during the prosecution of the application.

**2. Claims Particularly Pointing Out and Distinctly Claiming the Invention**

Office personnel shall determine whether the claims set out and circumscribe the invention with a reasonable degree of precision and particularity. In this regard, the definiteness of the language must be analyzed, not in a vacuum, but always in light of the teachings of the disclosure as it would be interpreted by one of ordinary skill in the art. Applicant's claims, interpreted in light of the disclosure, must reasonably apprise a person of ordinary skill in the art of the invention. However, the applicant need not explicitly recite in the claims every feature of the invention. For example, if an applicant indicates that the invention is a particular computer, the claims do not have to recite every element or feature of the computer. In fact, it is preferable for claims to be drafted in a form that emphasizes what the applicant has invented (i.e., what is new rather than old). *In re Dossel*, 115 F.3d 942, 946, 42 USPQ2d 1881, 1884 (Fed. Cir. 1997).

A means plus function limitation is distinctly claimed if the description makes it clear that the means corresponds to well-defined structure of a computer or computer component implemented in either hardware or software and its associated hardware platform. *Atmel Corp. v. Information Storage Devices Inc.*, 198 F.3d 1374, 1380, 53 USPQ2d 1225, 1229

(*Fed. Cir. 1999*); *B. Braun Medical, Inc. v. Abbott Labs.*, 124 F.3d 1419, 1424, 43 USPQ2d 1896, 1899 (Fed. Cir. 1997). Such means may be defined as:

- a programmed computer with a particular functionality implemented in hardware or hardware and software;
- a logic circuit or other component of a programmed computer that performs a series of specifically identified operations dictated by a computer program; or
- a computer memory encoded with executable instructions representing a computer program that can cause a computer to function in a particular fashion.

The scope of a "means" limitation is defined as the corresponding structure or material (e.g., a specific logic circuit) set forth in the written description and equivalents. See MPEP § 2181 through § 2186. Thus, a claim using means plus function limitations without corresponding disclosure of specific structures or materials that are not well-known fails to particularly point out and distinctly claim the invention. *Dossel*, 115 F.3d at 946-47, 42 USPQ2d at 1884-85. For example, if the applicant discloses only the functions to be performed and provides no express, implied or inherent disclosure of hardware or a combination of hardware and software that performs the functions, the application has not disclosed any "structure" which corresponds to the claimed means. Office personnel should reject such claims under 35 U.S.C. 112, second paragraph. *B. Braun Medical*, 124 F.3d at 1424, 43 USPQ2d at 1899. The rejection shifts the burden to the applicant to describe at least one specific structure or material that corresponds to the claimed means in question, and to identify the precise location or locations in the specification where a description of at least one embodiment of that claimed means can be found. In contrast, if the corresponding structure is disclosed to be a memory or logic circuit that has been configured in some manner to perform that function (e.g., using a defined computer program), the application has disclosed "structure" which corresponds to the claimed means.

When a claim or part of a claim is defined in computer program code, whether in source or object code format, a person of skill in the art must be able to ascertain the metes and bounds of the claimed

invention. In certain circumstances, as where self-documenting programming code is employed, use of programming language in a claim would be permissible because such program source code presents “sufficiently high-level language and descriptive identifiers” to make it universally understood to others in the art without the programmer having to insert any comments. See *Computer Dictionary* 353 (Microsoft Press, 2ed. 1994) for a definition of “self-documenting code.” Applicants should be encouraged to functionally define the steps the computer will perform rather than simply reciting source or object code instructions.

## ***B. Determine Whether the Claimed Invention Complies with 35 U.S.C. 112, First Paragraph Requirements***

### **1. Adequate Written Description**

The satisfaction of the enablement requirement does not satisfy the written description requirement. See *In re Barker*, 559 F.2d 588, 591, 194 USPQ 470, 472 (CCPA 1977) (a specification may be sufficient to enable one skilled in the art to make and use the invention, but still fail to comply with the written description requirement). See also *In re DiLeone*, 436 F.2d 1404, 1405, 168 USPQ 592, 593 (CCPA 1971). For the written description requirement, an applicant’s specification must reasonably convey to those skilled in the art that the applicant was in possession of the claimed invention as of the date of invention. *Regents of the University of California v. Eli Lilly & Co.*, 119 F.3d 1559, 1568, 43 USPQ2d 1398, 1405 (Fed. Cir. 1997); *Hyatt v. Boone*, 146 F.3d 1348, 1354, 47 USPQ2d 1128, 1132 (Fed. Cir. 1998). The claimed invention subject matter need not be described literally, i.e., using the same terms, in order for the disclosure to satisfy the description requirement. Software aspects of inventions may be described functionally. See *Robotic Vision Sys. v. View Eng’g, Inc.*, 112 F.3d 1163, 1166, 42 USPQ2d 1619, 1622-23 (Fed. Cir. 1997); *Fonar Corp. v. General Electric Co.*, 107 F.3d 1543, 1549, 41 USPQ2d 1801, 1805 (Fed. Cir. 1997); *In re Hayes Microcomputer Prods., Inc.*, 982 F.2d 1527, 1537-38, 25 USPQ2d 1241, 1248-49 (Fed. Cir. 1992). >See MPEP § 2163 for further guidance with respect to the evaluation of a

patent application for compliance with the written description requirement.<

### **2. Enabling Disclosure**

An applicant’s specification must enable a person skilled in the art to make and use the claimed invention without undue experimentation. The fact that experimentation is complex, however, will not make it undue if a person of skill in the art typically engages in such complex experimentation. For a computer-related invention, the disclosure must enable a skilled artisan to configure the computer to possess the requisite functionality, and, where applicable, interrelate the computer with other elements to yield the claimed invention, without the exercise of undue experimentation. The specification should disclose how to configure a computer to possess the requisite functionality or how to integrate the programmed computer with other elements of the invention, unless a skilled artisan would know how to do so without such disclosure. See, e.g., *Dossel*, 115 F.3d at 946-47, 42 USPQ2d at 1884-85; *Northern Telecom v. Datapoint Corp.*, 908 F.2d 931, 941-43, 15 USPQ2d 1321, 1328-30 (Fed. Cir.1990) (judgment of invalidity reversed for clear error where expert testimony on both sides showed that a programmer of reasonable skill could write a satisfactory program with ordinary effort based on the disclosure); *DeGeorge v. Bernier*, 768 F.2d 1318, 1324, 226 USPQ 758, 762-63 (Fed. Cir. 1985) (superseded by statute with respect to issues not relevant here) (invention was adequately disclosed for purposes of enablement even though all of the circuitry of a word processor was not disclosed, since the undisclosed circuitry was deemed inconsequential because it did not pertain to the claimed circuit); *In re Phillips*, 608 F.2d 879, 882-83, 203 USPQ 971, 975 (CCPA 1979) (computerized method of generating printed architectural specifications dependent on use of glossary of predefined standard phrases and error-checking feature enabled by overall disclosure generally defining errors); *In re Donohue*, 550 F.2d 1269, 1271, 193 USPQ 136, 137 (CCPA 1977) (“Employment of block diagrams and descriptions of their functions is not fatal under 35 U.S.C. 112, first paragraph, providing the represented structure is conventional and can be determined without undue experimentation.”); *In re Knowlton*, 481 F.2d 1357, 1366-68, 178 USPQ 486, 493-94 (CCPA 1973) (examiner’s

contention that a software invention needed a detailed description of all the circuitry in the complete hardware system reversed).

For many computer-related inventions, it is not unusual for the claimed invention to involve more than one field of technology. For such inventions, the disclosure must satisfy the enablement standard for each aspect of the invention. See *In re Naquin*, 398 F.2d 863, 866, 158 USPQ 317, 319 CCPA 1968) (“When an invention, in its different aspects, involves distinct arts, that specification is adequate which enables the adepts of each art, those who have the best chance of being enabled, to carry out the aspect proper to their specialty.”); *Ex parte Zechnall*, 194 USPQ 461, 461 (Bd. App. 1973) (“appellants’ disclosure must be held sufficient if it would enable a person skilled in the electronic computer art, in cooperation with a person skilled in the fuel injection art, to make and use appellants’ invention”). As such, the disclosure must teach a person skilled in each art how to make and use the relevant aspect of the invention without undue experimentation. For example, to enable a claim to a programmed computer that determines and displays the three-dimensional structure of a chemical compound, the disclosure must

- enable a person skilled in the art of molecular modeling to understand and practice the underlying molecular modeling processes; and
- enable a person skilled in the art of computer programming to create a program that directs a computer to create and display the image representing the three-dimensional structure of the compound.

In other words, the disclosure corresponding to each aspect of the invention must be enabling to a person skilled in each respective art.

In many instances, an applicant will describe a programmed computer by outlining the significant elements of the programmed computer using a functional block diagram. Office personnel should review the specification to ensure that along with the functional block diagram the disclosure provides information that adequately describes each “element” in hardware or hardware and its associated software and how such elements are interrelated. See *In re Scarbrough*, 500 F.2d 560, 565, 182 USPQ 298, 301-02 (CCPA 1974) (“It is not enough that a person skilled in the art, by carrying on investigations along the line indicated in

the instant application, and by a great amount of work eventually might find out how to make and use the instant invention. The statute requires the application itself to inform, not to direct others to find out for themselves (citation omitted).”); *Knowlton*, 481 F.2d at 1367, 178 USPQ at 493 (disclosure must constitute more than a “sketchy explanation of flow diagrams or a bare group of program listings together with a reference to a proprietary computer on which they might be run”). See also *In re Gunn*, 537 F.2d 1123, 1127-28, 190 USPQ 402, 405 (CCPA 1976); *In re Brands-tadter*, 484 F.2d 1395, 1406-07, 179 USPQ 286, 294 (CCPA 1973); and *In re Ghiron*, 442 F.2d 985, 991, 169 USPQ 723, 727-28 (CCPA 1971).

## VI. DETERMINE WHETHER THE CLAIMED INVENTION COMPLIES WITH 35 U.S.C. 102 AND 103

As is the case for inventions in any field of technology, assessment of a claimed computer-related invention for compliance with 35 U.S.C. 102 and 103 begins with a comparison of the claimed subject matter to what is known in the prior art. If no differences are found between the claimed invention and the prior art, the claimed invention lacks novelty and is to be rejected by Office personnel under 35 U.S.C. 102. Once distinctions are identified between the claimed invention and the prior art, those distinctions must be assessed and resolved in light of the knowledge possessed by a person of ordinary skill in the art. Against this backdrop, one must determine whether the invention would have been obvious at the time the invention was made. If not, the claimed invention satisfies 35 U.S.C. 103. Factors and considerations dictated by law governing 35 U.S.C. 103 apply without modification to computer-related inventions. Moreover, merely using a computer to automate a known process does not by itself impart nonobviousness to the invention. See *Dann v. Johnston*, 425 U.S. 219, 227-30, 189 USPQ 257, 261 (1976); *In re Venner*, 262 F.2d 91, 95, 120 USPQ 193, 194 (CCPA 1958).

If the difference between the prior art and the claimed invention is limited to descriptive material stored on or employed by a machine, Office personnel must determine whether the descriptive material is functional descriptive material or nonfunctional descriptive material, as described *supra* in paragraphs IV.B.1(a) and IV. B.1(b). Functional descriptive mate-

rial is a limitation in the claim and must be considered and addressed in assessing patentability under 35 U.S.C. 103. Thus, a rejection of the claim as a whole under 35 U.S.C. 103 is inappropriate unless the functional descriptive material would have been suggested by the prior art. *In re Dembiczak*, 175 F.3d 994, 1000, 50 USPQ2d 1614, 1618 (Fed. Cir. 1999). Nonfunctional descriptive material cannot render nonobvious an invention that would have otherwise been obvious. >*In re Ngai*, \_\_\_ F.3d \_\_\_, 2004 WL 1068957 (Fed. Cir. May 13, 2004).< Cf. *In re Gulack*, 703 F.2d 1381, 1385, 217 USPQ 401, 404 (Fed. Cir. 1983) (when descriptive material is not functionally related to the substrate, the descriptive material will not distinguish the invention from the prior art in terms of patentability).

Common situations involving nonfunctional descriptive material are:

- a computer-readable storage medium that differs from the prior art solely with respect to nonfunctional descriptive material, such as music or a literary work, encoded on the medium,
- a computer that differs from the prior art solely with respect to nonfunctional descriptive material that cannot alter how the machine functions (i.e.,

the descriptive material does not reconfigure the computer), or

- a process that differs from the prior art only with respect to nonfunctional descriptive material that cannot alter how the process steps are to be performed to achieve the utility of the invention.

Thus, if the prior art suggests storing a song on a disk, merely choosing a particular song to store on the disk would be presumed to be well within the level of ordinary skill in the art at the time the invention was made. The difference between the prior art and the claimed invention is simply a rearrangement of nonfunctional descriptive material.

## **VII. CLEARLY COMMUNICATE FINDINGS, CONCLUSIONS AND THEIR BASES**

Once Office personnel have concluded the above analyses of the claimed invention under all the statutory provisions, including 35 U.S.C. 101, 112, 102 and 103, they should review all the proposed rejections and their bases to confirm their correctness. Only then should any rejection be imposed in an Office action. The Office action should clearly communicate the findings, conclusions and reasons which support them.

A-1

## 2106.01 Computer Programming and 35 U.S.C. 112, First Paragraph

The requirements for sufficient disclosure of inventions involving computer programming is the same as for all inventions sought to be patented. Namely, there must be an adequate written description, the original disclosure should be sufficiently enabling to allow one to make and use the invention as claimed, and there must be presentation of a best mode for carrying out the invention.

The following guidelines, while applicable to a wide range of arts, are intended to provide a guide for analyzing 35 U.S.C. 112, first paragraph, issues in applications involving computer programs, software, firmware, or block diagram cases wherein one or more of the “block diagram” elements are at least partially comprised of a computer software component. It should be recognized that sufficiency of disclosure issues in computer cases necessarily will require an inquiry into both the sufficiency of the disclosed hardware as well as the disclosed software due to the interrelationship and interdependence of computer hardware and software.

### WRITTEN DESCRIPTION

The function of the description requirement is to ensure that the inventor had possession of, as of the filing date of the application relied on, the specific subject matter later claimed by him or her; how the specification accomplishes this is not material. *In re Herschler*, 591 F.2d 693, 700-01, 200 USPQ 711, 717 (CCPA 1979) and further reiterated in *In re Kaslow*, 707 F.2d 1366, 707 F.2d 1366, 217 USPQ 1089 (Fed. Cir. 1983). See also MPEP § 2163 - § 2163.04.

### BEST MODE

The purpose of the best mode requirement is to “restrain inventors from applying for patents while at the same time concealing from the public the preferred embodiments of their inventions which they have in fact conceived,” *In re Gay*, 309 F.2d 769, 772, 135 USPQ 311, 315 (CCPA 1962); “only evidence of concealment + (accidental or intentional) is to be considered [in judging the adequacy of a best mode disclosure]. That evidence, in order to result in affirmance of a best mode rejection, must tend to show that the quality of an applicant’s best mode dis-

closure is so poor as to effectively result in concealment.” *In re Sherwood*, 613 F.2d 809, 816-817, 204 USPQ 537, 544 (CCPA 1980). Also, see *White Consol. Indus. v. Vega Servo-Control Inc.*, 214 USPQ 796, 824 (S.D. Mich. 1982), *aff’d on related grounds*, 713 F.2d 788, 218 USPQ 961 (Fed. Cir. 1983). See also MPEP § 2165 - § 2165.04.

There are two factual inquiries to be made in determining whether a specification satisfies the best mode requirement. First, there must be a subjective determination as to whether at the time the application was filed, the inventor knew of a best mode of practicing the invention. Second, if the inventor had a best mode of practicing the invention, there must be an objective determination as to whether the best mode was disclosed in sufficient detail to allow one skilled in the art to practice it. *Fonar Corp. v. General Electric Co.*, 107 F.3d 1543, 41 USPQ2d 1801, 1804 (Fed. Cir. 1997); *Chemcast Corp. v. Arco Industries*, 913 F.2d 923, 927-28, 16 USPQ2d 1033, 1036 (Fed. Cir. 1990). “As a general rule, where software constitutes part of a best mode of carrying out an invention, description of such a best mode is satisfied by a disclosure of the functions of the software. This is because, normally, writing code for such software is within the skill of the art, not requiring undue experimentation, once its functions have been disclosed. . . . [F]low charts or source code listings are not a requirement for adequately disclosing the functions of software.” *Fonar Corp.*, 107 F.3d at 1549, 41 USPQ2d at 1805 (citations omitted).

### ENABLEMENT

When basing a rejection on the failure of the applicant’s disclosure to meet the enablement provisions of the first paragraph of 35 U.S.C. 112, the examiner must establish on the record that he or she has a reasonable basis for questioning the adequacy of the disclosure to enable a person of ordinary skill in the art to make and use the claimed invention without resorting to *undue experimentation*. See *In re Brown*, 477 F.2d 946, 177 USPQ 691 (CCPA 1973); *In re Ghiron*, 442 F.2d 985, 169 USPQ 723 (CCPA 1971). Once the examiner has advanced a reasonable basis for questioning the adequacy of the disclosure, it becomes incumbent on the applicant to rebut that challenge and factually demonstrate that his or her application disclosure is in fact sufficient. See *In re Doyle*, 482 F.2d

1385, 1392, 179 USPQ 227, 232 (CCPA 1973); *In re Scarbrough*, 500 F.2d 560, 566, 182 USPQ 298, 302 (CCPA 1974); *In re Ghiron*, *supra*. See also MPEP § 2106, paragraph V.B.2 and § 2164 - § 2164.08(c).

### 2106.02 Disclosure in Computer Programming Cases [R-1]

To establish a reasonable basis for questioning the adequacy of a disclosure, the examiner must present a factual analysis of a disclosure to show that a person skilled in the art would not be able to make and use the claimed invention without resorting to undue experimentation.

In computer applications, it is not unusual for the claimed invention to involve two areas of prior art or more than one technology, e.g., an appropriately programmed computer and an area of application of said computer. *White Consol. Indus.*, 214 USPQ at 821. In regard to the “skilled in the art” standard, in cases involving both the art of computer programming, and another technology, the examiner must recognize that the knowledge of persons skilled in both technologies is the appropriate criteria for determining sufficiency. See *In re Naquin*, 398 F.2d 863, 158 USPQ 317 (CCPA 1968); *In re Brown*, 477 F.2d 946, 177 USPQ 691 (CCPA 1973); and *White Consol. Indus. v. Vega Servo-Control, Inc.*, 214 USPQ 796, 822 (S.D.Mich. 1982), *aff’d on related grounds*, 713 F.2d 788, 218 USPQ 961 (Fed. Cir. 1983).

In a typical computer application, system components are often represented in a “block diagram” format, i.e., a group of hollow rectangles representing the elements of the system, functionally labeled, and interconnected by lines. Such block diagram computer cases may be categorized into (A) systems which include but are more comprehensive than a computer and (B) systems wherein the block elements are totally within the confines of a computer.

#### BLOCK ELEMENTS MORE COMPREHENSIVE THAN A COMPUTER

The first category of such block diagram cases involves systems which include a computer as well as other system hardware and/or software components. In order to meet his or her burden of establishing a reasonable basis for questioning the adequacy of such disclosure, the examiner should initiate a factual analysis of the system by focusing on each of the individ-

ual block element components. More specifically, such an inquiry should focus on the diverse functions attributed to each block element as well as the teachings in the specification as to how such a component could be implemented. If based on such an analysis, the examiner can reasonably contend that more than routine experimentation would be required by one of ordinary skill in the art to implement such a component or components, that component or components should specifically be challenged by the examiner as part of a 35 U.S.C. 112, first paragraph rejection. Additionally, the examiner should determine whether certain of the hardware or software components depicted as block elements are themselves complex assemblages which have widely differing characteristics and which must be precisely coordinated with other complex assemblages. Under such circumstances, a reasonable basis may exist for challenging such a functional block diagram form of disclosure. See *In re Ghiron*, 442 F.2d 985, 169 USPQ 723 (CCPA 1971) and *In re Brown*, *supra*. Moreover, even if the applicant has cited prior art patents or publications to demonstrate that particular block diagram hardware or software components are old, it should not always be considered as self-evident how such components are to be interconnected to function in a disclosed complex manner. See *In re Scarbrough*, 500 F.2d 560, 566, 182 USPQ 298, 301 (CCPA 1974) and *In re Forman*, 463 F.2d 1125, 1129, 175 USPQ 12, 16 (CCPA 1972). Furthermore, in complex systems including a digital computer, a microprocessor, or a complex control unit as one of many block diagram elements, timing between various system elements may be of the essence and without a timing chart relating the timed sequences for each element, an unreasonable amount of work may be required to come up with the detailed relationships an applicant alleges that he or she has solved. See *In re Scarbrough*, 500 F.2d at 566, 182 USPQ at 302.

For example, in a block diagram disclosure of a complex claimed system which includes a microprocessor and other system components controlled by the microprocessor, a mere reference to a prior art, commercially available microprocessor, without any description of the precise operations to be performed by the microprocessor, fails to disclose how such a microprocessor would be properly programmed to either perform any required calculations

or to coordinate the other system components in the proper timed sequence to perform the functions disclosed and claimed. If, in such a system, a particular program is disclosed, such a program should be carefully reviewed to ensure that its scope is commensurate with the scope of the functions attributed to such a program in the claims. See *In re Brown*, 477 F.2d at 951, 177 USPQ at 695. If the disclosure fails to disclose any program and if more than routine experimentation would be required of one skilled in the art to generate such a program, the examiner clearly would have a reasonable basis for challenging the sufficiency of such a disclosure. The amount of experimentation that is considered routine will vary depending on the facts and circumstances of individual cases. No exact numerical standard has been fixed by the courts, but the “amount of required experimentation must, however, be reasonable.” *White Consol. Indus.*, 713 F.2d at 791, 218 USPQ at 963. One court apparently found that the amount of experimentation involved was reasonable where a skilled programmer was able to write a general computer program, implementing an embodiment form, within 4 hours. *Hirschfield v. Banner*, 462 F. Supp. 135, 142, 200 USPQ 276, 279 (D.D.C. 1978), *aff’d*, 615 F.2d 1368 (D.C. Cir. 1986), *cert. denied*, 450 U.S. 994 (1981). On the other hand, another court found that, where the required period of experimentation for skilled programmers to develop a particular program would run to 1 to 2 man years, this would be “a clearly unreasonable requirement” (*White Consol. Indus.*, 713 F.2d at 791, 218 USPQ at 963).

## BLOCK ELEMENTS WITHIN A COMPUTER

The second category of block diagram cases occurs most frequently in pure data processing applications where the combination of block elements is totally within the confines of a computer, there being no interfacing with external apparatus other than normal input/output devices. In some instances, it has been found that particular kinds of block diagram disclosures were sufficient to meet the enabling requirement of 35 U.S.C. 112, first paragraph. See *In re Knowlton*, 481 F.2d 1357, 178 USPQ 486 (CCPA 1973), *In re Comstock*, 481 F.2d 905, 178 USPQ 616 (CCPA 1973). Most significantly, however, in both the *Comstock* and *Knowlton* cases, the decisions turned on the appellants’ disclosure of (A) a reference to and reli-

ance on an identified prior art computer system and (B) an operative computer program for the referenced prior art computer system. Moreover, in *Knowlton* the disclosure was presented in such a detailed fashion that the individual program’s steps were specifically interrelated with the operative structural elements in the referenced prior art computer system. The court in *Knowlton* indicated that the disclosure did not merely consist of a sketchy explanation of flow diagrams or a bare group of program listings together with a reference to a proprietary computer in which they might be run. The disclosure was characterized as going into considerable detail in explaining the interrelationships between the disclosed hardware and software elements. Under such circumstances, the Court considered the disclosure to be concise as well as full, clear, and exact to a sufficient degree to satisfy the literal language of 35 U.S.C. 112, first paragraph. It must be emphasized that because of the significance of the program listing and the reference to and reliance on an identified prior art computer system, absent either of these items, a block element disclosure within the confines of a computer should be scrutinized in precisely the same manner as the first category of block diagram cases discussed above.

Regardless of whether a disclosure involves block elements more comprehensive than a computer or block elements totally within the confines of a computer, the examiner, when analyzing method claims, must recognize that the specification must be adequate to teach how to practice the claimed method. If such practice requires a particular apparatus, it is axiomatic that the application must therefore provide a sufficient disclosure of that apparatus if such is not already available. See *In re Ghiron*, 442 F.2d 985, 991, 169 USPQ 723, 727 (CCPA 1971) and *In re Gunn*, 537 F.2d 1123, 1128, 190 USPQ 402, 406 (CCPA 1976). When the examiner questions the adequacy of computer system or computer programming disclosures, the examiner’s reasons for finding the specification to be nonenabling should be supported by the record as a whole. In this regard, it is also essential for the examiner to reasonably challenge evidence submitted by the applicant. For example, in *In re Naquin*, *supra*, affiant’s statement unchallenged by the examiner, that the average computer programmer was familiar with the subroutine necessary for performing the claimed process, was held to be

a statement of fact which rendered the examiner's rejection baseless. In other words, unless the examiner presents a reasonable basis for challenging the disclosure in view of the record as a whole, a 35 U.S.C. 112, first paragraph rejection in a computer system or computer programming application will not be sustained on appeal. See *In re Naquin, supra*, and *In re Morehouse*, 545 F.2d 162, 165-66, 192 USPQ 29, 32 (CCPA 1976).

While no specific universally applicable rule exists for recognizing an insufficiently disclosed application involving computer programs, an examining guideline to generally follow is to challenge the sufficiency of such disclosures which fail to include either the computer program itself or a reasonably detailed flowchart which delineates the sequence of operations the program must perform. In programming applications software disclosure only includes a flowchart, as the complexity of functions and the generality of the individual components of the flowchart increase, the basis for challenging the sufficiency of such a flowchart becomes more reasonable because the likelihood of more than routine experimentation being required to generate a working program from such a flowchart also increases.

As stated earlier, once an examiner has advanced a reasonable basis or presented evidence to question the adequacy of a computer system or computer programming disclosure, the applicant must show that his or her specification would enable one of ordinary skill in the art to make and use the claimed invention without resorting to undue experimentation. In most cases, efforts to meet this burden involve submitting affidavits, referencing prior art patents or technical publications, arguments of counsel, or combinations of these approaches.

#### **AFFIDAVIT PRACTICE (37 CFR 1.132)**

In computer cases, affidavits must be critically analyzed. Affidavit practice usually initially involves analyzing the skill level and/or qualifications of the affiant, which should be of the routineer in the art. When an affiant's skill level is higher than that required by the routineer for a particular application, an examiner may challenge the affidavit since it would not be made by a routineer in the art, and therefore would not be probative as to the amount of experimentation required by a routineer in the art to

implement the invention. An affiant having a skill level or qualifications above that of the routineer in the art would require less experimentation to implement the claimed invention than that for the routineer. Similarly, an affiant having a skill level or qualifications below that of the routineer in the art would require more experimentation to implement the claimed invention than that for the routineer in the art. In either situation, the standard of the routineer in the art would not have been met.

In computer systems or programming cases, the problems with a given affidavit, which relate to the sufficiency of disclosure issue, generally involve affiants submitting few facts to support their conclusions or opinions. Some affidavits may go so far as to present conclusions on the ultimate legal question of sufficiency. *In re Brandstadter*, 484 F.2d 1395, 179 USPQ 286 (CCPA 1973), illustrates the extent of the inquiry into the factual basis underlying an affiant's conclusions or opinions. In *Brandstadter*, the invention concerned a stored program controller (computer) programmed to control the storing, retrieving, and forwarding of messages in a communications system. The disclosure consisted of broadly defined block diagrams of the structure of the invention and no flowcharts or program listings of the programs of the controller. The Court quoted extensively from the Examiner's Office Actions and Examiner's Answer in its opinion where it was apparent that the Examiner consistently argued that the disclosure was merely a broad system diagram in the form of labelled block diagrams along with statements of a myriad of desired results. Various affidavits were presented in which the affiants stated that all or some of the system circuit elements in the block diagrams were either well-known in the art or "could be constructed" by the skilled design engineer, that the controller was "capable of being programmed" to perform the stated functions or results desired, and that the routineer in the art "could design or construct or was able to program" the system. The Court did consider the affiants' statements as being some evidence on the ultimate legal question of enablement but concluded that the statements failed in their purpose since they recited conclusions or opinions with few facts to support or buttress these conclusions. With reference to the lack of a disclosed computer program or even a flowchart of the program to control the message switching

system, the record contained no evidence as to the number of programmers needed, the number of man-hours and the level of skill of the programmers to produce the program required to practice the invention.

It should be noted also that it is not opinion evidence directed to the ultimate legal question of enablement, but rather factual evidence directed to the amount of time and effort and level of knowledge required for the practice of the invention from the disclosure alone which can be expected to rebut a *prima facie* case of nonenablement. See *Hirschfield*, 462 F. Supp. at 143, 200 USPQ at 281. It has also been held that where an inventor described the problem to be solved to an affiant, thus enabling the affiant to generate a computer program to solve the problem, such an affidavit failed to demonstrate that the application alone would have taught a person of ordinary skill in the art how to make and use the claimed invention. See *In re Brown*, 477 F.2d at 951, 177 USPQ at 695. The Court indicated that it was not factually established that the applicant did not convey to the affiant vital and additional information in their several meetings in addition to that set out in the application. Also of significance for an affidavit to be relevant to the determination of enablement is that it must be probative of the level of skill of the routinier in the art as of the time the applicant filed his application. See *In re Gunn*, 537 F.2d at 1128, 190 USPQ at 406. In this case, each of the affiants stated what was known at the time he executed the affidavit, and not what was known at the time the applicant filed his application.

## REFERENCING PRIOR ART DOCUMENTS

Earlier, it had been discussed that citing in the specification the commercial availability of an identified prior art computer system is very pertinent to the issue of enablement. But in some cases, this approach may not be sufficient to meet the applicant's burden. Merely citing in an affidavit extracts from technical publications in order to satisfy the enablement requirement is not sufficient if it is not made clear that a person skilled in the art would know which, or what parts, of the cited circuits could be used to construct the claimed device or how they could be interconnected to act in combination to produce the required results. See *In re Forman*, 463 F.2d at 1129,

175 USPQ at 16. This analysis would appear to be less critical where the circuits comprising applicant's system are essentially standard components comprising an identified prior art computer system and a standard device attached thereto.

Prior art patents are often relied on by applicants to show the state of the art for purposes of enablement. However, these patents must have an issue date earlier than the effective filing date of the application under consideration. See *In re Budnick*, 537 F.2d 535, 538, 190 USPQ 422, 424 (CCPA 1976). An analogous point was made in *In re Gunn*, *supra*, where the court indicated that patents issued after the filing date of the applicant's application are not evidence of subject matter known to any person skilled in the art since their subject matter may have been known only to the patentees and the Patent and Trademark Office.

Merely citing prior art patents to demonstrate that the challenged components are old may not be sufficient proof since, even if each of the enumerated devices or labelled blocks in a block diagram disclosure were old, *per se*, this would not make it self-evident how each would be interconnected to function in a disclosed complex combination manner. Therefore, the specification in effect must set forth the integration of the prior art; otherwise, it is likely that undue experimentation, or more than routine experimentation would be required to implement the claimed invention. See *In re Scarbrough*, 560 F.2d at 565, 182 USPQ at 301. The court also noted that any cited patents which are used by the applicant to demonstrate that particular box diagram hardware or software components are old must be analyzed as to whether such patents are germane to the instant invention and as to whether such patents provide better detail of disclosure as to such components than an applicant's own disclosure. Also any patent or publication cited to provide evidence that a particular programming technique is well-known in the programming art does not demonstrate that one of ordinary skill in the art could make and use correspondingly disclosed programming techniques unless both programming techniques are of approximately the same degree of complexity. See *In re Knowlton*, 500 F.2d 566, 572, 183 USPQ 33, 37 (CCPA 1974).

## ARGUMENTS OF COUNSEL

Arguments of counsel may be effective in establishing that an examiner has not properly met his or her burden or has otherwise erred in his or her position. In these situations, an examiner may have failed to set forth any basis for questioning the adequacy of the disclosure or may not have considered the whole specification, including the drawings and the written description. However, it must be emphasized that arguments of counsel alone cannot take the place of evidence in the record once an examiner has advanced a reasonable basis for questioning the disclosure. See *In re Budnick*, 537 F.2d at 538, 190 USPQ at 424; *In re Schulze*, 346 F.2d 600, 145 USPQ 716 (CCPA 1965); *In re Cole*, 326 F.2d 769, 140 USPQ 230 (CCPA 1964). For example, in a case where the record consisted substantially of arguments and opinions of applicant's attorney, the court indicated that factual affidavits could have provided important evidence on the issue of enablement. See *In re Knowlton*, 500 F.2d at 572, 183 USPQ at 37; *In re Wiseman*, 596 F.2d 1019, 201 USPQ 658 (CCPA 1979).

## 2107 Guidelines for Examination of Applications for Compliance with the Utility Requirement

### I. INTRODUCTION

The following Guidelines establish the policies and procedures to be followed by Office personnel in the evaluation of any patent application for compliance with the utility requirements of 35 U.S.C. 101 and 112. These Guidelines have been promulgated to assist Office personnel in their review of applications for compliance with the utility requirement. The Guidelines do not alter the substantive requirements of 35 U.S.C. 101 and 112, nor are they designed to obviate the examiner's review of applications for compliance with all other statutory requirements for patentability. The Guidelines do not constitute substantive rulemaking and hence do not have the force and effect of law. Rejections will be based upon the substantive law, and it is these rejections which are appealable. Consequently, any perceived failure by Office personnel to follow these Guidelines is neither appealable nor petitionable.

## II. EXAMINATION GUIDELINES FOR THE UTILITY REQUIREMENT

Office personnel are to adhere to the following procedures when reviewing patent applications for compliance with the "useful invention" ("utility") requirement of 35 U.S.C. 101 and 112, first paragraph.

(A) Read the claims and the supporting written description.

(1) Determine what the applicant has claimed, noting any specific embodiments of the invention.

(2) Ensure that the claims define statutory subject matter (i.e., a process, machine, manufacture, composition of matter, or improvement thereof).

(3) If at any time during the examination, it becomes readily apparent that the claimed invention has a well-established utility, do not impose a rejection based on lack of utility. An invention has a well-established utility if (i) a person of ordinary skill in the art would immediately appreciate why the invention is useful based on the characteristics of the invention (e.g., properties or applications of a product or process), and (ii) the utility is specific, substantial, and credible.

(B) Review the claims and the supporting written description to determine if the applicant has asserted for the claimed invention any specific and substantial utility that is credible:

(1) If the applicant has asserted that the claimed invention is useful for any particular practical purpose (i.e., it has a "specific and substantial utility") and the assertion would be considered credible by a person of ordinary skill in the art, do not impose a rejection based on lack of utility.

(i) A claimed invention must have a specific and substantial utility. This requirement excludes "throw-away," "insubstantial," or "nonspecific" utilities, such as the use of a complex invention as landfill, as a way of satisfying the utility requirement of 35 U.S.C. 101.

(ii) Credibility is assessed from the perspective of one of ordinary skill in the art in view of the disclosure and any other evidence of record (e.g., test data, affidavits or declarations from experts in the art, patents or printed publications) that is probative of the applicant's assertions. An applicant need only provide one credible assertion of specific and substantial

utility for each claimed invention to satisfy the utility requirement.

(2) If no assertion of specific and substantial utility for the claimed invention made by the applicant is credible, and the claimed invention does not have a readily apparent well-established utility, reject the claim(s) under 35 U.S.C. 101 on the grounds that the invention as claimed lacks utility. Also reject the claims under 35 U.S.C. 112, first paragraph, on the basis that the disclosure fails to teach how to use the invention as claimed. The 35 U.S.C. 112, first paragraph, rejection imposed in conjunction with a 35 U.S.C. 101 rejection should incorporate by reference the grounds of the corresponding 35 U.S.C. 101 rejection.

(3) If the applicant has not asserted any specific and substantial utility for the claimed invention and it does not have a readily apparent well-established utility, impose a rejection under 35 U.S.C. 101, emphasizing that the applicant has not disclosed a specific and substantial utility for the invention. Also impose a separate rejection under 35 U.S.C. 112, first paragraph, on the basis that the applicant has not disclosed how to use the invention due to the lack of a specific and substantial utility. The 35 U.S.C. 101 and 112 rejections shift the burden of coming forward with evidence to the applicant to:

(i) Explicitly identify a specific and substantial utility for the claimed invention; and

(ii) Provide evidence that one of ordinary skill in the art would have recognized that the identified specific and substantial utility was well-established at the time of filing. The examiner should review any subsequently submitted evidence of utility using the criteria outlined above. The examiner should also ensure that there is an adequate nexus between the evidence and the properties of the now claimed subject matter as disclosed in the application as filed. That is, the applicant has the burden to establish a probative relation between the submitted evidence and the originally disclosed properties of the claimed invention.

(C) Any rejection based on lack of utility should include a detailed explanation why the claimed invention has no specific and substantial credible utility. Whenever possible, the examiner should provide

documentary evidence regardless of publication date (e.g., scientific or technical journals, excerpts from treatises or books, or U.S. or foreign patents) to support the factual basis for the *prima facie* showing of no specific and substantial credible utility. If documentary evidence is not available, the examiner should specifically explain the scientific basis for his or her factual conclusions.

(1) Where the asserted utility is not specific or substantial, a *prima facie* showing must establish that it is more likely than not that a person of ordinary skill in the art would not consider that any utility asserted by the applicant would be specific and substantial. The *prima facie* showing must contain the following elements:
